HUDSON Six-40

The Reign of Sixes

The Hudson Six-40 brings a new realm under rule of Sixes. This $1,750 price, this lightness, this low operative cost give to this Six resistless attractions found in no other type of car.

FIFTY-FOUR out of 79 exhibitors at New York's 14th annual automobile show displayed six-cylinder cars as their best offerings.

Eighteen showed Sixes exclusively.

That emphasizes the swing to Sixes.

In 1905 there were 196 exhibitors, of which 68 were single or two cylinder cars. The same thing was said then against the development of the Four as some are today predicting for the Six. Yet two years later the two-cylinder exhibits dropped out completely. That, as a bit of history, to set the mind at ease as to the future.

The appeal of the Six is resistless. It is so smooth-running, so flexible, so free from vibration, so economical of tires. It rides like constant coasting. At two miles an hour or sixty in crowded streets or in climbing hills, one rarely needs to change from high gear.

Sixes have suffered handicaps. They have always been heavy and costly. Their fuel cost was excessive. But men paid the price for their comfort and luxury. And they forced the best makers—all save one—to supply their demand for Sixes.

Now the Hudson Six-40 Brings a New Day in Sixes

Now the HUDSON engineers, who always lead, bring out a new-type Six. A Six with a small-bore, long-stroke motor, such as Europe is using to minimize weight and fuel cost.

They have built a Six-40, with extra tonneau seats, which weighs 2,980 pounds. That's 400 pounds less than our last year's four-cylinder—the HUDSON "37"—with shorter wheelbase and lesser power. And this new-type Six, which shows 47 horsepower, consumes one-fourth less fuel than the HUDSON "37."

The price is $1,750. Not a comparable car, whatever the type, has ever been sold so low.

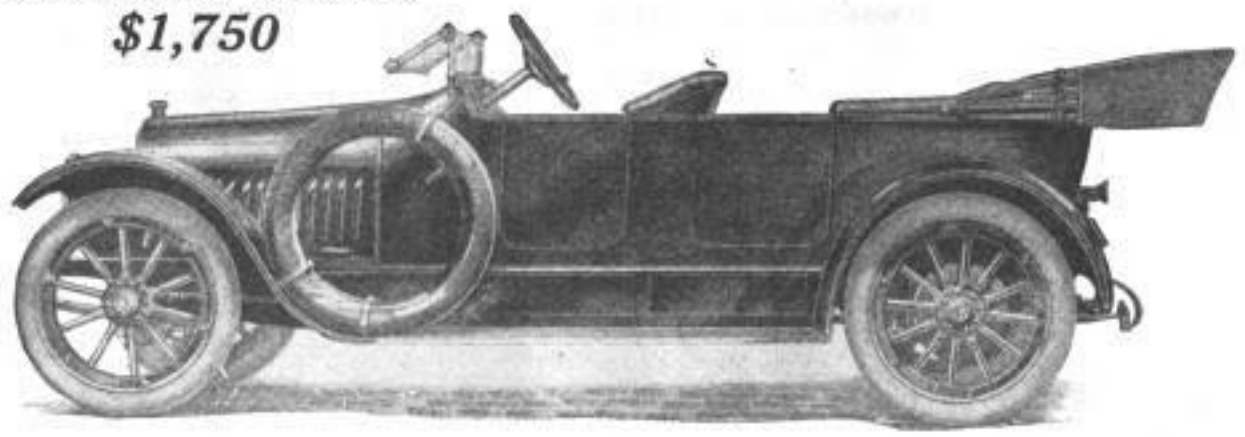
Note what this means. A much lighter car than the best we could do in Fours. A much lower fuel cost. And a price attained by no other makers in a car of this size, class and power.

So everything now—in this HUDSON Six-40—is in favor of the Six. Men who want light weight, low fuel consumption, and the lowest price in a quality car, must come to this Six to get them.

Legions of men, to whom cost has barred Sixes, will now find this Six-40 the only affordable car.

A Distinguished Body New-Style Equipment

This car also brings out new ideals in beauty, new conveniences, new equipment features. The Streamline body—now the vogue in Europe—is shown here in perfection. Flowing lines from tip to tip, without the awkward dash angle. You will find, we think, no other car so handsome and impressive.



Then note the new features which we list below. Some of these attractions have never before appeared in any American car.

Our Larger Six-54

We build on the same lines the new HUDSON Six-54. In design, in finish and equipment these two cars are almost identical. But the Six-54 has a 135-inch wheelbase. It has more power. And the price is $2,250.

Go to your local Hudson dealer and see these new-type Sixes. Go early, because we are now weeks behind on orders. Even for spring delivery you should make decision now.

HUDSON Six-40
$1,750

Wheelbase, 123 inches.
Seats up to 7 passengers.
Two disappearing seats.
Left side drive.
Gasoline tank in dash.
Extra tires carried ahead of front door.
"One-Man" top made of Pantasote.
Quick-adjusting curtains.

Dimming searchlights.
Concealed hinges.
Concealed speedometer gear.
Delco patented system of electric lighting and starting.
Integral rain-vision windshield.
Hand-buffed leather upholstery.

Electric horn—license carriers—tire holders—trunk rack—tools.
Price, $1,750 F. O. B. Detroit.
Wire wheels, with extra wheel, $75 extra.
Standard roadster, same price.
Cabriolet roadster, completely enclosed, but quickly changed to an open roadster, $1,950.

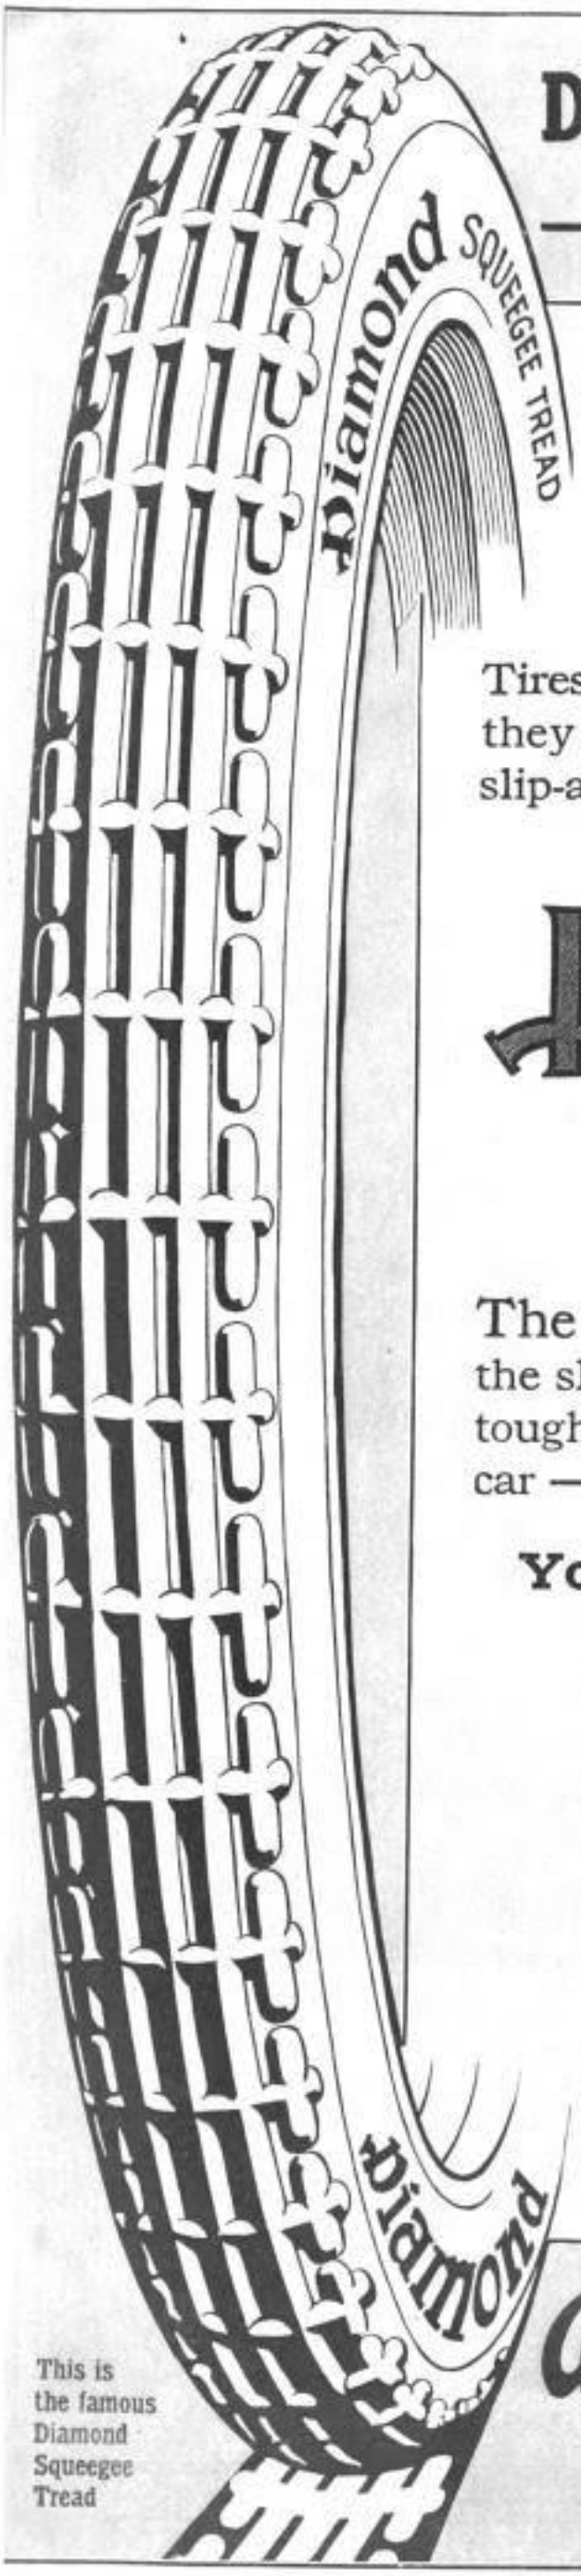
HY·FLEX·ROL

AS A FULL GROWN MAN PUTS AWAY CHILDISH THINGS AND TAKES A PART IN THE WORLD'S WORK, HE QUICKLY LEARNS THAT THE AIM OF MANY WORTHY EFFORTS IS DESTROYED BY UNCONSCIOUS ERROR

In the Heat Treating Department of the Hyatt Roller Bearing Company, Science and not man's judgment governs every operation.



In each of the 150 furnaces, heated to 1500 degrees, is a pyrometer from which run electric cables transmitting records of the temperatures to the Observation Department, which flashes back instructions to the furnace operators.

In every department making "Hyatt Quiet Bearings," the element of chance is eliminated and Science controls. A dependable product results: automobile bearings that are resilient, absorb vibrations, and quiet to the point of silence.

This is the famous Diamond Squeegee Tread

Don't be a "fair weather motorist" —use Diamond Squeegee Treads

It is no longer necessary to deprive yourself and family of the use of your car because of fear of skidding.

The users of Diamond Squeegee Tread Tires enjoy their automobiles every day in the year—they come and go in any kind of weather free from slip-and-skid worry.

Diamond Squeegee Tread Tires

The Squeegees bite their way down through the slippery, mucky coating of the road and hold. The tough rubber Squeegees give complete mastery of your car — and longer mileage besides.

You can't beat Diamond Quality — why pay more than Diamond prices?

Size	Squeegee Tread Prices	Size	Squeegee Tread Prices
30x3	$12.65	34x4½	$35.00
30x3½	17.00	35x4½	36.05
32x3½	18.10	36x4½	37.10
33x4	25.25	37x5	44.45
34x4	26.05	38x5½	57.30

The Papered Door

By Mary Roberts Rinehart

ILLUSTRATED BY F. R. GRUGER

THE small house was drafty. Air currents moved the curtains at the windows and billowed the cheap rug on the floor. The baby had had the croup; it had given her an excuse for being up, for the roaring kitchen fire, and lights.

Early in the evening she had sent over to the doctor's for medicine. The drug store was closed, and a curious crowd had gathered in front of it. The doctor dispensed his own prescriptions and had sent back with the bottle a kindly note:

"Dear Molly: If we can do anything, let us know. Would you like Ann to spend the night with you?"

The eight-year-old girl had trotted back with a message that she thought she could manage nicely. The thought of Ann's prying eyes made her shudder.

Then the quiet night had settled down on them. Some time after eleven, moving about the room, she had glanced out of the window and had seen glowing in the darkness a lighted cigar.

She knew what it meant. The house was being watched.

By one o'clock the baby was breathing easier. A light snow was falling; frozen hard, it beat against the windowpanes with little, sharp cracklings. In the next room the eight-year-old girl was sound asleep, one arm thrown up over her head.

SHE went to the window and looked out again; the man across the street moved uneasily, hesitated, came over and signaled her to raise the window.

"How's the boy?" he called through the snow. She knew him then—Cooper, one of the county detectives.

"Better; the doctor's medicine has helped him."

He hesitated awkwardly. "You'd better go to bed," he said at last. "There is no use of two of us staying up. I guess he won't come back while I am hanging around."

"No," she replied wearily, "he won't come back, Mr. Cooper. That was the last word he said."

The detective coughed, cleared his throat, spat.

"We are all mighty sorry," he observed, using a carefully conversational tone. "These—these things happen now and then."

"I expect you are right cold out there."

"Well, I am not warm," he replied cheerfully. "I am burning up considerable fuel, but it doesn't seem to heat much." To show his ease he lighted a fresh stogie. The match flare showed his good-humored face drawn and strained in spite of his tone.

"You wouldn't care to come in and warm your feet, would you?"

He hesitated. The village street was quiet. Owing to its semi-isolated position, he had commanded all approaches to the house from his vantage point across the street. Once inside— But then again—the house was small and lightly built; one could hear a footfall through it. A man ought to be able to thaw out now and then.

"I don't know but I will for a minute or two, Mrs. Carter," he assented, "if you'll unlock the door."

She came downstairs very soon, a shawl over her thin wrapper, and set a match to the fuel ready laid in the parlor stove before she admitted him.

She was a pretty, slender woman still in her twenties—an ultrarefined type for the village. Indeed, she had known better things than this thin clapboard house. She had taught school at the county seat before her marriage. The village had always resented her shy aloofness, the books on her parlor table. It had predicted calamity from the marriage, and now it had come.

Cooper was sound asleep in the parlor, his head dropped forward on his breast. There was a strong odor of drying wool as his overcoat steamed by the fire

THE detective eyed her with appreciation as he drew up his chair to the fire and warmed his numb fingers.

"How did it happen, anyhow, Molly?" he said at last. He had known her for a long time. "Had he been drinking?"

"I don't exactly know myself." Her tone was dreary. "I had asked him not to carry a gun—but when you ask Jim not to do a thing, he wants to right off. It was over a woman."

The detective was uncomfortable; he had known about the woman, of course. Molly Carter went to the foot of the stairs and listened; all was still. The baby still slept. So small was the house that she could hear his slightly stertorous breathing. The base-burner was glowing now. She did not sit down again. She rolled her arms in her shawl and stood looking at the blaze.

"It was the girl at Heideger's. He's been hanging around her for quite a while. Jim was sociable, you know, and lately, with the baby and the house, I haven't had much time for him. At night I was tired."

The detective nodded.

"And he went out, I suppose?"

"Well, you can hardly blame him. I guess here in the town they'll say I drove him to it. I have the reputation of thinking more of my children than I do of my husband. In the evenings I liked to read. Jim was no hand for reading."

IN HER nine years in the village she had adopted many of its colloquialisms.

"From what I gather, because with everybody talking at once I got kind of mixed up, it seems that the clerk from the drug store walked into Heideger's while Jim was there and asked the girl what she meant by fooling around with a married man. Then he told Jim to come home because his baby was sick. I'd sent over this afternoon for some ipecac. That was the start. The trouble came then."

"Then Jim came home," the detective prompted, "and after that what, Molly?"

"Then Jim came home," she repeated in a spiritless voice, "and said he was in trouble and he would have to leave town. I gave him all the money I had and got his winter overcoat out. It smelled of moth balls, but there wasn't time to air it. He put it on and went."

The detective sniffed.

"Moth balls!" he said. "That's what I've been smelling. You must have spilled them around."

There was no light in the room or he would have seen the woman grow even paler and her hands clutch under her shawl.

For a few moments there was silence in the parlor, save for the creak of the self-rocker in which the detective gently swung himself. He yawned and stretched out his legs.

"You don't mind if I smoke in here?"

"Jim smoked all over the house. Is the drug clerk badly hurt?"

The creaking of the self-rocker stopped. The detective looked hard at his stogie. "Yes, he's pretty bad," he said, after a moment. "He's—well, Molly, you will learn it soon enough anyhow—he's dead."

She sat down on one of the stiff plush chairs. Her jaw quivered nervously. She could scarcely articulate.

"Then it's murder?"

"I am afraid so."

He made an eager attempt to comfort her, bending forward.

"After all," he said, "something of this sort was bound to come sooner or later. If he gets away, you are better without him. If he doesn't—" He threw out his hands. "He has never supported you. You have worked for him, haven't you, and for his children? What have you had out of it? Try to be sensible. Things are pretty bad just now, but—they have been pretty bad for you for the last eight years. It's been drink and gambling and other women, and I am going to tell you the whole thing straight. There is no use cutting off a dog's tail an inch at a time. He shot the girl, too. They are both dead. The sheriff is out with a posse, and there is a thousand dollars on his head."

THE real blow had fallen earlier, in that early dusk when Jim had come in, frantic, and told her part of the truth. She only winced now, went a little paler; with the increasing warmth of the room the odor of moth balls seemed to fill the house.

She was dizzy, rather. Holding to the back of her chair, she listened for the sick child above. He still slept.

"Two of them!" she said at last. "The drug clerk was a nice young man. We used to talk about books and articles in the magazines. And now—oh, my God!" She pulled herself together sharply. "It's a pity of the girl, too," she said, quietly. "She was young and the men made a fool of her. I guess she wasn't really bad."

The detective said nothing. He rose, hoisting himself slowly out of the low rocker.

"Well, back to work!" he said. "It's been mighty good of you, Molly. I am warmed through now." He yawned again. "The sister hasn't got out my flannels yet and I was nearly frozen. I wasn't expecting an all-night job."

He threw the end of his stogie into the stove, drew a revolver from his coat pocket and glanced at it, remembered suddenly that the action was hardly delicate, and thrust it back. The woman's mind was working again—a subconscious intelligence that seemed to have been scheming all the while.

"I was thinking," she suggested, "that if I leave the latch off you could come in now and then and get warm. I can leave a cup of tea on the fender. Do you want milk in it?"

"Sugar, thank you, and no milk," he said. "You were always a thoughtful woman, Molly." There was something almost wistful in his voice. Mindful of the sleeping baby, he closed the door cautiously behind him as he went out.

Only the most casual search had been made of the house. Jim Carter had been seen after the tragedy to go home and shortly after to drive fiercely out of town in his buckboard wagon headed for the mountains. No one in the village had tried to stop him. He was grim, white-lipped, and armed.

The posse had found the buckboard eight miles away at nine o'clock that night, the wagon wedged in a fence corner with a wheel off and the horse lame. There was every likelihood that Carter was in the hills.

IT WAS Heideger, the hotel keeper, who had offered the reward. It was Heideger who with German shrewdness had suggested that the house be watched. But it had been almost midnight when the detective took up his position across the street, and in the interval—

Molly Carter went back to the kitchen and lighted the lamp. The room was stifling, but the fire in the range was low now. She put in a fresh piece of wood and set the kettle over it. Then, and not until then, did she go to the wall beside the range and put her lips to it.

"Can you breathe?" she said, cautiously. The reply came with astonishing clearness through the thin wall; even the sound of a body turning in a narrow space:

"I am making another air hole. Go out and see if any chips fall out."

"I can't, Jim. Chester Cooper is across the street. Did you hear what he said? They are both dead."

There was no reply to this. In the silence she could distinctly hear the bit as it worked its way through the outer wall.

"Jim, did you hear what he said?"

"I heard," he said sullenly.

The plan had been his. He had thought it out when the horse had gone lame and he had had to work his roundabout way back home through the commencing storm. But the execution was hers, and the work was well done.

Beside the range there had been a small unlighted closet, with a flat wooden door that fitted close without a frame. Long ago the door had been papered to match the kitchen. It had been the work of only a few moments to take off the lock. After that he had gone inside and drawn the door to behind him, shutting out from her sight, to her relief, his shaking hands and death-colored face. It was done and the paste almost dry before the sheriff's officer had made his cursory search. The child upstairs had been coughing hoarsely all the time. The little girl was with him, locked in. Half distracted, she had papered anew from the ceiling to the floor over the little door and built a fire in the range to dry the paste. In the lamplight the unfaded strips did not show against the old ones. Daylight would reveal them cruelly. If she could only keep the neighbors out! They knew the kitchen. Even at that she had gained a night.

She made the tea, crossing and recrossing the little room cautiously. When she came back from placing the cup on the fender of the parlor stove, the querulous voice was speaking from the other side of the partition. "What the devil do you mean by bringing him in here, anyhow?"

She pleaded with him, went down on her knees, grew hysterical finally, and had to be taken in his arms and quieted

"I thought it looked as if I hadn't anything to hide, Jim. He'll never think you are here now I have left the latch off, so he can go in and out when he likes."

"Well, you'd better see about those chips. Wait until he comes in the next time and then slip out the back door."

"The snow will cover them. Jim, there's a thousand dollars on you!"

"Well, why don't you sell me out? I haven't been worth much to you living; a thousand dollars dead wouldn't be bad."

Her lip quivered, but she made no reply. That was what the detective had said.

"If I could get to the barn," he grumbled, "I could work around behind Shultz's fence and get to the railroad siding. Where is that fool standing?"

"He's just across. You can't get to the barn. Jim, is that sleeping stuff of yours bitter?"

HE GATHERED the meaning in her tone and came close to the papered door.

"Yes. Why?"

"Would you notice it in a cup of tea?"

"I don't know. Not with sugar, maybe."

"Have you got your knife?"

"Yes."

"I thought this way, Jim. If he comes in to get warm and goes to sleep by the fire, I will tap three times lightly. You'll be listening, will you? You won't go to sleep?"

"God in heaven! do you think I am sleeping tonight?"

"Then listen. You can slip the blade around the door from the inside and cut the paper, can't you?"

"How do you know he is coming back?"

"He said he might. I think he will. What's that?"

She turned toward the rear of the house; a pair of peering eyes were staring at her from the window. She turned her back to them.

"Jim!" Almost a whisper, but he heard.

"What?"

"Mrs. Shultz is on the back porch."

When she looked again, the eyes had gone, and her neighbor was trying the door. With a despairing gesture Molly blew out the lamp and opened the door.

"I've been in bed for three hours," explained the visitor, "and seems like I can't sleep, with you so near and in trouble." She pushed herself through the half-opened door into the room.

"I'm sorry. I guess there's nothing anyone can do to help."

"I could sit here by the stove. I can't sleep anyhow. It's a comfort, when you're in trouble, to have some one about to lean on."

There was a sort of ghoulish curiosity in her face, but there was real kindness also. She came close and lowered her voice.

"I thought you was talking to some one a minute ago."

"I was speaking to the detective. He was in. I'm making him a cup of tea."

IF THE curiosity faded from Mrs. Shultz's eyes, the kindness also left them.

"Tea! I don't know that I'd care to make tea for a man who was waiting to hang Shultz or fill him full of lead!" She turned toward the door, hesitated. "I told Shultz I was going to stay. He locked the door after me. You wouldn't mind, would you, if I lay on your parlor sofa?"

Molly was a mild woman, but now she was desperate.

"I'm afraid I would mind," she said quietly. "This is a very sad night for me. I should like to be alone; absolutely alone."

The kitchen door closed with a bang. She was alone—with the papered door.

She ran up the stairs and brought down the sleeping powders in their pasteboard box. One she emptied swiftly into the teacup on the parlor fender. The box she put into the stove and waited until it was entirely consumed.

"I've fixed it, Jim. Listen for three raps. If he doesn't drink it, or the powder doesn't work—"

She broke down. There was only the sound of the bit from beyond, creaking as it turned. She opened the front door and called across in a low voice:

"I've left your tea for you and the door is unlocked. Be sure to close it tight when you go out."

Then she went upstairs.

The baby slept soundly. She put out the lamp and, drawing her shawl close about her, sat down in a chair before the fire. She thought of many things: of the days when Cooper, across the street, had wished to marry her; of her husband; of the blond girl at Heideger's; of the papered-up closet in the kitchen and the man in it drilling madly for breath.

Her eyes fell on a small white object on the floor. That brought her back with a start. She made another painful excursion to the lower floor.

"He smelt the moth balls on your overcoat," she said to the wall. "I've got to hide it again. It's under the parlor sofa. Where'll I put it?"

"Hide it behind the wood on the back porch." The voice was muffled.

"Jim, have you got enough air?"

"Oh, I'll manage somehow."

The kitchen clock struck, a thin metallic ring. It was a very old clock, with flowers painted on the dial. It had marked in its time death and birth and giving in marriage. But never, perhaps, had it marked so tragic a night.

Two o'clock.

She went back to her chair and sat listening. The blizzard had come now. Wind whipped the window sash and roared about the house corners. Beneath the ill-fitting frame a fine line of snow had sifted. She was painfully alive. Every sense ached with waiting.

More than once she mistook a slamming shutter for the closing of the front door, only to be disappointed. But it came an hour later, when the clock with the painted dial was striking three. The bait of the unlatched door and the glow of the base-burner through the parlor window had caught their victim.

COOPER had compromised with his conscience by making a careful round of the house. At one place he stopped. In a lull of the wind, it seemed to him that there was a curious, grinding sound. Then the gale rose again, caught his hat and sent him running and cursing. When he came back the noise, whatever it was, had ceased.

He stamped cautiously on the low porch and opened the door. A homely odor of tea met him, mixed with comforting warmth. He turned up the lamp and took off his overcoat. It was his best overcoat and shabby at that. If he had any luck and the storm drove Car-

Digitized by Google

ter back, he'd be able to buy a new one. He dusted it off with his hands before hanging it over the back of a chair to dry. On one shoulder a few grains of sawdust caught his attention. He looked at them with speculation, but without suspicion. He had a sense of humor."

"Ha!" he said to himself. "Even the sky has gone in for adulteration. Sawdust in the snow!"

He smiled at the conceit and sipped the tea. It was not very good, but it was hot. Overhead he could hear the slow rocking of a chair.

"Poor child!" he said. "Poor little girl—all this for that damned skunk!"

He effected a further compromise with his sense of duty by getting up every few minutes and inspecting the street or tiptoeing through the kitchen and pulling open unexpectedly the back door. Always on these occasions he had his hand in his revolver pocket.

Three-thirty.

The storm had increased in violence. Already small drifts had piled in still corners. The glow of the base-burner was dull red; the rocking overhead had ceased.

Cooper yawned and stretched out his legs.

"Poor little girl!" he said. "Poor li'l girl! And all for the sake—all for sake—"

He drew a deep breath and settled lower in the chair.

MOLLY CARTER bent down from the top of the stairs and listened. The detective had come in and she had not heard him go out. It would not do to descend too stealthily for fear he were still awake. As an excuse she took down a bottle of the baby's to fill with milk.

Cooper was sound asleep in the parlor, his head dropped forward on his breast. There was a strong odor of drying wool as his overcoat steamed by the fire.

Still holding the bottle, she crept to the kitchen and tapped lightly three times on the papered door. There was no reply. Her heart almost stopped, leaped on again, raced wildly. She repeated the signal. Then, desperately, she put her lips to the wall.

"Jim!" she whispered.

There was absolute silence, save for the heavy breathing of the detective in the parlor. Madness seized her. She crept along the tiny passage to the parlor door, and working with infinite caution, in spite of her frenzy, she closed it and locked it from the outside. Then back to the kitchen again, pulses hammering.

The bottle fell off the table and broke with a crash. For a moment she felt as if something in her had given way also. But there came no outcry from the parlor, no heavy weight against the flimsy door.

She got a knife from the table drawer and cut relentlessly through the new paper strips. Then, with the edge of the blade, she worked the door open.

JIM half sat, half lay, in the bottom of the closet with closed eyes. Drink and fatigue had combined with stifling air. She reached in and shook him, but he moved under her hand without opening his eyes. With almost superhuman strength she dragged him out, laid him prone on the kitchen floor, brought snow and rubbed it over his face, slapped his wrists with it to restore his pulse—the village method.

He came to quickly, sat up and stared about him.

"Hush," she said, for fear he would speak. "Can you hear me, Jim? Do you know what I am saying?"

He nodded.

"Cooper is locked in the parlor, asleep. You can get away now. My God, don't close your eyes again. Listen! You can get away."

"Away from what?" he asked stupidly.

"From the police. Try to remember, Jim. You shot the clerk from the drug store and—the girl at Heideger's. The police are after you. There's a thousand dollars on your head."

That roused him. He struggled to his feet, reeled, caught the table.

"I remember. Well, I've got to get away. That's all. But I can't go—feeling like this. Get me—some whisky."

He needed it. She brought it to him, measured out. He grumbled at the quantity, but after he had had it his dull eyes cleared.

She had gone to listen at the parlor door. When she came back, he was looking more himself. He was a handsome fellow with heavy dark hair and dark eyes, a big man as he towered above her in the little kitchen. His face did not indicate his weakness. There are men like that, broken reeds swinging in the wind, that yet manage to convey an impression of strength.

HIS wife brought the overcoat and held it out for him

"By Shultz's fence, you said, Jim, and then to the railroad. There's a slow freight goes through on toward morning, and if that doesn't stop, there's the milk train. And—Jim, let me hear about you now and then. Write to Aunt Sarah. Don't write here, and don't think once you get away that you are safe. A thousand dollars reward will set everybody in the country looking."

He paused, the overcoat half on.

"A thousand dollars," he said slowly. "I see. When I'm gone, Molly, how are you going to make out?"

"I'll manage somehow; only go, Jim. Go!"

"I don't know about this going," he said after a moment. "They'll grab me somewhere. Somebody'll get that thousand. You'll manage somehow! What do you mean by 'somehow'? You'll get married again, maybe?"

"Oh, no; not that."

He cared a little then—in spite of the girl at Heideger's!

If he would only go! This thing for which she had schemed the whole night might fail now while he talked.

"You can't stay here," he said slowly. "You can't bring the children up where everybody knows about their father. They can't run any sort of a race with that handicap."

FOR answer she held out his overcoat. But he shook his head. Perhaps it was his one big moment. Perhaps it was only a reaction from his murderous mood of the afternoon. For now quite suddenly he put his arms around her.

"I am not worth it, Molly," he burst out. "I am not worth a thousand dollars alive or dead, but if they're offering that for me, if you had it you could go out West somewhere and nobody would know about you.

A pair of peering eyes were staring at her from the window. She turned her back to them. "Jim!" almost a whisper, "Mrs. Shultz is on the back porch"

You could start the kids fresh. That's about the only thing I can do for you—give you a chance to get away and forget you ever knew me."

She did not understand at first. When she did she broke into quiet sobbing. She knew his obstinacy; the dogged tenacity of the weak. Now when every second counted to have him refuse to go!

SHE pleaded with him, went down on her knees, grew hysterical finally, and had to be taken in his arms and quieted, as he had not quieted her in years. And still there was no sound from the parlor.

"They'll get me somehow," he repeated over and over. "And I—I would like to feel that I had done one decent thing first. That red-eyed ferret in the parlor will get the money if you don't. For the children, Molly; they've got a right to ask to be started straight."

That was the argument that moved her finally into a sort of acquiescence. There seemed nothing else for her to do. He even planned the thing for her. He would hide in the barn in the loft. The swift snow would soon fill the footprints, but in case she was anxious, she could get up early and shovel a path where he had stepped.

When Cooper wakened she could say she had thought the thing over, that she needed the money, that she would exchange her knowledge for the reward.

"Only you get a paper for it—get a paper from Heideger. He'll bluff it out if he can. He was stuck on the girl himself."

"Jim, did you—care for that girl so much?"

His face hardened. "I thought I did; for a—for a little while. She made a fool of me, and I—showed her! But all the time I loved you, Molly."

He kissed her solemnly as she half lay in his arms and went toward the door.

"Good-by and God bless you," he said. "And kiss the—"

He choked up at that and made his way out through the drifts on the porch to the little yard.

SHE closed the door and fastened it behind him. Then very carefully she unlocked the parlor door and opened it. Cooper was still in his chair, sunk a little lower perhaps and breathing heavily, the overturned teacup on the floor beside him.

She went back to the kitchen and filled a fresh bottle for the baby.

As before, it served as an excuse for her presence; with it on the table near at hand she trimmed carefully the rough-cut edges of the papered door. The inside of the closet was a clear betrayal. Still listening and walking softly, she got a dust brush and pan and swept up the bits of wood and sawdust from the floor. The bit she placed on the shelf, and, turning, pan and brush in hand, faced the detective in the doorway.

He made a quick dash toward the closet.

"What have you got there?" he demanded shortly.

But now, as through all the long night, her woman's wit saved her.

"Don't jump at me like that. I've broken one of the baby's bottles and I am just about to sweep it up."

She stooped and swept the broken glass on to the pan. He stared into the empty closet.

"I'm sorry, Molly—I didn't mean to startle you. That tea and the heat of the stove put me to sleep. I've been half frozen. I guess it was the bottle breaking that wakened me. I thought you said you would go to bed."

"I couldn't sleep," she evaded, "and about this time the baby always has to be fed."

She took the bottle of milk from the table and set it inside the teakettle to warm. Every vestige of suspicion had died from the man's eyes. He yawned again, stretched, compared the clock with his watch.

"It's been a long night," he said. "Me for the street again. Listen to that wind. I'm sorry for anyone that's out in the mountains to-night."

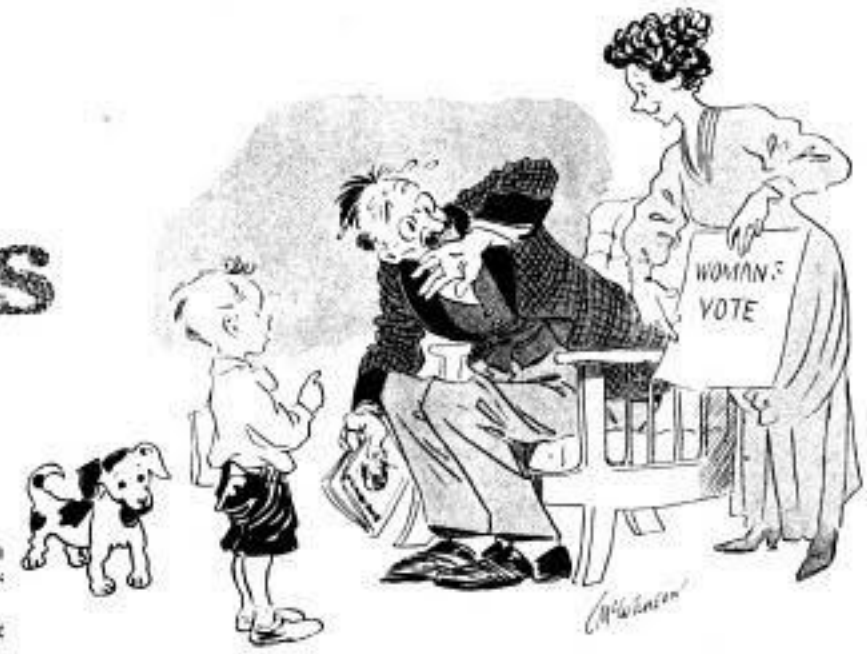
HE WENT into the parlor and, putting on his overcoat, stood awkwardly in the little hall.

She faced him, the child's bottle in her hand.

"I guess you know how I hate this, Molly," he said. "I—I—this isn't the time for talk and there ain't any disloyalty in it, but I was pretty fond of you one time—I guess you know it, and—I am not the changing sort. I have never seen anybody else I liked the same way. It don't hurt a good woman to know a thing like that. Good night."

Before she went upstairs she took a final look out the back door. Already Jim's footprints were effectively erased by the wind. An unbroken sheet of white snow stretched to the barn. By morning, at this rate, the telltale marks would be buried six inches or more.

She blew out the kitchen lamp and went slowly up the stairs.



The baby cried hoarsely and she gave him his bottle, lying down on the bed beside him and taking his head on her arm. He dropped asleep there and she kept him close for comfort. And there, lying alone in the darkness with staring eyes, she fought her battle. She had nothing in the world but the cheap furniture in the house. Her own health (*Concluded on page 22*)

Ventilated Opinions

By George Fitch

ILLUSTRATED BY JOHN T. McCUTCHEON

IN VARIOUS parts of this country a most embarrassing situation has arisen. It is all on account of woman suffrage. The soprano and alto vote is coming so fast in the United States that, far from being able to handle it, man is having difficulty even in getting out of its way.

Almost two million women have been enfranchised in this country within the past two years. What has been the result? In two million homes—less proper deductions for those women who have to fill their homes entirely by themselves—wives, daughters, and sisters are sitting down with their husbands, fathers, and brothers and are asking to have politics explained in a few brief words, such as a woman

trained only in domestic science, art, literature, child welfare, and kindred subjects of no importance can understand.

Give a young man of twenty-one an automobile and he will not rest until he knows how the timing gears are silenced and what kind of spark plugs are used. But give him the right to say to a President: "Pack up and skip. Your work is too coarse for me," and he bears up under the gift with a magnificent lack of curiosity. Men are several times more solidly poised than women.

For the Lady Voter—Recommended

WHAT is needed by the women in suffrage States, and even more pitifully by the men thereof, is a glossary of political terms and expressions. The dictionaries fall down in this matter with a distressing thud. They are too oblivious to the whole subject, so to speak. We pity the woman who opens her bright new dictionary and tries to glean therefrom a few hints as to the true inwardness of the many terms which freckle the general conversation during a campaign year.

If there is anything more discouraging than a husband and father regarding politics it is a dictionary. You couldn't run a missionary society election on the information extracted from the best dictionary published. In the cowardly silence of the whole dictionary-making profession we are moved to contribute the following definitions for woman in her dark hour of uncertainty:

Candidate—A man who loves all the people.

Campaign—Open season for loving same by candidates.

Campaign Pledges—Unsecured notes given by candidates in exchange for votes.

Election Day—Expiration date for above pledges.

The Voter—A king (or queen) on one day a year and a three-spot on the other 364.

The Platform—A common carrier used by parties for transportation purposes.

Plank—Special car provided in a platform for a doubtful faction.

Chairman—A near-sighted man who can only see his own friends in a caucus.

Caucus—A method of handling party business by absent treatment.

Primary—A school in which a lot of bosses have learned their first lesson in popular government.

Boss—The owner of a large or small section of a political party.

Voting the Straight Ticket—Throwing the brain out of gear while marking a ballot.

Reform—A universally desired improvement in politics.

Reformer—An impertinent busybody.

Republican—A man at a way station yelling to the train to come back for him.

Progressive—Man ahead of the train building track.

Democrat—Man in the engine cab wondering how to run the blamed thing.

Socialist—Man trying to trade the train for an aeroplane.

Jacksonian Democracy—Chronic stage of democracy.

Stinging Rebuke—When the other side wins by 100.

"Magnificent Indorsement"—When our side wins by 100.

"Personalities"—Criticism of our candidates by opponent.

"Playing Him Alice"—Discussion of opponent by our candidate.

"Signal Honor"—Appointment of friend to office.

"Got in on the Pie"—Securing of office by political opponent.

Statesmanship—Securing of post-office building by Congressman.

Record—Something that requires more explaining than theology.

The Mob—Us.

We Dubs Must Organize

FROM the four corners of the nation letters from Class Q golfers are pouring in, bristling with enthusiasm over the proposed revolt from the thralldom of the present golf rules.

The eagerness of the writers is as intense as the stories they tell are pitiful. "I have been playing with three friends for several years, a ball a hole," writes a New York golfer. "Recently they told me that I was to play henceforth with three other friends, because they wanted to take on a new man. In the course of a couple of months I learned that I had been sold by the first trio to the second for a sack of clubs and three months' dues. That shows the respect in which we dubs are held. We are little better than slaves."

"I want to join the dubs' revolt," writes a Philadelphia man. "At present I am conducting one by myself. I will not employ a caddie unless he consents to a fine of five cents for every time he laughs."

"Your rules are admirable," says a member of the celebrated Onwentsia Club of Lake Forest, "but they only go part way. I favor a rule which will allow a player to repeat a stroke in case he has forgotten to keep his eye on the ball. If golf is a game of memory, well and good. But if it is a game of skill, it should not be made to depend so much on the memory. When I can remember to keep my eye on the ball I am a slashing good golfer."

We had not intended to carry this idea further, but the demand seems overwhelming. It would be pure philanthropy to give a few general instructions in the perfection of a bad game of golf. There is, for instance, the drive from the first tee. This is one of the dub's greatest embarrassments. No matter what he does on the rest of the course, he would like to step up in front of the crowded club porch and bang out a respectable drive before a critical audience. It is the one weakness which none of us can overcome. We can become hardened on the rest of the course to a three-hundred-yard ambition, which results in a forty-yard trickle, but when fifty people at the first hole utter an "Oh!" composed of disappointment, surprise, disgust, and amusement in equal parts, after we have displaced the ball a few feet with a back-breaking swing, that "Oh!" hurts.

One dub we know of makes it up with a brother dub to create a tremendous disturbance back of the tee, during which the first dub drives hastily when no one is looking and hunts for his ball later on about 250 yards down the course. But this involves the deliberate abandonment of a ball, and besides officious friends are likely to pick it up as it stares at the world thirty yards from the tee and shame you. There is a better way. It requires imagination and fortitude, but it will work. It is this:

Take your stand carelessly on the driving green. Tee your ball in an offhand manner. Then take your mashie and, fixing your eye on an imaginary putting green thirty yards ahead, play a careful approach. Nine times out of ten you will get a good hundred yards and avoid disgrace. Later on when you have actually arrived within thirty yards of the real green, you can approach neatly and often dead to the hole by driving with all your might.

Another time we shall take up briefly the subject of driving in general.

The Invasion of Keokuk

AT KEOKUK, IOWA, an enterprising firm of capitalists built a dam across the Mississippi River and set the peerless Daddy of American Waters to work running the trolleys, lighting the streets, and turning the washing machines in a hundred towns and cities. It was a tremendous job of work which involved the wiping out of farms and villages and railroads, the rearrangement of a hundred square miles of scenery, and some minor changes in climate; and, as usual with gigantic enterprises, it produced some unexpected results.

For one thing it brought huge numbers of young engineers to Keokuk. They had worked all over the world on water powers, usually in spots well concealed from civilization and well insulated from feminine charm. Then they came to the Keokuk job, where fifteen minutes from the roaring rapids were the homes of Iowa's finest families, full of young women ready and willing to admire the wild, free life of the engineer. The result was over a hundred weddings in two years, and when the dam was completed and the young engineers moved on, they took with them the young women of Keokuk en masse.

Where Dollars Are Neighborly

By Isaac F. Marcosson

WHILE John Jones, the average American farmer of the Middle West—and, for that matter, any other section of the country—is haggling with the local usurer to obtain a loan of $100 at high interest rates to replace the loss of a work horse, his Jewish agricultural colleague, Moses Levy of New England, New York, or New Jersey, can negotiate the same transaction on the easiest terms by telephoning to the treasurer of his Credit Union.

John Jones, under ordinary conditions, must buy his seed, implements, and fertilizer at the nearest store and at prevailing retail rates, but Levy, if he is a member of the Federation of Jewish Farmers, can supply most of his farm needs through a central purchasing bureau, which not only gives him ample credit and carload prices, but a standardized product.

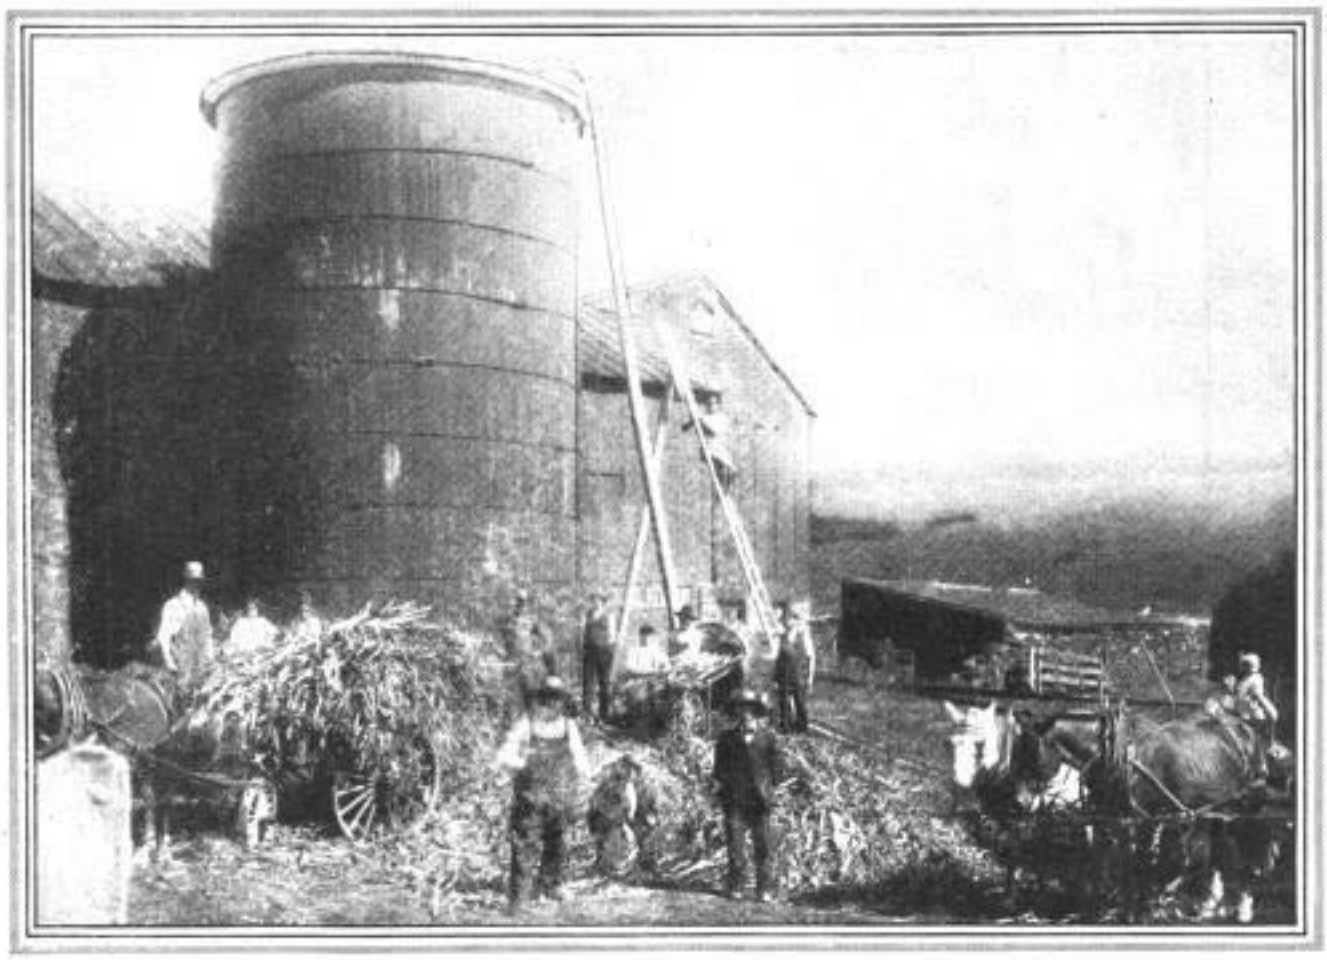
To carry this comparison just one degree further, when John Jones's wife falls sick, his bread is likely to go unbaked, his children untended, and his household uncared for. But Levy can send a hurry-up call to the Jewish Ladies' Auxiliary of his district, and the members flock in and keep the domestic wheels from getting clogged.

Here, in a nutshell, you have a striking and, perhaps, little-known contrast between the high price of individualism and the profit of cooperation in the activity which leads world industry and touches more people than all others combined.

What does it show? Simply this: that while our native farmers have gone a long way toward perfecting the science of farming, their Jewish brothers of the soil have developed the *business* of farming, thereby showing a practical path for the economic salvation of the man behind the plow.

Schooled to communal defense through generations of oppression, it was natural for them to turn to self-help as the agency toward a conserving end.

The net result is a cooperative machine that has solved, among many other helpful things, the whole pressing problem of rural credits so far as the small, short-time loan is concerned.



Here is the story of a picturesque emancipation from the thrall of those petty financial annoyances that have distracted the farmer, impeded his progress, and labeled him the most unbusinesslike of all our workers. Nor is it without the glamour of a certain romance, because the men who wrought it—refugees from Old-World tyranny—link the present with that other and far-away Jewish pastoral day when David dwelled amid his flocks on the hills of the Holy Land.

The Jew as a Farmer

THERE is no need of rehearsing here at length the succession of dramatic events that literally planted the Jewish husbandman in American soil. Bitter persecution drove him originally from his vine and fig tree to segregate in the congested city.

So, too, by a curious repetition of history did the same lash force him back to it on an alien but friendly shore.

The everyday American is hardly apt to associate the Jew with farming, save perhaps with a peddler's pack. The more familiar background of Hebraic movement is the hiving battle ground of trade. But, as a matter of fact, more than five thousand Israelites, scattered from North Dakota to Connecticut, attest to a conspicuous ability to make the good red earth produce with profit.

Refugees from Old-World tyranny link the present with that other and far-away Jewish pastoral day when David dwelled amid his flocks

Jewish agricultural activity in the United States was sporadic until the late eighties, when a great exodus from Russia forced the American coreligionists to devise some organized means of finding sanctuary for the refugees. Hence came the Baron de Hirsch Fund, whose scope covered every activity that would make the Jew self-supporting and self-respecting.

To locate the immigrant on the farm was part of this altruistic task. So readily did he adapt himself to the land—and, what was more important, stick to it in the face of all hardship—that the Jewish Agricultural and Industrial Aid Society was formed as an adjunct to the fund charged with the special work of encouraging and aiding the Jewish farmer. With its formation the whole Hebraic drama of rural cooperation, now to be unfolded, was made possible.

The society found the Jewish farmers living in struggling communities or as isolated individuals. Those who labored alone were doubly isolated, because they spoke a foreign tongue and were for the most part ignorant of the rudiments of farming. This made them the easy prey of the grasping and the unscrupulous.

Many needed money, and the first important function of the new organization was to make them loans at 4 per cent, secured by mortgages on their land or chattels.

Very early it was seen that if these farmers were to make permanent and definite progress they must be taught to work together.

The Man Who Could Help

ABOUT this time a keen-eyed, big-visioned man, Leonard Robinson by name, came to the society, first in a humble capacity and later as general manager.

I speak of him early in this narrative because, more than any other one man, he has helped to shape the cooperative destiny of the Jewish farmer in the United States.

Himself a Jew, he trod the thorny path of the persecuted immigrant. At fifteen he landed from the steerage in New York, alone and penniless. He worked his way through Harvard, studied law, and had served as teacher before he was called to the work for which he proved to be peculiarly fitted.

When he took hold the society was lending money at long range to Jewish farmers who, with few exceptions, were without training or adequate experience.

With swift perception he realized that what these men needed more than money was training. He set about making them efficient. But he did more than this, as you will later see.

The First Cooperative Step

HOW was he to reach quickly this scattered host of land toilers who only had two things in common, their ignorance and their knowledge of Yiddish? The best medium would be one that reached their hearthstones, so he founded the "Jewish Farmer," the first and only agricultural paper published in Yiddish in the world. An editor was found who seemed born for the job. He was Joseph Pincus, son of one of the pioneer Russian immigrant farmers in Connecticut, who had been graduated from the State agricultural school there and from the Jewish farm school at Woodbine, N. J. He made a fitting work fellow for Robinson, for he expanded from editor into an inspired missionary of the new agricultural order, bringing the word of science to the very doors of the backward.

Pincus said to the Jewish farmers: "Make our paper your forum. Tell me your troubles and I will try to help you." He translated Government reports so that the farmers could get the last word in Uncle Sam's investigations; he showed them by word and picture how to plant crops, fertilize their soil, manage their farms. Soon the farmers began to contribute: they asked questions; they told of their experiences. The message of print went home.

But Pincus did not stop here. He became an itinerant teacher, going from farm to farm, teaching always the gospel of the new farming. He aroused the desire for knowledge (the Jew is an innate thirster after fact), and he stirred their social consciousness. He asked the isolated farmers if they knew their neighbors. When they said they did not, he inquired the reason why.

"We are too busy working," they answered.

"But what would happen if you or your family got sick?" he would say. There was no reply. So his slogan became: "You must organize."

Initial Troubles and Failures

UNDER his direction the farmers of various sections got together and formed Jewish farmers' associations. They correspond to the Gentile farmers' institutes, but they developed into bigger economic proportions, for they formed the foundation on which a whole new epoch in the financing of the farmer has been created.

These associations had a stimulating effect, for they brought together exiles who had a common spiritual and material heritage and who were now joined in a kindred cause.

It was fertile soil in which to drop the rich seed of cooperative effort.

The next logical step was a union of all the associations (they now number sixty-two) into a Federation of Jewish Farmers. Here at last was a far-flung and united agency with which to consummate some of the dreams that beckoned before the vision of the transplanted Ghetto dreamers.

Digitized by Google

Though the Jewish farmers were now united, they wrestled with the troubles that naturally crowd thick upon the stranger working in a strange land. To begin with, many were literally "green." They had either left Russia at the bloody high tide of pogrom or had escaped from sweatshop to find health and comfort in the open country. Even if they had some knowledge of farming, they were at the mercy of the dealer who sold them seeds or implements.

Often, when the Jewish farmer went to the storekeeper and asked for credit, he would be met with the statement: "You are green and won't stay on the farm. I can't afford to trust you."

When he did get what he asked for it was often inferior. He got sand for fertilizer and trash for seeds. When they put this inferior stuff in the ground there was no harvest. Complaints began to pour into the "Jewish Farmer." Whereupon Pineus said: "What is the good of teaching these farmers how to farm if they do not get the right kind of materials to farm with?"

Credit

HENCE came the inspiration to form a central cooperative purchasing bureau for the benefit of the Jewish farmer. The main purpose was to make him independent of the trickery and the misrepresentation of the storekeeper, to enable him to have trade credit to meet his farm needs, and to get the best possible result out of his labors. Cooperation was to be given its first supreme test.

The bureau was organized on a definite business basis. A membership fee of $5 enables any Jewish farmer to buy his supplies through its assistance. When a farmer is unable to pay for a full share, a first installment of $1 is ample to make him eligible for benefits.

What is the result? If a farmer wants to buy a silo, a harrow, or an incubator, and the amount is more than he can spare, the association guarantees payment to the manufacturer, and the farmer can pay it off to the bureau on easy payments. In other words, the agricultural implement seller looks to the bureau rather than to the man for his money. The bureau sees that the purchaser does his part. If he wants reasonable extension, he gets it. So, too, with the purchase of seeds and fertilizer.

Pitfalls

NOW the important part of this procedure is that the farmer gets just what he wants, because the implement and the seed dealers cannot fool the experts of the bureau. The case of fertilizer—a common need—will illustrate the extent to which this Jewish buying has been standardized.

As I have already pointed out, the isolated Jewish farmer was often deceived about fertilizer. He had to take what the dealer gave him and be satisfied. Frequently it was of the poorest quality, entirely lacking in plant food.

The bureau, by careful investigation, has become agent for high-class fertilizers, and in order to be sure that its clients get what they buy, the material is packed in bags which bear the Jewish Federation stamp. On these sacks is printed in large letters the exact proportion of plant food in the fertilizer.

Nor is quality the only end gained. By shipping a group of farmers a carload of fertilizer they get it at wholesale prices and save in the transportation charge as well. It is estimated that the farmers have saved from 15 to 20 per cent by this cooperative buying of fertilizer alone.

Now take the all-important matter of seeds. A concrete illustration will show the way the bureau safeguards the farmer. A Jewish agriculturist near Syracuse bought 200 pounds of alfalfa seed through the central office at 16 cents a pound. As in all similar cases, the source of this seed supply had been carefully tested and found to be adequate. But the farmer was short fifty pounds, so he bought this supplemental amount at a local dealer at 18 cents. What happened? The seed that he bought through the bureau sprouted successfully, but not a blade came from the extra fifty pounds. If he had bought all his seed at home his crop would have been a failure.

Expert Knowledge Available

THE bureau also censors the purchasing of farm supplies, and by this stewardship has saved many a Jewish farmer from loss or failure. Here is a case in point: A farmer in New Jersey wrote in for enough seed to plant five acres of early tomatoes. Mr. Pineus wrote back asking if he had any hotbeds. The farmer replied expressing great surprise that hotbeds were needed. "A neighbor told me it would be a good thing to raise them," he added. The plain facts were that without expert advice this man would have gone ahead and wasted his time, his seeds, and the use of five acres for a product that, without adequate equipment, would never have appeared. It is needless to add that Mr. Pineus advised against this venture in early tomatoes. But he showed him how he could use the ground to profitable advantage.

The Farmer's Chief Problem

IN FACT, one of the functions of the bureau is to print, through the medium of the "Jewish Farmer," advice and counsel in planting. At regular intervals during the year appear the statements: "Now is the time to plant corn, or beans, or wheat." The Jewish farmer has come to look upon the bureau as his friend, philosopher, and guide. It has never failed him. You get some idea of the extent to which this work has developed when I say that last year it purchased $43,102 worth of material for the Hebrew agriculturist. Of this sum $20,000 was for fertilizer alone. More than $11,000 was spent for seeds.

But this system of cooperative purchasing, admirable as it is, did not supply one urgent need felt by Jewish and Gentile farmer alike. Stated in its simplest terms, this need was for some cheap and convenient form of rural credit which would place in the farmer's hands, and without delay, a sum of money with which to meet an emergency or fill some pressing want.

In the case of the Jewish farmer, this form of agricultural credit is of the utmost importance. With the approach of spring he is often at his wits' end to find the wherewithal for seeds, fertilizer, or general spring work. If he is delayed at this season he not only loses that time, but is handicapped for months to come. He may lose a work horse in the midst of the early plowing; a good cow may die just when her milk is in greatest demand; a payment on a mortgage is likely to come due. Even in buying through the central bureau a cash deposit is often required. How is the farmer to raise the money without loss of time or annoyance?

Emergency Money

UNDER ordinary circumstances the farmer—regardless of race or creed—has been forced to depend for his working capital on the none-too-ardent generosity of his neighbor, on the tolerance of his storekeeper, or, last and worst of all, upon the cupidity of the usurer.

Early in its efforts to finance the Jewish farmer, the Jewish Agricultural and Industrial Aid Society faced this need. But its loans were for long terms and secured by mortgage. Yet from all parts of the country came appeals for quick funds for working capital. Much as it desired to help the immigrant farmer, the society could not respond. It was too far from the source of want to make an investigation. Even if it did elect to look into the case, so much time would elapse that, before aid could be sent, it would be too late. Besides, the interests of the society prohibited the lending of money on personal credit.

The Solution

NATURALLY this situation disturbed a good many people, for it applied to all rural quarters. Statesmen and economists talked and investigated about it, but did nothing. But Leonard Robinson did some thinking and produced a remedy which not only gave the Jewish farmer a unique economic distinction, but established a precedent that is little short of historic.

As he pondered over the plight of the Jewish farmer in the matter of the small urgent loan, he asked this question: "Since the farmer has learned the value of cooperation in buying, why shouldn't he apply the same thing to borrowing?"

Mr. Robinson knew that Europe was full of cooperative credit banks, such as those operated under the well-known Raiffeisen system in Germany, by which the farmers syndicate their savings and lend to each other on character. Here was an idea to be translated into banking terms in America. He outlined a Credit Union along similar lines to be adopted by the Jewish farmers.

At first it was decried and discouraged. The familiar adverse argument against it was: "How can you make a solvent union out of a group of insolvent people?" But the European experience had proved the efficacy of the plan. After vainly waiting for two years for the cumbersome machinery of legislation to grind out relief for the oppressed farmer, Mr. Robinson decided to take the initiative. In 1911 he established the pioneer cooperative agricultural credit bank in this country under the auspices of the Jewish Agricultural and Industrial Aid Society. It was a voluntary, unincorporated organization that set a new mark for cooperation and blazed a fresh path for the farmer (Continued on page 30)

The Heart's Own Day

By MADISON CAWEIN

THIS is the heart's own day:
With dreaming eyes
Life seems to look away
Beyond the skies
Into some long-gone May—

A May that cannot die;
Amid whose hills
Youth's heart goes singing by
'Mid daffodils,
With Love the young and shy:

Love of the slender form
And elvish face,
Who with uplifted arm
Points to one place—
A place of old-time charm—

Where once May lilies grew
For Love to twine
With violets, white and blue,
And columbine
Of gold and crimson hue.

Gone is the long-ago—
Gone like the wind;
And Love we used to know
Sits dumb and blind,
With locks of winter snow.

And by him Memory
Sits sketching back
Into the Used-to-be,
In white and black,
One flower on his knee:

One rose, whose crimson gleams
Like Youth's own heart
And fills the day with dreams
And is a part
Of the old love it seems.

And touches into tints
Of Fairyland
This day, and makes a Prince
Of him whose hand
SHE holds—his Princess since.

WILSON AND MEXICO

THE criticism of President Wilson's Mexican policy which is set down on this page should not be confused with that other kind of criticism of which the end and purpose is intervention or some sort of war with Mexico. *This latter kind of criticism, which looks to intervention and hopes for it, is a very deplorable incident of current political discussion.* It comes partly from men and factions and newspapers that think war would be popular; partly from others who represent property interests in Mexico which they think would be helped by intervention; partly from others overeager to criticize anything that flows from a Democratic Administration. But the fear of being confused with these critics should not prevent free expression of a more disinterested criticism of President Wilson's Mexican policy. *This criticism is based precisely on the fear that our present Mexican policy will lead us ultimately into intervention.* War with Mexico or some other active use of our American troops is the logical end of our present attitude. This should be prevented. It should be prevented, if necessary, even by a certain amount of "backdown" on the Administration's part.

Of course, to say now what thoughtful observers generally acknowledge—that President Wilson's Mexican policy has been a mistake from the start—is a matter of hindsight. President Wilson, in adopting his Mexican policy, could have had the benefit of a wise statesman familiar with diplomacy and international law at the head of the State Department. He did not have this aid. It is only fair also to say that at the beginning of his Administration, at the time Wilson adopted his policy, men experienced in international law were shocked, and predicted the very muddle that has now come to pass. The Administration's foreign policy at the beginning could fairly be summed up in one sentence: "Huerta is an assassin, and I do not like assassins." Let us all admit that at the time most Americans praised this policy and were rather proud of it.

Morals—Private and Public

LET us be fair to Wilson. He refused recognition to Huerta because he believed Huerta was an assassin, and he wished to express his disapprobation of a government founded on assassination. To take this position was the highest kind of personal morals. But to act as if this were the whole of a foreign policy had drawbacks. It failed to take into account a multitude of considerations which trained diplomats would have remembered. In addition, it failed to take into account the special nation we are dealing with in this case, and the special moral standards of that nation—standards very different from our own. All Mexican politics is a matter of factions and leaders. Some of the rebels in the north call themselves Constitutionalists. This is a joke. There are about as many real Constitutionalists in Mexico as there are monarchists in the United States. Few persons in the United States, the Administration least of all, seem to realize the composition of Mexico. There are less than half a million whites, less than one in thirty. About a million and a half are of mixed breed; the remaining thirteen millions are Indians. What the United States most needs in Mexico is a government that will maintain order. The way to secure this would have been to give a guarded recognition to the man who had a government and an army and was maintaining order. That Huerta has been able to do so well under the appalling handicap of our disapproval shows what he could have done if we had recognized his as a government de facto.

Copyright 1914 by John T. McCutcheon

He Doesn't Understand the Language

McCutcheon, in the Chicago "Tribune"

The Cost of It

IT MUST be admitted that a year of Mr. Wilson's mistaken policy has cost some things that can never be recovered. Of course, if we should reverse it or modify it now, we might be able to avoid the intervention which is the logical end of such a policy. But, even so, a certain number of Americans have lost their lives in Mexico who would have been living to-day if Wilson had adopted a better policy. For the Mexicans themselves, civilization has been measurably set back by the turbulence which would have been restrained if Wilson had dealt differently with the de facto government which he found there when he came into office. Most serious of all, we have forfeited the confidence of Latin America as far south as Cape Horn to such a degree that we shall not be able to win it back until another generation grows up. They have seen us adopt toward Mexico a policy of which the logical end, to persons who know the situation, is intervention. Can they be blamed for suspecting—what is in fact preposterously untrue—that the policy was adopted in order to bring about intervention?

Patriotism

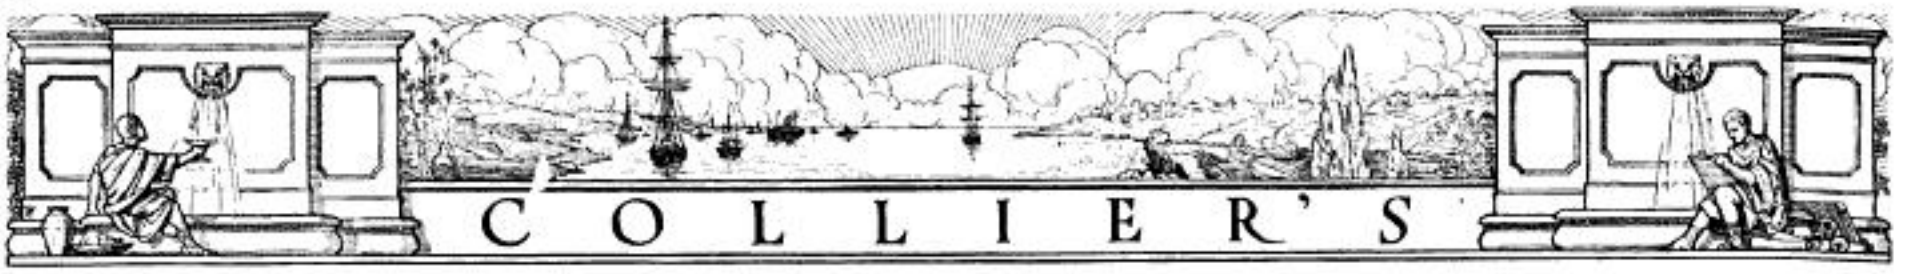
THERE have been few things finer in recent American politics than the manner in which two standpat Republicans, Senator Lodge and Senator Root, uphold the President's foreign policy. They are both men of high skill and experience in international law and in diplomacy. Necessarily they know that during the past year the conduct of our foreign relations under Secretary Bryan has been pretty deplorable, but they never criticize it. More than that, when other Senators, less restrained, attempt to criticize, Mr. Lodge and Mr. Root hasten to the defense of the Administration. Such a bearing must rest only on the highest sense of patriotism. The same obligation to be patient with the Administration and support it rests in equal degree upon all thoughtful commentators.

Mr. Bryan and Mr. Moore

THERE can be no doubt that the resignation of John Bassett Moore, counselor of the Department of State, has called public attention to a situation in our State Department which has been less pleasant than any other aspect of the Administration. Close observers at Washington have known for a long time that our foreign affairs are not well conducted; that too many of our diplomatic appointments have been personal and political, and that the machinery within the State Department has been very badly run. The resignation of Mr. Moore has merely called public attention to it. In such an office as Secretary of State no amount of good will or high purpose can take the place of intelligence. Moreover, nothing can excuse the partisan and personal character of some of Mr. Bryan's appointments.

Simple Honesty

THE clause in our treaty with England covering the building of the Panama Canal reads as follows:



> The canal shall be free and open to the vessels of commerce and war of all nations on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise.

The clause in the law we passed concerning tolls in the Panama Canal reads as follows:

> No tolls shall be levied upon vessels in the coastwise trade of the United States.

Any person able to understand the English language who reads these two clauses and then refuses to admit that we are in the wrong proclaims thereby his own personal moral status. No statesman was ever on stronger ground than Wilson is in the matter of canal tolls.

The Basic Service of Railroading

ONE OF THE MOST IMPRESSIVE SIGHTS of our time is that from a wagon bridge over a four-track railroad. You may be a day's walk from the nearest city, but the fact of the city's existence is plain in the endless movement of goods and people. It is plain also that the railroad is not so much a business as a gigantic underlying service. This service moves human beings and things from place to place. We get used to it, depend on it, and in time come to shape our actions very largely by what the service makes possible. It follows that the cost of this transportation becomes embedded in thousands and thousands of prices. It is desirable, therefore, that its cost to others be stable, so that passengers and shippers can be sure of their plans. Furthermore, the railroad must be made to feel that success depends on doing a good job rather than on taking advantage of the public's necessities. Mr. BRANDEIS has given this point the clearest and most dramatic of statements in his famous aphorism about the "Million Dollars a Day" which efficiency ought to save for the railroads. Our whole accepted policy of regulation and public control hangs upon these facts. The public must have real power over rates and capitalization, over dividends, and over purchases of other lines and utilities, or else the monopoly power of the railroad will be used in many cases for private gain and to the disadvantage of the community. There have been too many instances of this.

What Do We Want?

IT IS NOT A MATTER OF BARGAINING with an independent power. It is a matter of deciding what we want to get out of a certain service. These railroad corporations are creatures of the State, and most of them realize it very clearly nowadays. It is the economic facts that are obdurate, and it is our own social purpose that is vague. Do we want to use the railroads so as to accentuate and emphasize the present dominance of the Atlantic Seaboard in the business life of this country? Or do we want to use the railroads so as to get a spreading of population and industry over our entire area? What towns and regions should be given a comparative advantage when rates are readjusted? There is no benefit to be had from merely throwing a bone in the shape of higher rates to those who own the railroads as property. What we must do is to strengthen and extend the railroads as a gigantic fundamental service, no matter how owned. This is the only control worth while, and to accomplish it will require the handling of the problem from the broadest standpoint of constructive industrial statesmanship. It will not be done by figuring dividends and costs. We must have a national plan. What, in the long run, do the American people want from their railroads?

The Selling of Drugs

A FIRM OF RETAIL DRUGGISTS in New York prints this advertisement:

RIKER AND HEGEMAN DRUG STORES DO NOT SELL

Narcotic Poisons or Habit-Forming Drugs, excepting upon the written prescription of a registered physician. We are in advance of all laws that pertain to the safety of the purchasing public. We believe that Cocaine, Morphine, Opium, Laudanum, Codeine, Heroin, Chloral Hydrate, and other Narcotic Poisons should be used only . . . by the advice of your Doctor, and we do not sell them otherwise. . . .

We notify our sales people in every store that this rule must be rigidly enforced.

The family Doctor is our authority in these matters, and we must have his written and signed Prescription before dispensing anything of this nature.

We take off our hat to these druggists both for their policy and their business acumen, and hereby give them this advertisement for nothing. It is a bitter commentary on our laws that the druggist himself (if he is shrewd) can volunteer such an announcement. The law has piteously left this to his discretion. Even in Mantua—that is to say, in SHAKESPEARE'S day—ROMEO'S "wondrous needy" apothecary announced:

> Such mortal drugs I have; but Mantua's law
> Is death to any he that utters them.

The law at all events was sound, though ROMEO got the drugs—by means of that gold that is

> Doing more murders in this loathsome world,
> Than these poor compounds that thou mayst not sell.

The druggists of to-day, many of them, have no more character than the wondrous needy man of Mantua, upon whose back contempt and beggary hung.

We Are "Materialists"

SOME ONE COMPLAINS that our editorial "The Cost of Intervention" is materialistic, because it figures in money and men the tax a Mexican war would entail. We are, then, materialists, since "idealism" means the sacrifice of 260,000 of our fellow countrymen. On one condition, however, we are prepared to welcome armed intervention. We unreservedly declare for it provided the army of occupation be made up of American and British oil magnates and mine owners—excluding neither Standard Oil nor the PEARSONS. Notice, however, that we say "magnates" and "owners"—not employees. These forces should form three great army corps—led, respectively, by the Hon. BOIES PENROSE of Pennsylvania, the Hon. ALBERT B. FALL of New Mexico, and the Hon. WILLIAM RANDOLPH HEARST—all three on the firing line. One trouble with the wars that have been fought in the past is that the heaviest price has not been paid by the interested magnates and mine owners. It has been the employees who paid.

Victories of Peace

MOLE TEQUOP ("the man who talks with his hands") has a record of victory extending over thirty-five years. In the early spring of 1878, as a Second Lieutenant fresh from West Point, he overcame the Cheyennes in the Black Hills. The Crows were conquered at Mizpah Creek the same year. Other encounters, all uniformly successful, were with GERONIMO'S Apaches, with the Navajos and Utes of the Four Corners country, the Hopis beyond the Painted Desert, the Moros of Sulu in the Philippines, and, more recently, with the Navajos on the Beautiful Mountain. The names are sufficiently romantic. The Government saved a lot of powder on these "battles," for not a shot was fired. At most of them no troops were present. Success came because General HUGH L. SCOTT (that is his real name) prefers to know and study people in place of shooting them. He found out the feelings and grievances of the Indians, and dealt with them in honesty and fairness. The results were honorable, permanent, and inexpensive. Can we say as much for war after some four thousand years of recorded experience with it? War is merely the deadly and extravagant purchase of fear. Why not train a few disciples of General SCOTT for our diplomatic service? Unless this is done, it may some day be the epitaph of our modern civilization that it used civilized methods in dealing with the savages and savage methods in dealing with the civilized.

And Speaking of Hens

WE SANG THE HEN only the other day as an economic force and productive agent. But perhaps we didn't do her quite justice as an intellectual Titan. Our attention has been caught by a scientific and intellectual hen—really intellectual, not merely highbrow, like the hens at the afternoon tea in "Chantecler." This hen has a knowledge of physics. What is more, she applies it. Listen. The shed which she made her headquarters was warm and cozy. Thus she had no reason to worry about the temperature. But one day, when her owner was going off to church, this hen was locked out. Shut off from her well-heated quarters, she was forced to deposit an egg in a convenient snowdrift, where her owner happened to find it on his return. Naturally he supposed it to be frozen. Yet such was not the case. Investigating, he discovered that that hen *had laid an egg with a double shell having a vacuum between the inner and outer layers.* The hen had sized up the problem and solved it by the means used in every vacuum bottle to husband heat or cold. We take our hat off to this hen. She is entitled to a Ph. D. in physics. And we know the tale must be true, for (*a*) there are no snowdrifts in the silly season, and (*b*) it happened neither in New Jersey nor yet on Long Island.

The Higher English

THE UNIVERSITY OF OREGON has a school of journalism, and an Eastern professor to teach it. The students of the university publish a paper, the "Oregon Emerald," from which we get this gem concerning certain changes at the University of Washington:

"Not only was hazing done away with, but the push-ball contest, the annual tie-ups, and all class scraps were abolished from the university in order that the new student council may start its work with a clean slate," declared the professor. These customs may be reinstituted, according to the faculty, but they will be done by the student council, and will if they are.

No wonder some old fogies have been invoking the referendum on the university's appropriation. The professors ought to polish that "Emerald."

From St. James's to Broadway

THE EVER-RESPECTABLE New York "Evening Post" cites in a recent book review:

> The command laid on the dramatist, CRONE, to write a masque for the young Stuart princesses in the form of "a clean, decent, and inoffensive play on the story of a rape."

This was some 225 years ago or more, but what a market CRONE would have in our latter-day books and plays and movies! And how they have democratized the "literature" of royalty!

Street and Morgan

DESPITE OUR HOPES AND EFFORT, JULIAN STREET and WALLACE MORGAN will not be able on their present tour to visit the South. But may we say to our friends there that we are already planning for a second tour that is certain to include them? This undertaking has been something of an eye opener to us. The invitations are still pouring in by the hundreds. We are proud of our popularity—humble in the thought of our deserts.

Fashion Note

MR. C. W. DELYON NICHOLLS, authority on etiquette and fashion, and Governor General of the Society of Colonial Cavaliers, announces that his society is opposed to woman suffrage. Somehow we should just naturally suppose as much—even if he hadn't called attention to it.

Laughter

A CORRESPONDENT of the "Saturday Review" holds laughter to be "always vulgar and offensive." With thoroughgoing British disapproval, he quotes the stanza:

> Let us have wine and women,
> Mirth and laughter;
> Lemonade and soda water
> The day after.

"Laughter is profane, in fact, where it is not ridiculous," is the absurd conclusion. Just as if wine were the only laughter maker! Mirth may be ribald, cruel, profane; just as children may be heartless young savages. Laughter is a purifier. If the empty laugh declares the vacant mind, the laugh of resonance bespeaks the man of health. There is as much difference between the laugh which is only a noisy discord and the laugh which is an explosion of the comic spirit as there is between a barroom joke and a comedy by MOLIÈRE. In our modern sophistication too few of us know how to laugh at all. We can only grin, giggle, or snicker. A hearty laugh does the body good, and what is really good for the body is generally good for the soul too. "He who laughs," said GOETHE'S mother, "can commit no deadly sin."

One Woman's Wit

VERY CLEVER PERSONS put together the magazine called "Current Opinion," but they show a quaint lack of literary understanding when they head an article about JANE AUSTEN: "Is the Greatest Humorist in English Literature a Woman?" Of course they must know better. JANE AUSTEN is, if you like, the most charming of British humorists, in some ways the most delightful commentator and dialogist of *all* writers in English—but she herself would have been the first to cry out: "Greatest nothing!" In her pages, as one reads in "Current Opinion" itself, "the seven deadly sins fade into one—ill taste." JANE AUSTEN is not to be measured in greatness, but in consummate, delicious, and quite perfect littleness. Those who echo MACAULAY'S comparison of her characters and SHAKESPEARE'S generally miss the point of the British essayist's remarks. Hers is the "Little Theatre"; her characters, most of them conventional to a degree, are nicely little in proportion. In the novel of JANE AUSTEN religion is represented by formalism; passion by cordiality; every great emotion by its diminutive. Do we regret the lack of the reforming instinct in JANE AUSTEN? Not in the least. This author's place is unique. She understood the country gentry of her times as no one else who wrote understood them; and people of to-day, too, can find themselves reflected in the mirrors of "Pride and Prejudice," and "Emma," and "Sense and Sensibility." Yet it is absurd to use the word "greatest" or "great" or "greatness" in discussing the creator of ELIZABETH BENNET. Literary distinction she has, this kindly satirist of men and manners and the marriage market; delight she brings to the fireside reader, but greatness—would you speak of the greatness of a miniature or the greatness of a Pekingese?

"The Lethargic Public"

TO OUR MIND the one sure mark of a tuppenny critic or "pote" is this talk about "the lethargic public," which means in plain words: "These people are dull and mean since they do not listen to *me*." We doubt it. There never was a time in the whole recorded history of the world when so many were reading, thinking, alert, and responsive to new ideas as now in this year 1914. Some of our most characteristic practices in business and politics are coming to be founded on this fact. But the world cannot listen to every mouse squeak of egoism. There isn't time.

Safety

FRANCE'S leading tourist aviator, M. CHAMPEL, has been carrying passengers from Port Aviation for some three years. He has taken up 1,772 different persons in that time—once 52 in one day—without an accident. Here is an incident in the history of civilization which many of us read without being stirred, while we get thrills out of reading something much less striking in GIBBON'S "Decline and Fall of the Roman Empire."

The Coming of Spring

JOHN BURROUGHS is seventy-seven years old, God bless him, but when a man has passed seventy-five the years don't really signify. One is grateful to JOHN BURROUGHS for a great many things; one of them is the wholly unaffected love for nature and his fellow men that he has proved during all these years. Opening one of his books the other day (it happened to be called "A Year in the Fields") we found it asking the question: "From what fact or event shall one really date the beginning of spring?" And then one finds the answer:

> The little piping frog usually furnishes a good starting point. One spring I heard the first note on the 6th of April; the next on the 27th of February; but, in reality, the latter season was only two weeks earlier than the former. When the bees carry in their first pollen, one would think spring had come. Yet this fact does not always correspond with the real stage of the season. Before there is any bloom anywhere, bees will bring pollen to the hive. Where do they get it?

The coming of spring is indicated to us in more ways than one—in city or country. For instance, there is that yearning we have to cut loose and desert the ship of state and the markets and the magazine office and to spend our days afield. Sometimes we yield to that instinct—and break off in what is really only the middle of the editorial paragraph.

The Why of Immorality

EVERY SO OFTEN some person with an unoccupied mind rises up to argue whether dancing, drink, cards, or what not is "the greatest cause of sin." This is the old excuse of the scapegoat, the old refusal to see that every mature human being is a responsible chooser of good or evil. To all these evasionists we can only recommend this saying, attributed to the Founder of the Christian religion:

> For from within, out of the heart of men, proceed evil thoughts, adulteries, fornications, murders.

Manners and Marriage

ONE OF THE MORE UNRELIABLE New York morning papers quotes this observation:

> "At least three nights a week," says a European suffragist, "a husband ought to utterly forget that he is married, throw aside every thought of domesticity, and go forth to battle with his fellows for another woman's smile."

Very likely nobody ever did say just this, but it is sap-headed enough to have emanated from the feminist fanatics, and it does make indirectly a very important point. One of the worst things about family life is the way in which people get to take things for granted, to presume and impose on the kindness of those who should be nearest and dearest to them. Suppose we really felt all the time that we had to try for the favor of those we care about? Getting married even does not give anyone a permanent tenure of the other person's good will. It is a stock incident in our fiction that relatives are apt to be on terms of ill will and suspicion. They may never have engaged in active hostilities, but they have bumped and rubbed one another sore: their present relations are the logical result of hundreds of small acts of rudeness, selfishness, and neglect. What they need above all else is an intensive politeness, a strict observance of one's manners *within* the family circle. Why should not the married man battle for his own wife's smile "at least three nights a week"?

World's-End

Chapter XVII
The Guilt of Queen Guinevere

By Amélie Rives
(Princess Troubetzkoy)

ILLUSTRATED BY ALONZO KIMBALL

A WEEK after Richard's departure Owen took Dempsey to join her chaperon at Hot Springs, and Mr. Nelson and Aunt Charlotte returned to Nelson's Gift.

"We three lone women roam about this house 'like mice in a cathedral'—as Sir Oliver Lodge says that electrons do in atoms," remarked Mary, as the last carriageful of guests drove off. She slipped her arm about Phœbe, who was standing on the lowest front step, where she had gone to give her father a last good-by kiss. "Poor little grass widow," she said, "you mustn't look so forlorn. What can we do, Sally, to cheer her up?"

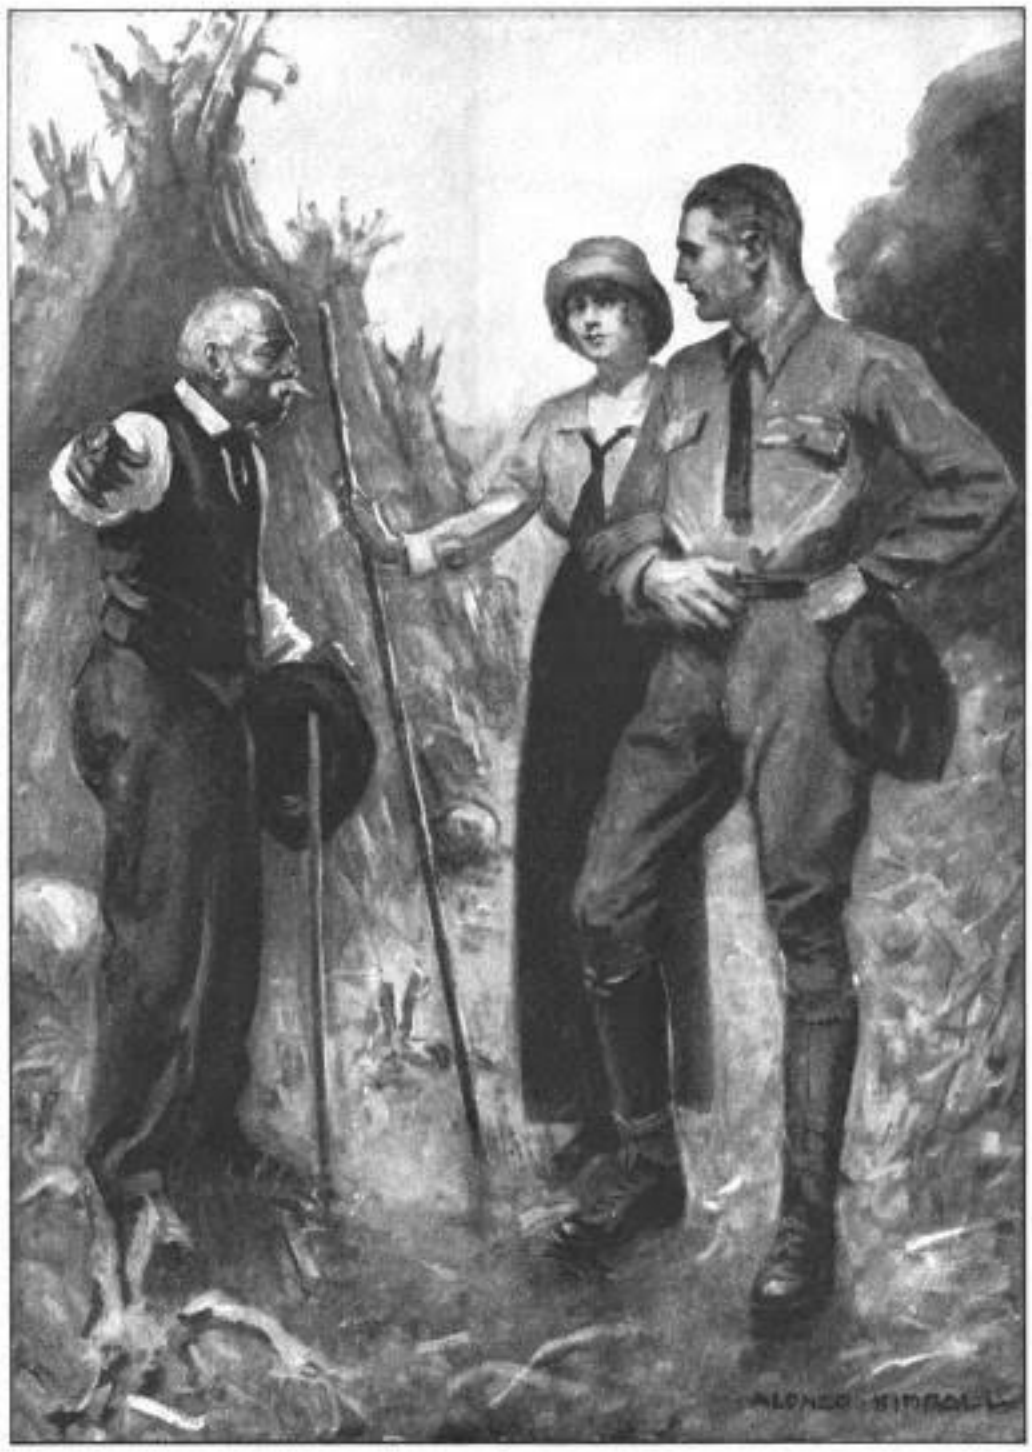
"I'm a rather broken reed for cheerfulness myself," said Sally dryly. "I am going to the last resource—duty—for comfort: to write some letters that I've long neglected." And she ran off to her own room.

"What shall we do, mouse?" said Mary, feeling a little vexed with Sally. She thought that Phœbe looked very pale, and she didn't like those purplish shadows under her eyes. She was beginning to think that Phœbe's persistent idea of Sally's dislike for her was not all imaginary. "Shall we walk, or ride, or have a game of tennis?"

"You're *so* sweet to me, Cousin Mary," said Phœbe in her old, girlish way, leaning her cheek against Mary's arm. "But I feel so tired somehow to-day. If you don't mind, I think I'll just go and lie down in my own room for a little while."

And she, too, slipped off.

Mary stood, looking after her, and determined to advise Owen as soon as he returned to ask Charles Patton to have a look at Phœbe. "The child's dreadfully run down," she thought. "She's such a sensitive thing, though—I wonder if Sally's attitude toward her has anything to do with it? What a dreadfully complex thing 'family life' is!"



PHŒBE, lying listlessly on the lounge in her bedroom with the little lace pillow pressed against her cheek, was gazing absently at the gray, flower-filled cornucopias on the old carpet, and wondering how often she would be called on to bear the horror of Richard's presence—whether, indeed, she could bear it more without going out of her mind.

It seemed to her that her head had felt very queer and empty ever since he had come. All the past joy lay on her heart like the withered leaves on the autumn paths outside. Only there was no gardener in her heart to sweep away these leaves. And she seemed to see her heart, a little feverish red ball wrapped in moldering leaves. She turned over and brushed the hair from her face, holding it back with both hands, and staring up now at the ceiling. One, two, three—four flies. She thought all the flies died on some mysterious date in October. How had these come there? Probably the warmth of the wood fire had brought them to life again. She counted them over, then back again—now straight across, now diagonally.

"How stupid my mind is!" she thought. "It's so tired, yet it goes working over a silly thing like counting flies. Now, if I told him—if I got him to come here in this room—all alone—the moment he comes back—and told him everything—how would that be? It might be better than this feeling I have all the time now—all the time—even in dreams. Yes—suppose he turned me out of the house—the poor baby and me—at least I would feel honest. This horrible, slimy feeling of hypocrisy would be gone. But then—"

"Well—you see," she said aloud, as if addressing some one, "I would so much rather be dead than be without his love." The sound of her own voice speaking in the empty room gave her a scared feeling, and, strange to say, a feeling of the room's not being empty but filled with some silent, inimical presence. "It's as if we were never really alone," she thought, her heart beating faster. "As if there were—witnesses."

She turned over again, and again fell to staring at the gray cornucopias. What would he say if I told him? And suddenly her ears seemed ringing with vile epithets uttered in Owen's voice. She lay quite still, her heart beating faster and faster. She imagined him looking at her with a hard, jeering stare, cool as glass. She even imagined him striking her!

"Yes, suh, Marse Owen, dat's sho' Logan's tree. My gran'paw is ben tend' on yo' gran'paw whilst he wuz confabulatin' wid ole Logan hisse'f onder dat ve'y tree"

"Then what would I do? I would get down close to his feet like a dog—and kiss them—and perhaps he would kick me. No, no! I am going crazy!—I'm not thinking my own thoughts—something, *not me*—is thinking them in me. It's that thing that's in this room—watching me—hating me—"

SHE spoke aloud again before she knew it, sitting up and holding back her hair from her hot forehead with both hands.

"Well—you see," she said, as though addressing that invisible thing, "the wages of sin is death. But suppose death doesn't come? What pays sin, then?"

Her voice did not startle her this time. "What pays sin, then?" she repeated, frowning and looking at the wall before her, as though she expected an answer. She waited a moment and then said, still aloud:

"If death doesn't come, one can go after it and fetch it and pay oneself—yes, that must be the way. Is it the way?"

She waited again as if for the answer. It seemed to come from somewhere, for she lay down again with a heavy sigh, murmuring:

"Yes—of course—that's it. But it's very difficult to find death. It sounds easy in books—but really it's very—very difficult."

Here some one softly opened the door (she had forgotten to lock it), and Mary slipped in with a little tray on which was a glass of sherry and bitters and some delicate sandwiches.

Phœbe lay looking at her, still with the little pillow doubled against her cheek.

"I couldn't—I couldn't, Cousin Mary," she began murmuring, shivering with repulsion. But Mary came and knelt beside her, speaking with quiet determination. She knew the master key to Phœbe's will.

"Listen, dear," she said, "do you want to meet Owen when he comes back to-morrow, looking like a blue-and white ghost? Do you want to be sent to some horrid place for your health, with domineering nurses bullying you from morning till night? Very well then—take what I've brought at once. I've been watching you. Owen asked me to. You haven't eaten a morsel, that *I've* seen, for nearly two days. Come, Phœbe—I assure you that Owen and Charles Patton, between them, will certainly pack you off to a sanatorium if they find you looking like this."

PHŒBE swallowed all the wine and ate a sandwich and a half with perfect meekness. Then she suddenly rebelled and pushed the plate from her with petulant disgust. "Not another mouthful—not if they sent me to prison," she said, half sobbing, half laughing.

Mary put down the plate, and, sitting down on the sofa, drew her into her arms as though she had been a baby.

"There—there—there," she said, rocking her gently. "Do you know, Phœbe, I believe all this is more mental than physical. I believe you've got something preying on your mind. Yes—I believe I know your secret, you little ostrich—*Phœbe!*" she called the next instant. The girl hung limp in her arms. She had fainted dead away.

Dreadfully frightened, Mary laid her flat on the sofa and rang for America on her way to the washstand for a wet towel.

Then as she knelt by her, trying to restore her, she thought suddenly:

"I wonder—I wonder if it could be—*that*."

But by "that" Mary only meant that she wondered if Phœbe might perhaps be going to bear Owen a son.

AS SOON as he saw her on his return from the Hot Springs next evening, Owen was struck by the sudden change in Phœbe, just as Mary had been the day before. It was as if some deep-seated inner illness had suddenly sent its painful signal into her pale face and heavy eyes. But when Mary spoke of this to him, and asked if he did not mean to have Dr. Patton see her at once, he said no, that he thought Patton was not needed just now, and this confirmed Mary in her own secret thought of yesterday.

Owen, standing alone over his study fire, mused deeply and painfully. Some way must be found out of this impasse. He could not leave her to sit alone in the dark jail of her thoughts, like the poor wretch in Poe's story on whom the walls closed inch by inch every day. Yet how—how? In some way—by some means he must manage to impart more clearly to her his views on certain questions—on the general question of sin and the forgiveness of sin. In a general way she knew his opinions on that subject—knew that he held no narrow, harsh views of women whom the world called "disgraced" or "lost"; but from the very closeness of the subject to her own piteous case he had never ventured to speak more than casually on such topics. Now the time had come when it would be a kind cruelty to wound her by direct allusions to instances of a like nature, and by so doing clearly and emphatically to make known to her his own attitude toward them. Yes, he must make her see

Digitized by Google

once and for all that in his innermost thought it was by bad faith she had chiefly wronged him—not by a fault committed before she loved him, but by her silence in regard to that fault—her lack of truth with him. He felt sure that once he had expressed himself fully, clearly, strongly in the matter, she would speak out as he knew that she longed to, and her heart would be freed from the load which now seemed eating into it like a cancerous tumor, that, long torpid, has suddenly, under some hidden stimulus, renewed its deadly florescence. She would see how, when he knew all, he could still love and honor her for all that was loveworthy and honorable in her, clean forgiving and forgetting the wrong that she had wiped out by confession. She must realize that he was one who left the dead past to bury its dead—and that in his view the woman who has yielded unwisely to love has not by that one act shut herself out from all other love and the respect of those who obey a larger commandment than that written on the tables of the pharisaical.

AH, how well he understands how it all happened with her—poor child, so young, so undisciplined—not half sensing where codes and conventions are weak and where strong; then slowly, as we all win our souls, coming little by little to the knowledge from within as well as from without, that bad faith is at bottom the crime, the core of all crime. How well he divined the sense of cowardly hypocrisy that was gnawing her—the remorse for the lie that she had acted to him—and the fear, the dark, dreadful fear that were she to tell him now he would turn from her with scorn and loathing.

"If I can't ease that sweet heart of hers, and bring her to confide in me wholly—I'm no man, but a straw image," he thought grimly.

THE next day was clear and mild, though the blue haze had increased till the mountains looked like scenery in a dream.

"Let's go wandering, dear," said Owen to Phœbe, as they stood in the south portico after luncheon, watching the gardeners raking up the short grass from the lawns which had just been shaven. "You won't even need a hat—just put on boots and gaiters so that we can go into thickets and 'brier patches' if we like—and then let's explore the whole farm."

"Oh, I'd *love* to!" said Phœbe, a timid joy stealing into her shadowed eyes. "It always makes me happy to go over the farm with you."

She ran off and was back in ten minutes in a short skirt and stout little boots and shooting gaiters.

"We'll take in the stables on our way out," said Owen; "I want to have a look at that foreleg of Paternoster's."

He took some apples from a basket on one of the hall tables, and they went across the western lawn toward the stables.

THE mellow October sun flooded the world, softly, clearly, like a great, golden sea whose bed was the arable soil tilled by little mortals. Against the vague blue hills and distances the autumn woods hung like an arras of lovely faded tapestry, with now and then the more vivid accent of some frost-reddened tree spreading the great posy of its branches against the vaporous azure.

On every side man, tiller of the soil, was at his labors. Here the great fields of maize, their tassels twelve to fifteen feet above the dark red earth, were beginning to go down beneath the gray blades of the corn knives; there, a spike team—two milk-white Clydesdales and a gray—plodded soberly, slanting forward in the strain of plowing—along the shoulder of a hill where wheat had been harvested in June. The rich, share-sleeked clods—violet brown in this fat "bottom" fell, slowly turning like a sluggish, heavy wave in the wake of the plow. And that freshest, sweetest, most mysterious of all fragrances, the scent of newly broken earth, floated dank and cool into the sunlit air.

HIGH in the dreamy sky a buzzard—ignoblest of birds, noblest of aeronauts—sailed on moveless wings as though dozing, in its assured, contemptuous flight above a world that creeps and clambers.

And softly, rhythmically, like the beating of the day's heart under its blue gauzes, the regular "rap-rap, rap-rap" of the apple packers' hammers sounded from the distant orchards.

As they stood on the flight of stone steps sunk in the turf near the box hedge that divided the western lawn from the paddocks they could see the little Green-Flower, stained (*Continued on page 26*)

The American Savage

By Edith Orr

ILLUSTRATED BY WALLACE MORGAN

NONE of the other Americans at the Prince de Galles knew Mr. Frank Connor of New York City.

We told our French and English friends that he was not the kind of American we were in the habit of meeting. We said it frequently and passionately; for the longer an expatriate remains away from home the more firm and uncompromising is he as to what a "nice" American must not be.

Our French and English friends listened to us politely and went away to speak of Mr. Connor not merely as an American, but as "*the* American."

Some of us grew heated, as tales of his exploits got about, and descended from phrases of lofty contempt to terms quite unpleasant and unmistakable, as "bounder," "sweep," and "apache."

It was rumored that he was a professional gambler; and that his knowledge of chances had enabled him to break the bank across the bay. Certainly he had broken it, for he boasted of the adventure and others had seen him in the act.

The hotel was full of Russians of a more or less doubtful cast, and Connor was constantly to be seen with them. It was said that he was teaching them our national game of poker and had won from them fabulous sums.

He used to swagger every night into the café of the Casino, seat himself at one of the little drab iron tables, and, if the waiters were not immediately attentive, beat upon it with his big right fist.

HIS clothes were the evening clothes of civilization; the difference was in the way he wore them. His hands played about impatient of the restraining cuff; his neck jerked fiercely against the collar; his shirt bosom creaked. He had a tremendous jaw, a challenging eye, and a shock of thick, black hair. When he walked or moved his right shoulder went first.

"Bring me a silver fizz," he would say in a lordly and contemptuous tone.

And when a waiter mournfully thought that they had not a silver fizz, he would want a gin rickey, and when the gin rickey was not forthcoming and Scotch or rye was suggested, he would wearily command the one or the other and look about for sympathy at being stranded in a benighted land. If the waiter was not quick enough he would ask what was the matter with him and had he the sleeping sickness.

MY COMPATRIOTS said no one ever acted like that at home; but sometimes it seemed to me that I had not been so refined before I left America. Anyway it was not long before I was the only American at the Prince de Galles who knew Connor.

He was "with" a firm in New York, and had been sent abroad to buy goods. Having accomplished in two weeks what was expected to take a month, he was treating himself to a holiday. Connor was quite frank in his general condemnation of the whole continent. He objected to the absence of anything you could really call breakfast and the invariable presence of diplomat pudding at dinner. He considered the business methods of Europe antiquated and pictured the whole Old World slumbering on in happy and ridiculous obsolescence.

HE HAD been particularly disappointed in the gambling arrangements of Europe, to which he had looked forward, I gathered, as to some new enchantment of the senses.

He had expected scenes of lurid abandonment; beautiful women laughing feverishly as they swept into their laps great piles of gold and notes, desperate characters watching the last Napoleon fade away and going out to shoot themselves. He himself had accomplished the great adventure, and it had left him cold and unsatisfied.

"I broke the bank. Sure I broke the bank. But it took me a week to do it, and all the good it did was to put one table out of business, while I ambled over to the next and lost the last red I'd made."

I mentioned the game of poker. Connor grinned. I was on the right track here. He admitted he had a regular class in poker, including one Belgian count, a French prince, a German baron, and Russians uncountable.

Digitized by Google

He blurted it out—the fatal truth. "What do you know about this? The old lady asked me what my intentions were "

"Show a man with a handle to his name a legitimate business proposition and he'll act like it was the cholera; show him a phony game of chance and he'll buck it every time. And not men only, mind you. Inside of three days, if you'll believe me, I had a lady sending me messages and begging to be let in!"

"Did you let her in?"

"No, it wasn't the place for a woman, not even a Russian. She was a Russian, a Russian princess. I got up a little quiet game with her, her nephew, and an old sport they call the General."

"What's her name?"

"I don't know what her regular name is. They just call her Tatiana Alexandrovna when they speak to her. I don't know *what* to call her myself."

"Good loser?"

"Fine. Seems to like to lose. She's a queer old party—and a *princess* too, mind you!"

THE old Princess Tatiana Alexandrovna—known in French simply as Mme. Makaroff—was a familiar sight to all frequenters of the Casino. She came every year before the season had really dawned and left only when the plane trees had come into leaf. It was currently rumored that she brought with her always 50,000 francs in gold, which, with careful husbanding, saw her through the season. The rest of the year she spent on her country estate far from Petersburg, where, in pitiful economies, she made up for the ravages of the past year and prepared for the glories of the next. She was old and fat and her face was pear-shaped, like that of Louis Philippe or a Chinese idol, and day after day she was the first at her favorite roulette table and the last to leave. She always sat at the right of the croupier, just in front of Rouge, her white jeweled old hands crossed behind her piles of gold and silver.

She had a last remaining daughter, or rather stepdaughter, with her that year. Her own daughters she had succeeded in marrying off years before. She had a dame de compagnie for the young girl, who was never seen in the Casino, and very seldom with Mme. Makaroff at all.

CONNOR accosted me one morning and asked me if I were going to the ball at the Cercle Nautique that night. Some one had sent me a card, but the doubtful glories of a club ball had not fired my imagination.

"Come on," urged Connor mysteriously.

"You going?"

"Sure. Taking a lady friend. Come on. *I'll introduce you to her.*"

Something in the words or his manner piqued my curiosity. I went. The cotillion was at its height when I entered the ballroom.

Connor, his mighty arms flung high in air, came sliding the length of the polished floor, while all in his path scattered to cover.

The favor for that figure, a rope of flowers, he curled like a reata in spirals about his head. Coming abreast of the hapless chosen one, he shot it out to fall about her shoulders. Her he straightway grasped and whirled into the maze in a step reminiscent of the café dance of that season.

I thought I might have to save him from lynching; but Connor was the hit of the evening.

"He is amazing, splendid, that big savage there."

"They are all like that, the Americans."

His neighbors shrugged their shoulders and looked approvingly after the wild American, as if applauding a new and eccentric vaudeville turn.

As Connor passed on in the dance he favored me over the head of his partner with a long, slow contortion of the face, beginning at the left eye and traveling downward. So I understood that his partner of the moment was the "lady friend."

With the next revolution I saw her face. It was a surprising face. She was a girl, almost a child, slight, fair, exquisite. She had yellow hair, a skin like milk, and slanting Tartar eyes. Her frock was perfection in simplicity. She had an indefinable, untouched, hothouse look that went very badly indeed with Connor and a ball at the Cercle Nautique.

Connor swaggered up to me when the figure was over.

"Some class to that little girl, what?"

I pretended to congratulate him; but suddenly I felt annoyed with Connor and sorry that I had come.

"They ain't used to real men over here." His complacent vanity was magnificent.

"Who is she?"

"The old lady's stepdaughter, just out of a French convent. She hasn't really made her début, but seeing it was me they made an exception. Come along; I'll introduce you, and you can have the next dance with the little girl."

"Have you asked permission?"

"Have I asked permission? Why, man, I *brought* her here! Brought the old lady along because she threw a fit about me taking the little girl alone. What would I ask permission for?"

His face expressed such amazement that I forebore to press the question.

THE little girl did not seem to be so happy as a fledgling ought to be at her first ball. As we bore down upon her, she shrank farther into the shadow cast by her ponderous stepmother and looked down at the fan in her lap, which she was nervously opening and folding again.

The old princess, blinking her inscrutable eyes, was very cordial in a spidery kind of way. She assured me she found it enchanting to make the acquaintance of a friend and compatriot of our dear Mr. Connor.

"Indeed my little one will be very glad to dance with you. You must be patient with her. She does not dance very well yet, do you, chérie?"

"But, mamma," said the girl in French, very low, not looking at anyone, "I cannot. I promised this one to Stepan—to Lieutenant Scribin."

An immaculate youth, whose shoulders and bearing suggested gold lace and buttons, was at that moment hanging his hands and drooping his neck in a bow just beside her.

"My cousin was to save this for me," he said sweetly.

I was rather glad to get out of the affair with honor and was about to make way for the young Russian. But I had reckoned without Connor.

"What d'you mean?" he cried, turning red down to his collar. "You can't butt in on us this way, Lieutenant. She's here with *me*. I brought her. If I bring up any friend of mine, I don't care who it is, I expect him to get a square deal."

"I promised the dance to my cousin," murmured the girl, gentle but very obstinate.

CONNOR turned to her with heavy and jocular gallantry. "But you hadn't any business to make promises, young lady—see what I mean? You've got to leave promises to me. Ain't I right, ma'am?"

The old woman took us all in appraisingly from under her heavy, white lids. There was a look of sinister amusement on her face as at some joke she was sure no one but herself was clever enough to see.

"Be a good boy, Stepan," she croaked. "Let the American gentleman dance with Marya—"

Just what happened after that I do not exactly know. I seemed to myself to be apologizing and about to take myself away. Marya was thanking me with a shy look, and about to put her hand into that of her cousin. There was a rush as of a rocket mounting into space, and the young Russian and I were left staring at each other, while Connor whirled his "lady friend" on his fiery way.

Lieutenant Scribin turned very red and then very pale, put his heels together, bowed, and strode significantly out of the room.

"Oh la-la-la-la!" observed Mme. Makaroff quite comfortably. "How droll these young men are! Sit down, monsieur, and amuse an old woman."

"You can't butt in on us this way, Lieutenant. She's here with me. I brought her"

I sat down beside her. Of course it was not right to talk to her as I did, but a mature and sane American objects to being drawn out by a wily Continental as if he were a simple child. Besides there is something in the sound of French from my own lips that intoxicates me and makes me want to tell lies.

I WAS an old friend of Mr. Connor's? she began.

Of course I was. Oh, very, very old. We had gone to school together.

Then surely I knew his family. It was distinguished, one could see that, in his native land.

Most distinguished.

His father had been a merchant, he had told her.

Perfectly.

In America all merchants are rich—was it not so? Of course—Cresuses.

We had such extraordinary ideas of riches. Such imaginations—staggering! Now what would I call rich?

I? Oh, I wouldn't call anything wealth under 25,000,000 francs.

Mr. Connor?

Had doubtless the same ideas.

The old Princess blinked her eyes like a sleepy boa constrictor. She did not go on. She did not want to go on. She remained where she was and mentally wallowed in the gorgeous idea of 25,000,000 francs in heaps of gold around her.

I left her, politely I hope, and went for a walk along the sea front, feeling very much disgusted with everything. The waves broke, pounding on the beach, and the scent of the mimosa mingled with the sharp smell of brine. I wished I were a Russian and in love with a young slip of a cousin.

THE band played merrily away the next morning in its little round bird cage. The sun shone cheerfully. Promenaders chatted and were gay; dapper little Frenchmen, sputtering Germans in Tyrolean hats, actresses from Paris, handsome Jews from Vienna, swarthy Turks draped in their own wares of laces and tinseled scarfs, straight-haired English children with their prim governesses, priests with green-lined umbrellas.

Alone on a bench sat Connor, his Panama hat drawn down over his eyes, his great hands dangling between his knees. He lifted his eyes heavily as I spoke to him and they were red and bloodshot.

"Say," he began. "It's no use—I got to go home and get out of this."

I seated myself beside him.

"What's wrong, Connor? You were the 'belle of the ball' when I left you last night. Does Lieutenant Scribin want to fight, and has he sent a friend to wait upon you?"

"Him? No, I ain't laid eyes on him. He's the least of my troubles. He's sweet on the girl, I guess, but I don't think he'd queer my game much." He puffed out his chest at the thought, and the action seemed to restore his usual complacence.

"It ain't the Lieutenant. It's the old lady—"

"What's she up to?"

He turned red: "You saw what I did last night—I was sorry to turn you down, being a friend, but it was a case of Russia against the whole United States."

"That was all right."

"Well, they can't make me see I did anything but what any gentleman would do in defense of his rights—I took her to that party and no one else had any

Miss Pearl Vogel "swearing in" Coxey volunteers

Coxey's Second Army Opens the Spring Campaign

THE first division of Coxey's Army to start on the march to Washington—2,000 unemployed men who were enlisted in San Francisco—did not have far to go to engage in battle. In Oakland, across the bay from San Francisco, 250 policemen armed with rifles routed the army, put it on street cars and shipped it to the railroad town of Richmond, ten miles north. In Richmond the army amused itself with an attempt to demolish a storage building, so policemen arrested a few of the leaders and temporarily dispersed the rest of the army by charging it with clubs.

Our photograph above shows Miss Pearl Vogel, journalistically described as "a second Joan of Arc," swearing in Division One in a San Francisco public square.

Wrecking Freight Cars to Provide a Dike

WHILE the East and the North were struggling in snow, southern California was being drenched with damaging rains. The snapshot above shows one of the emergency measures taken in Los Angeles to control the waters of Los Angeles River. Five freight cars were shunted into the river to prevent the swollen stream from eating farther into the bank and destroying warehouses.

In the neighborhood of Los Angeles six lives were lost and the flood damages exceeded $3,000,000.

LAVA-HEATED WATER, *which made sea bathing possible in February, was a small compensation granted to the survivors of the volcanic eruption that devastated Sakura Island, Japan*

BY SAWING OFF *the two highest branches of a pine tree and nailing a crosspiece on their stumps, Howard Tyrrell, a forest guard in the Klamath National Forest, California, has a lookout seat 100 feet above ground. He sleeps on a platform in the limbs. A trapeze, shown above, saves him time in descending*

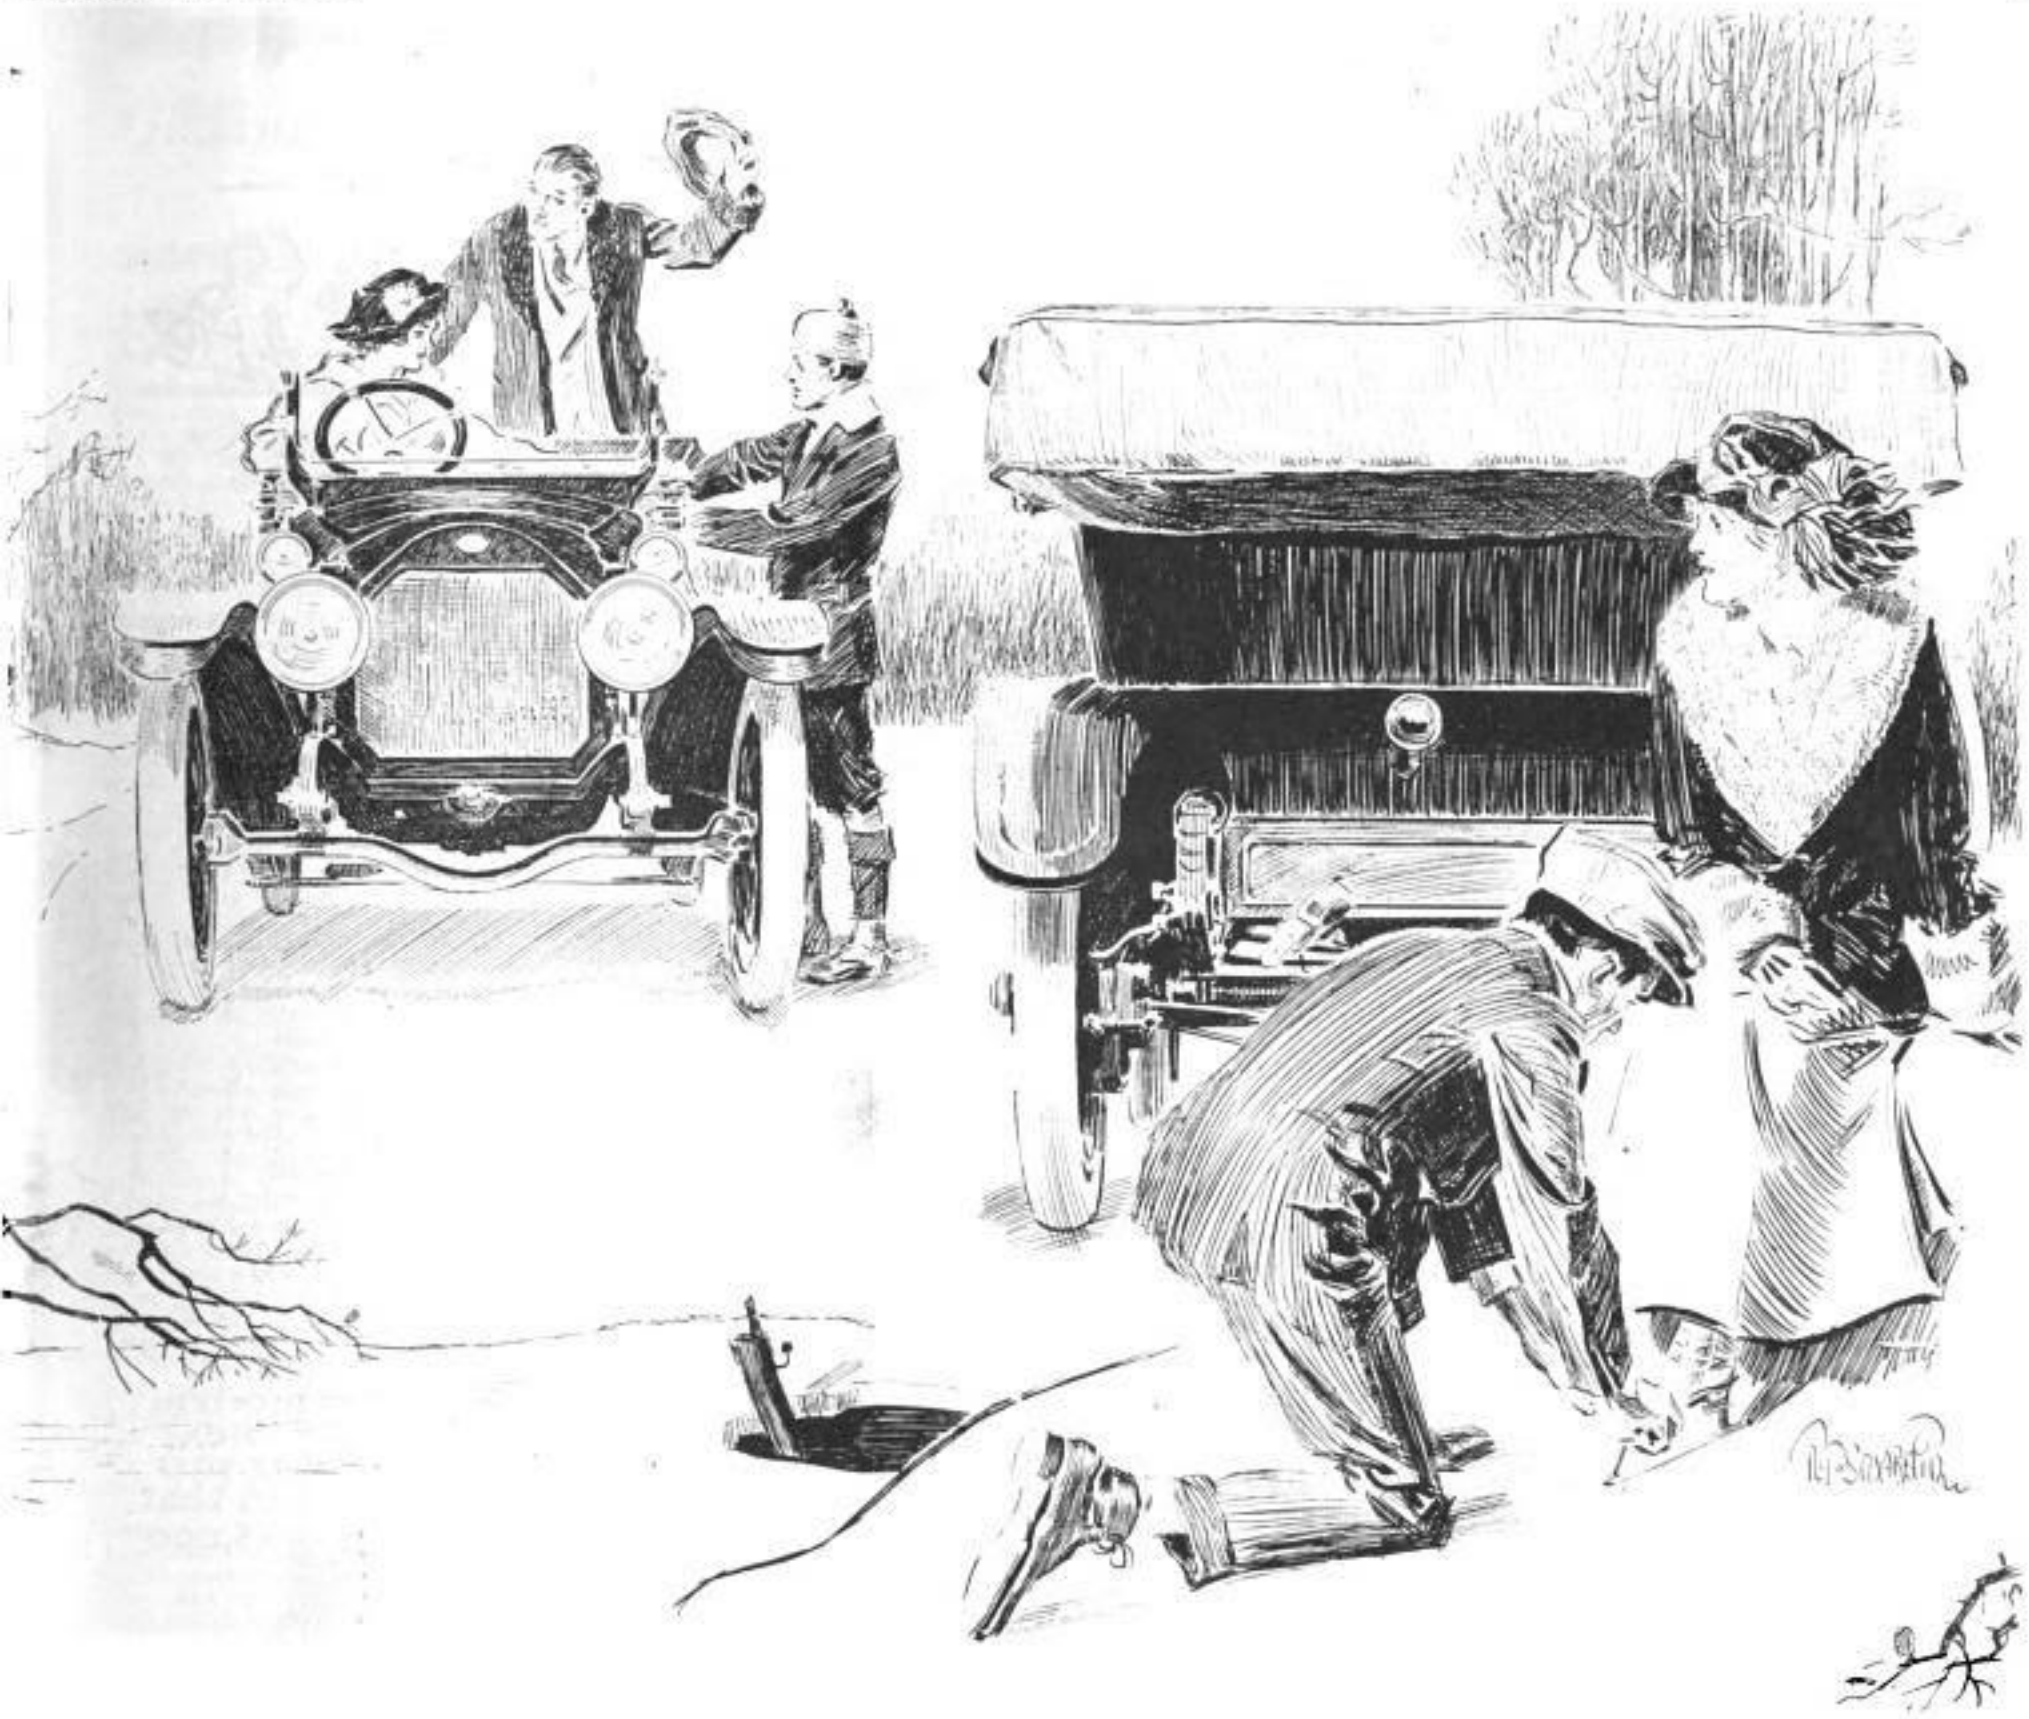
From Any Point Of View—
The World's Greatest Automobile Value

FROM the standpoint of *appearance*—the Overland has unusual grace, harmonious body proportions, symmetrical and full sweeping lines, a beautiful rich dark Brewster green finish, edged with highly polished heavy nickel plate and aluminum.



From the standpoint of *power*—the Overland is a big powerful smooth running 35 horsepower car; economical to operate; easy to drive.

From the standpoint of *comfort*—the Overland is luxuriously upholstered in genuine hand buffed leather, tufted over specially selected curled hair, made deep with tilted divan cushions; lots of leg room; ample for five passengers; no crowding.

From a *mechanical* standpoint—the Overland chassis is one of the finest and most finished pieces of mechanism in the world. Parts are machined on the most expensive automatic machinery until they are accurate to one one-thousandth of an inch. Producing millions of parts for 50,000 cars makes it possible for us to employ the very latest and costliest mechanical equipment. Mechanically no car—regardless of price—could be better.

From the standpoint of *size*—the Overland has the longest wheelbase of any car at this price in the world; the largest motor, the roomiest tonneau, and the largest tires of any car at this price in the world.

Digitized by Google

From the standpoint of *equipment*—the Overland is complete—having a full set of electric lights, even under the cowl dash—storage battery—windshield—electric horn—jeweled speedometer—top-boot—full set of tools, etc.

And finally, and most important of all, from a *price standpoint*—the Overland costs 30% less than any other similar car on the market.

Now from *your* standpoint—can you afford and does it seem reasonable to pay *more* for other cars that offer you *no more* than you get in the Overland for $950?

Can you?

There is an Overland dealer near you. Look him up and see this car today.

Handsome 1914 catalogue on request.

Please Address Department 6

The Willys-Overland Company, Toledo, Ohio

Manufacturers of the famous Overland Delivery Wagons, Garford and Willys-Utility Trucks. Full information on request

$950

Completely equipped f. o. b. Toledo

Electric head, side, tail and dash lights
Storage battery

35 horsepower motor
33 x 4 Q. D. tires
114-inch wheelbase

Stewart speedometer
Mohair top, curtains and boot

Clear-vision, rain-vision windshield
Electric horn

$1075

With electric starter and generator, f. o. b. Toledo

Canadian Factory: The Willys-Overland of Canada, Ltd., Hamilton, Ont.

Canadian Prices: $1250 Completely equipped, f. o. b. Hamilton, Ont. $1425 with electric starter and generator.

Pickups

By Grantland Rice

The Duffer's Dream

With any necessary apologies

ONE night a Duffer dreamed that he had died
And that his wretched, balky soul had skied
To Heaven's gate, where, finding it was locked,
He clamored "Fore" and hammered, rapped, and knocked.

"Who comes," St. Peter cried, "with all that din?"
"A Duffer," cried the soul; "please let me in."
"And what is that," he heard the good saint say,
"That you should hear the golden harps at play;
What have you done upon that earth so drear
That you should mingle with the angels here?
Put me adjacent to a Duffer's fate"—
And this reply came drifting through the Gate—

"A Duffer's fate? I pray you lend an ear
And be prepared, O Saint, to shed a tear;
For thirteen years the ancient green I baffled,
Sliced, hooked and foozled, topped and smeared and schlaffed,
Spending my days in bunkers, traps, and worse,
Dividing time between a sob and curse;
Losing each time I struck a swinging blow
A new white ball at sixty cents a throw,
Until a wreck, with tangled nerves awry,
I had naught left except an alibi.

"A Duffer's fate? To work your soul apart
And then get worse each time you make a start;
To be ashamed at any time or place
To look your anguished caddie in the face;
To know your friends, each time that you alight,
Are diving swiftly from your anxious sight;
To get an 'eight,' a 'seven,' and a 'ten,'
A 'nine,' a 'six,' and then an 'eight' again;
To flub your drive and take three putts or more,
While those behind are loudly yelling 'Fore'—
To know each year the selfsame bitter lot—
You have the facts—do I get in, or not?"

"Here is the key," St. Peter said. "Come through—
Heaven, I think, was built for such as you;
Choose any harp among these scenes of mirth—
O blighted soul, you had your Hell on earth."

In Warning

AS THESE death-defying phrases are being propelled to press, word comes to us that the demand for colored wigs will soon be abundant and that the two favored fashion tints will be purple and green.

Less than a hundred years ago the most appealing outdoor sport among a good many Indians was to rush upon their prey, first tomahawk their victims and then tear their reeking scalps loose with savage yells of exultation.

We have never tomahawked nor scalped a lady in our life, as far as we can remember, but if we ever meet a dame attached to a purple or green wig and there is a tomahawk, hatchet, ax, baseball bat, or brick in quick reach, we state flatly right here that

we will not be responsible for what may happen. We have an iron will, one that is under wonderful control, but after all there are certain limits.

The Turkey-Trot Variety

Lives of dancers oft remind us
How to work the jamboree,
And, departing, leave behind us,
Finger prints from neck to knee.

Fable

ONCE upon a time there was a proud dame who wore the long, dangling earrings so highly esteemed in Fifth Avenue and Fiji Island society.

The aforesaid attachments to the punctured lobes of her shell-like listeners increased her good looks and generally attractive appearance by at least 47 per cent. In fact, they looked good on her.

Moral—Munchausen and Ananias never dreamed of one like this, even in midseason form.

The Revised Version Being—

THE time I've spent in wooing,
In courting and pursuing
The Tango Glides
And Maxixe Slides
Have been my soul's undoing.

Though teachers oft have sought me,
I smeared the lore they taught me,
And twisted pegs
And tangled legs
And woe is all it's brought me.

Panning the Pessimist

A CERTAIN morose pessimist remarked lately that the present era had become entirely too swift—that old-fashioned decency was no longer part of the parade.

After a thorough investigation of the present status of things in general, we are glad to be able to report that he was entirely out of focus. Outside of an indecent tendency in our popular songs, our dances, our drama, a good part of our literature, most feminine apparel, and a section of our political life, the situation apparently is fairly well arrayed in cleanly garb. But you can't persuade a pessimist to look in this direction. Benighted wight that he is, he still insists that there is room for a trifle more decency in a few sparsely scattered spots. Which, of course, there isn't.

Mack vs. McGraw

WITH full realization of all the bizarre wrinkles and kinks that might assail expected developments through seven months of baseball, it is difficult to see how any outside stymie will be able to prevent Mr. John J. McGraw of New York and Mr. Cornelius McGillicuddy of Philadelphia from meeting in their fourth world-series clash this coming fall.

Neither machine is old yet, except in victory. Both have added to their 1913 power, which was strong enough then to suppress all pennant competition. And in both circuits the Federal array has come handily to their aid, weakening competition by heavy raids upon the Phillies and the Cleveland Naps.

So it is that Giants and Athletics still look to be the class of the field, and, by all the laws of the dope, October will find us again watching Messrs. Mathewson, Marquard, Tesreau, Demaree, etc., endeavoring to ascertain just what peculiar variety it is that Messrs. Baker, Collins, etc., can't hit beyond the confines of the lot. All in all, it is a trying ordeal for Manager McGraw. By winning he will have achieved the distinction of being the first manager in over thirty years to attach four successive pennants in one of the Main Corrals. But by winning he must also pay the price of meeting that Mackian Avalanche again, a consummation devoutly to be spurned.

Have a Heart!

***Being forty years old, with seventeen big-league seasons already behind him, this will likely be Hans Wagner's last year.*—Baseball Note**

TELL us, Dear Time, in accents dire,
Caruso hours before the Fates;
Say that T. R. will soon retire
As Prexy Wilson abdicates;

Say that Maude Adams' day is through,
That Sothern fades behind the wings;
Or whisper Kubelik is due
To strum no more the living strings—

Take whom you will from any part,
If Fame's brief line-up you must rob;
But set some limit—have a heart
And leave that Dutchman on the job.

The Story of the Rose

SHE cut me loose from my swaying stem
In the sweep of the silver dew;
She took me away from my garden home
And the old-time friends I knew;
Away from the fold of my crimson clan
Through a hallway, dark and cool,
Where she buried my thirsty, drooping lips
In the depths of a crystal pool.

She brought me forth in the twilight's shade
With a smile, as her red lips pressed
Against my own, and her eyes were bright
As my head leaned to her breast;
And together we wandered forth again
Where the moon danced through the trees,
And the breath of my clan came back to me
On the drift of the twilight breeze.

Our pathway led to the garden gate,
When out through the moonlight clear
Another came up the winding road
With an old-time song of cheer;
And side by side on the rustic bench
They sat where the stars shone dim,
And when he left for the road again
He took me away with him.

. . . . . .

He opened the dusty book one night
Where I had lain through the years;
And his eyes, half closed in the lonesome room,
Looked down through the mist of tears;
And he held me there till the gray dawn swept
The shadow away with its gleams—
"Ashes of roses—" I heard him say—
"Ashes of roses—and dreams."

How It Worked

WITH the initial filing of the Income Tax we discovered only two classes that had any lusty roar to make by way of general complaint.

The first kick came from those with incomes large enough to be soaked. The second growl came from those with incomes too small to be considered. The citizen paying a tax of $35,000 on a $500,000 income was considerably peeved. The citizen with an income of only $1,000 was equally depressed because he didn't have the $500,000. Beyond which, income conditions appeared to be eminently satisfactory to the universe at large.

The Coat and the Lining

"WE PREFER the coat to the lining; the game to the score."—Theodore Andrea Cook, British delegate to the Olympic Games International Committee.

This is well enough as far as it goes, Mr. Cook, but does it travel the full distance?

It would be sap-headed folly, of course, to put the lining above the coat or the score beyond the game. But why not both the coat and the lining—the game and the score together?

As a matter of fact, in spite of theoretical dreams to the contrary, this is precisely what England does do, as well as America and every other red-blooded country which sends its entries to the field.

There are two main ingredients attached to any game—the first, to play cleanly and fairly; the second, to play hard to win.

The coat is a grand little institution. But the warm lining of victory has its place here and there to ward off the harassing chill of defeat.

Getting Off on an Ocean Liner

By HOMER CROY

EVERY time I get on an ocean liner to go anywhere I feel frightened. The ship is so big and there are so many people and so much confusion that I feel as though I ought to be at home with the nurse.

I always wonder why they left the ship so far out at sea, for even though I ride to the end of the car line, or as far as the car will take me, my trip to the dock has just begun. It is always a long jaunt from the beginning of the covered dock to the ship. A person feels that he has been traveling a long time even to get to the liner. Somebody has always been there ahead of me and piled the wharf building high with boxes and barrels so that at every step I have to dodge a wharf worker to keep from being run down by a hand truck. The truck workers always seem to know the ship I am to sail on and get out in my path.

DURING the morning I arrive at the gangplank, but when I start up the guard tells me it is the wrong entrance. I have to walk back to the gatekeeper to ask where my gangplank is. It always seems that somebody with a low sense of humor has hidden my gangplank. No person with the instincts of a gentleman would do this. The gate guard looks at my stateroom number, points up to another deck, and motions off into the morning—I have been trying to get in with the third-class passengers! I walk through the littered wharf house again, dodging other truck handlers, and in the course of the morning arrive at another gangplank.

I START up, but a uniformed official stops me with a question. I converse with him until he feels that it will be safe for me to go aboard. I take a few more steps when another man thinks up a question and stops me. As I put my feet on the deck another guard is seized with an idea and comes up and asks a question.

With a suit case in each hand I start out to hunt for my stateroom. I decide to drop into my stateroom, leave my things and come up on deck to welcome my friends—it sounds so easy. I start down a companionway, struggling along in the dim light with my grips. In the narrowest passage I meet the fat man. On every ship there is one fat man who likes to linger in the narrow aisles.

I TRY to decipher the numbers over the doors, but the stateroom is in hiding. My key says C17 and it seems only natural that it should be near B18, but it is not. They have secreted C17 somewhere on the ship, but they shall not placate me. I don't want any of their placates, so I go on hunting for the stateroom. In peering along at the numbers I step off on a lower floor and bite my tongue. This makes me think even less of their placates.

Something within me struggles for expression, but the companionway is full of ladies. I go on the upper deck to find a member of the crew to get a clue to my stateroom, but all the crew seem to be on the gangplank asking questions. At last I see a uniformed man coming and step over to ask him the question, but he dodges out of sight down a stairway. I wait and wait until another comes by and step up to him with the words on my lips. He waves me to another man and hurries on. I gather from his actions that the ship wouldn't get off unless he personally superintended it. I am sorry that I stopped so important a man until I glance at his uniform and see that he is a deck hand with a regular income of $16 a month.

ANOTHER of the ship's crew comes into sight and I make for him. Although he sees me coming, he does not try to get away. After all there is one gentleman aboard. To him I put my question as to where C17 was last seen. He does not quite understand, so I repeat my question slowly and carefully. The man shakes his head and goes on—he doesn't understand English!

Bent and bowed with my suit cases, I stumble on, hunting for my stateroom. At last the number glistens above the door, and I eagerly fit my key into the lock. But the door opens only part way. I put my shoulder against the door and finally wedge in. The stateroom is full of grips, suit cases, and handbags of my traveling companion. I have not yet seen the person who is to share my stateroom with me, but already I have my opinion of him. The other man always has the most luggage. I kick his grips into a corner, put mine in the middle of the floor, and hurry out to look for my friends. I had told them to meet me on deck, but it hadn't occurred to me that there was a whole school of decks. At last I spy my friends and rush at them, but just then the whistle blows, and with a farewell wave they have to rush off.

AFTER the mate has hurried the last person off and drawn up the gangplank, I stand there waiting for the ship to pull out. My friends go down to the other end of the pier. The boat does not move. It does not offer to move; not a tug tightens. I spend the time in puzzling over the mystery of why they draw up the gangplank so far ahead of time and still make no move to be off. I sit down and wait awhile; then I stand up to see if that will hurry them. At last the boat finally gets going and we sail past the end of the pier and out into the bay and I wave and wave at my friends—without feeling quite sure that I recognize them.

Wanted

The Words of an Old-Time Song

Collier's is endeavoring to recover the words and music of a song which dates back to the original conquest of the Alleghenies. It is described in

A Son of the Middle Border

A Serial by

Hamlin Garland

Beginning in the March 28 Issue

It is an autobiographic story of a family migration through the States of Wisconsin, Iowa, and Dakota during a certain heroic and splendid era of settlement. It is a detailed study of the homeliness and intimacy of family life, with the shine of firelight in it, amid the actual conditions of farm life just following the Civil War. ¶ Unlike many recent autobiographic writings, this is at every point a human story; it has no political discussions, and no direct bearing on sociological problems. It is everywhere filled with the actual doings of men and women of the border — humorous, homely, typical The romance and adventure of a manner of life now extinct make it a story of unusual fascination, and one that our readers should not pass by.

"Ladies and Gentlemen:

Here you see a veritable monument of culinary art—

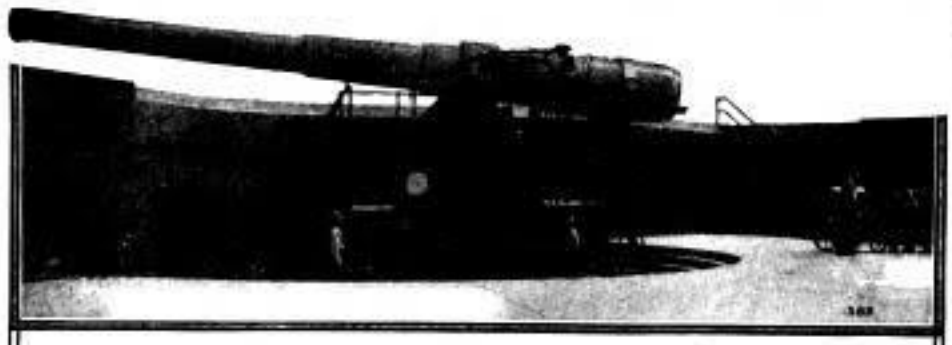
"A tempting wholesome food-product which appeals to all tastes, and suits such a variety of occasions that it has become a leading menu-feature in our best-conducted homes—

Campbell's Tomato Soup

"Pleasing both the eye and the taste, it combines a fresh *natural* color and flavor with a satisfying richness peculiar to itself. It is a delightful and appropriate soup-course with any dinner which is not extremely heavy.

"Why not enjoy it at *your* table *today?*"

"Ahoy! Navalle-soups ne'ered
With nullity-based in-feriors.
Just bring me but some Campbell's kind
And warm my inmost cockles."



21 kinds—10c a can

Asparagus	Clam Chowder	Pea
Beef	Consommé	Pepper Pot
Bouillon	Julienne	Printanier
Celery	Mock Turtle	Tomato

Robbins & Myers Motors Uncle Sam's Choice for These Sea-Coast Defenses

Seventy-eight 8-horsepower Robbins & Myers "STANDARD" Motors were ordered and specially built for the United States Government to operate 12-inch disappearing guns used in various fortifications along the sea coast.

Such motors must be exceedingly rugged and staunch to withstand the terrific shock due to the discharge of the guns. Since they are exposed to all the elements of the weather, they must be rendered waterproof and non-corroding, especially so on account of the action of salt water and air. In short, they must operate perfectly under conditions far more severe than ordinary motors are ever subjected to.

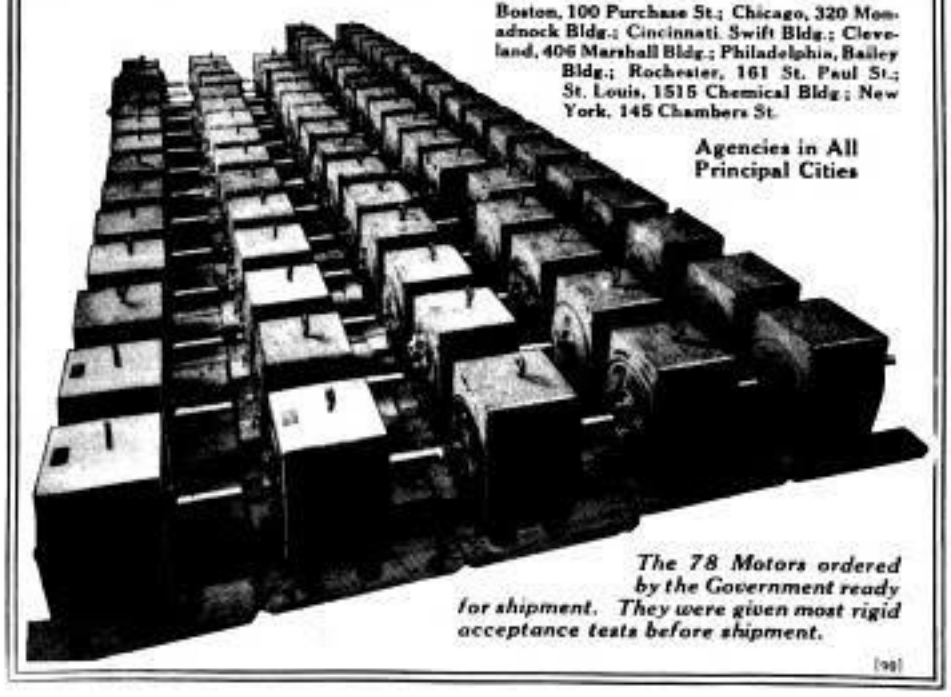
That these Robbins & Myers Motors have served with unqualified satisfaction for five years at these fortifications, indicates their premier reliability for extraordinary as well as ordinary power uses.

Robbins & Myers "STANDARD" Motors

Helping 50,000 Power Users to Greater Efficiency

Robbins & Myers "STANDARD" Motors are made from 1-60 to 20 horsepower. Over 50,000 factories, offices, shops, stores and homes have adopted them for their cool, cleanly, efficient operation, their utter dependability, and the fact that their installation usually results in increased output at lowered cost.

Put Your Small-Power Problems Up to Us



We invite the opportunity of aiding *you* in your power-problems as we are now aiding thousands of others.

Branches in all the larger cities enable us to give prompt service and quick deliveries. Your request for information and advice will place you under no obligation. Write us today.

THE ROBBINS & MYERS CO., Main Office and Factory **Springfield, Ohio**

Boston, 100 Purchase St.; Chicago, 320 Monadnock Bldg.; Cincinnati, Swift Bldg.; Cleveland, 406 Marshall Bldg.; Philadelphia, Bailey Bldg.; Rochester, 161 St. Paul St.; St. Louis, 1515 Chemical Bldg.; New York, 145 Chambers St.

Agencies in All Principal Cities

The 78 Motors ordered by the Government ready for shipment. They were given most rigid acceptance tests before shipment.

Round the Calendar with the Dope

THE patent-medicine quack and his lies are nothing new. He has been spreading the same snares ever since human nature existed. Even the device of using the season to tempt you to purchase nostrums is not fresh. "Max Adeler," an almost forgotten humorist of forty years ago, tells of an advertisement he read one winter:

The excessive moisture and the extreme cold and continuous dampness of winter are peculiarly deleterious to the human system, and colds, consumption, and death are very apt to ensue unless the body be braced by some stimulating tonic such as Blank's Bitters, which give tone to the stomach, purify the blood, promote digestion, and increase the appetite. The Bitters are purely medicinal and contain no intoxicating element.

Spring came, bringing all her blessings; and he read:

The sudden changes of temperature which are characteristic of the spring, and the enervating influence of the increased heat, make the season one of peculiar danger to the human system, so that ague, fever, and diseases resulting from impurities clogging the circulation of the blood can only be avoided by giving tone to the stomach and increasing the powers of that organ by a liberal use of Blank's Bitters.

When summer came he hoped for a respite. On the contrary:

The violent heat of summer debilitates and weakens the human system so completely that, more easily than at any other time, it becomes a prey to the insidious diseases which prevail during what may fairly be called the sickly season. The sacrifice of human life during this dangerous period would be absolutely frightful had not Nature and Art offered a sure preventive in Blank's Bitters, which give tone to the stomach, etc., etc.

"Nature and Art," as sponsors for patent medicine, is good. But autumn came at last with its life-giving breezes. Now he was confronted with this wisdom:

The miasmic vapors with which the atmosphere is filled during the fall of the year break down the human system and destroy life with a frightful celerity which is characteristic of no other season, unless the stomach is strengthened by constant use of Blank's Bitters, which are a sure preventive of disease, etc., etc.

THANKS to "Max Adeler" for his cycle of dosing! There has been no wiser or brisker comment on the way poor old Nature is made a stalking-horse for dope.

The Papered Door

(Concluded from page 7)

was frail. It would be a year perhaps before she could leave the children to seek any kind of employment.

The deadly problem of the poor, inextricably mixed as it is with every event of their lives, complicating birth, adding fresh trouble to death—the problem of money confronted her. Jim had been, in town parlance, "a poor provider," but at least she had managed. Now very soon she would not have that resource.

To get away from it all! She drew a long breath. From the disgrace, from the eyes of her neighbors, the gossip, the constant knowledge in every eye that met hers that her husband had intrigued with another woman and killed her. To start anew under another name and bring her children up in ignorance of the wretched past—that was one side.

BUT to earn it in this way—that was another. To sell out to the law! All her husband's weaknesses and brutalities faded from her mind. She saw him—with that pitiful memory of women which forgets all but the good in those they love—only as he had looked in the one great moment of his life an hour ago. Once again he was her hero—her lover: once again he held her in his arms. "I would like to feel that I have done one decent thing."

The battle waged back and forth. She no longer cried. There are some tragedies to which the relief of tears is denied.

Four o'clock.

She slipped the baby's head from her arm and got up. Cooper was still across the street, huddled against a house, stamping to keep warm and swinging his arms. In an hour the milk train would come in and wait on the siding for the express. That would have been Jim's chance. If he could get away, he could start all over again and make good. He had it in him. He was a big man—bigger than the people in the village had ever realized. They had never appreciated him—that was the trouble. Why should *she* have a fresh start? It was Jim who needed it. She moaned and turned her face to the pillow.

Five o'clock.

The milk train whistling for the switch. It was still very dark. She crept to the window and looked out. It was a gray dawn with snow blowing like smoke through the trees. The cold was proving too much for Cooper. He was making his way cautiously across the street through the snow toward the house. Once in the parlor again, she could get to the barn. The freight waited on the siding ten minutes sometimes, and tonight, with the snow, it might be longer.

She leaped off the bed and hurried down the staircase. Just before the front door opened to admit the detective, the kitchen door closed behind her. She was out in the storm.

She stumbled along, sometimes knee-deep, holding up her thin cotton wrapper.

"Don't jump at me like that. I've broken one of the baby's bottles and I am just about to sweep it up"

THE barn door was open and she slipped in.

"Jim," she called. "Jim!"

She was standing at the foot of the loft ladder, all her heart in her voice.

"I can't do it, Jim. I can't sell you out, even for the children, Jim!"

There was no sound from above.

She climbed up, trembling. The loft was dark. She would not believe the silence, must creep around to each corner.

"I can't do it," she said over and over. "I can't do it, Jim!" He was gone.

She felt her way down through the darkness and staggered to the door of the barn. Cooper was standing there quietly waiting for her.

From the railroad came the whistle of the express as it raced through, and the slow jangle of the milk train as the engine took up the slack.

"He's gone, Molly," said the detective. "He went out by Shultz's at a quarter to five. I guess he'll make his getaway." There was shame and something else in his eyes.

The freight had gathered way. As they listened it moved out on to the main track.

The American Savage

(Continued from page 16)

call to butt in—but you can't make a foreigner talk sense or see reason—"

"Well?"

He blurted it out—the fatal truth.

"What do you know about this? The old lady asked me *what my intentions were*—"

I could not help it. He looked so helpless and bewildered, and the situation was so inane. When I had recovered from my mirth he was looking at me out of his blue eyes like a beaten dog.

One had to be serious. "Well—what are your intentions?"

"What are they? I ain't got any—never thought about having any. Don't think I want to tie myself up to a *foreigner*, do you? What would my poor old mother say?"

"But the girl, Connor. You must think about the girl. What do you suppose is her attitude?"

HE merely turned red, shook his head and rumbled in his throat.

"Say, honest, is the old lady stringing me? She says my attentions have been so conspicuous as to compromise her daughter—"

I thought a moment—it was hard to know where to begin.

"Their ideas are different from ours," I ventured.

"I should say they *was* different! Why, it ain't even decent, the way they look at things—why don't they wake up and learn better?"

"Perhaps they think we should learn better. See here, Connor, do you mind my asking a few questions?"

He growled out shamefacedly his willingness.

"Where did you first meet Mlle. Makaroff?"

"At a kind of tea party the old lady had—tea and wafers. Asked me to come in for the 'five o'clock,' so I went."

"You talked to Mlle. Makaroff?"

"Yes."

"Remember what you said?"

"Well—I told her she ought to come to New York and I'd give her an ice-cream soda and a box of good American candy every day of her life."

"Oh, you did!"

"Of course I did—why not? And then just to show I wasn't a four-flusher I sent up to Paris for ten pounds of American chocolates. Why, where was the harm in that?"

"Ever send her any flowers?"

"Yes. Two or three times—Roses and things. I was making enough off the old lady to afford it."

CONNOR was able to summon up a smile.

"And you took them to a ball and publicly insulted the girl's suitor?" I added mildly.

"I tell you I didn't insult him! He butted in. I invited the girl to that ball. If I took her there I had a right—"

"Certainly, Connor," I agreed in haste. "Of course you had. Every right. But you must remember they're on their own ground here and you aren't. I am credibly informed that in many unprogressive sections of European society a mere bunch of roses is equivalent to a declaration. I am afraid Mme. Makaroff was quite within her rights and not at all on the side of indelicacy in inquiring about your intentions."

He groaned. "Well, I'm on the level, and I don't want to treat any woman bad, even if she is only a Russian, but upon my soul I didn't mean a thing, any more than I'd have meant it at home. You know how it is with us. We ain't so afraid of a few roses or a few pounds of candy that we can't give 'em away unless we're ready to follow with a house and lot.

"Fact is," here Connor looked very sheepish, "there's a mighty fine girl back in little old New York I've done a heap of thinking about since I came over here."

"You haven't told that to Mme. Makaroff?"

HE blushed a blush of protest and righteous indignation. "It wasn't any of her business—a man ain't going around talking of a woman he really cares anything about to a gang of foreigners. You must think I'm all right!"

I thought of the innocent face of little Mlle. Makaroff and smiled. It is a funny world. Of course Connor was right according to his standards; it was merely a case of being right in the wrong place.

"It's mighty good of you, just the same," said Connor awkwardly. "It's none of your funeral."

THAT roused my sleeping conscience. It suddenly seemed to me I had not been behaving very well. I was particularly ashamed of the conversation I had had the night before with Mme. Makaroff.

So I talked to Connor like a father. I pointed out to him that there was no use sacrificing himself from a mistaken sense of honor, for a convention in which he himself did not believe—I touched on the absurdity, the impossibility from a practical point of view, of any such alliance. I told Connor I thought him justified in using any means whatever for squirming out of the trap. I came out strong on what seemed to me the key to the whole situation; namely, Mme. Makaroff's fond conviction, born of her own greed and fostered by Connor's generous habits and my irresponsible patter of the night before, that Connor was a millionaire.

I told Connor what I knew of the itch of the European palm for American gold and pointed out to him, as delicately as I could, that since like most of us he was *not* a millionaire, he had probably only to make that fact perfectly clear to Mme. Makaroff to find himself released with honor from the entanglement.

NOW Connor had assured me that he wanted to get out of it. He had even hinted that his heart was otherwise engaged. I showed him a perfectly respectable method of escape, one that razed the air castle to the level of everyday life. And he didn't like it. He didn't like anything about it. He *wanted* to close his eyes and walk into the trap.

The plain truth was that having once walked in the splendor of borrowed plumes Connor could not bear to strip himself of them. He could not face the thought of having Mme. Makaroff and her set know him as neither high born nor rich. He wanted to believe himself desirable because of the charm and prowess of his native manhood; but he had not the courage to put his faith in himself to the test.

That was the way I interpreted these simple words:

"Oh, I couldn't tell her that! And it wouldn't make any difference if I *did* tell her!"

So I gave him up.

And soon it became a familiar sight to see the savage led about in golden chains. Connor, looking sheepish but far from unhappy, attended the Makaroffs on the morning promenade, at luncheon, and at tea. Whether anything like a formal betrothal had taken place, I had no means of knowing, for my new-made friend avoided me from that time on; but current gossip made him out an accepted suitor. It seemed to be one of those things that couldn't possibly happen and yet there it was happening before one's eyes.

IT was toward midnight of a chilly day in April that there came a tremendous knock on the door, and to my surprise the knock was followed by Connor.

"Come in!" I begged him, and pushed the whisky and soda in his direction.

Connor still wore his morning clothes and there was a happy light in his eyes.

"Going to be married?" I asked him.

He grinned. "Nothing like that. I came to say good-by. Little Willie sails from Cherbourg the day after to-morrow. Just listen:

"I suppose you watched me playin' the kind-faced old cow in the midst of that Makaroff herd—things to all appearances going as merry as a wedding bell, and the bells themselves getting ready to ring. Some of the time it looked that way to me and then again it didn't. My feelings was various and mixed. For one thing I didn't take to the little girl really as I'd ought to have.

"Then the old lady had a lot of fool ideas that made me sore. Wouldn't leave us alone, and when I came around with the ring, took it all right, but wouldn't let the little girl wear it. Then Marya herself— Well I had reason to think I wasn't used right.

"You've seen that young Scribin feller around. Lieutenant Scribin, Marya's

This Is Done 400,000 Times Per Day

Every day, on the average, 400,000 housewives serve a Van Camp dish.

Van Camp's Beans, perhaps. Or some other delicacy prepared in the kitchens which bake them.

All because our chefs produced a dish of Baked Beans which nobody ever matched. Then they applied the same skill to other things you like.

Now lovers of good things buy these delicacies 130,000,000 times a year. And to bring them to you we use more tin cans than any other concern in the world.

VAN CAMP'S
PORK & BEANS BAKED WITH TOMATO SAUCE
Also Baked Without the Sauce

This Dish made these kitchens famous. The Chef who prepares it used to be a leading Parisian chef.

The Beans for this dish are picked out by analysis. The Sauce we bake with them has remarkable tang and zest.

Steam Ovens are used to bake them, and in very small parcels, so every bean comes out mealy and whole.

This Dish is supreme, and millions of people know it. No home can bake anything like it. No rival brand compares with it. Even the chefs in the finest hotels do not attempt to approach it.

Countless restaurants and lunch rooms, famed for their Baked Beans, serve nothing but Van Camp's. There are more than 500 in New York City alone.

Don't try to duplicate this Dish. It has never been done. And Van Camp's come to you with the fresh oven flavor—mellow and nut-like and zestful—at a cost of three cents per serving.

10, 15 and 20 Cents Per Can

Some Other Van Camp Delicacies

Van Camp's Evaporated Milk
Van Camp's Soups—18 Kinds
Van Camp's Tomato Catsup
Van Camp's Chili Con Carne
Van Camp's Spaghetti a l'Italienne

FIFTY NINE YEARS OF KNOWING HOW

"I'll Quit Before I Make Panic Clothes!"

When "Hard Times" had become most acute, in 1893, when Almighty Dollar was sulking in his strong box, a delegation of Stein-Bloch salesmen called upon Nathan Stein, founder and upholder of this house.

"The public cannot afford to pay the prices asked for the clothes we are turning out," they said to him. "The only way to keep this business going is to make clothes that cost less."

Nathan Stein listened patiently. When the salesmen had finished, he sprang to his feet and fairly shouted the words quoted in the heading above. The meeting stood adjourned.

Some years later, when manipulation of cotton in clothes fabrics had become a fine art, and when it was difficult to obtain absolutely all-wool cloths that could be put into popular-priced suits and overcoats, this same Nathan Stein was importuned to lower his all-wool standard in order to meet competition.

"That isn't competition," he declared. "That's plain stealing. I won't talk about it. Good day."

These two incidents show how straight the Stein-Bloch trail has been through all the years—how straight it is today—how straight it will continue to be.

And they show why it is that clothes made by this house are *character* clothes.

The Stein-Bloch Co.

cousin, the one we had the little argument with at the Yacht Club ball. He used to come around pretty regular to my poker classes, and it was through him that I first met the old princess, my mother-in-law that was but is not to be. Well, I knew all along that he was crazy about Marya; and being an excitable feller, I was kind of surprised he took it lying down. He didn't treat me cordial exactly, but he didn't give up poker either.

"One night, after a protracted session, as the bank was locking up, he looks at me kind of queer and says: 'I'd like to have a word with you, Mr. Connor,' he says.

"I told him to go ahead.

"'I've been in doubt for some time,' he says, very quiet, 'whether to slap your face in public, or to talk to you like a friend.'

"'Think it over good,' says I, getting ugly.

"'Don't tempt me,' he says, 'because it would be much more sensible to talk it over calmly.'

"'Talk what over?' I wanted to know.

"'Your engagement to my cousin,' he says.

"'You must be aware,' he says, 'that long before we had the pleasure of your acquaintance I had asked my aunt for my cousin's hand.'

"Well, I didn't know that, not definitely, and I told him so.

"'I had asked for my cousin's hand,' he says, 'but my aunt refused it, although there is nothing whatever to be said against me. My position, my prospects, and my income are not below what my cousin has a right to expect.'

"Well, he told me a long story about the way the old lady had been carrying on. According to him she loses most of her income regular in gambling. This year it's been worse than ever—on account of my little poker game, maybe. Scribin claimed she'd already lost a good share of Marya's 'dot,' or whatever they call it; besides pawning some tiaras and necklaces, and so on, that came to the girl from her own mother. That was the real reason, he said, the old lady had turned him down; not that *he* cared, he said, whether Marya had a full-sized dot or not; but his father is one of the girl's guardians, and the old lady knew what would happen if the girl came up to the scratch shy her dot and all that jewelry, particularly if his own son was to lose by it. He says his father is an old Tartar, just like the Princess.

"Well, I looked the proposition over and it seemed to me from what I know of the parties that what he said was probably true enough. Only I couldn't see any reason why I should get out of the way just because he'd been turned down, and I told him so.

"'But,' says I, 'if you can prove to me you're the favorite with the lady, I'll throw up the race.'

"He turned red at that. He's a pretty decent chap at bottom, Scribin is.

"He says: 'That's something I'd rather not say anything about, especially to you. But so long as the life happiness of so many people is concerned I will ask you to go to Marya and put that question to her. I promise to abide by the result.'

"That was fair enough and I agreed to do it. The first chance I had—and it didn't come right away, on account of the old lady being so vigilant—I put it to Marya straight. It was in the Casino; the only way you can shake the Princess is when she's playing.

"'Is it true, little girl?' I says.

"She looked me square in the eye. She's a good-plucked one, that little girl is. 'Certainly it is true,' she says. 'I love my cousin. I have always loved him. I have no wish in life but to marry him.'"

CONNOR left his narrative to muse. "Seems queer, don't it? Little feller, he is, don't come up to my shoulder, waxes his mustache and speaks soft and gentle, just like a girl. Well, they've got their own peculiar tastes, I suppose.

"Well—I saw it was time for me to make a gallery play. I told Marya that whatever might be my own regret, I was willing to stand from under and let the best man win. I said I didn't want any woman to marry me feeling she'd made a mistake.

"She smiled at me kind of queer and shook her head. 'It isn't so easy,' she says. 'You don't wish to marry me and I don't wish to marry you, but that will not satisfy my stepmother.'

"And then she told me the same story Scribin had—about the old lady gambling away her dot and hanging up the jewelry. By this time I began to take quite an interest in that story and in the young folks. Seemed as if they was in such a mess and so helpless about it.

"'Just leave that to me,' I says. 'I'll tackle your stepmother.'

"Marya looked pretty scared and begged me not to do it. But naturally as I'd said I was going to, I *was* going to.

"So I interviewed her that same afternoon. Say, what do you think? She thought I'd got wise and was putting up a holler on my own account! So she denied the whole thing; said the dot was all right and the jewels too. Then, when I made my position clear, she turned right around and threw herself on my mercy. Said it was true. The dot was $5,000 shy, and she'd pawned some pearls for $5,000 more. Such a loss meant nothing to a rich man like me, she says, but if it was found out it meant ruin for her.

"'Well,' I says, 'see here. If I get you out of the scrape, will you sign a paper agreeing to let your daughter marry Lieutenant Scribin without any further objections?'

"Of course she claimed she'd sign anything. And she would have."

"Do you mean to say, Connor," I put in, "that you were willing to pay $10,000 to get out of marrying Mlle. Makaroff?"

"Get out of marrying her nothing," returned Connor with some heat. "I thought I explained that I wasn't paying to be let off! I was trying to make the young folks happy. I tell you I was sorry for 'em!"

IT was useless to split hairs with Connor, or to express a hope that Mme. Makaroff had seen the situation in the same light.

"Then you really paid the $10,000?"

"Sure I did—or almost. I went with her myself to see the old pawnbroker she'd pawned the jewelry to, and it came out she'd made a little mistake in the figures."

"Surprising!"

Connor was imperturbable. "She only owed him $4,000. I paid that and gave her a check for the other five."

"You did! You gave that old harpy a check!"

"That's what I did. Why, I could afford to. I've made twice that since I've been here; some of it out of the old lady at that."

"But you played a straight game of poker?"

"Of course I played a straight game."

"If they had done *you*, they wouldn't have made it up to you."

"To *me*? Why, of course not. That's foolish. I wouldn't have taken it."

"But don't you know, Connor," I said in a last feeble effort, "that Mme. Makaroff is congratulating herself on having 'done' you? Don't you know that because she thinks you're a clever chap, she thinks she's twice as clever at having got ahead of you? Don't you know she probably pawned the pearls all over again when your back was turned and is now gambling away your $10,000?

"Don't you sometimes have cynical moments when you suspect that perhaps Scribin was Mme. Makaroff's partner rather than her enemy? That perhaps she put him up to confiding in you? Else why should he have swallowed your insult at the party and said nothing till luck was against him? Don't you even sometimes wonder if innocent little Marya—"

Our princely Savage put his hand gently on my arm to stop me. On his face was a look of genuine concern. It was blank, too, as of trust and confidence withdrawn.

"Say, old man, why don't you come home, too? Your mind's getting rotten over here. There's no use explaining things to you. You just don't see them right."

He was very kind. Our last few moments were full of surface cordiality. Connor was almost boisterous. We shook hands warmly and promised to look each other up in New York. But I felt that I had disappointed him and was rejected.

THE other Americans thanked Heaven that he was gone, and said it was a shame that other nations should judge us by impossible persons we would never meet at home.

CHALMERS · MOTOR · CO. Detroit, Mich. U.S.A.

This monogram stands for all you can ask in a motor car

"Sixes" vs. "Fours"

DURING the past few weeks big newspaper space has been used for the purpose of defending the high-priced four-cylinder car. We are not surprised. Any four-cylinder car selling for more than $1800 certainly needs defense.

Whenever a tight shoe pinches, the wearer makes a wry face. And high-priced, four-cylinder shoes are pinching a number of feet pretty hard this season.

Let us examine the real situation of "Six" vs. "Four."

Three years ago there were eleven builders of "Sixes" in the United States. Last year twenty-five companies produced "Sixes."

In 1914 thirty-seven of the forty-two leading manufacturers of motor cars build "Sixes."

Can such development be due to a fad or whim, as the builders of high-priced "Fours" say?

High-Priced Car Builders Found "Sixes" Superior

Seven years ago the Pierce-Arrow Motor Car Company built "Fours" only—"Fours" that were above reproach. Six years ago they added "Sixes" because the "Six" was demanded by those who wanted the utmost in a motor car. For five years the Pierce-Arrow has been building "Sixes" only. Not because the Pierce-Arrow "Four" was not good, but because the "Six" was proved better.

For years the Packard Motor Company built only "Fours." Today Packard cars are built in "Sixes" exclusively. Not because the Packard "Four" was not good; for there were no better "Fours." But because Packard engineers and Packard owners found the "Six" mechanically superior to the "Four"—and the Packard Company had the courage to build the car which was proved best.

The Peerless Company abandoned "Fours" for "Sixes" exclusively, because those who paid Peerless prices demanded the superior smoothness, flexibility and silence of the "Six."

Seven years ago the Winton Company predicted the growth and popularity of the "Six." Since 1908 Winton cars have been built in "Sixes" only, because Winton found the "Six" superior to the "Four."

There is no question now about the Winton prediction being right. Because this year practically every prominent maker, except one, selling cars above $1250 is building "Sixes."

Public Demand Forced the Development of the "Six"

The admitted mechanical superiority of the "Six" over the "Four" and the demand for this superiority on the part of those who are willing to pay any price for the motor car luxury forced these builders of high-priced cars into the six-cylinder field.

Practically all successful builders of "Fours," such as **Locomobile, Packard, Pierce-Arrow, Stevens-Duryea, Winton, Peerless, Buick, Hudson, Oldsmobile, Marmon, White, Studebaker** and **Oakland,** have been forced into the six-cylinder field.

None of these companies changed their designs or spent thousands and thousands of dollars for new machinery and to market new types of cars just to satisfy a whim.

Through sheer merit the "Six" has conquered.

Practically every well-known company this year building a car of $1250 or over, except one, builds "Sixes."

Is it possible that all these admittedly successful companies are wrong? Isn't it logical to suppose that the majority is right?

Isn't it conclusive when practically all makers above $1250 are devoting their brains, money and energy to "Sixes"?

Is it reasonable to suppose that the one company which dissents should be right against such overwhelming evidence?

It has been our experience that, price being equal, people want the greater smoothness, silence, flexibility, lower upkeep, and superior mechanical luxury of the "Six."

They want it now and they always will want it.

Pretty nearly all present owners of "Sixes" have at some time been owners of "Fours." Ask them which is the better car—"Six" or "Four"?

Did you ever know of a driver of a "Six" to go back to a "Four" of equal price?

Drivers of "Sixes" will tell you that there is something inherent in a "Six" that makes it better than a "Four," just as there is something inherent in a thoroughbred that makes him better than a horse of common blood.

Outside of the companies that have over-priced "Fours" to sell the little talk there is against the "Six" comes from people who never rode in a "Six." To all such we say—Ride 50 or 100 miles in any good "Six," not only the Chalmers, but any good "Six."

Until you have made such a test reserve judgment. We have no doubt of your judgment if you will only take the ride.

Don't Buy a Near "Six" When You Can Get a Real "Six"

The best known builder of high-priced "Fours" this year admits the superiority of the "Six" by using a mechanism which it is **claimed** will give to the "Four" some of the recognized superior qualities of the "Six."

How consistent of those with "Fours" to sell to decry "Sixes" in one breath and in the next tell you they have a device that makes a "Six" of their car—nearly!

The superiority of a "Six" over a "Four" exists in the motor—and can be obtained only through the motor. It can't be obtained through the transmission or the rear axle.

The last resort of the four-cylinder advocate is that the "Four" is more economical than the "Six."

Positively, **it is not.**

It costs less to own a Chalmers Master "Six" a year, or to drive it 20,000 miles, than to own a "Four" of equal size and power an equal length of time. We have had in the Chalmers factory every well-known "Four" of $1800 or over. We have run them side by side with the Chalmers "Sixes" and here is what we have learned:

Because of its steady, uninterrupted flow of power, the "Six" is easier on tires and easier on every moving part than a "Four."

The most prominent "Four" in the same price class as the Chalmers "Six" has less power and weighs more. In the Chalmers the labor of moving that weight is divided among six cylinders: in the "Four" each cylinder does more work because of the greater weight carried by four cylinders.

Don't you see that in the "Four" each cylinder must be doing more work all the time?

In other words, the four-cylinder motor is forced to work at full capacity more of the time than the "Six." It is always working harder than the "Six" and that means shorter life.

"But a 'Six' burns more gasoline," say four-cylinder builders.

Again we say, that is not true.

For any considerable distance the Chalmers Master "Six" can be run on as little gasoline as any "Four" of equal motor displacement and with equal car size. This is not merely an advertising claim. We have proved this by actual tests.

Power and Performance Considered "Six" Is More Economical Than "Four"

The fallacious statement that the "Six" burns more gasoline than a "Four" originated in the fact that in the past four-cylinder cars have been compared with six-cylinder cars of nearly twice as much power. Compared on an equal footing, as to power and car size, the economy argument is all in favor of the "Six."

While six-cylinder builders are working toward greater fuel economy all the time, builders of "Fours" are going the other way.

The Chalmers Master "Six," for instance, has only a 4-inch bore and a 5½-inch stroke. A few years ago six-cylinder cars of equal power had bores of 4¾-inches to 6 inches. In the Chalmers Master "Light Six," which sells for $1800, the motor is even smaller—only 3½-inch bore. Yet this motor has developed 53 horsepower. All engineers admit that small bore and long stroke make for greater fuel economy. So builders of "Sixes" are at least on the right track.

Four-cylinder designers, on the other hand, are forced constantly to increase the size of their motors to get enough power adequately to handle cars of increasingly greater weight.

The high-priced "Four" grows each season to be more extravagant in fuel, while the well-built "Six" becomes more economical.

A leading builder of high-priced "Fours" has announced through the newspapers that he "has no intention of building a 'Six.'" We believe this must be a welcome announcement to a great many intending buyers who had already finally made up their minds to buy a "Six" and had, perhaps, been wondering whether this particular manufacturer would build one.

Now they have only to pick out the best "Six." They need no longer hesitate, anticipating that this particular builder may produce a "Six." Such statements of policy do much to clarify the public understanding of the motor car situation.

Chalmers Policy Is to Build Best Cars Possible at Chalmers Prices

As in the past, the Chalmers policy shall always be to build the most efficient, most up-to-date quality cars to sell at medium prices. The design of Chalmers cars shall be changed whenever adherence to that policy shall make changes necessary.

We are proud of the changes that have been made in Chalmers cars. For all progress is change. To keep pace with the advance of science it is necessary to change. Every change we have ever made in Chalmers cars has given our customers higher value, more comfort, greater safety and more beauty.

The Chalmers Company always builds the best cars human ingenuity, painstaking workmanship and fine materials can produce to sell at Chalmers prices. It introduces new and good things as they are discovered and proved worth while.

It is in pursuance of this policy of advancement that, having proved the "Six" superior to the "Four," the production of Chalmers factory is now being concentrated on "Sixes."

We predict that within two years all cars selling above $1500 will be "Sixes." Even those who now decry the "Six" will be building "Sixes" within two years or building a "Four" at a great reduction from their present prices.

Cars selling above $1500 belong to the six-cylinder field as much as the cars selling below $1000 belong to the four-cylinder field.

It is just as impossible to stop the trend toward six-cylinder cars as it would be to dam the Niagara Falls. One builder of "Fours," in the $2000 class, claims more sales for his car than all makes of "Sixes" combined. This is positively exaggeration. There are being sold today **three** times as many "Sixes" as "Fours" at $1500 or over. Crying against the "Six" won't stop it—it only increases the desire for an investigation and a comparison of the relative merits of "Fours" and "Sixes." That is all that we as makers of "Sixes" ask.

When You Buy a "Six" You Get the Newest Style and Best Investment

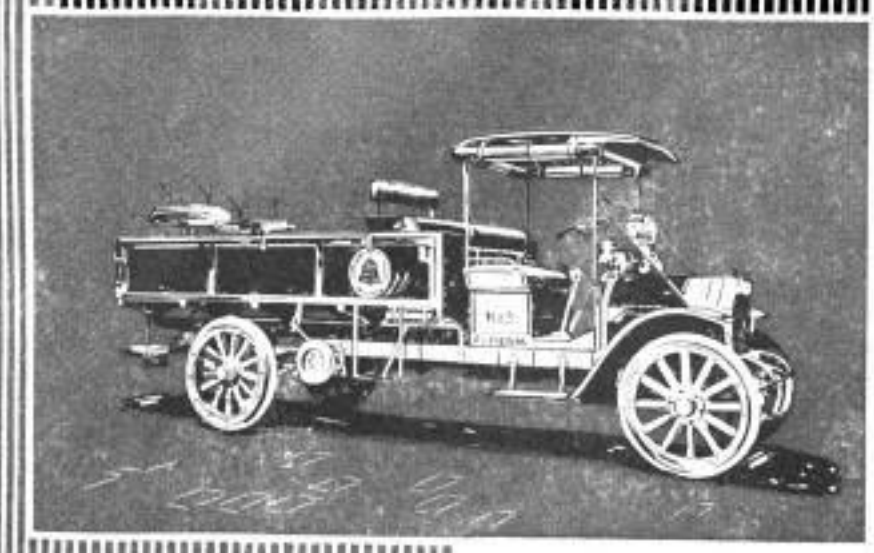
To you who are contemplating the purchase of a car this question of "Six" or "Four" is vital. We believe that only in a "Six" can you get a car which will give you the greatest satisfaction combined with safe investment. Why sink money in a car already out of style and bound to become more so each day?

When you buy a "Six" you buy on a rising market. When you buy a "Four" you buy on a declining market.

Our proposition is simple. We say ride in "Fours" and ride in "Sixes."

Ask your friends who have "Sixes" if they would go back to "Fours." We are sure you will want a "Six" after making such a test. And having reached that conclusion we ask you to ride in all the different "Sixes."

Then take the Chalmers Road Test. After this we are sure your purchase will be a Chalmers Master "Six." We invite comparison, with even the highest-priced cars.



Any Chalmers dealer will give you the Chalmers Standard Road Test. It is proof positive of every claim we make. Judged by the measure of this rigid test, we know that no car within $500 of the Chalmers price can even approach the Master "Six" in power, quietness, absence of vibration, flexibility, comfort, beauty, convenience and luxury.

That is a sweeping claim. But it will cost you nothing to prove to yourself that we are right. Don't buy any car until you have done yourself and us the justice of investigating the Chalmers Master "Six."

Chalmers Master "Six," 2, 4, 5-passenger . . $2175
Chalmers Master "Six," 6-passenger body . $2275
Chalmers Master "Light Six," 5-passenger . $1800
Chalmers Master "Light Six" Coupelet . . . $2050

One of the many Federal trouble-trucks in use by the Bell Telephone System

FEDERAL

It Takes More than Money To Buy a Federal

Here are four cardinal points of the Federal selling policy, adopted as much for our own protection as for yours.

1. You cannot buy a Federal unless you can use it profitably. We will investigate your haulage problem and your present costs. The investigation must demonstrate conclusively—to your satisfaction and ours—that there is a saving in cost or a gain in efficiency, or we will not sell you a truck.

2. You cannot buy a Federal unless we are permitted, through our Traffic Department, to suggest any necessary readjustment of your routing or hauling arrangements designed to promote greater effectiveness.

3. You cannot buy a Federal unless we are prepared, through proper co-operation in your locality, to render you the most efficient service after purchase—for without such service you would be handicapped from the start.

4. You cannot buy a Federal if a larger or smaller unit would better fit your business. In that case we will frankly tell you so.

Thousands of Federal trucks have been sold on this basis; and each year sees a steady increase in our output.

We have made a special study of traffic problems in many lines of business—yours, probably, among them.

We would welcome an opportunity to investigate, without obligation on your part, whether or not you can use motor-trucks profitably.

The investigation will be thorough, fair and conclusive.

Write us to-day.

Public Utility Corporations Find Much Greater Efficiency in the Federal

A large number of Federal trucks have been installed by public service corporations as trouble and repair wagons, as well as for general uses. Most of these installations were made after a thorough investigation which demonstrated to the satisfaction of the buyer the inherent superiority of the Federal in the elements of durability and dependability.

We have some interesting facts and figures along this line

World's-End

(Continued from page 15)

blue by the sky's caress, chuckling in its sleep as it drowsed gently to the sea, bearing with it gay flotillas of red and yellow leaves.

Owen looked from the lovely scene to the little face beside him. It was very rapt and quiet. The big eyes seemed searching the hills for some answer to deep, deep questions. He put out his big hand and took the small one next him, and instantly the slight fingers curled tight about his (almost as little Di's had done that first day when he touched them), and his heart yearned to her, quite as a mother's to her child in grief. But neither said anything. Silent and hand in hand they went on to the stables.

PATERNOSTER was found standing calmly on the feverish member, which during the night had become as cool and firm as a well-conducted pastern should be, so they bestowed apples right and left, and passed on through the old orchard, now fallen on senility, with its quaint, gnarled trees that bore Leather Jackets and Lady Apples and Bellflowers, and under whose branches the horses were allowed to regale themselves on all the windfalls that they could manage.

"Shall we go and see them cutting maize?" asked Owen, and she said: "Yes. Let's do that. I love the smell of the cut stalks and to see them building the shocks." They stood for some time talking to the men and watching them at their work. Being in among the tall stalks was something like being in a jungle of bamboo, and the light air, stirring the leaves that were already turning brown, made a soft, incessant rustling like the sound of women passing on light feet in gowns of silk.

"I should think you might get lost in a cornfield, mightn't you?" asked Phœbe, gazing about her at the ranks of green and tawny canes growing so densely and regularly.

"You could indeed," he said, and he told her how an old slave had assured him that a cornfield was a surer hiding place than a forest.

"How good it smells!" said Phœbe. "And how fast they work! They have almost built another shock since we've been standing here. I've always loved the corn shocks in autumn. They look like little wigwams standing about over the red fields. It makes me think of the days when there were Indians here—friendly Indians, weren't they?"

"Yes—fine, friendly tribes. Do you see that old silver fir?"

HE pointed to a splendid old tree whose top had been torn away, giving it a Japanese look.

"That was where the first Owen Randolph used to sit for powwows with the chiefs—it's an old landmark. 'Logan's tree,' it's called. That's Logan's tree, isn't it, Uncle Eben?" he asked, addressing an old negro.

"Yes, suh, Marse Owen, dat's sho' Logan's tree. *My* gran'paw is ben tend' on *yo'* gran'paw whilst he wuz confabulatin' wid ole Logan hisse'f onder dat ve'y tree."

"And now," said Phœbe as if to herself, "the tree is just the same, but they are changed. They are dust now, but the tree is as green and strong as ever."

"No sad thoughts, please," said Owen, drawing her hand through his arm.

"Indeed, indeed, I wasn't sad!" she exclaimed eagerly. "I was only thinking how it all ends that way—everything—in quiet—in rest—"

"Well, do you consider that a very cheerful reflection?" he asked, smiling.

She still gazed earnestly and wistfully at the dark, tranquil tree, out of whose quiet branches a bird had just flown.

"Rest is such a beautiful thought," she said softly.

"Isn't joy as beautiful?" She gave a little start and colored slightly.

"Yes, it's all beautiful," she murmured.

THEY took a path across the fields toward the new orchard, as Owen wanted to speak to Downer. The brambles grew very thick near a bit of quagmire beyond which ran Logan's Creek, and he went ahead to hold back the long thorn-armed sprays for her.

Looking at his tall figure in the old shooting breeches and light cotton shirt that disclosed the splendid muscles with every movement, Phœbe's heart swelled with love, pride, and pain. She thought:

"If he knew—if he knew—he would not trouble to hold back the briers for me." An absurd idea intruded itself as so often in our moments of keenest misery. She gave a little, involuntary, bitter laugh. It was so unlike her usual laughter that Owen turned.

"What is it?" he asked. "Can't I share the fun?"

But the look in her eyes worried him, and all at once the thought of that day when he had overtaken her on her way to Thunder Mountain gripped his heart.

"This must stop," he thought. "I can't have her suffer like this. God knows what she might do."

"Well," he said aloud, "what was your joke, dear?"

She looked half shy, half reckless.

"I was just thinking that if I were to be very wicked you wouldn't hold back the briers for me—you would 'teach' me with them as Gideon taught the men in Succoth. Don't you remember? Gideon went out and got him briers, and with them he taught the men of Succoth."

Owen laughed with her.

"I dare say all that Gideon taught them was a proper fear of Gideon. I don't believe one can teach much more than that with briers."

PHŒBE walked behind him in silence for a few moments. Then she said in her low voice: "But you think wickedness ought to be punished, don't you?"

He answered over his shoulder, without looking at her.

"There's so little wickedness—it's nearly all ignorance. In fact, it's *all* ignorance, in my philosophy."

The low voice came again after a moment or two.

"But you would punish bad ignorance, wouldn't you?"

"I wouldn't 'punish' anything. I'd help it to see better if I could."

Silence again for a little. Then the voice grew lower than ever, almost inaudible:

"Don't you think King Arthur—in Tennyson's poem—was *too* good to—to Guinevere? Men aren't really ever like that, are they?"

He laughed out, walking steadily on in front of her along the narrow, brambleset path.

"Too *good!* I think he was a bally prig! The most sugary, conceited ass that ever wore a helmet!"

He heard a sharp little gasp behind him.

"I—I don't know exactly what you mean," she faltered.

Now he turned round.

"My dear girl," he said in a matter-of-fact voice. "Just think the thing over for yourself. Have you read the 'Idyls' lately? No? But you remember them clearly enough, I dare say. He might at least have spared her that bifalutin' interview in the convent. Think of the picture of that sanctimonious prig, standing there in full armor, while the poor woman groveled at his feet, and, holding forth about her golden hair, 'now lying in the dust,' and about how in heaven she would come to her senses and love him (why, pray?), 'not Launcelot nor another'! . . . You can't really admire that royal he-prude, Phœbe. You don't really think he was 'too good' to poor Guinevere, do you?"

PHŒBE had stood through this, her color changing from white to red, from red to white. It was so wildly, improbably strange to hear Owen thus defending the royal adultress against her spotless husband.

"But—but," she stammered finally—"but she was wicked, Owen. She deceived him—she deceived her husband."

"Not in the vulgar, everyday sense, Phœbe. She had been married by proxy to Launcelot when she was a young, ignorant girl. Night after night during that long, false bridal journey they lay side by side with his bare sword between them. But swords can't divide hearts and thoughts."

He took a step toward her in the narrow path, and, framing her face in his hands, raised it so that he could look into her eyes. He held her to him an instant, then released her.

"You may be very sure of this," he continued, resuming his walk ahead of her: "that no matter what you had done, I shouldn't let you crawl about the floor while I preached to you from the heights of my self-righteousness."

Phœbe walked behind him dumbly, her thoughts all in a bright, confused tangle like the particolored ribbons that issue from a juggler's mouth. She was too

Keeps rooms always at 70°

You can keep your home steadily at one temperature—whether on cool, raw, or stormy days. No matter how great or sudden the range of winter weather, you can hold the indoor temperature at just the degree desired for the comfort and health protection of the children and grown-ups by use of an

IDEAL SYLPHON REGITHERM

It is a mechanical servant which keeps a close watch on the temperature of your rooms. The REGITHERM can be regularly set at any temperature from 60° to 80°—usually 70°; then you pay it no further attention, all winter. If the outside temperature rises or drops, the REGITHERM sensitively feels the change and instantly moves the draft or check-dampers of the Heater, to make the fire burn faster or slower and yield the exact degree of constant comfort. It never tires, never runs down; never over-heats or under-heats. REGITHERM is all metal, has no diaphragms, clock work or batteries to replenish or repair; coal savings pay its cost in a few winters.

Easily added to old heating outfits

Write for "New Heating Aids" booklet—tells all about the REGITHERM, SYLPHON Packless Radiator Valves (never can leak around stem), also about NORWALL Air Valves (for best heating work from radiators)—and other labor and coal-saving devices. Write today.

bewildered to take real comfort from his words, yet there was a balm in them that soothed that steady, bitter pain in her heart. And, presently out of the bewildering, snarled brightness of these thoughts came one clear and golden—a ray of hope piercing her darkness like a magic blade. He had found excuses for Guinevere! Maybe—maybe— But no. It was impossible. He could judge Guinevere with leniency because she was so far apart from him—but for his own wife—the woman who slept on his heart—who might some day bear his son! He would not be human if he did not have for her another judgment. And then, besides, the child—the child that he thought his! The child that he thought his! No, Guinevere had not been as false as she, Phœbe, had been. She had not gone to the king soiled and stained, letting him believe her pure—letting him by marriage with her assume the fatherhood of a child not his. There it was—the unforgivable, the inexplable—the awful falseness on which she had reared her brittle palace of joy. What had she and joy to do with each other? She had snatched at the cloak of what she thought passing happiness, and it had come away in her selfish, feverish grasp, disclosing the stark figure of vain Remorse barring her way.

SUDDENLY Owen sprang aside and pressed in among the twigs of a thicket near the creek, which they had now reached. She followed him to the edge of the tangle, wondering what it was that he had seen.

When he came back—from between his big fingers, carefully hollowed, there peeped the sleek, tiny head of a field sparrow—with its scared eyes so like blackberry seeds.

Owen opened his fingers slightly and showed her one little chafed claw.

"It was caught in a forked twig," he said. "If I hadn't happened to see it, it would have starved to death."

"Oh," said Phœbe, her eyes suddenly full of tears, "how kind, how *kind* you are to *everything*."

Owen smiled at her over the bird's timid, bright-eyed head. "You talk of Guinevere's 'wickedness,'" said he. "This poor little mite was 'wicked' enough to get itself caught in a forked twig. All young things that 'go wrong,' as they say, are just birds in forked twigs." He opened his hand, lifting it toward the sky with the little fluff of feathers quivering on it. An instant's doubting pause—then, like a shot from a magic sling—away—out—up sped the tiny life.

THEY entered the orchard by the southwest gate, and walked toward the sound of hammering along aisles of trees already stripped for the market. And these young trees, so vigorous and symmetrical, on which, only here and there, hung reddish fruit too small and poor to be worth gathering, seemed very sad to Phœbe. Patient dryads they looked to her, from whom all their rosy offspring had been taken away.

"It was so gay and cheerful in here a week ago," she said, "and now the poor trees look so sad in their dark green dresses with all the apples gone."

Owen stopped and took a graceful bough in his hand. "Yes," he answered, "but think of the magic secret that each of these bare twigs knows. Thousands of blossoms hidden here—thousands more of apples— We shall be here next spring, please Providence—and you will see these sober things in bloom—each a tent worthy of Pari Banou and her lover."

But in Phœbe's heart was the sick thought: "Can I stand it till the spring? This pain, all the time—all the time?"

"It must be wonderful," she said aloud. "I'd love to see them. But all these—" she stooped and picked up an apple from the pile of discards near which they stood—"they look so fresh and sound. It seems such a waste to leave them—"

"Look carefully," he said. "No matter how sound they seem, they have each their secret, too—a dark little secret this time."

"How?" she asked, turning the glossy, scarlet fruit in her hands and gazing at it.

HE took the apple from her and showed her a tiny, dark speck near the stem.

"It's only a speck," he said, "but it goes to the core. Wait—I'll show you."

He twisted the apple in two with a turn of his strong wrists. "There! You see?" he said.

And Phœbe saw that the one black speck ran in a little groove to the heart of the fruit.

"Just one cheeky worm," he smiled,

"Here comes an Indian—the machine that evolved motorcycle electricity"

OF all departures made by the Indian for motorcycle development its 1914 electrical equipment has received the readiest and most extensive recognition both in America and abroad. This does not even except the famous comfort feature originated in 1913—the Cradle Spring Frame.

Behind this success is a story of more than twelve months engineering endeavor—research—deliberation—selection—test—and costly experimentation without end. Not until the Engineering Department had stamped its final O. K. on every minute mechanism was the following announcement made:

Indian Motocycle

for 1914—all standard models equipped with electric head light, electric tail light, electric signal and two sets of high amperage storage batteries.

The Indian electric lighting system, especially, qualifies as the most advanced mode of illumination today for the motorcycle. In its mechanical principles it is soundly based on all the electric lighting experience which automobile engineers have worked out. The fact that over 95% of all automobile manufacturers have adopted electric systems is sufficient indication that the trend in motorcycle design and appliance must likewise be an electric one. The Indian electric system has been proven at all the cardinal points

—powerfulness —convenience —wear —economy —reliability —accident resistance

Each battery is ample for 750 miles of night riding—cost of recharging is very small. The total electrical mechanism is protected against vibration and shock by the Cradle Spring Frame and Fork—devices which play a large part in the successful application of motorcycle electricity as evolved by the Indian.

2,500 Indian dealers throughout the world are ready to demonstrate the electrically-equipped Indian to you.

throwing away the halves, "and the whole fruit's good for nothing but pigs or bulk." The blood rushed suddenly into her face.

"But all the rest was good!" she cried passionately; "why do you throw it in the dirt?"

SHE stood gazing at the broken fruit, now smeared with red dust, and her dark eyes had a pained, almost angry, protest in them. He knew so well what she was thinking! He raged inwardly at his cruel, momentary forgetfulness.

"Of course the rest was good," he said lightly. "It's only that for the winter market they don't keep when they're like that. Apple merchants ask far more than philosophers. They won't be satisfied with anything short of perfection."

"It seems cruel somehow—" she said, all pale and listless again. "But, of course, they're right—it went to the heart— If it had only been on the outside—"

He put his arm about her as they went on. "You mustn't talk so woefully, as if apples were human beings," he said, smiling. "Sometimes a worm at that strange thing, the human heart, only sweetens it. I can't imagine a more deadly companion than a flawless human being, dear Woebegone."

"But just faults are different from a black spot in the heart—"

"Even that apple didn't have a black spot in its heart, Phœbe. Downer and I are far too proud to allow that to happen. That worm just took his selfish fill from one tiny corner. A black spot at the heart would come from some disease of the apple itself, and we don't have that kind at World's-End."

"But you threw it in the dirt."

"I did it without thinking."

"Yes—just naturally. It was blemished—men don't like blemished things."

"Your knowledge of men is, of course, beyond question," laughed Owen.

"I know that much," she said with dreary obstinacy.

"What you might call 'blemished' women have been loved more perhaps than any others."

"How could that be?"

"Because sometimes they have the most lovable natures and the warmest hearts."

"Suppose a man found it out—afterward?" Owen gave that soft laugh again.

"From your awe-stricken tone," he said, "I suppose that you fancy him slaying her, or crying 'Avaunt, wanton!' in a terrible voice, and turning on his superior heel to leave her forever to remorse."

PHŒBE walked on blindly for another moment, clinging to his arm, through which he had drawn her hand. Then she faltered: "Well—what would he do?"

"If he were a real man," said Owen, striking with his stick at the drooping boughs, "I should think he might be so devilish sorry for her that he'd love her all the more to make up to her for all she'd suffered."

"Oh! It's turning black!" cried Phœbe, and she fell against him, grasping with her other hand.

He sat down on the warm, dry earth, and laid her with her head upon his knees. When he saw that she had recovered and was not going to faint he said:

"You know, Phœbe—Mary's been telling tales on you. It seems that you don't eat enough to maintain a mosquito. Now, while I've got you so entirely at my mercy, you've got to promise me something. Either you promise that from this time forward you'll eat properly or I phone for Charles Patton as soon as we get back to the house."

"Oh, I promise—I do promise—" she said. He pulled her up into his arms, holding her jealously.

"You little imp!" he said brokenly, "to dare go fretting over things you won't tell me of—you wicked child! Don't you know me yet?"

(To be continued next week)

A Number of Things

The Swallow Chasers

PERSONAL property taxes have been a stale joke in this country for some years now. Nevertheless, Tax Commissioners Fackler and Agnew of Cleveland, Ohio, have found some provision in the 1914 tax laws under which (according to report) they will levy on John D. Rockefeller for $35,000,000, or $6,000,000 more than the famous near-fine of a few years ago. Preparatory to this unique feat in the annals of the bureaucratic vaudeville which taxation often is, the commissioners have shut themselves up in their office with an adding machine, and are handicapped in their work, we are told, because the machine adds only five columns of figures. Our guess is that Messrs. Fackler and Agnew must be intentionally contributing a comic relief to our muddle of taxation, for we know that Mr. Fackler at least has an intelligent insight into the fundamental principles of this science.

Local Color

AN American who is going to England to manage a railroad says:

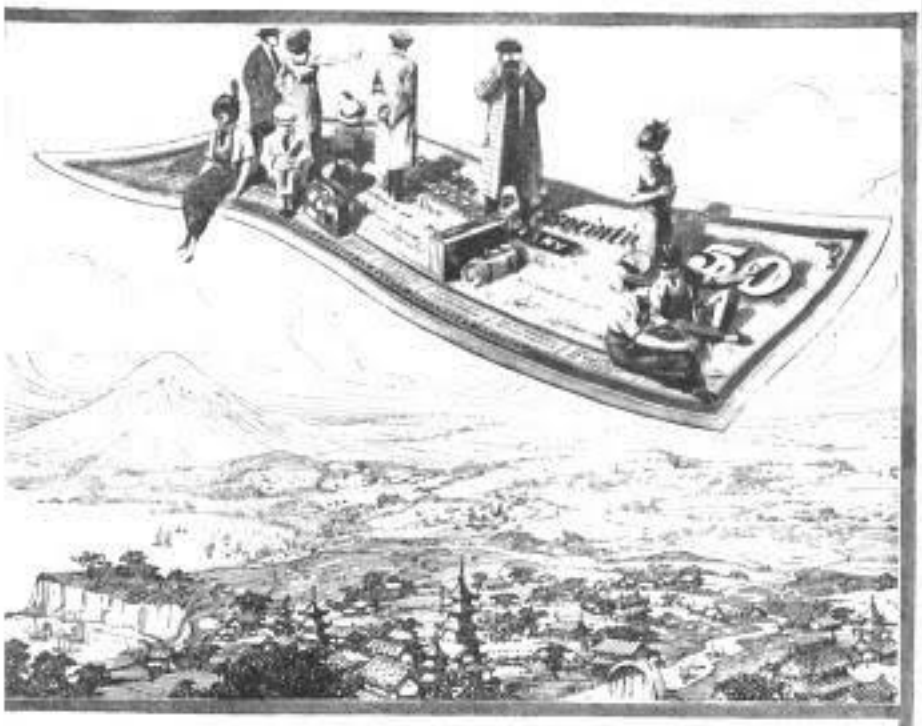
"There are 32,000 employees of the Great Eastern Railway, and I am sure there are several competent men among that number. I shall make it my business to get personally in touch with the staff and help along those who have merit."

One seldom sees anything so ineffably and complacently British. How popular he will be over there!

It's Different in England

APROPOS of this same man's job, the accurate "Evening Post" (New York) makes some observations which go to the heart of our transportation problem:

"When the shareholders of the Great Eastern hold quarterly or annual meetings, Thornton will be called upon to answer all kinds of leading questions regarding his operating methods. And he will not have two or three high-priced lawyers at his elbow to answer for him or rule the shareholder out of order. There a chairman would not dare to order his shareholders 'to vote first and discuss the matter afterward.' At the annual and quarterly meetings the shareholders are the owners, and not the servants."



How different things would have been with the New York, New Haven & Hartford if Mellen had had to stand up to this sort of treatment! Hadn't we better domesticate a few true-blue British shareholders for some of our utilities? One of the facts which are being ignored in our present discussion of the New Haven Railroad and other corporations is that an appreciable portion of the blame rests on the small shareholders who never go to the meetings.

A Pinkerton for the Sun

WE like these almost disembodied souls who write "defenses of monogamy." We hope they will find time to defend health, honesty, and the composition of water as now constituted. What would become of civilization and the well-filled columns of our magazines if it were not for these custodians of the innermost? It was the White Knight in Lewis Carroll's "Through the Looking Glass and What Alice Found There" who had his horse wear anklets round his feet to guard against the bites of sharks. "An invention of my own," as he proudly observed.

Warnings

A FREQUENT headline in the conservative press is this: "A Warning from Mr. Taft," or "William H. Taft Warns Against Present-Day Dangers." The range of subjects runs all the way from altruism to whisky. Being somewhat in the warning business ourselves, we sympathize with this activity; and yet Mr. Taft himself is a very notable warning to those interested in forward-looking politics. His career warns us that a statesman must plan and lead and control. He must read the purposes of his generation and must not be turned from his projects by merely legal precedents or by interested pressure masking as public opinion. Mr. Taft does a service in cautioning people against various dangers. His career warns us how we must deal with them.

Travel on "A.B.A." Cheques

They will relieve you from the risk of carrying large amounts of cash. They will simplify your calculations in foreign currency. They will free you from the annoyance and expense of exchanging money at frontiers.

"A.B.A." (American Bankers Association) Cheques will make your money matters as simple as though you carried $10, $20, $50 and $100 bills engraved with their exchange values in the moneys of the various nations. They are as safe to carry as your personal check book, because your countersignature (which identifies you) is required to make them good and because they may be replaced if lost or stolen.

They are accepted exactly like currency by hotels, railway and steamship lines generally, and by the best shops in every country. They may be cashed by 30,000 banks throughout the world.

"A.B.A." Cheques are the only travelers' cheques issued under authority of the American Bankers Association. They are the only travelers' cheques which can be accepted, under the law, for U. S. Customs duties.

Get them at your Bank

If your own bank is not yet supplied with "A.B.A." Cheques, write us for the booklet and for information as to where the cheques may be obtained in your vicinity.

BANKERS TRUST CO., New York City

Be sure that you get

Only 1 oil in 9 is correct for *your* car

That is conservative.

There are two vital factors in automobile motor lubrication. One is the oil's *quality*. The other is the fitness of the oil's *body* for your type of motor.

There are many variations in the *body* of oils.

Only one is correct for *your* motor.

There are also many variations in *quality*. But, under the heat of service in your motor, only one *quality* will show maximum lubricating efficiency.

What if your oil is below the highest *quality* or incorrect in *body*.

Loss of power or undue friction, or both, must result. Repair bills follow.

Consumption of gasoline and oil mounts up.

Two motor demands

You may "want" correct lubrication. But you will seldom get it by chance.

It is of the utmost importance that you find the oil whose *body* suits your motor and whose *quality* offers the highest protection after the oil has been distributed.

It is now generally known that oil of correct body for your car can be determined only by detailed motor analysis – backed by scientific lubricating experience.

How friction hides

We are sometimes asked why incorrect lubrication does not always show up quickly in a motor.

That is an interesting question.

Some years ago motor parts were more exposed. Cars were often under-powered. Noise, overheating and loss of power gave the motorist timely warnings to investigate his lubrication.

But today most motors are amply powered and are largely closed in. Loss of power may not be noticed. Sound is deadened beneath metal jackets. Parts are frequently out of sight and hearing.

It is much like smothering an alarm-clock gong under a pillow.

The *noises* of friction are now partly smothered. But the *friction* still exists.

There is only one safeguard against undue friction—*correct lubrication.*

The solution

As a fundamental step in producing the oils specified in the Chart below we analyzed the motors of every make of automobile. We found widely varying conditions.

Correct lubrication for every type of motor demanded several grades of oil.

Keeping before us the special requirements of gasoline engine lubrication, we manufactured these grades from selected crude stocks.

In our lubricating Chart we then specified the correct grade of Gargoyle Mobiloil for each car. Every year by fresh analyses and demonstration, this chart is brought up to date to cover the models for that year.

This Chart, printed in *part* below, for a number of years has been a standard guide to correct lubrication. Our *complete* Chart will be mailed you on request.

Make a note of the grade of Gargoyle Mobiloil specified for your car. Make sure that you secure it—buying preferably in the original barrels, half-barrels and sealed five-gallon and one-gallon cans, marked with the red Gargoyle.

Then there can be no doubt that your oil will be scientifically correct for your car in both *body* and *quality*. You will use the "one" oil essential to the longest life of your car and the greatest pleasure in motoring.

On request we will mail a pamphlet on the Lubrication of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants.

For information, kindly address any inquiry to our nearest office.

A guide to correct Automobile lubrication

Explanation: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example, "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." For all electric vehicles use Gargoyle Mobiloil "A." The recommendations cover both pleasure and commercial vehicles unless otherwise noted.

Another World's Record

The record score, 1154 out of a possible 1250, was made January 1, 1914, by the Springfield Team in Match No. 6 U.S.R.A. Indoor League, using S. & W. 22 Single Shot Pistols.

Mechanical perfection and accuracy

The same mechanical perfection and accuracy that have made the Smith & Wesson Revolver the *superior* revolver, are embodied in the new

Smith & Wesson Automatic

"The gun that makes you think"

Unintentional discharge is impossible

You *have* to think before firing. The automatic safety is operated *not* by pressure of the hand in grasping the butt—*not* by the finger that pulls the trigger—but by a *double* motion of the *middle* finger, which necessitates a *definite intention* to fire.

Accidental discharge is impossible

No fall or blow could operate the trigger *and* the automatic safety—and this *must* be released *before* the trigger can be pulled. And what is more, if you set the *non*-automatic safety (on the rear of the butt) it locks the trigger *absolutely, regardless* of the *automatic* safety.

Five-fold superiority

Ease of cleaning, ease of loading and the *.35 caliber*, which automatically protects you from cheap or unsuitable ammunition, are other exclusive features. These three, with *double safety* and *mechanical perfection and accuracy*, give the Smith & Wesson a *five-fold* superiority in the automatic field.

Ask your dealer about the Smith & Wesson Automatic. Write for free catalogue.

SMITH & WESSON, 717 Stockbridge St., Springfield, Mass.

Where Dollars Are Neighborly

Continued from page 10

struggling to free himself from debt and usury.

Now what is a Credit Union? In the terms of one of the many Jewish organizations it is a group of twenty or more farmers living within a short distance of each other who form an association to lend money. The assets consist of the proceeds of the sale of shares which cost $5 each. Each member only has one vote regardless of the number of shares he owns. Thus the administration becomes purely democratic. Loans, ranging from $1 to $100, are made on their personal notes with one or two indorsers. Each application for a loan however must state the specific purpose for which the money is to be used. The four principal officers constitute a Credit Committee which passes on all loans, which are only made for productive purposes or urgent needs. The notes may run for six months with privilege of renewal and at the rate of 6 per cent a year. Only one member of a family or one partner, when the farm is owned by several individuals, can borrow from the union at the same time. Membership in the organization is only open to members of the local Jewish Farmers' Association in good standing. Thus one cooperative benefit leads to another. In order to encourage the Credit Unions at the start, the Jewish Agricultural and Industrial Aid Society lends each one twice its initial assets and charges 2 per cent interest.

The profits on loans are divided among members in proportion to their holdings of shares. Most of the unions, however, have preferred to keep the net earnings in the treasury. It is worth adding that in thirteen months the original seventeen unions rolled up a net profit of $1,317.93, which was at the rate of 13 1-4 per cent on the capital employed.

To-day in the eighteen places where Credit Unions are in operation (they include nearly 600 members and have loaned out $73,000) you find the Jewish farmers economically independent. With this emancipation has come freedom from the anxieties that so often clog the progress of their Gentile neighbors. By becoming their own bankers for working capital they have developed a larger faith in themselves and thus they strengthen the stability of the whole section. In a word, these Credit Unions represent the very essence of cooperative effort.

On these sacks is printed in large letters the exact proportion of plant food in the fertilizer

The Example of Fairfield County

LET us now see, in the concrete terms of one community's prosperity, just what this amazing system of cooperation can achieve. Take Fairfield County, Connecticut, where one of the oldest Jewish farming settlements is located and where a pioneer Credit Union was set up. Here, within a radius of a few miles of Bridgeport are nearly fifty Jewish families.

All refugees from oppression, they have reared a commonwealth that provides sanctuary and sustenance amid the friendly hills.

The beginning of this colony was typical of many of its sisters. A sweatshop worker down on the East Side of New York, weary of the bondage of the needle, bought an abandoned farm. Then another Hebrew with health ravaged by Ghetto congestion followed suit and so on until there were a score.

Now the striking feature of this colony, as in all others, was that so long as these Jewish families remained isolated units they did not completely prosper. For one thing they were at the mercy of avaricious land agents who palmed off sterile stretches of rocky waste as "productive farms." The traditional resource of the Hebrew faded before the aggression of the stranger whose speech and customs were foreign.

But as soon as a Farmers' Association was started the settlement got a rebirth of progress. Men who had passed each other on the highways came together in social, religious, and economic intercourse; their wives became friends; no longer could the land agent foist off a worthless and unproductive area. Why? Simply because the newcomer had colleagues of his own kind to consult and, what is more interesting, they were not willing to stand by and see him duped.

The Right Way to Buy

HERE, as elsewhere, the operation of the Central Purchasing Bureau has not only saved the Jewish farmers money but wrought a benefit for the whole community, as this illustration will show: The Fairfield farmers bought several carloads of feed at wholesale prices. They could not use all of it themselves so, upon request, they disposed of the balance to their Gentile neighbors at a slight advance on what they paid. But what happened? The Bridgeport dealers, seeing good business slip away from them, reduced their prices to meet the rates established by the Jewish farmers. Thus the Israelite became good angel as well as good neighbor.

The work of the Credit Union at Fairfield is merely typical of what all the others are doing. With twenty-nine members who own 108 shares they have loaned nearly $7,000 in less than three years. These loans (the average is well under $50), tell an impressive story of uplift and advance. Each one represents an emergency met or a needed increase in productive machinery. It may have been the interest or an installment on a mortgage, a cow, horse, or silo.

The big fact is that without the ready and reasonable aid of the union hardship might have been worked or prosperity impeded.

So highly developed is the spirit of cooperation among these farmers that it is a sort of instinct among them, manifesting itself in various significant ways. Here is an example: A newcomer in the vicinity bought a farm and started a small dairy. Naturally his first act was to join the Farmers' Association and subscribe to the Credit Union. But almost before he was elected his barn burned and all the contents were destroyed. At one swoop fate had wiped out his whole source of income. He had exhausted his modest capital in buying the farm and he was destitute at the beginning of winter with a family on his hands.

As soon as his plight became known his Jewish neighbors assembled. All have telephones and are easily accessible. "What can we do to put this man on his feet?" was the question that occupied them. In less than an hour the victim of the fire had $250 to his credit and was able to start all over again. The Credit Union loaned him the limit which was $100, and the remainder came from the surplus of the Farmers' Association which may be employed in this way in rare emergencies.

Cooperative Milk Hauling

LAST spring another farmer was busy plowing. One night his best horse died. Unless it was replaced at once his work would stop. He already owed the Credit Union $100 and under its laws could borrow no more. But this did not prevent him from having cooperative help. Once more the neighbors got together, raised a fund and bought him a horse, the cost of which he is paying back in small installments.

Now take another angle of this cooperative effort. Most of the Fairfield Jews

are dairymen and they live from three to five miles from a milk station. If each man had to haul his milk every day it would cut a big hole in his time. So they agreed to syndicate the hauling. There are six farmers in every agreement and each man hauls the milk for the entire group one day in the week. This enables the rest to remain home all day and stick to their work.

Then, too, there is the religious side. The Jewish farmer is a devout man and feels the need of a regular place of worship. As a result the Fairfield colony is to build a cooperative synagogue. One farmer gave the lot and a dozen others each subscribed enough to make a worthy little edifice possible. The basement is to be used as a schoolroom for the children and a place of assembly for communal work.

Even the women have felt the inspiration of the get-together mood and formed a Ladies' Auxiliary which meets at the various houses and discusses domestic science, the care of children, and farm sanitation. When the wife of a farmer falls sick there are half a dozen women in the community ready to take up her work and care for her babies. No phase of all this cooperation has a deeper or more lasting significance than the part contributed by the women.

A Transplanted Slice of Russia

I WENT among these Jewish farmers to see just what they had done for themselves. I found a vivid slice of faraway Russia nestling in the snows of rural New England. In the living rooms of the farmhouses stood the brass samovars that had steamed in Continental ghettoes; there were the tall candlesticks that gleamed on the Sabbath-eve tablecloths; on the doorposts were the sacred scrolls, universal hall-mark of the pious Jew. Here, as everywhere the world over, was the orthodox Jew maintaining the integrity of his faith supremely indifferent to environment.

As I drove along the icy road a huge white barn loomed up before me. I asked my guide who owned it.

"That's about the best in the county," he replied. "One of those Jewish farmers owns it."

I went inside and found Morris Nussbaum, who, like his Biblical ancestor Ruth, stood "amid the alien corn," only in this case the corn was being ground into fodder in a cutter operated by the most approved gas engine. The place was a revelation. On one side thirty cows chewed their cud contentedly; on the other were half a dozen horses. Both upper and lower floors groaned under the weight of almost every modern implement that added to the convenience and profit of the farmer. Even the cows were milked by machine. And in the midst of all of it was an upstanding giant of a Russian with the face of a Tolstoy, only beardless, who greeted me warmly in broken English and stopped to talk occasionally while his Yankee helper paused to breathe.

"Hard Work and Cooperation"

THE story of Nussbaum is merely the duplicate of many of his neighbors. Eleven years ago he was a prosperous timber merchant in Minsk. When persecution got too hot for him he disbanded his household, sent his family to the country, sold his business at a sacrifice, and landed in New York with exactly $1,000 in his pocket. He had seen something of farming in Russia, but he had no practical experience. He heard that the Jews were successfully operating dairies in Fairfield County, so he put the remnant of his small fortune into an eighty-seven acre place near Bridgeport and started life anew.

He found a battered farmhouse, a decrepit barn, a stony area that almost defied cultivation, and a few head of live stock. For months he slept on a straw pallet in the kitchen where he cooked his own meals. But he was a prodigious worker and he had a cooperative machine behind him. Before a year he was able to send for his family. I found him installed in a comfortable new house; I have already described the barn. The nucleus of a few cows has grown to a considerable herd. His place is so sanitary that he gets more for his milk than any of his neighbors. He would not sell his farm for $14,000.

I asked him what lay behind his success. He replied with true Russian brevity:

"Hard work and cooperation."

Regal
A Smart Style for Every Occasion

"WHY I AM A UNITARIAN"
By James Freeman Clarke and other Unitarian Literature sent free. "Unitarian Associate Department," 2 Beacon St., Boston, Mass.

"How did cooperation help you?" I asked.

"In many ways," he replied. "First and foremost was the Credit Union. I keep no money ahead, because I put all my profits back into the farm in the shape of improvements. I have had many chances to buy good cows cheap, so when these opportunities come I simply borrow from the union and increase my equipment. I buy feed through the purchasing bureau and save $50, for example, on a carload of alfalfa."

Mutual Helpfulness

I WENT on to the farm of Jacob Puzinsky, a refugee from Wilna. When he arrived in New York he was penniless. After working in a grocery on Ludlow Street near Hester (in the heart of the East Side) he drove a milk wagon. In eight years he saved $3,000. With this he made the first payment on a farm about a mile from Nussbaum's. At the start he had one horse and a dozen cows. When I saw him he owned twenty-five cows and four horses and had a plant that he would not sell for $15,000. His wife and children, rescued from the congested city, are rotund and rosy, and he is a cheerful and contented citizen.

Then there was Solomon Rose, who, like Nussbaum, fled from Minsk. Curiously enough, these two men who had known each other in the Fatherland met by accident after a long lapse on a Fairfield country road and found that they lived within five miles of each other. Rose ran a dyeing establishment in New York, but the reek and fumes were too much for his health. In Connecticut he not only found vigor but abundant prosperity.

So too with Harry Garder, who broke down under the tumult and sordidness of the grind for existence in New York and started farm life with his savings of $800. Now his place is worth eight times that much. Unlike his associates, he has gone in for fruit raising. In the summer he keeps boarders.

None of these men, and the many others that I could cite, could have achieved success without the benefits that have come from close cooperation and the spirit of mutual helpfulness that characterizes this whole booming community. I can pay its prosperity no greater tribute than to say that within ten years this coterie of Russian refugees have built up a total investment of a quarter of a million dollars in land, live stock and general working machinery. What has happened in Fairfield County has been duplicated in Ellington, Conn., in Rensselaer, N. Y., in Colchester, Conn., in Hurleyville, N. Y., in Woodbine, N. J., in Attleboro, Mass., and in a dozen other places. Everywhere the Jewish farmer has marched ahead under the banner of cooperation.

Some Picturesque Cooperative Effort

THE Jewish farmer might well rest on the achievement that all this cooperative effort has produced, but he has gone farther, as the instance of the Cooperative Fire Insurance Company of Sullivan and adjacent counties shows. Like most Hebraic progress it was bred out of some kind of discrimination.

Up in Sullivan and Ulster Counties in New York State the Jewish husbandmen had great difficulty in obtaining insurance on their properties. One reason was that ancient prejudice that the Hebrew is a "fire bug." When they did get insurance it was at prohibitive rates, some farmers paying as much as $4 a hundred a year. An acute situation developed.

These farmers had enjoyed the benefits of cooperative effort, so in this new emergency they got together to find a remedy.

"Why not apply the Credit Union idea to fire insurance and have our own company?" was asked.

The result was the formation of a company which solved the whole troublesome business. Like the Credit Union it represents the highest self-help. No surplus is carried and losses are paid out of assessments based on the amount of insurance carried by each member. The company charges $2 for membership policy and survey. Insurance is written at the average rate of ten cents a hundred dollars. A farmer can get $1,000 insurance for three years for $5; $2,000 for the same period for $8 and so on.

Even a Mutual Insurance Scheme

AT the end of nine months the company had 206 risks and had written $654,000. The fire loss during the first year was less than $1,000. It is estimated by the officers of the company that the saving to the Jewish farmers, so far, by those directly insured in the cooperative scheme and by those who have benefited by the general reduction of rates that has followed throughout the region is not less than $25,000. Here, as I have pointed out in other instances, a whole section has been helped by cooperation among a group.

Two more instances may serve to round out these annals of a really notable progressive advance. You have already had one example of the enterprise and resource of the Jewish farmers of Sullivan and Ulster Counties. Here is another:

Many of them keep boarders during the summer, and this means that they use up practically all the milk and butter they produce. But when the vacation season is over they must find a market for these products. Last fall when they started to ship they found the buyers arrayed against them. "If we can't get your milk and butter all through the year, we won't handle it at all," was the argument.

Once more the sons of Israel got together. It is instinct in time of trouble. The fire insurance history simply repeated itself, because a cooperative creamery was started. "We will send our butter direct to the consumer in New York," was the slogan. And it has worked out successfully.

An old mill near the railway station at Hurleyville was bought and converted into a creamery.

An agency was established in New York which receives the product fresh every day. The butter is sent out in sanitary packages bearing the device of the Federation of Jewish Farmers and the motto "From the Producer to the Consumer." Eggs also are shipped.

The Consumer Shares in Profits

THIS creamery project has a feature —the real test of cooperation—in that the consumer will share in the profits. He gets 25 per cent at the end of each year. His share is based on the amount of the product that he has bought as evidenced by the wrappers on the butter. Fifty per cent of the profits will go to the farmers and the remaining twenty-

FREE A GREAT NEW MUSICAL WORK
ALL MANDOLIN AND GUITARDOM of Three Continents is set agog by the "GIBSON" Violin construction of Mandolin and Guitar

Exclusive "GIBSON" Features

Carved Top and Back; Stradivarius arching; scientific graduation from thick in center to a delicate thinness at rim which simultaneously secures strength and sensitiveness and compels free vibration of entire sounding-board by affording the vibrational lines of least resistance clear to the rim. A **tilted neck** permits a **high bridge** on both Mandolin and Guitar, which with the **extension string-holder** secures vertical and increased string pressure sufficient to pulsate a larger and thicker sounding-board; thus producing a **highness of tone never before realized. Relative treatment of top and back** secures sympathetic vibration from the back-board which additionally supports the tone. **Necks are reinforced,** and made non-warpable. **Guard-plates or finger-rests are elevated** on all "Gibson" instruments. **Easy action. Adjustable string bearing** at bridge overcomes sharping of heavier strings in upper positions. **Get a "Gibson" on approval** at as low as $2.00 down and $1.50 a month. **(Only 5c. a day.)**

Costs you nothing to investigate. Besides, you want our **free superb book of 100 pages — 50 cuts** — and subject-matter on instrument construction, intonation, orchestration, great American and European Artists and Orchestras; a terse compilation of virile truth. For the player and teacher of strings.

Wm. Place, Jr., the Country's Idol of Mandolin Virtuoso-ship and Star Soloist of the Victor Talking Machine Company, writes:

"The 'Gibson' tone resonates perfectly and carries to the largest hall with a wealth and brilliancy peculiarly its own, which gives confidence dear to the virtuoso, for he knows the contrasting tonal effects, the rapid execution and all the other intricacies of technique will go forward to the audience just as he produces them. * * * I most thoroughly believe in the superiority of the 'Gibson' construction."

Also FREE Treatise "HOW TO PRACTICE, WHEN AND WHY, PSYCHOLOGICALLY CONSIDERED." The greatest lecture in three decades on this specific subject.

Write today. If a teacher, **do business on our capital. Stock furnished. We help sell. We pay the advertising. You pay for goods when sold; return goods not sold. Try our "Still Hunt." Catalog and thematic list free. Enclose your card.**

OPEN—A splendid, permanent teaching and business opportunity to the right teacher. Either sex. Write promptly. Other positions pending.

IOWA SEED CO. DEPT. H DES MOINES, IOWA

five to a surplus fund to meet emergencies. Inspired by the example of the up-State New York farmers, their brethren in Fairfield County, Connecticut, are planning a similar enterprise.

Final evidence of this "all for one and one for all" campaign is the Cooperative Live Stock Insurance Company organized among the Jewish farmers of Carmel, N. J. Twenty-five of them contribute $2 each to a fund. When a member's horse or cow dies, his loss is made good. If the fund is inadequate, a small assessment is levied.

Leadership Rather Than Legislation

WHAT then is the real significance of this amazing lesson in cooperation among an alien people who, beginning life anew in a strange land, have established at the same time, a whole economic order? First and foremost it shows the efficacy of collective effort as applied to a multitude of common needs; second, it proves beyond doubt that the whole harassing problem of rural credits does not need legislation as much as it needs real leadership.

In its purely human side it means that for the tired and oppressed city worker, whether refugee or native, the journey "back to the land" is the road to cheerfulness and content. The concrete illustration revealed here indicates that in farming, as in all other activities in which he joins, the Jew is well worth watching and heeding.

" Don't give 'im all the peanuts, Eddie; you'll spoil his dinner "

PENNSYLVANIA Oilproof VACUUM CUP TIRES

Question:

Do They Actually Prevent Skidding?

Answer:

For three years now we have sold these tires on our widely advertised guarantee that they will not skid on wet or greasy pavements, else returnable at full purchase price—

Never a challenge of this guarantee from a user.

There's no limit to their skid-resistance—the heavier the slewing force, the stronger grows the multiple suction hold of the heavy-walled Vacuum Cups. The rolling tire lifts and releases the cups edgewise without drag on the forward speed.

And what tires can match their service? Guaranteed for 4,500 actual miles—with many records of 12,000 to 15,000 on heavy cars and great excess mileage always the rule. ***Absolutely oilproof.***

Two Tires in One!

This is what the "Nobby Tread" Tire practically is—
Two wear-resisting Tires in One

The big, thick, tough rubber "Nobs" that prevent skidding, are made on a big, thick, extra strong additional strip.

Then this heavy strip is welded by hand and vulcanized on to an extra heavy, extra strong tire.

You have got to wear out the big, thick, tough "Nobs" of rubber before you even start to wear out the extra strong tire underneath.

Then comes the great big difference in the quantity and the quality of the rubber and of the fabric that is used in "Nobby Treads."

An unusually large amount of rubber and fabric is used in "Nobby Treads," and

—only the very toughest and the best rubber, and
—only the strongest, especially selected fabric.

Then don't forget this fact,

—rubber quality can differ and fabric quality can differ just as much as the quality of leather can differ.

These are the reasons for the history making mileage records of "Nobby Tread" anti-skid Tires during the past four years, and based upon these mileage records we recently announced that

"Nobby Tread" Tires

are now sold under our regular warranty—perfect workmanship and material—BUT any adjustments are on a basis of

5,000 Miles

The unusual wear-resisting quality

—the quantity of rubber
—the quantity of fabric
—the method of construction

all have been rigidly maintained in "Nobby Tread" anti-skid tires,

—and maintained regardless of cost,
—and maintained regardless of price competition.

"Nobby Tread" Tires are REAL anti-skid tires, and mile for mile, dollar for dollar, they are by far the most economical tires.

United States Tire Company

DO NOT BE TALKED INTO A SUBSTITUTE

Your own dealer or any reliable dealer can supply you with "Nobby Tread" Tires. If he has no stock on hand, insist that he get them for you at once—or go to another dealer.

NOTE THIS:—Dealers who sell UNITED STATES TIRES sell the best of everything.

FORT DEARBORN HOTEL

CHICAGO

Every Room an Outside Room with Private Bath or Private Toilet, at $1.50 to $2.50 per Day

Economical luxury is now at your service in the FORT DEARBORN HOTEL, just opened in Chicago. ***Five hundred rooms,*** all with outside air and light—and each with private bath or toilet. Filtered iced water on tap in all rooms.

Rates at the Fort Dearborn Hotel:

Single—$1.50, $1.75, $2.00, $2.25, $2.50.

Double—$2.00, $2.50, $3.00, $3.50, $4.00.

Located in "the center of all Chicago"—in the midst of the Insurance, Financial, Wholesale and Retail Districts.

One block from the Board of Trade. Forty feet from the La Salle Street Station. Within three blocks of sixteen railroad terminals.

The Fort Dearborn is the only hotel in Chicago with direct rapid-transit transportation from its door to every part of the city, including Chicago's great Live Stock Market.

Built of steel and concrete—absolutely fire-proof—absolutely safe.

Our experience in building the three-million-dollar HOTEL SHERMAN only two years ago enabled us to bring the FORT DEARBORN to a standard of construction and equipment never before reached in a moderate-priced hotel.

Traveling business men are cordially invited to inspect the new Fort Dearborn, whether they wish to register or not. Interesting illustrated booklet on request.

Telegraph or write for reservations, addressing the FORT DEARBORN HOTEL, La Salle St. at Van Buren.

A Son of the Middle Border

A Personal History—By Hamlin Garland

ILLUSTRATIONS BY ALICE BARBER STEPHENS

IN writing this story I have not only had the advantage of a somewhat similar life in the West; I have also enjoyed the use of a voluminous mass of manuscripts called "An Abandoned Autobiography," from which at critical points I have freely quoted. In this way I have been able to retain something of that intimate quality of utterance which comes from first-hand narration, while indulging myself in the historian's privilege of arrangement and comment. ¶ Stewart's notes, and especially certain of his letters, have been of very great service in all of that portion of the manuscript which deals with the vague world of childhood and the almost equally mystical region of early youth. ¶ "It is now over a quarter of a century," he states in his foreword, "since I began to write of the West, and here (midway on the trail) I am minded to pause and look back on the long, hard road over which I have trudged, eager to make a final record of my joys before they escape me, and in order that I may preserve to my children some few of the intimate details of a life which is already passing if not completely vanished." ¶ He says: "The truth is I take a curious pleasure—an illogical pleasure—in reliving, reshaping, and continuing the days of my youth. I love to grope and wander about in the misty half-forgotten paths of my boyhood with some part of the mingled pain and joy a man experiences when in returning to his family homestead he finds it swiftly falling into decay beneath ancestral elms. I am certain that something dies out of our souls when the memory of what we loved and suffered fades from our brain cells, and I, too, would catch and imprison all the significant hours of my past if I could!" ¶ And yet, as a conscientious historian, I must warn the reader against believing that this writing contains the whole truth about an author. It is not even the whole truth about a man. It is indeed the study of a family and an epoch. The Middle Border as herein depicted is not the West as others saw it but as Lincoln Stewart saw it, and the pictures drawn are truthful only in the sense that they present conditions as he remembers them and contain characters as they appeared to his youthful eyes. Even when most precise the narrative is not exact, for no man can write of friends and neighbors unreservedly and certainly no man writes of himself without restraint. ¶ In the spirit of Lincoln Stewart's own philosophy I have made use of the materials at my disposal.—HAMLIN GARLAND.

I—Half Lights

IN BEGINNING this story of Lincoln Stewart, I am almost wholly dependent upon the man's own words in order to account for his boyhood. He says: "All of this universe known to me in 1865 was bounded by the wooded hills of a little Wisconsin coulee, and its center was the house in which my mother was living alone with her children. My father does not appear in the vision, for he was away in the army.

"As I project myself back into that mystical age, half lights cover all of the valley, the road to the village begins and ends in vague obscurity—even the Widow Green's cottage at the fork of the road stands on the very edge of the earth, in a sinister region sparsely peopled with menacing forms. Beyond this point all is darkness and terror."

THE emergence of an individual consciousness is, after all, the insoluble mystery of human life, and I should like to spend all of this first chapter in groping about in the luminous shadow of this child's world because, deeply considered, childish impressions are the fundamentals upon which one's literary expression is based; but to do so might weary my readers at the outset, although I count Lincoln most fortunate in his boyhood, which was spent in the midst of a charming mid-Western landscape and at a certain heroic and splendid era of settlement.

On this point he insists: "The men and women of that day loom large in my memory, for they were not only pioneers; they were warriors." Aside from the natural distortion of a child's imagination, I am quite sure that he is right in this judgment. The pioneers of 1850 had something broad and fine in their action—something which tallied "with the broadcast doings of the day and night."

"The earliest dim scene in my memory," his notes go on to say, "is that of a soft, warm evening. I am cradled in the lap of my sister, who is sitting on the low doorstep of our house. It is midsummer, and at our feet lies a mat of dark green grass, from which a frog is croaking. The stars are out and above the high hills to the east a mysterious glow is lighting the sky.

"He often took us to his knees of an evening and told us vivid stories"

"The cry of the animal conveys to Hester's mind at last a notion of distress, and she rises to peer closely down into the weeds. She starts back with a cry of alarm, and my mother comes out. She, too, examines the ground, and then points out to me a long, green-striped snake with a poor little shrieking tree toad in its mouth. The horror of this scene fixes it in my mind. My mother beats the remorseless serpent with a stick—the mangled little victim hastens away, and the curtain falls."

LINCOLN must have been nearly four years old at this time, although there is nothing except the absence of the father to determine the precise date. "Our home, a small frame cottage, stood on the side of a low ridge and faced eastward across a meadow which seemed wide to me.

"In the middle of this field was a marsh filled with crawling things and a pool from which the toads trilled night by night. Beyond was a wooded mountain.

"The doorstep seems to have been a favorite evening seat for my sister, for I treasure many other delicious gloamings. Bats whirl about in the dusk of the scene. Nighthawks whizz and boom, and over the dark forest wall a prodigious moon miraculously rolls. Fireflies are shining in the grass, and in a lone tree, just inside the fence, a whippoorwill sounds his querulous note. Sweet, very sweet, and very wonderful are all these memories.

"This marsh, even by day, was a marvelous place to me, for there (so my sister Hester warned me) dragons lay, eager to bite runaway boys. 'If you should step in the mud between the tufts of grass you would surely sink out of

Digitized by Google

sight!" she used to say, and by night this teeming log became a place of dread and horrid mystery. Bears and wolves and wild cats, as well as blue racers and black snakes, were reported to inhabit the dark woods just beyond. Only the dooryard and a small section of the road seemed safe for little men—and even in this country it was well to have a grown person within call.

"Every child of my generation breathed in a mingled air of romance and sorrow. All through those first years of my life the words *Lincoln*, *Grant*, *Sheridan*, and *Sherman* rang in my ears like solemn bells timing a majestic march. All letters, papers, and messages spelled battle and death. What the war meant to my mother I shall never fully know. Her side of those long months of waiting was never delineated, for she was natively very reticent and markedly shy of emotional expression; but piece by piece in later years I drew from her an elliptical tale of her long vigil—some faint hint of the anguish of her suspense after each great battle.

"It is very strange, but I cannot define her face as I peer back into those heroic times, though I can feel her strong arms about me. She seemed large and middle-aged to me, though she was, in fact, only a handsome girl of twenty-three. Only by reference to a rare daguerreotype at the time am I able to correct this impression of her face and person."

THE Stewart farm lay well up in what is called a coulee (that is to say, a little valley) just off the road which runs along the north shore of the Neshonoc River in western Wisconsin. It contained one hundred and sixty acres of land, which crumpled against the wooded hills on the east and lay well up on a ridge to the west. "Only two families lived above us," continues Lincoln, "and over the ridge which bounded my world to the north certain red people lived, and small bands of their hunters used occasionally to come trailing down across the hillside on their way to and from La Crosse, their immemorial trading point."

Lincoln makes much of these visitors. "Sometimes they walked into our house without knocking," he says. "But, then, no red man knocks at a wigwam of his neighbor, and we were not afraid of them, for they were Chippewas and friendly, and our mother often gave them bread and meat, which they took (always without thanks) and which they ate dry with much relish while sitting beside our fire. Their failure to say 'Thank you' seemed very curious to us, but as they were accustomed to share their food and lodging with one another, they accepted my mother's bounty in the same matter-of-fact fashion.

"Once two old fellows, while sitting by the fire, watched Hester and me bringing in wood for the kitchen stove, and smiled and muttered between themselves thereat. At last one of them patted me on the head and called out admiringly to my mother: 'Small pappoose, heap work—good!' And I was very proud of the old man's praise.

"OUR grandfather, Ronald Stewart, lived with us one winter—perhaps while my father was away—and is a sharply defined figure in my vision. He was a small man with white, even teeth, keen gray eyes, and a stern expression of the lips. He was very austere in manner and extremely pious. His church was his club, his theatre, his commercial center. Whereas my mother's father, Hugh McTurg, was an 'Adventist,' which seemed to us something very, very strange. His accent was a mixture of Scotch and Irish, and appealed to my ear with peculiar pungency. Large of frame, slovenly of habit, roughhewn of feature, he nevertheless held high respect by reason of his essential inward grace and his love of prophecy. And as I remember him now, it seems that his place of worship was as insubstantial as a dream—a cloud-built temple of the mind.

"The prayers of Grandfather Stewart were pieces of elaborate oratory, but those of Grandad McTurg were lyrical chantings of the nature of poetry and awed me while they pleased me, and his sons and daughters filled a large place in my childish world.

"My father's mother, Harriet Stewart, a tall, thin, pitifully emaciated woman of almost Christ-like charity and patience, comes into my world before my father. She was an invalid, as I remember her, always seated in one corner of her room, the walls of which were covered with little shelves and pockets so arranged that she could reach out at any time and secure her materials without rising, and she was always able to discover in some one of these receptacles a piece of candy or a stick of 'lickerish root' for the children who came to call upon her.

"OUR visits to Grandmother McTurg's house carried us in the opposite direction—that is to say, to the eastward, around a high hill and over a wooded ridge into the valley of the Neshonoc. One of our trips into this memorable and unknown territory took place just before my father's return from the war, and has enormous significance to me. It was like an exploring trip into an entirely new world—like penetrating the upper regions of the Nile.

"She hurries little Owen into his wagon and, telling Hester to bring me, sets off up the road as fast as she can draw the cart, voiceless, almost breathless with excitement"

"In those days people did not 'call.' They went 'visiting.' They took their knitting, and stayed all day and sometimes all night. In this case gran'pap must have sent for us. We rode in a heavy farm wagon with Uncle David and mother sitting high on the spring seat before us, while we jounced up and down on the straw behind or clung to the back of the seat while riding on our knees.

"BEYOND the hills which bounded our small universe all the landscape lay in luminous mist, and in this diffused light, in this prismatic alluring landscape of hills and trees and shining streams, the figures of my young uncles and aunts come and go, radiant and joyous. The McTurg homestead always swarmed with glad people. I can hear their laughter and their songs, but I cannot define any form and face except that of gran'pap.

"We never called my father's father anything less than the full and proper term, 'grandfather,' but we always addressed Hugh McTurg, who was a gigantic and picturesque figure, as 'granpap' or 'grandad.' He alone among all those flitting figures holds definite place. I can see him seated in his old-fashioned straight-backed chair, smiling with genial humor upon the noisy household. I cannot recover his speech, and he does not join in any active sense in the merriment, and yet he appears to be a part of it, and his occasional nods of approval or his widening smile would indicate a responsive humor.

"I cannot quite describe Grandmother McTurg on this first visit, for she was busy cooking and I was very busy climbing trees and wading in the brook. Indeed, we scarcely saw her at all until we came swarming in to dinner like a drove of hungry pigs squealing for their porridge. The children always ate in the kitchen with 'gran'ma' to wait on them, because the table in the main room was completely filled with grown-ups. How they all slept in that small house I cannot understand at this time, but it did not trouble me in those days.

"IT WAS on this day that I listened to the tragic story of Jowler's mysterious death. Jowler, the farm dog, it seems, had wandered away into the acrid, sweet, cool deeps of the bottom-land forest, never to return. He had been poisoned. On this day, too, I heard for the first time the story of a relative who had been in the New Ulm massacre and had escaped from the Sioux, carrying her little son. For days she fled, living on berries and roots. The climax of the story to me was that part wherein she told of hiding all night in the cellar of a deserted house while the pursuing warriors camped above her head. In order to keep little Tommy quiet, we were told, she had permitted him to stick pins into her. It did not occur to me at the time to say—as it did later—that if Tommy took delight in sticking pins into his mother, he might very properly have been surrendered to the Sioux.

"Gran'ma waited on us as usual that day—poor, patient, tireless old soul—but I do not recall a single remark of hers. She just beamed on us while we chattered, and smiled silently in the midst of the tumult which her sons and daughters always raised when they were together.

"She was the mother of seven sons—everyone in perfect physical health, all but one standing six feet or more in height—and six daughters, almost equally gifted in physical beauty. All of them were natural musicians of a high order, and I never think of them without hearing the sound of singing or the wail of the violin. They could all play some instrument, and some of them could play several instruments. Naturally they fill a large place in my youthful universe.

"Edith McTurg had very little learning. She could read and write, of course, and she made pathetic attempts now and again to find the time to read a paper or her Bible. But her days were crowded with duties. She was born in Maryland, but not of aristocratic lineage, and her children knew very little of her pedigree.

"GRAN'PAP' was at this time a large, gaunt man with a thick shock of perfectly white hair. His eyes were gray-blue and deep set. He was both mystic and poet, and, notwithstanding his roughhewn frame and his lack of education, carried himself with singular dignity and repose. He was like Paul—a dreamer of dreams. He loved the Bible, especially that part of it which contained prophecies and lamentations. The poetry of Job's curses, the whirling visions of the Apocalypse, formed his emotional outlet, his world of imagination. Absent-minded, careless of dress, he was forever drumming on his chair (keeping time to some inaudible tune), or with faintly moving lips repeating for the hundredth time the impassioned lines of Hezekiah or John or Job. He was at this time about seventy years of age, but to me he seemed contemporaneous with the limestone ledges of the hills.

"Grandmother (as I learned later) did not fully share her husband's belief in the second coming of Christ, but on her fell most of the work involved in the hospitalities which gran'pap gladly offered 'the traveling brother.' I think she loved him with a love that never wavered or grew less, and yet I do not remember ever to have seen him caress her. He never spoke harshly to her, and, so far as he thought of it, I imagine he was kind to her. With eyes turned inward, with imagination filled with the visions of Daniel and Darius, he perceived but dimly the endless drudgery of her days, and this thoughtlessness was shared, in a measure, by all her children. Although too old to work in the field, he often drove the reaper or the mower; but at this he was a poor hand by reason of his absent-mindedness. He usually forgot to oil the machine, and often burned out a 'journal.' He would stop in the midst of the wheat to state the basis of his faith. He firmly believed that the end of the world had been fixed and that the time of the fulfillment of prophecy was near.

"GRANDMOTHER was cheerful in the midst of her discomfort, for who else had such a crowd of noble boys and handsome girls. They all loved her—that she knew—and she was perfectly willing to sacrifice herself for them. Occasionally David or Frank or Rachel remonstrated with her for working so hard, but she only put their protests aside with smiling gesture and sent them back to their callers—and when the girls were at home the horses of their suitors, tied before the gate, would have mounted a small troop of cavalry.

"It was well that she was rich in children, for she had little else. I do not suppose she ever knew

what it was to have a comfortable, well-aired bedroom even in childbirth, which came to her fourteen times. Her dresses were faded and poor. Her home was small, poorly furnished, without pictures and without art, save music—her sons and daughters gave her glorious music. She was practical and a good manager, and she needed to be, for her husband was as weirdly unworldly as a man could be. He was indeed a sad farmer. Only the splendid abundance of those early days and the manual skill of his sons, united to the careful management of his wife, kept them fed and clothed. 'What is the use of laying up a store of goods against the early destruction of the world,' he argued. And twice at least, in my recollection, he believed the day had been set when 'the heavens should be rolled together as a scroll.'

"THE next scene ineffaceably etched on my mind is the remembrance of my father's return from the war. I was only five years old, and the impressions on my childish brain are commingled with words which came long after, so that I cannot now be quite sure which events are truth and which imagined, but the picture as a whole is still very vivid and very real.

"It must have been Sunday, for my mother and her three children, Owen, Hester, and myself (all in our best dresses), are visiting at the home of the Widow Green, our nearest neighbor, a plump, jolly woman whom we all loved. The house swarms with her stalwart, laughing sons and buxom daughters. The table is heaped with the mangled remains of a farmer's midday feast. The women are 'telling fortunes' by means of tea grounds. Mrs. Green shakes a cup in her hand and, pouring out the tea, turns the cup bottom side up in a saucer, whirls it three times to the right, then three times to the left, and at last lifts it and studies the inside of the cup, while we all wait in breathless silence.

"'A soldier is coming to you,' she says to my mother. 'See!' And she points into the cup. I crowd near and perceive a stem sticking up from a leaf, like a rifle over a man's shoulder. 'He is climbing to the rim—he is almost home,' she goes on. Then, turning dramatically and waving her hand toward the road, she exclaims: 'Why, heavens and earth! There he is now!'

"We all turn and look toward the road, and there, indeed, is a soldier clad in blue, carrying a knapsack, wearily plodding his way up the low hill to the north! He is too far away for my mother to call him, and, besides, she is not entirely sure of his identity. Trembling with excitement, she hurries little Owen into his wagon and, telling Hester to bring me, sets off up the road as fast as she can draw the cart, voiceless, almost breathless with excitement.

"OF THAT walk I recover little. My next vision seems to be that of a soldier leaning upon the rough rail fence, studying with sorrowful, intent gaze our empty cabin. I cannot, even now, precisely divine why he stood thus, sadly contemplating his silent home—but so it remains in my mind. His knapsack is lying at his feet, his musket is propped against a post on whose top a cat is dreaming, unmindful of the warrior and his instrument of war.

"He does not hear us until we are close upon him, and even after he turns, my mother remains in doubt, so thin, so hollow-eyed is he. 'Duncan, is that you?' she quaveringly asks.

"His worn face lights up. His arms lift. 'Yes, Belle! Here I am,' he says to her. 'Home at last.'

"Nevertheless, though he took my mother in his arms, I could not relate him to the father I had heard so much about. To me he was only a strange man with big eyes and careworn face. I did not recognize in him anything I had ever known. Perhaps Hester did (she was two years older than I), for she went to his bosom of her own motion, but I submitted to his caress rather for the reason that my mother urged me forward than because of any affection I felt for him. Owen, however, would not even permit an embrace. The gaunt and grizzled stranger quite terrified him.

"'Come here, my little man!' my father said. '*My little man!*' Across the space of forty-seven years I can still hear the reproach in his vibrant voice. 'Won't you come and see your poor old pap when he comes home from the war?'

"'*My little man!*' How significant that phrase was! The war had in very truth come between this patriot and his sons. One had forgotten him—the other had never known him.

"OWEN creeps beneath the rail fence and stands there, well out of reach, like a cautious kitten warily surveying a doubtful dog. The soldier stoops and draws from his knapsack a big red apple, and, holding this toward the staring babe, confidently declares: 'Your, I guess he'll come to his poor old pap.'

"My mother apologizes. 'He doesn't know you, Duncan. How could he? He was only six months old when you went away. He'll go to you by and by.'

"Owen advances toward the shining lure. The soldier catches him, despite his kicking, and hugs him close. 'You little rascal,' says the soldier laughingly, 'now I've got you!'

"Then we all go into the little front room and the soldier lays off his heavy army shoes, and my mother brings a pillow and puts it under his head, and so with infinite content he stretches out on the rag carpet, the better to rest his tired, aching bones.

"'Oh, Belle!' he says in tones of utter content. 'This is heaven! I've dreamed of this a million times. I shall never leave you again.'

"Owen and I grow more friendly and begin to tumble about over him while our mother hastens to cook something for the soldier to eat. He asks especially for 'hot biscuit and honey and plenty of butter. I haven't had a real meal since I left home,' he adds.

"How mystic, how marvelous, this hour. And yet I can language but little of it. The afternoon glides into evening while they talk, and at last we all go out to survey the farm. I hear him ask about the crops, the renter, the neighbors. The sun sets behind the ridge. He leads the way back to the house, carrying little Owen in his arms. He is a strange man no longer. Each moment his voice sinks deeper into my remembrance. He is my father—*that* I feel ringing profoundly through the dim halls of my consciousness. I cling to his hand in perfect knowledge and confidence. The trundle-bed is pulled out, we children clamber in, and I go to sleep to the music of his resonant voice still recounting to my mother the story of the battles he had seen and the marches he had made."

THEREAFTER Lincoln's childish world possessed a ruler, stern and incisive. Naturally Duncan Stewart was a heroic figure in the eyes of his sons, for he brought back from his two years' warfare under Sherman, Thomas, and Logan the temper and the habit of a soldier. He taught his sons the manual of arms. Even Hester carried a broomstick and pounded on a dishpan in imitation of a drummer boy.

"Father's canteen," says Lincoln, "made an excellent water bottle for the men in the field, and his long blue overcoat sets a vivid spot in the midst of the landscape as I look back upon it. You will see my first impressions of life are martial. All my memories of those days are permeated with the haze of battle, and my father's scheme of discipline impressed itself upon me with instant terror, for the reason that we had fallen into rather free and easy manners under maternal government. Mother was too jolly, too tender-hearted, to engender fear in us even when threatening us with the application of a switch or a shingle—but the soldier's promised punishment (we soon learned) was swift and precise in fulfillment. We did not presume a second time on his forgetfulness or tolerance. And yet we knew he loved us, for he often took us to his knees of an evening and told us vivid stories of Grant, McPherson, and Thomas, and chanted war songs for us. He was an excellent story-teller, and his vivid phrases brought to us (sometimes all too clearly) the tragic litter of bodies on the battle fields around Atlanta and Nashville. 'You could walk for half a mile on the dead bodies,' he said. To him Grant, Lincoln, Sherman, and Sheridan were among the greatest men in history, but he had no hate of the South and its leaders. On the contrary, he loved to tell of their valorous charges over hopeless fields of carnage."

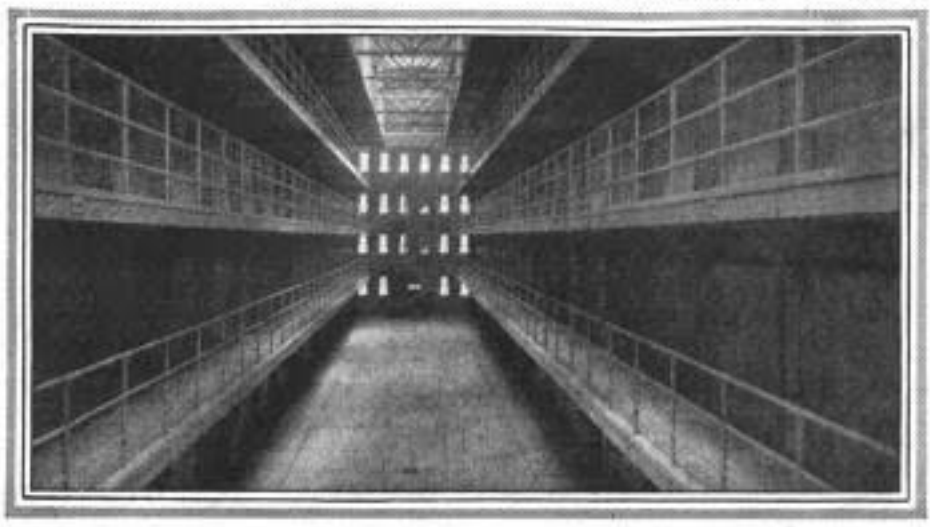
DUNCAN did not intend to be a hard father, but his own boyhood had been both hard and unlovely. Born in Oxford County, Maine, his early life was spent on farms in and about the Little Androscoggin, with small chance of schooling. Later as a teamster, and finally as shipping clerk, he had enjoyed three mightily improving years in Boston. He loved to tell of his life there, dwelling with especial joy and pride on the actors and orators he had heard. He could describe many scenes from plays and repeat many lines out of Shakespeare, and the roll of his deep voice as he declaimed, "Now is the winter of our discontent made glorious summer by this son of York," thrilled his sons with something far-off and wonderful.

"Next to his stories of the war," says Lincoln, "we loved best to have him tell of 'the pinery' of his early years in Wisconsin, for he had been both lumberman and raftsman, and had many delightful tales of wolves and bears and Indians, wherein he imitated the howls and growls and actions of the wild animals with startling realism. All his narratives were full of unforgettable phrases like 'just below the Jinny Bull Falls,' 'circling Old Mosinee,' and 'running the whirlpool rapids.'

"As we grew older he told us how his father and mother came West by way of the Erie Canal and a steamer on the Great Lakes, and how they had landed in Milwaukee with Sarah, their twelve-year-old daughter, sick with the smallpox; of how a farmer from Monticello had carried them in his big farm wagon all the way westward to their future home. And it was with deep feeling that he described the reception they had received from the village.

"IT SEEMS that the citizens in a panic of fright against the pest had risen up angrily and were all for driving the Stewarts out of the town, when old Hugh McTurg, big and gray as a grizzly bear, put himself between the leaders of the mob and its victims, and said: 'You shall not lay hands upon them. Shame to you!' And such was the power of his arm and the look in his face that no one went further with the plan of casting them out into the wilderness.

"'He established your grandfather in a lonely cabin on the edge of the village,' said my father, 'and he took care of your aunt and your grandmother, nursing them with his own hands until they were well. And that's the way the McTurgs and the Stewarts first joined forces. But the name of the gentle and generous man who carried them in his wagon on the long way from Milwaukee to Green County is entirely lost to me.'



"I cannot understand why Sarah did not die on that rough journey over the terrifying roads of Wisconsin, and what it all must have seemed to my gentle New England grandmother I grieve to think about. Beautiful as the land

A Professional Jailer

An Unassuming Everyday American

By Peter Clark Macfarlane

EVERYBODY knows about him—a little—yet few but convicts who have felt the touch of his hand upon their shoulders, or looked into his eyes in some moment of supreme stress when the issues of life were at stake, have sensed the secret of his power. For John L. Whitman has power, and that over turbulent souls in their most turbulent moods. Indeed, it is his profession to control people who have proved unable to control themselves. Long ago some one called him "tamer of men," and that phrase is apt if you look only on the outside of the man's influence; but it is likely to give an impression of Whitman as a man with a mesmeric eye who dominates by the sheer force of superior will, which is exactly what this jailer does not do.

There are two classic stories which they tell to show his power over men, and which, if not examined carefully, tend to support this erroneous impression. Each harks back to the early days of Whitman's life as a guard at the Cook County Jail in Chicago. A prisoner who was at liberty with two or three hundred others in the exercise corridors had refused to respond to a summons to the office. No brace of armed guards in the institution dared attempt to take him from among his fellows. Whitman went. Divesting himself of his weapons, he locked the iron gate behind him and disappeared among the two or three hundred men. Armed guards in groups gathered on the platform which overlooked the scene, charmed and awed by the daring of one of their number. Something between an eddy and a knot that shifted sinuously in the throng marked his progress. He was following the man, persuading, arguing, and appealing. Minutes passed. The wait seemed interminable. A hush fell over the mob. It might be the calm which precedes explosion? On the contrary, it marked the victory of intrepid courage. Whitman was coming out—bringing his man!

The Secret of His Mastery

THE other story is of a fight. There was much race trouble in the prison in those days, with ugly, bruising battles which, if not checked, sometimes enlisted many combatants and broadened into sanguinary conflicts. Whitman looked up one day from his work in the bundle cage, with a sudden sense that something was wrong. The tones of voices in the exercise corridors had changed. He heard the telltale scrape and shuffle of feet which proclaimed that a fight was on. Dashing into the corridor, he called two other guards to join him, but they declined to risk their lives in the human whirlpool of excited, half-maddened men who surged about the storm center. Again Whitman unhesitatingly plunged in alone. The swirl of the crowd struck him and flung him head first under the stairs. He leaped to his feet and began resolutely to tear his way toward the center where a white man and a giant black were fighting. Progress was slow. Whitman was continually carried out of his course by the ebb and flow of the human tide, but kept working toward the center. Presently he heard a low, tense voice behind him say:

"Don't you hit that man! Don't touch him!" After a minute or so he heard it again: *"Don't lay a hand on that man. On your life, don't do it."*

Whitman knew from this that his life was being threatened and that some unknown and unsuspected friend among the prisoners was protecting him; but at the moment there was no more time to heed protector than menacer. He must press on, and did, at length wrenching his way in between the combatants, who, at the touch of his hands, and after one look of amazement, surrendered weakly and were led below to the solitaries.

John L. Whitman has power, and that over turbulent souls in their most turbulent moods

Again, unquestionably, this looks like the triumph of intrepid courage. But there was another and supremer quality. It was not Whitman's courage which made the first man follow him out of the crowd, while a dozen ugly-mooded demons gathered round and urged: "Don't go—we won't let him take you." Nor was it his courage which made some unknown protect him from assault in the milling mob about the fighters. It was the presence in Whitman's character of something different, something much more commonplace—*mere human sympathy and the disposition to be kind.*

If the reader will watch Whitman's career for a moment, he can see that quality distilled out of experience into the man's own character, and thereafter working outward, transforming prisoners and prisons and giving impulse to the whole new humanitarian movement now invading our penological systems.

Man Tamer

EARLY in his present existence Whitman became acquainted with the need of kindness. He saw a good deal of cruelty around him. Some of it was practised upon persons he loved, and he fell quite naturally to compensating what they suffered from others by an excess of kindness and consideration from himself. He had entered the world with a high initial velocity. At seventeen he was a contracting painter and paper hanger in a small Illinois town; at eighteen he was a husband; at nineteen a father; at twenty, through the neglect of others and the generosity of his own nature, we find him supporting, in addition to his own family, his grandparents, his mother, and his three younger brothers. This was a heavy burden, but he did not shirk it nor grow irritable under it. Instead, he "stood the gaff." His heart had grown with the load. There appeared no limit to his sympathies; but there was a limit to his strength. His magnificent physical organization began to totter.

But this only softened his spirit a little more, so that at twenty-four years of age we see a young man with heavy responsibilities, whose health is seriously impaired, who has endured some sorrows, but who has learned to view life broadly and reflectively and acquired lastingly the art of being kind; who, in fact, deliberately made up his mind to create as little friction as possible upon his own account and to pour water and oil on hot bearings wherever he found them. Out of this spirit was bred the great man tamer.

Why Incur Hatred?

WITH life plans badly fractured, Whitman drifted into Chicago and upon the conductor's platform of a street car—lots of open air, you see, to give his health a chance to build up. One day an incident occurred which, in the light of later events, seems to have been prophetic. Whitman's car was blocked by a funeral procession. Some one among the irritated passengers asked whose funeral it was, and another, more irritated, answered: "Jailer Foltz of the Cook County Jail," adding with a vicious snap evidently born of some personal contact with the deceased: "There's a blamed sight more people glad than sorry."

This not entirely unnatural remark sank deep into the reflective heart of Whitman. As he says to-day: "It made an awful impression upon me, some way or other. I thought, why need a jailer incur the hatred of his fellow men?"

Now, by a singular coincidence, when Whitman resigned his street-car job to get a better location in life, his brother-in-law developed just political pull enough with the newly elected sheriff, James H. Gilbert—that was in 1890—to secure for the ex-conductor a position as guard at the Cook County Jail, Chicago.

The jail was a dark, gloomy structure, filled with prisoners of every type, from the novice and the accidental lawbreaker to the most desperate and confirmed of criminals. All were in a more or less highly temperamental state, for it is notorious that men merely on detention are much more prone to ugly mood and vicious temper than after they are tried and convicted.

The Crying Need of Kindliness

THE gentle-hearted Whitman—a lamb among wolves—was immediately assigned to duty in the bundle cage, the situation and function of which he was entirely ignorant of, although he soon discovered it to be a sort of nexus between the outside world and the inside hell. His duties were to receive the bundles which were daily brought there for the prisoners by their friends, to examine them carefully for drugs, weapons, or contraband of any sort, and thereafter to pass them on to the persons for whom they were intended.

The young man went out to the bundle cage timidly. He looked at the restless mob in the corridors and up at the tiers filled with a sort of creature that he had never known before, and was greatly disturbed. He found himself going to work with a kind of illogical, chilling terror in his heart, feeling the stab of a hundred peering, baleful eyes. Yet he soon perceived the helplessness of the prisoners, how hungrily they watched him, and how gruffly the guards dealt with them, so that by and by terror gave place to pity. They were human beings, and in distress. They stood in very great need of kindliness. In every contact of the day, and there were many, he treated them with sympathy and consideration.

On the prisoners' part, watchful eyes perceived that he stole nothing from (*Continued on page* 31)

Birdie, the Strikebreaker

By Frank X. Finnegan

ILLUSTRATED BY ERNEST FUHR

MISS BIRDIE McMULLEN, the queen of Halsted Street, sat in a sagging, red plush-covered chair in the parlor of Father Clancy's rectory and looked about her with observant eyes. She made note of the fact that half of the red cabbage roses were worn off the carpet and the sag of the chair on which she was sitting did not escape her. Her pretty brow was furrowed with the problem of refurnishing the parish residence, when Father Clancy came smiling into the room, both hands outstretched.

"My mother tells me you want to see me, father," Birdie said with a little smile of greeting. "I don't know what it's about, but I'll plead guilty right away."

"Aha! I knew I could depind on you, Birdie!" he exclaimed. "Sit down, child. 'Tis fine ye'er lookin', with the new throlley pole on your hat. Well, if it wasn't for having something left up to me that I don't know what to do with at all, at all, I wouldn't think of bothering you. But whin I was pacing the floor, racking my brains for an answer, and the poor woman coming back this evening for her advice, I thought of you all of a sudden.

"'Birdie McMullen!' says I to meself, 'she's the very one that'll know what to say to her!' And with that I stopped in and left word with your mother, asking you to come over. And here y' are!" he concluded, seating himself and beaming at her across the little marble-topped center table.

"Well, you've certainly got the welcoming hand out, father," Miss McMullen returned; "I've got to give you that. But the rest of your opening address doesn't stir me up to any hip, hip, hurrah! I can see myself from here dipping into somebody else's troubles and trying to grab whoever it is before she goes down for the third time. What's on your mind, father? I might have known it wasn't anything you wanted for yourself—that's always the least of your worries. Which of the eight or ten thousand poor women in the parish is it this time?"

"It's Mrs. Haskins," the pastor explained, with a little frown for his own helplessness. "She's a good, well-meaning soul, and since she's taken Jimmie Ferris to raise, I knew you'd be anxious to help her if ye could. You know, whin Haskins—the Lord have mercy on his soul!—died here a couple o' months ago, all unexpected though it was, the widow got twelve hundhred dollars insurance money from the Foresters. And a couple o' days ago, woman dear, but didn't she come to me to tell her what to do with it!"

"She was taking an awful chance," Birdie smiled. "If I ever got hold of twelve hundred in one bundle and you found it out, I wouldn't want to be in the same ward with you. It would be just like you to take it all away from me and blow it in on a new carpet," she added, glancing at the worn floor covering, "you're such a fiend for interior decoration."

Father Clancy's gaze followed hers to the floor a bit ruefully, and he almost blushed.

"It is pretty bad, isn't it?" he said. "Ch, well, 'twill do all right a while longer. Do you know how long that carpet's been down there, Birdie, with the feet of half my parish thramping over it day in and day out? Seventeen years. 'Tis no wondher it looks a bit ancient and thravel-worn."

"Seventeen years!" Miss McMullen repeated; "and you've had a good many of 'em in on the carpet in that time, father."

"FAITH, you may say that," he returned. "But I'm able to do a little something for most of them, thank God, and that's a dale more important than the carpet."

"You can't get up any argument with me about that," Birdie said cheerfully. "But don't ever get the idea that I'm crazy to horn in on these little mix-ups that keep me stepping around the parish between meals like a female tenement inspector. They're wished on me. When things are put up to me I do what I can to help out, but, believe me, I'm not going around looking for odd jobs as Little Miss Fix-It. What's the big idea about the Widow Haskins and her twelve-hundred-dollar bank roll?"

FATHER CLANCY leaned back in his chair with a little sigh.

"Well, she came to me for advice about buying some sort of a little business with her money that would bring in a living for herself and Jimmie Ferris," he said. "She doesn't want to give up. I was thinking," he added, almost timidly, "that since you were so much inth'rested in Jimmie Ferris and his future, you might have an idea for Mrs. Haskins that would keep thim together."

He looked over at her expectantly, but Birdie's brows were puckered in a frown.

"The best anybody ever gets for that kind of advice is the worst of it," she declared after a few moments. "No matter which way things go, there isn't a chance on earth to get credit for what you intend. If you ask me, the best thing she can do with that bundle is to put it in Holzmeier's bank and draw it out a five-spot at a time. And if she'll buy a new hat once in a while and keep a little powder on her nose, maybe Nick Feldmeyer, the butcher, would marry her after a year or so. He's been mooning around after three or four good-looking widows since his wife died, but none of them had money in the bank."

FATHER CLANCY chuckled softly. "But you must admit 'twould be placing the poor woman's little lump of money in serious danger to take a chance on Feldmeyer seeing things in the proper light at the right moment. No, we'll have to think of something safer than that, and I've been counting on you to do it. She'll be here with Jimmie almost any minute now—I'm glad you came in time to give it a bit of thought."

"If it wasn't for Jimmie I wouldn't think of handing any advice to that mournful old female," Miss McMullen returned. "This is a case where you're sure to lose no matter how it goes."

"But see what you did for Heidelmeier whin he wanted to get rid of his moving-picture place," the pastor urged anxiously. "That turned out all right, child. It was that I had in mind whin I sent for you. You've done so well, taking one thing with another, I'm thinking of turning the outside work of the parish over to you, Birdie."

He laughed at the suggestion, but the next moment added with a little sigh: "'Twould be a Godsend to me if you'd undhertake it."

Birdie looked over at him with more gravity than usually rested on her bright young face.

"I'd go a long way to help you out, father," she said quickly. "I'm not quitting on this Haskins proposition now, but just to keep the record straight I wanted to declare myself."

The doorbell jingled.

"Here they are now, belike," the pastor ventured, and a moment later the housekeeper ushered the forlorn Mrs. Haskins into the parlor with Jimmie Ferris close in her wake.

Father Clancy met her at the threshold with a beaming smile that found no reflection in her lugubrious countenance. From beneath her trailing widow's

"Everybody in the ward knows you have money in the bank, and if you play it right you can have some party hooked, strung, and hung over the side of the boat in no time"

Digitized by Google

weeds Mrs. Haskins looked out upon a world which she was assured had entered into a grim conspiracy to steal her inheritance and consign her to the poorhouse to end her dismal days.

"Good evening, father," she wailed; "I'm sorry to be bothering you again, and I hope I'm not too much trouble altogether, though the goodness knows I don't want to be, but it's along of my being left all alone. Oh, good evening, Birdie. I hope I'm not interrupting anything."

JIMMIE sidled into a seat in a corner and grinned cheerfully at Miss McMullen.

"Not at all—not at all, Mrs. Haskins," his reverence heartily assured her. "You know what they say about speaking of the angels. 'Tis only this minute that your name was in my mouth. I was just telling Miss McMullen about your looking for an investment of some kind and hoping she might have an idea that would fill the bill. You know, Birdie has quite a name for helping people out of difficulties, Mrs. Haskins."

"Yes, I know," the widow dolefully admitted, turning toward Miss McMullen with a wan little smile. She had seated herself in a creaky rocker, and when she discovered that it made a dismal noise, she settled back in satisfaction.

"When I think of all that money being mine and how easy I might lose it some way," she went on, "it just scares me to death."

"I don't see where a good-looking young widow like you has any license to be fretting about the future," Birdie interposed; "you'll probably be married again in a year or so. Everybody in the ward knows you have money in the bank, and if you play it right you can have some sturdy party hooked, strung, and hung over the side of the boat in no time."

Mrs. Haskins waved the idea aside grandly, though not without a sad smile in recognition of the compliment.

"No, indeed, Birdie," she sighed, "I won't never marry again. That ain't a thing that poor Thomas would have me do, I'm sure, though the subject wasn't never mentioned between us. But of course I realize I can't go on living on this insurance money and have it last, and that was why I come to Father Clancy—to see if he could think of some business I could put it into. I've thought of a millinery and I've thought of a delicatessen and a school store, and nearly everything a woman could do by herself, but people tell me there's such chances in all of 'em. And I've got Jimmie to think of, too. Since poor Thomas took him to raise, I wouldn't want to give him up now, and if I lost all my money there would be nothing between us and the poorhouse."

"Oh, the Lord save us! It's not as bad as that!" Father Clancy exclaimed.

"Don't fret about me," Jimmie Ferris suddenly piped from his corner; "I want to go to work anyhow. I'm tired of goin' to school."

THE others turned on him in a body.

"You can cut that stuff right there, young man," Miss McMullen advised. "Didn't you promise me to go to school and study hard and learn how to be an alderman when you grow up?"

"That's why I don't want to go any more," Jimmie declared. "I was talkin' to Alderman Lawless the other day and I asked him what collidge he graduated off of, and he told me he graduated off of Magee's livery stable down in the old Fourth Ward."

"Yes, and he looks it," Birdie asserted. "If Magee put a blanket on him and tied him up in a stall, the other horses would be talking to him inside of five minutes. He isn't the kind of an alderman I meant, Jimmie. I guess you'd better not head for the council chamber after all."

"Since we've been hearing so much about the moving pictures," the widow observed after a little silence, "I've been thinking how you got Abe Jacobs fixed up with a moving-picture theatre, Birdie, that time he was looking to buy one. They tell me he's making money hand over fist."

"And you think these people would jump their jobs and go out hunting free lunches just to help you get your raise, eh?"

"I'm glad to hear it," Father Clancy declared; "he's a well-meaning little man. Abe is, and he's had a hard row to hoe, with sickness and bad business and the rest of it."

"And the best of it is, if he gets a few dollars he knows how to plant 'em so he'll have something to dig up the first time there's a heavy rain," Miss McMullen added. "You won't find Abe buying any six-cylinder car this year. If he can keep a four-cylinder gas range going he'll be tickled to death."

"You'll be surprised when I tell you what I was thinking," Mrs. Haskins went on, looking bashfully down at the remnants of the red roses in the worn carpet. "I—I was wondering if it would be a good idea for me to try to buy out one of these theatres—just a little place, you know, that would bring in something right along for me and Jimmie."

"Sure! And I'll run the lantern!" Jimmie exclaimed enthusiastically.

"What?" Birdie exclaimed incredulously, looking for traces of a smile in Mrs. Haskins's doleful countenance and failing to find them. "You don't mean that you've really been thinking of going into the show business! Why, I didn't think you'd ever gone past the gate at one of those places!"

"Oh, yes. Thomas and I used to go often," the widow admitted, "and especially after Jimmie came to live with us—Jimmie is so fond of the movies. But, of course, I don't know the first thing about how they're run or anything like that—I was only thinking because I'd heard that all around about Jacobs, and how easy his money was coming in. There's a good many picture theatres owned by women, ain't there?"

"Say, Billy, it doesn't take a mental mastodon to run one of those movies and get the kale, does it?" she asked

"Yes, but not by such thoroughly domestic fowls as you are, Mrs. Haskins," Miss McMullen returned. "After all, though, I suppose they all had to start and take a chance. If you have any idea you could get away with it, I'll be on the watch for a show shop for you—they're changing hands all the time along Halsted Street."

"Will you, now?" interposed the pastor, who had been listening in surprised silence to the new turn of the conversation. "That'll be grand, Birdie! I never would have thought of that in the world, but the way women are moving along these days there's no telling what they won't be into next. If you could fix up Mrs. Haskins in a nice little theatre, bringing in an income that would sort of put her mind at rest, 'twould take a load off my shoulders. It would, indeed."

Birdie rose and prepared to go. The conference seemed to be at an end so far as she was concerned.

"I'll see what I can do," she said; "but if I keep on putting over moving-picture theatre deals I'll have to charge both parties a commission like a regular little broker. Good-by, father. My poor mother will be notifying the police if I don't get home pretty soon."

"Good-by—and God bless you," Father Clancy returned, clasping her hand warmly. "I don't know what we'd do without you, child. The more I think of it, the more inclined I am to make you assistant adjuster of parish difficulties."

"IF YOU do that, you'll have to hand that plate around twice on Sundays," Miss McMullen declared. "I'd expect to be on the pay roll and half of what you get would never do for me. Good night," and she hastened away, leaving Mrs. Haskins to continue her mournful dissertation on the world and its woes as viewed by a lone, lorn widow.

Billy Sheehan called that evening, it being one of the five or six evenings of the week that he accorded himself that privilege.

"I was talking to Anton Novak on my way over here," he said as he comfortably settled in his favorite chair, "and it looks as if that bunch over at the police station were certainly going to give him the gate. It's too bad, because he's got a nice business at that little one-horse-power theatre of his."

"What's the matter?" Miss McMullen asked idly. "He's got sense enough to come through once in a while, hasn't he? Captain Price has had five birthdays that I know of in two years, and he must have enough chests of silver and fur-lined overcoats to start a pawnshop. They tell me he was very much Busy Jimmy down at the auto show, looking at the new cars, I suppose he's framing to pull off another birthday pretty soon or a fifteenth anniversary or something like that—kindly sign the inclosed subscription list."

"No, it wasn't collections," Sheehan said. "I guess he's been all right there. But it seems the captain's tough son, Eddie, got into Novak's theatre a couple of weeks ago with his private, personal gang and tried to break up the show. Anton's got a bouncer over there—a big Bohemian who hasn't been in this country more than a month, is about half out of the language, and doesn't know Cap Price from a rabbit. All he knows is that Anton told him to throw out anybody that tried to pull any rough stuff, and as a thrower-out he's got a lot of records.

"This big Hun tossed Eddie and his mob into the middle of the street car tracks without bothering to put on the soft pedal, and when the captain heard about it he gave Novak two weeks to get out of the district. You know Price has always stood behind Eddie and kept him out of the penitentiary—so far."

"Yes—so far," Miss McMullen observed; "but they might as well begin making Eddie's little gray suit right now. He'll be along there all right one of these days, looking for a free hair cut and a steady inside job, room and meals included."

"Well, they've landed Novak seven times since then," Billy went on. "Price keeps a copper on duty around there all the time looking for a chance to get him. Now they have started in to do the censor stuff on his films—making him take off everything the police don't happen to like—and Novak says he's done. He's ready to quit and beat it while he has all his eyes and ears. Of course he doesn't expect to get a decent price for the place, but he's simply got to sell out."

MISS McMULLEN'S busy brain suddenly switched from the troubles of Mr. Novak to those of Mrs. Haskins. Sheehan's narrative dovetailed so well with what had been unfolded in Father Clancy's parlor that when he spoke of the beleaguered Novak's selling out she interrupted him.

"Say, Billy, it doesn't take a mental mastodon to run one of those movies and get the kale, does it?" she asked.

"I guess not," Billy admitted. "I never heard any medals jingling on Novak."

"What would you think of Mrs. Haskins sitting in behind the ticket window at Anton's place and grabbing the nickels?" she pursued. "Wouldn't that make the neighbors take a couple of quick looks as they went by?"

World's-End

Chapter XVIII
The Dreadful Day

By Amélie Rives
(Princess Troubetzkoy)

ILLUSTRATED BY ALONZO KIMBALL

OCTOBER passed on its swaggering, golden way. November came and went, with its pale crown of Indian summer and veil of wood smoke from forest fires, through which peered a sun colored like a Jacqueminot rose. December rushed on World's-End, frost-nipped and cheery, with the "weather glim" of icy gold and violet belted about its horizon, and the sound of axes ringing from the mountain woods.

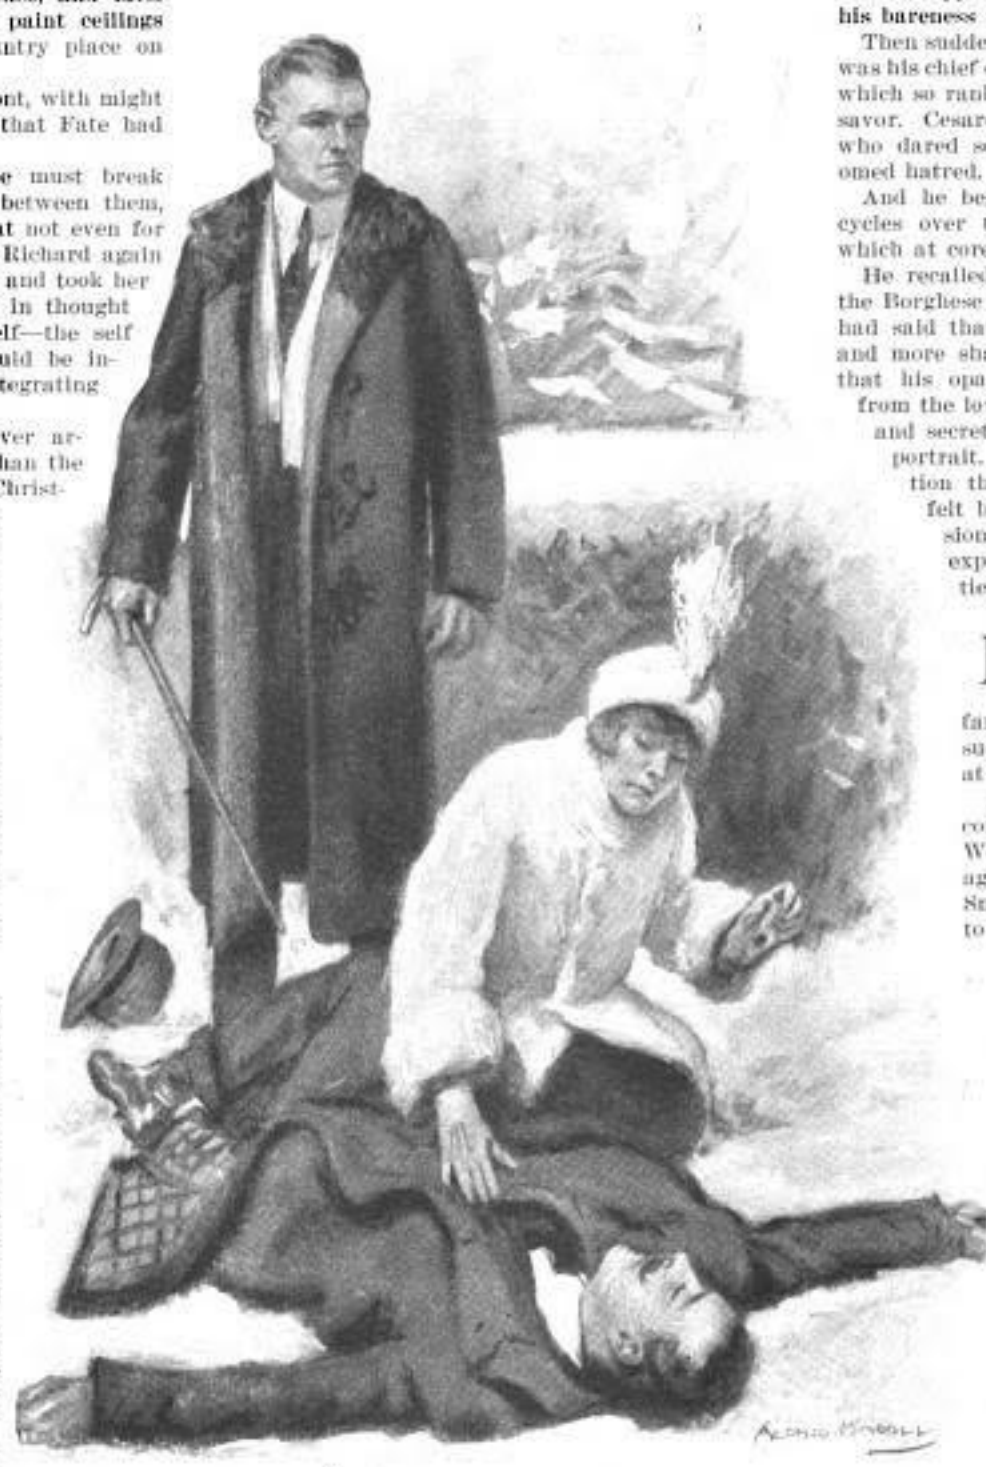
And this long chaplet of wonderful, vivid days—never had there been such an autumn and early winter, said the old folk—this jeweled rosary of time, Phœbe told with the feverish fervor of a nun, whose convent might be sacked by nightfall, telling her heaven-insuring beads. For it had been understood early in November that Richard could not come again to World's-End until Christmas, and then only for a few days. He was simply overwhelmed with work, Sally had explained. Sylvia Beresford wanted him to decorate the whole lower floor of her town house, and Mrs. Pierce-Hull had commissioned him to paint ceilings and walls in the big hall of her country place on Long Island.

So Phœbe lived, as was her ardent wont, with might and main during the precious respite that Fate had accorded her.

Owen felt sometimes as though he must break through the thin veil that still hung between them, and tell her to be utterly at peace—that not even for a few sinister days need she ever see Richard again—that he, Owen, knew and understood, and took her part against herself, so that not even in thought must she be disloyal to her truest self—the self that was her own and his—that should be inviolate of anything so low and disintegrating as vain remorse.

Perhaps Life, Master of Irony, never arranged a situation more to his gusto than the arrival of Richard at World's-End on Christmas Eve. Laden with gifts he came, and of course everyone (even Phœbe, to whom Owen had made a present of the present that she was to bestow) had gifts for him, neatly laid away in tissue paper, sealed with little Red Cross charity stamps, and tied with ribbon decorated with holly. No—it is impossible that irony ever had more toothsome nourishment than when Richard was handed by Mary, as distributor of Christmas-tree fruit, a volume of Villon in a marvelous old binding, the gift of Phœbe to her nephew-in-law; while Phœbe received a real "yellow jacket" of royal Chinese weave, with buttons of solid gold—the season's offering from Richard.

SHE got America to light a huge fire in the laundry later in the day, and, slipping out (the laundry was a brick building by itself), locked the door and laid the lovely robe on its last bed of coals. It writhed feebly before it caught, as though sentient, and she watched it shuddering, her hands gripped together and her heart beating fast. Very slowly it burned, and some of the gold buttons were melted and some escaped among the ashes; these last, America fished out afterward and had set in a gorgeous bracelet, which she never wore, however, until safely out of sight of her mistress.



Then, still pursuant of this great ironic play, custom must needs compel Richard to go with the little company that, headed by Phœbe and Owen, went first to Downer's house to preside over the "Christmas tree" held there yearly for the laborers and their families; then down to the servants' dining hall at World's-End, where a like tree was erected for the negroes and pickaninnies and a noble feast, including roast pigs and turkeys, spread for the retainers and their friends. He had to stand by, smiling as best he could, while the old servants drank the healths of the family one by one, name by name—and called Heaven's blessings on the "l'il mist'iss" (meaning Diana) and hoped that Owen's seed would be like Abraham's—"as the sands of the sea." And, at Hannah's request, he had to play the small organ that was Owen's Christmas gift to them (being the only musically endowed member of the family, there was no escape), fitting horrible, commonplace chords to

"Dere's a star in de East on Chris'mus morn.
Rise up, chillun, an' follow."

And to the old plantation hymn, oddly out of place to the Caucasian mind at such a festival:

"God's gwine set dee worl' on fire!
He's gwine raise dee heavens higher!" etc.

And, also, Richard had to play "Nearer, My God, to Thee," while the rich, thundering chorus of throaty negro voices rolled about him and he could see (without looking at it) Phœbe's face, hard and cold and white as a heart-shaped pearl, close to Owen's shoulder.

Owen stood like a figure of stone staring down at him, but Phœbe dropped on her knees beside the blood-smeared form, wildly searching for signs of life

When Sally would have drawn him into her bedroom for a good-night talk that evening, he shrank back, saying in a stifled voice:

"Not to-night, mother—I'm not fit to be with anyone but myself to-night."

AND he went off to his own room, and shutting the door with a violent jerk, was suddenly aware that his eyes were wet with tears of rage. Yes, it was as he had said to his mother that autumn: the edge of his helpless, base anger against her whom he had injured only grew keener with time and occasion. Hateful desires wrung him.

To hurt her—to hurt her in her dearest nerve, secretly, cunningly—that only would assuage this cold fever that devoured him. But he knew well that madness lay that way. He must endure as best he might. Yet here she and her child were lapped in luxury—and he constrained to this vile hypocrisy unless he would be beggared of everything.

He stood at his window, staring out at the lovely lawns and fields wrapped in winter moonlight, and a shrilling shimmer of sound told him that the sheep were running after the bellwether from some imaginary danger. The sound brought back all childhood and boyhood. He remembered how once, when a tiny lad, he had asked his mammy, sitting up in his crib to listen, "What's that funny noise?" and mammy had said: "Go to sleep, little master, dat's only the sheep bells. H'it's only your own sheeps running to fold." And when he had asked, "Are they really all my sheep, mammy?" she had said: "Well, dey's as *good* ez yo' own sheeps—same as dis whole place is good as yo'n—ef Marse Owen don't never marry."

And now it had all slipped from him forever like some bright, teasing dream. And she and her child would have it all. Yes—she had taken everything from him—stripped him naked—yet she must needs blister his bareness with her steady, unrelenting scorn!

Then suddenly, with that curious perverseness which was his chief characteristic, he realized that the emotion which so rankled in him was one of rare and peculiar savor. Cesare Borgia might have felt toward a woman who dared scorn him just such a poignantly envenomed hatred.

And he began to muse on the power of different cycles over the form assumed by human passions, which at core are so unvarying.

He recalled the portrait of Cesare, by Raphael, in the Borghese gallery at Rome, and how several people had said that he resembled it. His face was longer and more sharply modeled, but he could see himself that his opaque, black eyes, slightly swimming up from the lower lids, and his mouth, small, composed, and secretive, were much the same as those in the portrait. Yet, though this biting, poisonous emotion that now corroded him might have been felt by that other, pang for pang, his expression of it in the fifteenth century and any expression that could be given it in the twentieth must necessarily differ in all essentials.

IT BROUGHT him a grim diversion in his sore, exasperated mood, unmedicined by even the hope of retaliation, to fancy what course Cesare might have pursued with a woman who presumed to look at him with a very nausea of loathing.

As the days of the week which he was compelled by circumstances to spend at World's-End went by, his pent, sullen anger against her bit ever sharper and sharper. Small incidents were continually happening to exacerbate this feeling. The skill with which she avoided ever addressing him directly without seeming rude was really amazing. Never once, since his first visit in October, had she spoken to him, except in the casual way demanded by her position as hostess. When she did speak, she looked between his eyes. Once chance so arranged it that they met face to face in the woods of World's-End Mountain. He had gone out with his gun, though the legal date for shooting was past, having sickened of hunting and the long, aimless rides that formed the only alternative. Phœbe, seeing that Borak was not in the stables (she was very careful to inform herself of Richard's probable whereabouts) and ignorant of the fact that a groom had ridden him to Crewe, had gone to the winter woods for refuge.

They met face to face. Richard, standing by a great bowlder in the dry bed of a stream, saw her coming long before she saw him. His first thought was to turn back, then a savage impulse fixed him. He stood watching her, his small mouth just touched by a smile.

Phœbe was walking with her head bent, her eyes fixed on the dead leaves which rustled ankle deep about her. Growing warm with the steady climb, she had thrown her jacket over one shoulder and rolled her gloves into a ball, which she tossed absently in her hand as she advanced. When she was about a yard from him she looked up with a start like one rousing suddenly from sleep.

Her face went white and her eyes black. The gloves fell on the dead leaves between them.

Richard stooped and handed them to her. She took them mechanically, then, turning short, went away from him between the gray stems of the trees. When she had gone about ten paces he saw her hand open and the gloves fall at her side. She walked rapidly on and soon the gray aisles hid her from him.

A blaze of wrath scorched Richard.

"She dropped them as if they were filth, just because I'd touched them," he thought, staring at them. His jaw set with an ugly clench. As he passed the gloves,

Digitized by Google

on his way down the mountain, he kicked them aside among the underbrush.

That afternoon, when tea was being served in the rose room, Mary ran in with the baby and sat her on the carpet.

"Just watch her!" she cried, laughing. "She'll be toddling before we know it. She pulls herself up on her little feet by anything that's handy."

RICHARD saw Phœbe's eyes dilate as they fixed themselves on little Diana. As once before, the baby was crawling straight toward him, pausing now and then to hammer with her little feet on the carpet and gurgle joyously. In her eagerness she had taken her small underlip entirely under her daisy-petal teeth, and her small chapped chin glistened like a pink shell with the tension.

Phœbe half rose from her chair, then sank back again. She was just pouring out a cup of tea for Sally. With a hand that shook slightly she carefully dropped in the four lumps that Sally always took with her afternoon tea.

Richard, with a cruel joy at his heart, watched the baby's rapid advance toward him. This was her chiefest treasure. He would grasp it in both hands and she could not cast it from her afterward as she had cast her gloves because his touch had soiled them.

"Isn't she *too* darling with Richard!" Mary cried, delighted. "See her lifting herself up by his leg! Don't be frightened, Richard—she won't hurt you," she ended, laughing.

"I'm not at all frightened," said Richard.

The baby, with both dimpled arms clamped about his leg, was slowly but surely, amid a series of earnest little grunts, dragging herself on to her bronze-shod feet.

"Pitty! Pitty!" she shouted, succeeding at last and having resource to her latest accomplishment in words to express the triumph of her soul. And bobbing and dipping slightly in her effort to maintain the perpendicular, she gazed up into Richard's face, her arms wrapped about his leg.

HE BENT forward and, gripping her by either arm, lifted her suddenly upon his knees. Still gripping the small arms fast, he held her there, staring at her with what he meant to be a smile, but which was more like a grimace of pain. And he gripped her tighter and tighter, a savage desire to hurt overmastering him.

"Bravo, Richard!" called Mary. "He's really scared to death—" she smiled in an aside to Owen, near whom she was sitting.

But now the baby, who almost never cried, was getting the oddest look on her little face—half like one who courts a coy sneeze, half that of a woman who is afraid of cats and senses one in the room. Her delicate eyebrows made a sudden "V" on her forehead—her underlip thrust out like a wee cherry—then suddenly the finest, most piteous wail came plaining up from her little breast.

PHŒBE swooped like a hawk. Her eyes were the panther's that sees its cub maltreated. She caught the baby to her heart and stood glaring at Richard, trembling from head to foot.

"You hurt her!" she spat at him. "You hurt her! How dare you!"

"She's a little coward," said he coolly. "Fancy my hurting her—"

"You are the coward—to hurt a baby!" cried Phœbe, beside herself.

Sally's voice slid in like a sliver of ice beween flames.

"Owen, I must really ask you to speak to Phœbe. She seems quite out of her head—"

Richard rose and strolled to a window. He did not wish his face to be seen just then.

Owen, putting his arm about Phœbe and the baby, who was now catching her breath in a series of little half-comforted, hiccupy sobs, led them from the room.

"He hurt her! Coward! He hurt her!" Phœbe kept saying, shaking so violently that he was afraid she might let the child fall. (*Continued on page 27*)

The Final Escape

By Marianne Gauss

ILLUSTRATED BY F. E. SCHOONOVER

All winter the outlaw hid among the rocks

IT BEGAN to be thought that the last of the Black Knobber gang had escaped; as the sheriff put it one day at the county seat: "Either Ally Spencer's dead er he's got clean away out'n the kentry. He never were knowed to keep still this long sence he were alive." But the sheriff was mistaken. All winter the outlaw hid among the rocks, in caves and holes, near the summit of Black Knob. As he watched in the spring he thought much of his three friends—also members of the gang—who were under sentence to die in April. In the latter part of February a warm wind took the snow from the sides of the mountain, and roads became impassable with the black Missouri mud. Bright redbirds darted among the walnut branches. The earlier trees tasseled. There was a thunder of bees on the warm air, and huge knobs of them swarmed in the woods. Then maple trunks were wet with sweetish sap; ferns unrolled; groves took on a cloudy pink from red bud. The abundant life of another year was bursting bounds everywhere on the mountain.

The outlaw knew what were the signs of spring at the county seat: garden making, gay new cotton dresses on the streets, children chasing fireflies in the long dusk. In at the jail windows would be drifting an odorous, smoky wind from the woods. And all those who were expecting to witness the summer would be unusually happy—in that expectant mood which is the uplift of April.

AT LAST came the appointed Friday. It was raining when he crawled out of the cave in which he had slept, with wind and occasional lightning. It would be very muddy at the county seat, "where his three old friends awaited their fate in the jail."

The Governor, who had not been heard from, would send a night message. About nine o'clock the sheriff would leave his house, next door, and come across to the jail through the rain, in one hand a torn envelope, in the other a sheet of yellow paper with damp, violet writing. The jail would be just as always in the morning—a distant rattle of cooking vessels, the odor of food, a negro, taken up for vagrancy, mopping the stone corridor. When the sheriff came in the negro would stop mopping and listen—his eyes prominent, his mouth open.

The sheriff would stand outside the cells, at the grating, and read the message to each condemned man separately. And as soon as he had heard the news the negro would resume his noisy mopping of the floor.

As to what the message would be, the outlaw had no doubt at all. It was as certain as his own fate in case he were caught. He had killed a deputy sheriff in that last battle between the county and the gang; and killing an officer in those outlaw counties of Missouri was a crime never condoned—the man who did that must die for it.

All day it rained, so that he was able to see but a few yards from him through the thick mists of Black Knob. His wife had reported seeing one of the Holt family on the west side of the river which separated his hiding places from the farming country below; and as all Holts were his relentless enemies he was keeping away from the hut in which he was accustomed to visit her.

AFTER the hour set for the execution, his restlessness gave way to depression, which lasted all of the next day. Late in the afternoon of Saturday the rain ceased and the clouds changed from gray to crimson, then blew away in the dusk.

Sunday, on the newly washed mountain, was a glorious day. He heard the first mocking bird of the year mimicking a sound of bells blown from some church in a far-off mountain valley. In the afternoon the outlaw ventured to visit his wife.

"Waal, Ollie," he said as he sat in the doorway of his hut, "hit's all over fer the boys. They're in the yother world, gittin' used to it by now." He mused a moment. "It'd sholy be somethin' to go through: one moment here, the next off wher' nobody could follow 'em—lak a squirrel escapin' up a tree."

Viola broke in with a correction. "Thar's a *river* to cross over, Ally. You-uns ain't hearkened to Brother Bee Cole lak you'd ought to. When y' come thar y' kep' a-gapin' all over meetin'—must ha' ben gapin' after that Rody girl." Her dimples played coquettishly.

"I never gaped after no *Rody* gyurl!" avowed the outlaw.

"Then I cayn't see whar you kep' yo' mind. But thar's a river to cross!" Viola continued with the firmness of the orthodox. "It's lak a cloud someway, pow'ful misty—thar's a picter of it in Brother Bee Cole's book, en two men crossin' over. Hit ain't no ways at all on the yother side till thar y' come to the city gates. Might be some further than shows in the picter—that ar picter of 'Bo Holt's store—looks lak the river run plumb again' the street. But hit ain't no walkin', to speak of, till y're thar."

A huge dog, bushy around the head, like a wolf, and very silent, rose from beside her, walked out of the hut to a gap among the sheltering vines, and snarled as he smelled the wind. He had caught the smoke of a gun fired by a deputy sheriff.

Viola sat thinking, one foot on the cradle rocker.

"I keep a-steadyin' about th' yother world," she resumed. "Them thar golden streets, now—looks lak, to me, ef that ar gold hed been het up some way en poured over 'em, lak es not some o' th' meltin's would drap onto th' yearth en sink plumb down in—en thar's how gold come to be found in the groun'."

"I don't know, Ollie, mought be. I cayn't say fer sure, lak Brother Bee Cole would. He's so shore o' gittin' thar he's read up. En I reckon he 'lows I won't see no golden streets."

HIS black eyes laughed again. He was superior in intelligence to Viola—though a wild life of nearly two years had somewhat altered him. At one time, while in his teens, he had seemed to show an aptitude for civilization, so that a bookish man down at the county seat interested himself in his education. For a year or two the incipient outlaw did really attend school. He read a number of books and wrote some verses—his patron said he was a poet. But the student phase rapidly passed, and he was again to be found galloping over the mountain or entertaining delighted groups of his neighbors with his mimicry of those not present. If a poet, he belonged to the old-time minstrel type. His language, which had altered under the influence of his teachers, became again the vernacular of back counties in Missouri. He courted and married Viola Meighton, the daughter of an outlaw; he joined with her brothers in the Black Knobber gang, and moved swiftly in his course till he had committed the crime for which he must some day die.

The silent dog came back to lie beside him, lifted his head, and growled reminiscently as he thought of the gun smoke on the wind. His master paid no attention.

"Ollie—I keep a-steadyin' 'bout that ar Sunday Brother Bee Cole baptized you."

That Sunday, from horseback, he and his wild companions had watched her go down into the stream. Baptizing had fascinated him always: the blue and gold shimmer of a river; the smell of summer hills; the singing voices, which were harsh indoors but sweet as birds' when blown across water by the wind; the mystic emotions of the people, crude perhaps, like their voices, but infinitely sweet in the shadow of great things, like birth and death.

Digitized by Google

He looked from Viola's face to the baby in the crib. "I 'lowed to Bud Spencer that Sunday they baptized you. 'Bud,' I 'lowed, 'that ar preacher, he'll sholy have me cut out now. Ollie won't spend no thought on a godless young man lak me.'"

"That ain't no kind of talk fer a baptizin', Ally Spencer—en you know it!" Her eyes met his a moment; they were a kind of greenish blue, like dragon flies, and sparkled enticingly. But she returned them resolutely to a large volume that lay open on her lap, so that the man could see only their lashes, thick, fair, powdery, like the stamens of flowers. She did not expect a man to observe the Sabbath. "Looks lak the good Lord won't hol' 'em to account," she was accustomed to say. "They cayn't help them actions, they have so many temptations—'less'n, of course, they're preachers, lak Bee Cole."

BUT if Viola was a saint, she had also been a great belle on Black Knob. She had certain tricks of the dimples in her cheeks; her calico gown was turned in artfully to show a very white, soft throat, and a string of blue beads, of which Brother Remas Cole could not have approved, was wound in the voluptuous gold braid which went around her head. She glowed in the dimness of the hut. It was built well within a very large old grapevine, which formed almost a perfect shield as the woolly young leaves came out, and blossoms shedding a faint, penetrating perfume. Light came in at the front, from which the sky could be seen, almost an indigo, except where the wind had blown a drift of cumulus clouds that gleamed frostily in the sun. There were no windows at the rear; a door there opened into a cave, from the darkness of which the outlaw might fire tellingly on his enemies. But he had been so long let alone, he began to think the world had forgotten about him.

"What's that noise? Es it a-thunderin'?" asked Viola.

"Naw, hit's this yere pesky dawg jawin' at us. Wolf, quit yo' foolishness!—a-growlin' en a-goin' on lak y' see a deppity sheriff. Ther ain't nobody comin'. Is ther, Ollie?" He laid his hand suddenly on her lap. "Looks lak to me you-uns has read yo' Bible pow'ful long to-day!" he complained.

"That ar's the Wo'd of God, Ally," his wife answered, reproving him.

"Y' cayn't read a line of it. Give it hyah."

"I know I cayn't read," she admitted, "but thar's a holy peace comes over me ef I jes' tetch a Bible with my hand."

AGAIN the black eyes sparkled delightedly. For the book was "Vanity Fair." The library of the Meightons—a Bible, three medicine almanacs, and an arithmetic—had become confused years before with that of a school-teacher boarding at the cabin.

"En I know it helps me to read it!" insisted Viola.

"That ar's the Wo'd of God to you, Ollie," he replied. "All human hearts es a-waitin' en a-listenin' for that wo'd—only, down in town, cayn't none of 'em hear.

"En they tuk me down thar to town en 'lowed I should go to school—en I done it. En sech a jawin' a-goin' on I couldn't heah myself think noway, so I come back hyah to the mountain. Why cayn't they leave me be, wher I like to live? I ain't askin' the county fer nothin'; I can git plenty squirrels to live on. Is it the county's business what I do? I ain't never pestered nobody; never fired a shot at no man tell they 'lowed I was a outlaw, en sent deppity sheriffs after me to kill me. Cayn't I defend myself noway?"

"Hit's jest them-all's crazy foolishness," Viola replied. "Looks lak to me them that makes the laws cayn't jedge no reasons. Less'n them voters picked a bunch o' plum lunytics, sholy they never noticed what they writ in the books."

"I know no law but the law of Almighty God!" cried the man. The child heard him, started, and clenched a tiny fist against the whiteness of the breast on which he lay. Viola had taken him into her arms. It was sunset. Crimson and gold—flashing stars—burned through the vines to her.

THERE was silence till the child, happy and fed, pulled himself to his feet on her lap. He was a strong, wiry boy of ten months; his eyes were black and his wits keen, like the outlaw's. Presently he found his father's hat—wide, black, much battered by winter rains—fumbled a while with it, and awkwardly set it over Viola's ear.

"Ef a girl gits on my hat I can kiss her!" The outlaw announced an immutable social law of Black Knob.

"I know I cayn't read," she admitted. "but thar's a holy peace comes over me ef I jes' tetch a Bible with my hand"

"Ally, this hyah's the Sabbath day." She got up primly and set the child in his crib.

But while she struggled in the man's arms her dignity vanished. She laughed aloud; the gold braid slid down around one shoulder, the revolver fell from his pocket, and was not discharged, but bounced toward the open door. The child crowed aloud. But the dog remained morose—walked to the door that looked down the mountain, smelled once more of the wind, and snarled again.

The gold mass came out of braid—Viola hid her face in it till it was wrenched from her by force. Her fair flesh reddened under her lord's kisses, so that the pale gold freckles disappeared. But her dimples stayed very white in the scarlet. Outside the mocking bird repeated her laughter.

"Thar now!" she condescended. "I reckon you-uns es suited—plum fool of foolishness, lak you always wuz. Looks lak to me, Ally Spencer, you-uns'd hate to give sech a pattern to a yar-old baby—a-breakin' the Sabbath day! I cayn't see how in yearth I'm to git him raised."

"Give me over to the sheriff, that's whut y' can do!" cried the outlaw. "Sen' wo'd to Sam Hope I'm a pow'ful noosance to hev 'round, en he can git me by callin' fer me."

AT HIS mention of the sheriff, Viola's eyes became almost black; she looked like her father, or like that brother, the Black Knobber, who did not shoot and so went to prison instead of the gallows—he did not shoot because his powder was damp. "That ar Sam Hope!" she cried, "ef I meet up with him, I 'low I'll name him fer whut he is to his face."

"You-uns es liable to see him 'most any day, Ollie. He'd lak pow'ful well to pay me a visit up hyah." He spoke thus to play on her heart. It was instantly vibrant, the music he could make on it amazed him. "Ally," she whispered; "Ally—"

He stooped a little; her arms went around him, warm and soft against the sinews of his neck, but clinging savagely, like all wild things. "Ef that ar sheriff comes to my do' I'll stand hyah with the rifle," she resumed; "en—'Sam Hope,' I'll 'low to him, 'you-uns es come to 'rest a man whut never done no crime; he only shot to save his life, lak any yother man would. Yet y' won't leave him be, y' God-forgotten skunk! Y' keep atter him tell he—cayn't—take no—rest! En he lays out in the rain when he's wore nearly to death with yer runnin' of him.' En—'Sam Hope,' I'll tell him, 'I reckon y'd shoot a woman same es a man; but come a step nigher my do' en I'll fill yo' hide plum full o' laid, lak a squirrel.' Oh, thar's Bible for that, Ally. The Good Book 'lows: 'Ef yer enemy hunger, feed 'em; but ef y' cayn't stop 'em so doin', heap coals of fire on thar haid.'"

"You leave the rifle be, Ollie," warned the outlaw. "I don't aim to have y' mixed up in no shootin' scrapes lak a man."

There was a heavy thud outside the hut. In his wolflike silence the big dog had leaped on a man who approached the place, and the man had knocked him senseless with a club.

WITHIN, unheeding, Viola went on: "Ally, I wisht y'd take the boys' plan. Let 'em git y' down yander to the railroad, to a p'int whar nobody never see y' before—they can do it under a load o' wood on thar wagin. En yo' hawse'll bring money fer a ticket clar away. En when y' git safe away y' can send for me."

"I druther stay up hyah, Ollie—with you. I reckon, down thar in town, they've furgot us. They won't pester us." Suddenly he stopped and pushed her arms aside. Some one was near the door of the hut.

An instant later, in the doorway, against the sky—all gold by this time, with open gates in it—appeared a thick-set, reddish man in town-made clothes. There was an instant's silence.

Then the outlaw laughed oddly. "Howdy, Sam Hope?" he asked.

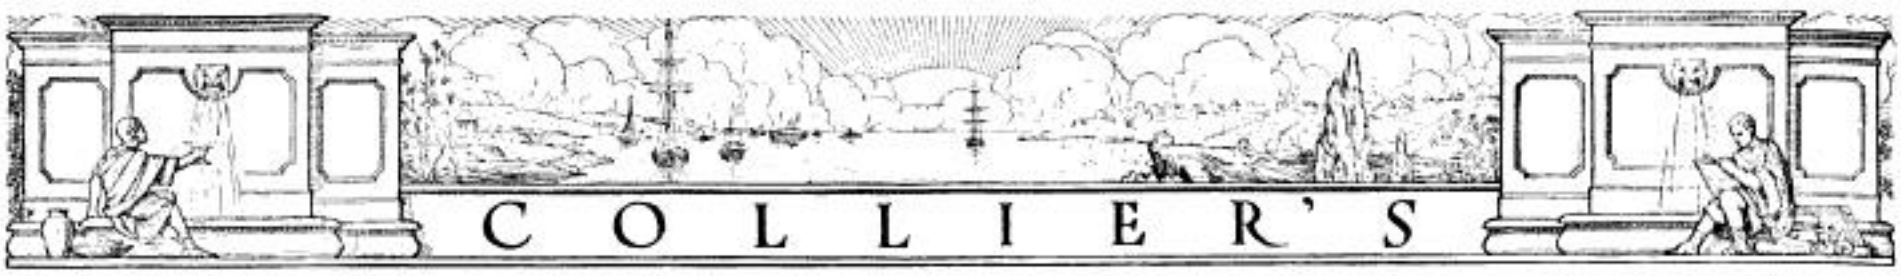
"I come to 'rest y', Ally," replied the sheriff. "Ef y' feel lak shootin', go ahead; but the minute you tetch yo' hand to a gun you drap where you stand."

The outlaw dived for the revolver on the floor; but he was not quick enough, it was snatched away by one of the men who accompanied the sheriff. Among them the prisoner saw his old enemy, Ebenezer Holt, saying nothing, but grinning triumphantly.

In the shadow of the vines behind him stood another of the Holt family. "I 'lowed we'd git Ally Spencer within the week," muttered this man. "I 'lowed it es I stood by the jail when them yother Knobbers was hung. It wuz las' Friday mornin', en rainin'—en Eb hearn me say that."

THE sheriff produced handcuffs. As the outlaw put out his wrists, ducked his head a little and laughed, he said: "Hit ain't no use, Sam, doin' me this a-way. I'm plum done fightin'. I know the court'll tu'n me loose nex' week—mought as well hev a trial right away."

As the posse poured into the hut the outlaw's child sat staring with round, black eyes. He had always supposed his father the only man in the world; this influx of spurred, noisy beings was disturbing to his preconceptions, unsettling to his faith. He began to wail shrilly.



"I reckon, ef you-uns come to 'rest Ally, we-all cayn't do nothin'." Viola's voice was gentle, but she had stepped backward to the wall against which a rifle rested.

"Ollie!" her lord commanded—"Ollie, you drap that gun!" The sheriff sprang to wrench it from her grasp; and she was saved from the crime for which her husband must die. She smiled.

But when they had taken him away she flung herself against the wall, sobbing so that he heard her from outside the hut.

For his last ride down the mountain he was put on a spotted pony with a red eye, which turned inquiringly to see what was going on. For the first few miles he did not speak to any of the posse, and none of them spoke to him. (Continued on page 31)

The Samaritan Religion

THE PHILADELPHIA "NORTH AMERICAN" has sent to a number of persons letters, the gist of which is the following questions:

1. Does your observation of the present time lead you to believe that some sort of spiritual awakening, or upheaval, or fresh expression, is impending or imminent?

2. If so, what form, in your judgment, is the revival, or experience, or manifestation, likely to take?

Some of the answers published have been rather hectic, to say the least. But one, the letter of CHARLES W. ELIOT, president emeritus of Harvard University, is worth reproducing if only because it presents (in fewer words than anyone else could put them) the state of mind of many Americans to-day:

A new religious sentiment seems to me to be gradually spreading throughout the world, and especially among young people in the United States.

It is a sentiment which takes small account of ceremonies, rites, sacraments, creeds, and dogmas, but inspires an enthusiasm for the service of family, neighbor, and society at large.

Guided by the modern scientific spirit, this sentiment is developing a new kind of Christianity, based on the ethics taught by Jesus, and particularly on the command "Thou shalt love thy neighbor as thyself," and the parable of the good Samaritan.

In their youthfulness of spirit these three sentences are worthy of their author. Though Dr. ELIOT's religion is not orthodox, it is sincere. Dr. ELIOT is, incidentally, our candidate for the biggest man now living in America. Hardly a week goes by but we get, out of some of his public utterances or activities, a fresh conception of the loftiness and breadth of his view of our contemporary civilization and the things that are necessary for its richer development.

By the way, accepting Dr. ELIOT's definition, about the most irreligious feature of present-day life is the spectacle of some men growing rich through inducing other men to consume alcohol.

W. W.'s Conviction

WE ARE INDEBTED to Mr. CLARENCE SACKETT of Newark, N. J., for one of the best epigrams we have seen concerning the present political situation in Washington. Mr. SACKETT says the epigram came originally from the Boston (Mass.) "Transcript":

None of the Democrats in Congress have the courage of their own convictions—but they all have the courage of Mr. WILSON's convictions.

Bunk about "Honor"

THE MAJORITY of the Democrats in the Massachusetts Legislature have voted resolutions that begin like this:

Whereas, National honor, dignity, and integrity demand that American coastwise vessels be given the privilege of passing through the Panama Canal exempt from any toll charges.

We don't know just how much the Democrats in the Massachusetts Legislature had to do with digging the Panama Canal, but one Colonel GEORGE W. GOETHALS—not, we believe, a member of the Great and General Court—is quoted as saying:

I do not believe in exempting any vessels from paying for the use of the canal.

Somehow we are a lot more impressed by what the builder of the canal and the President of the United States say on this subject than by the ludicrous resolutions of the Massachusetts Democrats and the arguments of disingenuous hairsplitters.

Training for Congressmen

A MUCH-NEEDED IMPROVEMENT in our National Government is the provision of adequate training in finance and in accounting for our Representatives and Senators. These subjects are of prodigious importance, and something like clear understanding of them is absolutely necessary if constructive national legislation is to go forward. One of the great factors in President WILSON's leadership is his grasp of these subjects and his ability to get expert advice when his own information is not complete. The average Congressman, on the contrary, is at the mercy of his credulity. He will believe and repeat in debate almost any absurdity, provided only it is sufficiently dramatic in quality and discreditable to large financial interests in some distant city. Hardly a week goes by but the "Morgan crowd" is the target for some acrid nonsense which never would have been uttered if the speaker had had even the slightest idea as to what is the work of modern bankers. A conspicuous example was Senator BORAH's assault on GEORGE W. PERKINS with reference to some imaginary six million dollars. Mr. PERKINS's cool explanation left the Senator looking rather silly. We will not get anywhere by favoring corporations in the style of the Hannaized Republican party or by holding jamborees over the money devil in the style of the late Populist party. To deal constructively with American business one must understand the facts and not rant about them. It is greatly to the credit of many Congressmen that they have studied law in preparation for their legislative work. What the United States needs from now on is legislators who have mastered the principles of finance and accounting so as to be able to judge economic facts.

Attention, Mr. Hearst!

APROPOS of the Mexican situation and the lies, direct and indirect, that are being told about it, we dedicate this definition, from the Washington (D. C.) "Star," to WILLIAM RANDOLPH HEARST:

"Father," said the small boy, "what is a jingo?"

"A jingo, my son, is a man who devotes his time to thinking up opportunities for other people to go out and be shot at."

New Politicians for Old

ON THE THIRD OF MARCH, this year, HIRAM C. GILL was elected Mayor of Seattle, Wash., by a majority of 14,000 votes. This does not seem so wonderful until we note that this is the same GILL who was elected Mayor in 1910 on an "open town" platform, recalled in 1911 largely by the newly enfranchised women's vote, and defeated in much the same manner in 1912. This time the rejuvenated Mr. GILL ran on a platform calling for strict enforcement of the laws! He got his majority in the residence districts which had beaten him before, and was supported by former opponents but opposed by former supporters. If 14,000 votes is any evidence, it is a clear case of political rebirth or conversion. This is a very encouraging result of the new spirit in our politics. The aptitude and experience of men who have taken naturally and successfully to political life are assets that we cannot well afford to lose. Good government is not always to be had from untried enthusiasts. It will be better for us if we can make the more capable fellows choose and hold the right courses. Of this seemingly improbable state of things, HIRAM C. GILL is so far a shining example. May there be many such.

We Strive to Please

From "Truth," Boston, Mass.

To whale patent-medicine fakers and frauds and assail the evils of alcoholism may do good; but these things at their worst are hardly as bad as the activities of HAYWOOD and MOYER, the evangels of the I. W. W. and the Murder Trust, for whom COLLIER'S appears to have a profound regard. Recently PETER MACFARLANE, a belated and sentimental muckraker, has striven hard to make a case for the Murder Trust—the Western Federation of Miners—as against the Calumet and Hecla Company, and the many good things done by the copper concern to improve the social and industrial conditions of its employees, its broad generosity and sense of responsibility, are as nothing when the violence and vicious methods of the Murder Trust are to be condoned. For pure rot and unadulterated slop commend us to MACFARLANE and COLLIER'S.

From the Fort Worth (TEX.) "Record."

COLLIER'S WEEKLY was a radical labor newspaper. It has changed. Now it is a conservative. ROBERT J. COLLIER has made way for MARK SULLIVAN as editor. MARK isn't a radical. He is just the opposite. "The Issues at Calumet," by PETER CLARK MACFARLANE, is a new departure. PETER takes the side of the copper kings. He tells the reading world that General Manager JAMES MACNAUGHTON has "a great record for efficiency." This is true. His mining company has paid $125,000,000 in dividends and reinvested $72,000,000 in its property, all upon an original investment of $1,500,000. Give MARK SULLIVAN full swing and Saint MACNAUGHTON's name will appear in the holy calendar. . . . 'Tis fitting that MARK SULLIVAN should be the editor of their publication. When it comes to "bunk and guff" newspaper creators MARK SULLIVAN leads the profession.

Wouldn't it be amusing to hear a joint debate between these two?

The Marvels of Chance

OUR FRIEND, Mr. C. G. CARVER of Sharon, Pa., calls our attention to the most wonderful series of coincidences which have ever been brought to our attention. On February 29, 1912, the House being in Committee of the Whole on the State of the Union, the Hon. EVERIS A. HAYES of California made a speech lauding to the skies his fellow citizen, Mr. LUTHER BURBANK, for his really great achievements as a plant breeder and creator of new varieties of fruits, flowers, and field crops. In this speech he gave a rather full list of these creations, including the unfortunate "wonderberry" which has been con-

Digitized by Google

THE NATIONAL WEEKLY

demned by such authorities as the "Rural New Yorker" as nothing more nor less than the ordinary black nightshade and the "spineless cactus," which is said by some to be nothing better than the wild spineless cactus. But Mr. HAYES, and friends of Mr. BURBANK generally, are not inclined to join in assaults on the work of a man which is so good in so many incontestable ways. We are not now discussing BURBANK, but coincidences. Mr. HAYES's Burbank speech has been sent out under his Congressional frank, and helped to swell that postal expense which is so bemoaned when the second-class mail privilege is debated. One of these speeches reached Mr. CARVER under an envelope in which his name is misspelled, "CARBER." Afterward Mr. CARVER received from the Luther Burbank Company, "Sole Distributor of the Burbank Horticultural Productions," a catalogue setting forth the beauties and excellences of the fruits and flowers in which they deal for good hard cash. This also came in an envelope in which Mr. CARVER's name was misspelled "CARBER." Remarkable coincidence? But wait! In the catalogue of the Luther Burbank Company are found descriptions of the Luther Burbank creations, which are word for word reproduced in Mr. HAYES's speech. If it should turn out that Mr. HAYES of California is interested in the Luther Burbank Company, the series of coincidences would be complete. Anyhow, the Luther Burbank Company may now advertise its wares, "wonderberry," "spineless cactus," and all under the Congressional frank of the Hon. EVERIS A. HAYES—and seems to be doing so. We seek in vain in the catalogue for a description of the political peanut.

For the Farmer

TO THE DESK of the writer of this paragraph there comes in the course of a month something more than a ton of printed matter. Among the few periodicals which command friendly and interested reading is the "Farm Journal," published by Wilmer Atkinson Company of Philadelphia. It has old-fashioned charm, sincerity, piquancy, occasionally a militant sword for fraud and chicanery, and throughout an atmosphere which breathes the desire of service to its readers. Its charm starts with its title piece at the head of the first page, an old-fashioned stone farmhouse of the kind that is common in the Quaker and Pennsylvania Dutch parts of Pennsylvania, surrounded by little pictures of typical farm life: a mother and two daughters making pies in a farm kitchen, a boy bringing eggs, a stalk of corn, and some climbing roses. About the first printed matter in every issue of the paper is this standing notice:

FAIR PLAY

We believe, through careful inquiry, that all the advertisements in this paper are signed by trustworthy persons, and, to prove our faith by works, we will make good to actual subscribers any loss sustained by trusting advertisers who prove to be deliberate swindlers. Rogues shall not ply their trade at the expense of our subscribers, who are our friends, through the medium of these columns. . . .

This notice has appeared in every issue of the "Farm Journal" since 1880. We think it antedates by twenty years the movement for clean advertising in periodicals generally. When this guarantee first appeared in the "Farm Journal" nearly all farm papers were primarily vehicles for the purpose of helping swindlers cheat the farmer (a great majority of the farm papers still are that). The "Farm Journal" has kept a charming and attractive old-time quality and appearance, while it has adapted itself to all that is useful in the modern science of agriculture. We know no publication so sure to inspire and instruct any person with a real affection for the soil as the "Farm Journal."

Interior Decoration in 2014

OUR FORBEARS used to fill the warming pan with live coals and thrust it between the chilly sheets for a few minutes before retiring. Now, brightly polished, this same humble utensil decks the drawing room. We are impelled to a query about the dim future. Will the hot-water bottle of to-day adorn the parlor walls of our great-great-great-grandchildren?

Puzzle: Why Does the Donkey Stay on the Job?

Her Majesty's Umbrella

THREE HEARTY BRITISH CHEERS for the illustrious MARY, Queen of the English! She deserves to live forever in the hearts of her subjects. Ever since she ascended the throne, it has been one of our avocations and chief delights to attend her, through the medium of the illustrated prints, on all of her public appearances. In the very beginning we made an odd and interesting discovery. She never stirred abroad without an umbrella. This discovery gave a definiteness to what had been a mere pastime. At corner-stone layings, at the opening of new hospitals, at cattle shows, at horse and dog shows, at the races, on a stone bench in the gardens of country houses, at presentations of colors, at reviews of troops, at visits to coal mines, at the Lancashire mills, at the ceremonies attendant upon investing the young Prince of Wales with the Order of the Garter, in India, and at sea, every photograph of the Queen showed the umbrella in the foreground and firmly grasped, usually with both hands. Then the object of the game became to discover a photograph of her Majesty in which one of the royal parasols or umbrellas did not figure. It was obvious that she did not carry one as a protection against the elements, for by no possible chance could she be exposed to the rain on any of her public appearances, and certainly habitually carrying an umbrella indoors is the height of something or other. But now we know that the quest is in vain. We gave up hope when we read in the newspapers the other day of an adventure that befell this most British of British queens when she went with the Bishop of Norwich to visit the Norwich Castle Museum. The gate attendant did not recognize his Queen and refused to admit her unless she relinquished her umbrella and deposited it in the rack provided for that purpose. She stubbornly refused to surrender it. The attendant was equally stubborn. It began to look like an impasse until the Church intervened and disclosed the identity of the lady. Of course they let her umbrella in then. If we were English royalty, desirous of holding our subjects' love and respect, this is the sort of story that we would have our press agent disseminate.

Class Consciousness

A TWICE-DIVORCED WOMAN, temporarily retired on an alimony of $20,000 per annum, explains the whole mental layout of her kind in a few brief sentences:

It's too early to talk about marriage. I'm living alone now, but just remember this: I don't intend always to live alone. The main thing that is interesting me now is not marriage, but the New York Dog Show. I have ten dogs entered, and I'm going to stay here until it is over.

The society editors try to gloss these people over, but that is what they are. Twenty thousand dollars a year is a good deal of money.

What One Woman Did

IN 1910 there were 1,152 illiterates in Rowan County, Kentucky. Now, says the Berea "Citizen," there are 23—as follows:

Too stubborn to learn, 4; confirmed invalids or sick during campaign, 6; defective eyesight, 6; idiots, 5; moved in during closing days of campaign, 2.

The "campaign" referred to was started two years ago by the County Superintendent, Mrs. CORA WILSON STEWART, and its object was to wipe out illiteracy in Rowan County. No other community in America, rural or urban, has made such a record as this. And there are some persons who still say that women are untested as public servants, and incapable, under existing conditions, of rendering effective public service.

Asking Congress for Work

IT IS INTERESTING TO NOTE that two thousand unemployed men left Point Richmond, Cal., on February 27 to march to Washington, D. C., and petition Congress for work. If we know anything at all about the United States, they will pass over two thousand jobs before they get to the Mississippi River. What are they really looking for?

Digitized by Google

COMMENT ON CONGRESS

IT WOULD be difficult to say which is the more important aspect of affairs at Washington just now—our Mexican problem or the Democratic retreat on the trust question. The Mexican situation is undoubtedly very formidable, and grows more so. At any time between the writing and the printing something may happen to make this difficulty less tolerable. It is not to be doubted that not only our Mexican problem, but our foreign affairs generally, have been handled with less efficiency than anything else which the present Administration has touched. One of the most capable and detached observers of events in Washington is Mr. Arthur Willert, the resident correspondent of the London "Times." One of his dispatches to his paper, dated last month, contained the following words:

American external relations, since last week's conference between the President and the Foreign Relations Committee of the Senate, have been discussed with unprecedented keenness. It has been discovered that never before has an American President been faced with so many diplomatic difficulties. There is much truth in the assertion.

The "Times" correspondent then went on to prove his point by the following analysis of the President's diplomatic difficulties:

The action of Mr. Taft and his Congress in passing a Panama act which Great Britain contends breaks the Hay-Pauncefote Treaty by exempting from the payment of tolls American coastwise shipping.

The action of California in raising last summer in an acute form the Japanese immigration question and the graver questions that underlie it.

The abrogation by Mr. Taft and his Congress (under pressure from the Jews) of the Russian Commercial Treaty because of Russia's domestic regulations about Jews.

The failure of Republican Congresses to compensate Colombia for the loss of the province of Panama, which she alleges became autonomous by the help of the United States.

The consequent distrust of American altruism aroused in other Latin-American countries, especially in Central America.

The possibility of being obliged to take strong measures to end disorder in Haiti and Santo Domingo.

The possibility of having to do the same on a vastly larger scale in Mexico.

Serious disorganization of the State Department under Mr. Bryan and his spoilsmen.

This correspondent lays the blame chiefly on Secretary Bryan. Because this observer writes with the European background of insight and experience in international affairs, his analysis has much weight:

The President had much ground to clear before he could hope to tackle the difficulties left him by his predecessors. In this he has been extraordinarily active and successful. Burdened by a Secretary of State who, for all his great qualities, is anything rather than a diplomatist or thinker on foreign affairs, he came into power a year ago at the head of a party trained in anti-imperialism and exclusiveness, and utterly ignorant of the pressure of modern-world commerce on politics. He himself was as untried in diplomacy as in national politics. Seldom has a statesman had a better excuse for vacillation or even for the downright subordination of his views to party tradition and prejudice. The excuse has not been taken. In Mexico he has assumed responsibilities which may well lead to armed intervention. In Haiti and Santo Domingo he has proved himself ready to assume them. In Central America he is eager to forward a policy of something tantamount to a series of American financial protectorates of a type more advanced than even the Republican authors of "dollar diplomacy" or the Republican wielder of the "big stick" ever contemplated.

For Latin America, which for the present must remain infinitely the most important field for American diplomacy, he has outlined a policy which, if it matures, will make the significance of the Monroe Doctrine more real than ever before.

Possibly our Mexican problem may work out well. One of the most pleasant aspects of contemporary American history is the earnestness with which public men uphold President Wilson's hands, although they believe his Mexican policy has been unwise from the beginning, and is likely ultimately to lead to intervention. Among public men at Washington the suggestion of intervention is resisted almost universally. There is at Washington practically no response to or sympathy with the jingo call for direct action that occurs in some newspapers. It is just because they think Wilson's policy is likely to lead to intervention (little as he wishes it) that many earnest men deplore the course he adopted.

The Goat

A WISE and witty observer of the present Administration says:

It's a cinch for the Democrats. When the Administration does anything good, praise Wilson. When it does anything bad, blame Bryan.

The Democratic Retreat

AS TO the antitrust bills, the Democrats are in the position of a man who has "walked right in and turned around and walked right out again." At the present moment they are considering deeply whether they shall enter again. If they do, it is likely to be in a new pair of shoes acquired from the Progressive party—whether by theft or donation, as the case may be. The fact is that at the present moment, with respect to trust regulation, the Democrats are a little less advanced than they were at the beginning of the present session of Congress last December. All of this is interesting and important, and will be the subject of extensive discussion in early numbers of COLLIER'S.

Mr. Wilson and His Ways

PRESIDENT WILSON has not been able to maintain the policy of the "open door" to his private office which he announced before he came to Washington. He thought then that he would sit at his desk with no barriers between him and the anteroom. He had done this at Trenton as Governor, but he did not suspect how many more persons desire access to the President of the United States than to the Governor of New Jersey. It did not take him long to find out and shut the door. Now Washington complains that he is more inaccessible than any President since Harrison. So he is to those who have no legitimate demands upon him. He guards his time closely and serves it out in doles to those who can advance good reasons. He is very fair about it. A man having a five or a ten or a fifteen minute appointment is sure of that many uninterrupted minutes to present his case, and he is also sure of the closest attention to what he says. Mr. Wilson is an admirable listener. But he detests bores and persons who do not come to him prepared to say what they have to say.

Only two days are given over to general appointments at the White House—Mondays and Thursdays. Tuesdays and Fridays the President has Cabinet meetings and receives members of the Cabinet singly by previous arrangement. He sees no one else. Wednesdays are given over to conferences with committees of Congress having pending legislation in hand in which the President is directly interested. Saturdays the President is not in his office. Members of the House and Senators are given appointments on Mondays and Thursdays in the order in which they apply without recourse to the President, but applications for appointments made by citizens of the world at large must be approved by the President before they are put on the list for the day. The President maintains this strict routine of engagements he has established. He receives visitors between ten o'clock in the forenoon and one o'clock in the afternoon. They are supposed to present themselves on the minute, and Mr. Wilson sees to it that they bring their business to a conclusion on the minute. Mr. Wilson does not see one-third the number of persons President Roosevelt received. He gives the impression of not liking to have people come in and talk to him. Many of his visitors complain of his deferential coldness.

But even in this matter of receiving visitors the President's method has the qualities of definiteness and finality that are his most marked characteristics. The human quality is subordinated to precision and efficiency. Simply, it is Mr. Wilson's way of doing things, and callers who do not like it might just as well complain to the Interstate Commerce Commission about the time-tables of the planets.

Farms for Sale by the Government

THE United States Reclamation Service has a number of irrigated farms for sale. These are located in Idaho, Montana, North and South Dakota, Nebraska, and Wyoming. The Reclamation Service has compiled data concerning these farms which are of much interest to prospective settlers. These data deal with the climate, soil, elevation, and crops of these reclaimed lands. This service to the public is entirely without charge. For full information, write to Collier's Washington Bureau, 902 Munsey Building, Washington, D. C.

COLLIER'S maintains an office at Washington which will give the record of any member of Congress on important roll calls, or supply information concerning Congress and the Government. The service is entirely without charge. Address Collier's Washington Bureau, 902 Munsey Building, Washington, D. C.

Wilson Among the Cartoonists

By McKee Barclay

WHEN Woodrow Wilson was nominated at Baltimore the cartoonists, regardless of age, sex, color, or previous condition of political servitude, rejoiced with exceeding great joy. Champ Clark's face had possibilities but called for no enthusiasm from the caricaturists; Oscar Underwood's photographs showed a smooth face with no color contrasts and none of the whiskerial adornments or incongruities of anatomy that are so dear to the cartoonist's soul; Judson Harmon offered a face which baffled even the most talented of the caricaturists. Woodrow Wilson's physiognomy, however, had, from the cartoonist's point of view, not even a single fault. His lantern-jawed, long-chinned, sharp-nosed face promised unlimited possibilities.

So the men of the craft proceeded with great gusto to experiment with the Wilsonic countenance. Soon there followed a laying aside of pencils and a great scratching of heads among the men employed by the papers that were opposing Wilson, for however they might distort the candidate's features and however amusing the result, the face produced was still the face of a strong man, likable and worthy of trust. It was a situation calling for expert psychological analysis. No matter how the laws of comparative measurement and interrelation were disregarded, if the caricature was a success as a caricature in every other way, somehow the handicraft of the anti-Wilson cartoonist lacked the punch needed in an iconoclastic pictorial attack. It was so in the days of the Civil War when the caricaturists tackled the rugged ugliness of Abraham Lincoln. Even John Tenniel, "Punch's" master cartoonist, who died this very month, aged ninety something, failed to make the rail splitter's face ridiculous. Likewise Bernard Partridge, who to-day occupies old Sir John's place on "Punch's" staff, unintentionally idealizes the Lincolnic visage of Woodrow Wilson. Herbert Johnson of the "Saturday Evening Post" and J. N. Darling of the Des Moines "Register and Leader" and Fontaine Fox of the Chicago "Post," who probably make the most laughable and most exaggerated caricatures of the President, produce what are certainly not viciously damaging likenesses.

Even the camera has an inclination to caricature the Wilson features. The Uncle Sam likeness in the center was achieved merely by putting chin whiskers and long back hair on a photograph

Wilson's Funny Bone

STILL, whatever the difficulties, the cartoonists of the country are learning how to take liberties with the President's features, and some of them are decidedly amusing without transcending the ethics of good taste.

Joe Tumulty has organized a bomb-proof wall of protection around President Wilson that gives our chief public servant more personal liberty than was ever before enjoyed by any President, but the White House scheme of selection and rejection allows whatever is worth while in the way of editorials and cartoons to filter into the presidential inner sanctum. The result is that Mr. Wilson is enabled to keep in intimate touch with newspaper opinion and no man in public life gets more enjoyment out of the shots that are aimed at him by the humorists of the pen and pencil. He has a keen appreciation of clever cartoons and paragraphs and his saving sense of humor has prevented him from ever wincing at any sort of good-natured fun making at his expense.

View the Wilson face from whatever angle you choose and some characteristics will appear that will, to use a favorite expression of the caricaturists, "give a fellow something to hang his hat on." Speaking of "angles," you will notice that every line and corner in a Wilson portrait makes for character and strength. Strange to say, even the camera sometimes seems to have an inclination to caricature the Wilson features. The profile views and three-quarter portraits show a head slightly bald at the crown, hair tinged with gray that swings from the temple back of the ear and hangs long and straight from the crown—or as near the crown as it starts—to the nape of the neck.

In the Wilson face note the fact that the eyebrow is decidedly darker than the average tone of the hair. This is a feature of great good fortune to the artists, for it means that all-important thing, "color contrast." The upper crease in the eyelid is hidden by a flap of skin that runs down to the southeast and scatters in half a dozen wrinkles. Those who have seen the President at close range know that some delightful effects in crow's-feet are shown as one watches the play of expression on Mr. Wilson's face.

Chin—Chin

THE nose, straight and thin, sticks out straight unless drawn back by the risible muscles when something tickles the Presidential funny bone, for when its owner laughs he gives the cartoonists just excuse for presenting him with a hooked nose. The Wilson mouth, like its neighbor, the nose, is, in repose, very different from the same mouth in action. The side-view portrait which was used so extensively as a newspaper cut during the campaign is one of those which shows the face in ordinary repose—that is, in contradistinction to grim repose and the Mona Lisa species of repose. In this portrait there is a straight drop of the upper lip from the nose, a little swing inward to the line of the mouth, a slight protruding of the lower lip, and a chin that drops back of a perpendicular line from the upper lip. Now no one would accuse Woodrow Wilson of having a receding chin, and yet, in spite of the seeming immobility of his features, the camera insists that, at times, he has. Let a look of determination come to the owner of that chin, however, and the lump of muscle in front of the lobe of the ear tightens up, the hinges of the jaw swing forward and lock, the chin sticks out, and it's time to raise your guard and side-step. The lines of that jaw, by all the rules of anatomy as laid down by students of physiognomy, are decidedly deceiving when there is neither physical nor literal tension. From the wide-open and rather large ear it sweeps down with a sort of convex curve, and entirely lacks the outward hook which we are accustomed to suppose must go with a character of determination and fixedness of purpose.

All of which, when corroborated by other insistent features of the Wilson face, goes to show that in spite of anatomical laws and phrenological charts it is the ensemble and not the details that indicates character. Compare with the grim Wilson face the portraits that show him laughing. Study the twinkling eyes and the teeth that out-Teddy Teddy himself, and you will conclude that one view of a face will often fail to give an infallible index to its owner's character. In other words, more important than an analysis of the individual features or even a survey of the ensemble is the cinematographic play of the change of mood and expression on the face that is the subject of study. Who doesn't remember Woodrow Wilson's favorite Limerick?

For beauty I am not a star:
There are others more handsome by far;
But my face—I don't mind it,
For I am behind it!
It's the people in front that I jar.

Unsober Second Thoughts

By George Fitch

DRAWINGS BY JOHN T. McCUTCHEON

IN CHICAGO the overworked citizen has to vote for 144 different public officials, and the objection to this cumbersome proceeding is approximating a revolt. No human being, it is claimed, can keep track of the candidates for these positions and choose from them intelligently.

This is too true to be argued about and Chicago is entitled to relief. The average man can hardly keep track of the batting records of 144 big-league baseball players, let alone the records of 144 public officials.

The Dub Golfer's Corner

The Only Space in the World Devoted to His Interests

THE ART OF DRIVING. Much has been written on this subject and all of it of no account to the hopeless golfer. Driving, for the dub, is not a matter of grips or position or footwork or balance, but of intelligence. Grasp the problem firmly with your own mind. If this involves violence toward your expert companion do not hesitate. Your drive may be a poor one, but it is your own child. Adopted styles will desert you in your hour of need and bring you to scorn.

Choose your own style and make it a principle. Principle is everything in golf. If you wish to drive thumbs down and left leg up, arm yourself with a vocabulary and defend your theory. Tell what you habitually do and make it not less than 250 yards. What is 200 yards of exaggeration in this country of magnificent distances? Quote Vardon on the subject. Be offensive. Be arrogant. In other words, meet your expert companion on his own ground and back him off it.

As for the driving itself, remember the first principle of the good golfer. You must always be off your game. If by any chance you get 200 yards, be gloomy. If you get 150 yards, be disgusted. If you get your normal 75 yards, be furious. Leave the other fellow nothing to say. Say it all yourself. And never be satisfied. If you should drive to the green and hole out in one, be merely mollified and bring up the offenses of fortune against you on the preceding holes. It is really no trouble at all to be a good golfer between strokes.

A few simple directions about driving should be effective. Always drive for the hazard. Aim directly at the woods to the right or the creek in front. Study carefully how to put a ball in the bunker 50 yards ahead of you. Achieve so real an ambition to do this that you will be unspeakably disappointed when you dub the shot away over the bunker and miss it by 50 yards.

Tee Your Ball on Your Watch

NEVER drive twice the same way. This is very important. Study carefully a new position each time. By so doing you will adopt unconsciously some other position—your natural one—whereas if you were to fix your mind on your natural position you would overlook it every time.

As for the club, you will probably find that your lofter will get a long, low ball of good distance. If so, use it and announce that you paid $10 to an Eastern professional for the secret. Some dubs drive best with a putter, but the position necessary is cramped and awkward. Except in desperate work, such as pitching out of ravines or over swamps, do not resort to this club. As for teeing, most dubs top their drives, leaving the tee undisturbed. This can be easily remedied by teeing your ball on your watch. Use a durable gun-metal watch. It will last for several rounds.

In an early issue we shall take up the problem of approaching.

The Listener

WHEN the bright grate sings alto to the gale,
The patient listener, with longing sighs,
His slothful body from the armchair pries
And drags it forth, far, far from comfort's pale
To some chill hall where, to unfurl his tale,
A speaker struggles with heartrending cries
And o'er rose-tinted clouds of wit to sail
On warped and stuttering gobs of English trite;
Praise me no more, Demosthenes the wise,
Nor Bryan's tongue so thickly silver-plated.
'Tis not through speech alone they chanced to rise
And into deathless fame perambulated,
Sing me the listener with leaden eyes
And bulging ears, with eloquence o'erfreighted.

Beacon Lights of Obscurity

WUGG, ADAM, Denver; Scientist. Mr. Wugg has discovered a use for a hitherto waste product. He has papered his house with mining shares bought for five cents per square yard from discouraged investors.

PELEG SNODGRASS, West Boston; Philanthropist. Mr. Snodgrass owns a home valued at $3,000 and two $1,000 bonds, on all of which he pays full taxes. Mr. Snodgrass thus helps provide electric light, police protection, and city conveniences for a large number of neighbors who pay no taxes at all, including a millionaire who schedules each year on $25 worth of household goods.

JAMES J. CARMODY, Chicago; Educator. Mr. Carmody, who is a street-car conductor and weighs 190 but does not look like it, has taught politeness during the last six years to more than twenty-five young men without expense other than hospital charges.

The Manly Art

IF THERE is anything which fills us with a drowsy desire to crawl off somewhere and rest for several years it is the custom of calling prize fighting "The Manly Art of Self-Defense."

We say this in all kindness to the occupation itself, which has its good points, notably in the line of finance. At taking awkward young boys away from the trolley controller, the meat block, and the blacksmith's anvil, and making out of them knobby young plutocrats with incomes greater than that of our country's President, nothing can excel prize fighting. But as a means of self-defense it is a hopeless and depressing failure.

We have recently talked to several men who spend each year hundreds of dollars on the noble art of self-defense. They have followed this art carefully for many years, devoting as high as three evenings a week to it. Without exception they are pessimistic as to the results. One man says that enduring the atmosphere of a fight carnival has made the stuff they serve up as air in the street cars of his city less offensive to him. It has hardened him to poor ventilation, but that is all. Another claims that struggling for the unreserved seats in the back of the hall has developed his agility to some slight extent, but that it has cost him more in clothing than it has been worth. Another declares that he goes to prize fights for mental protection—that prize fights do not soften his brain as fast as the modern sex drama would. But outside of these results none of the many earnest devotees has been able to discover any advance in the art of self-defense.

Sitting on a pine seat all evening yelling for blood does not develop the shoulders or the chest muscles, and, considering the quality of air which must be inhaled in order to do the yelling, it can't possibly improve the pupil's wind.

Watching a thousand face-massage matinées would not improve the watcher physically as much as sawing one cord of wood. As a mental rest, watching two men hashing up each other's features is unexcelled. But the trouble is the rest is far too likely to become chronic and incurable.

The Cauliflower Ear

AT THIS point we can hear a storm of murmurs to the following effect: "Chump! Prize fighting doesn't develop the watcher. It develops the fighter."

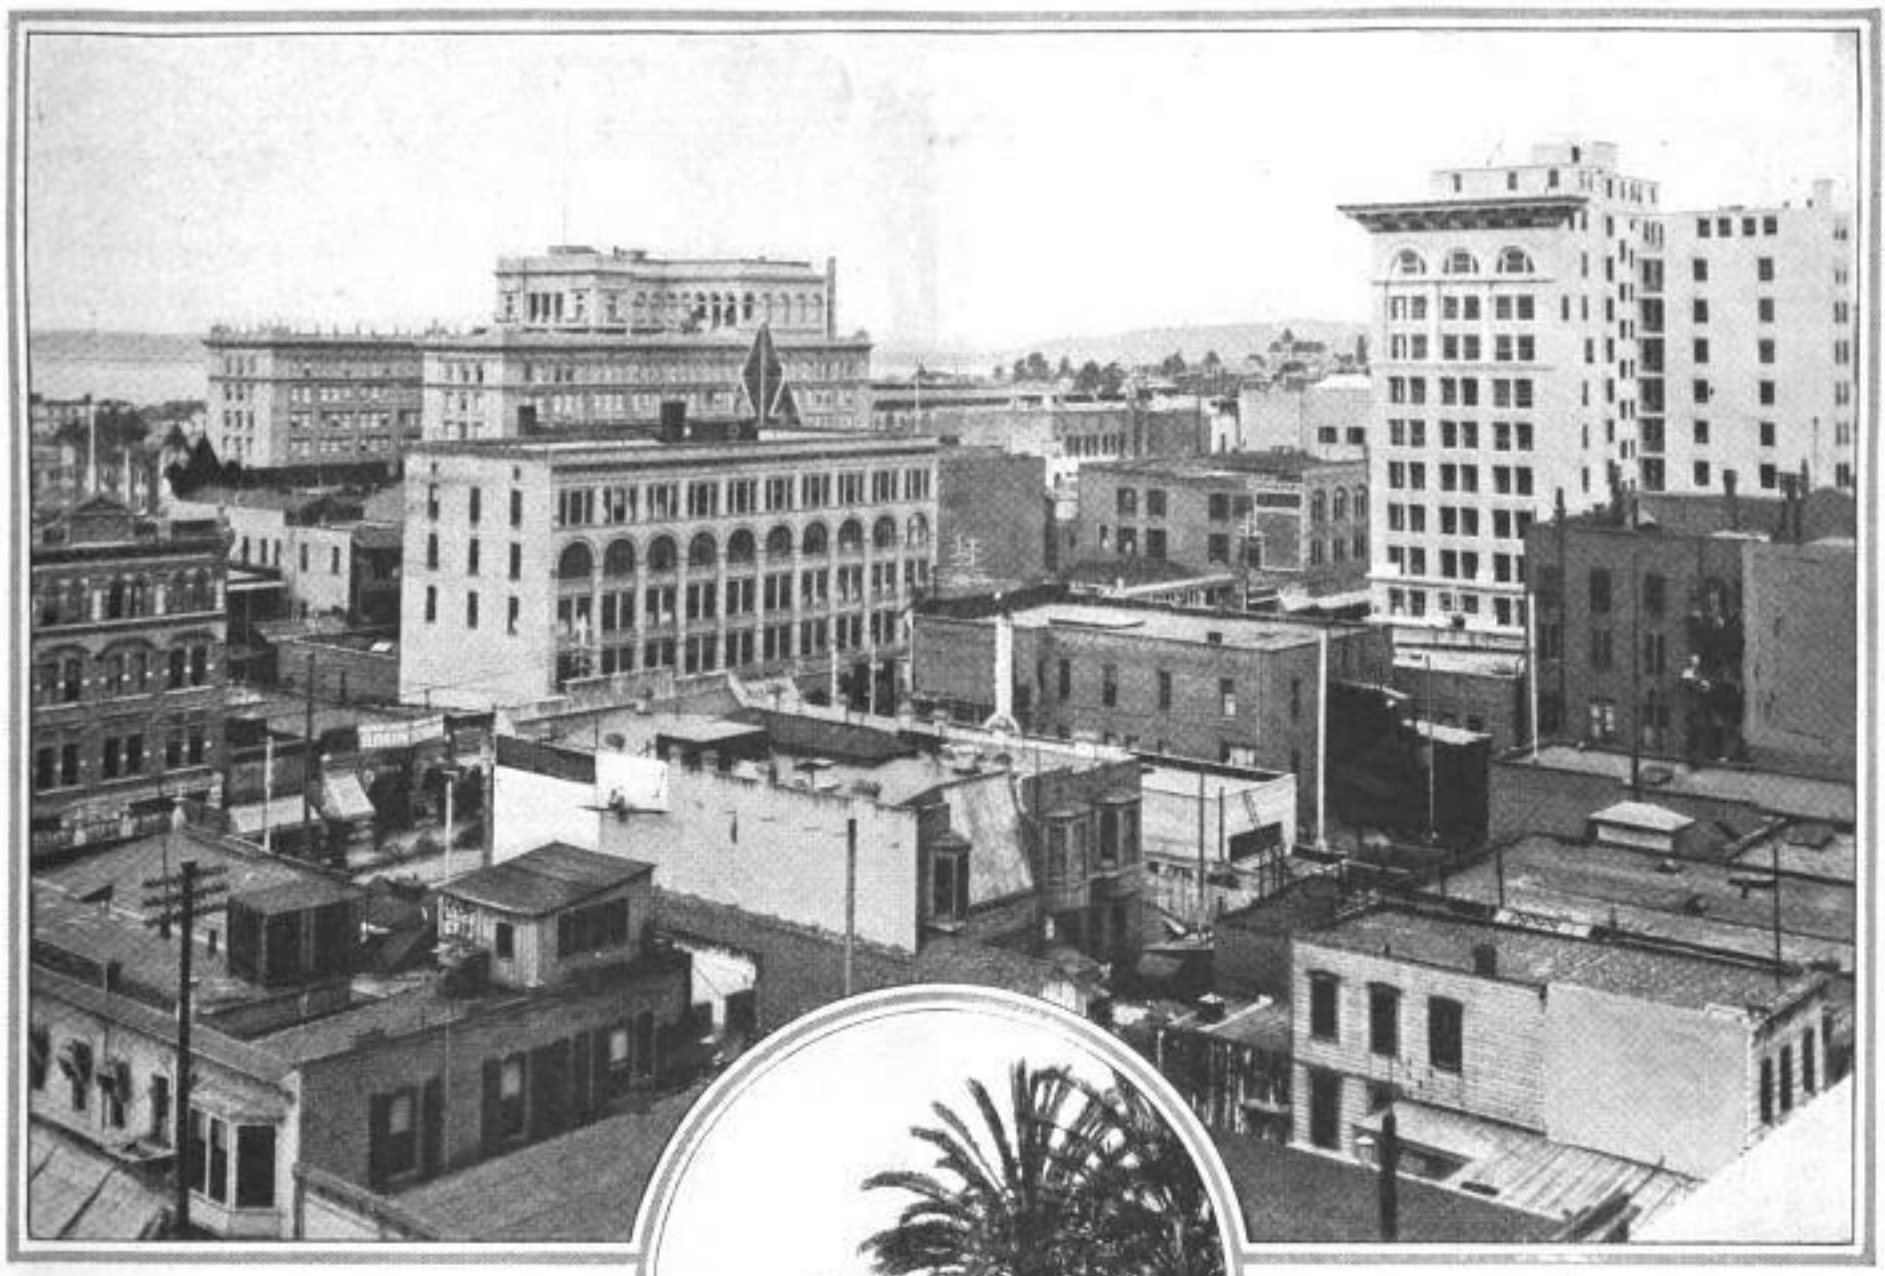
We have examined a good many prize fighters as we have inspected spotted leopards and large, sleepy tigers—at a safe distance. They are impressive beings who fit their clothes as if they had been blown up inside of them, but they have most peculiar imperfections. Their noses slant in all directions. Their teeth do not all answer to roll call. They have scars over their eyes, and their jaws are warped and irregular. They also, now and then, have ears shaped like early June tuberoses. They look exactly like men who have been operated upon by muscular surgeons armed with sledge hammers.

If that be the art of self-defense, no art for us. It is too dangerous. It is too much like getting run over by a street car in order to harden oneself against railroad collisions.

Prize fighting is purely financial, like trust making, the many contributing to the prosperity of the few. And as such let it be classified. Any effort to preserve it as a means of cultivating the art of self-defense should be frowned upon in the interests of manly beauty and the uncauliflowered ear.

Curt Conclusions

IT IS *as hard to admire some old families as it is to admire old eggs.*



Economy is the science of getting along happily without anything that you want.

The best epitaph most of us could hope to accumulate would be the fact that some one outside of the immediate family cried when we died.

In spite of the vast strides made by our music conservies one must still go out in the fields to hear the birds sing.

PHOTOGRAPHS BY EARLE HARRISON

Unconventional Portraits of American Cities—San Diego

HISTORY rather than civic architecture, commercial activity, and scenic beauty is embodied in these typical features of San Diego's entity. The tall buildings in the upper view are the sky line of a city that has been built within the last decade—a city of more than 80,000 population since the last census of 39,000; the medallion contains the Mission of San Diego, founded by Padre Junipero Serra in 1769; the lower picture is the harbor of San Diego in the glory of an unrivaled (no duplicates issued!) southern California sunset. The low buildings in the upper picture are relics of "the boom of 1888," before which San Diego was chiefly famous on the Pacific Coast for its "bay and climate." It was in San Diego, at Old Town, two miles from the present site, that the first settlement of white men was made in California; the palms in the middle picture were the first trees planted on the western coast of America and are 144 years old. San Diego Bay was discovered by Juan Rodriguez in 1542 and named by Sebastian Viscaino, who moored his caravels there in 1602. Here was the beginning of California's stirring history, when Serra and his devoted Franciscans founded the mission that afterward gave a name to what will be the first port of call north of Balboa on the west coast of the United States when the Panama Canal shall be opened to the commerce of the Pacific. From the parapet of the Presidio in the Old Town of San Diego have floated the flags of three nations—the banner of Castile and Leon, the eagle and cactus of Mexican sovereignty, and the Stars and Stripes. This history and the promise of high destiny as the great outport of the Southwest will be commemorated in San Diego by the Panama-California Exposition, beginning on January 1, 1915, and closing at midnight on December 31 of that year.

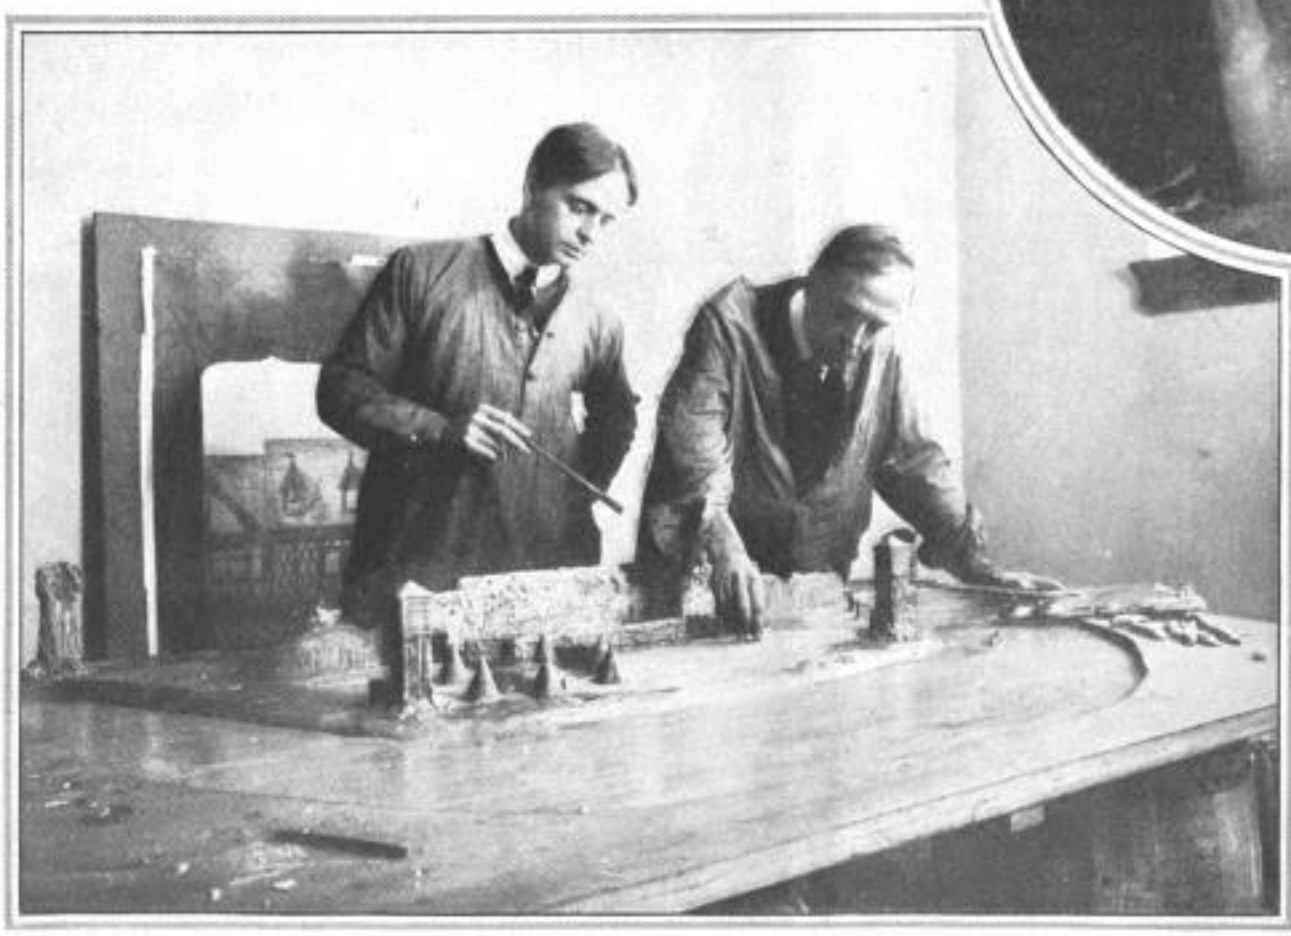
A regiment of President Huerta's Rurales on parade in Mexico City. The Dictator has garrisoned in the capital a Federal force of nearly 6,000 picked troops

A WOMAN CANDIDATE FOR CONGRESS

Mrs. Eva M. Murphy of Goodland, Kas., is unopposed for the Progressive nomination in her district

Huerta's Word for It: A War Is on in Northern Mexico



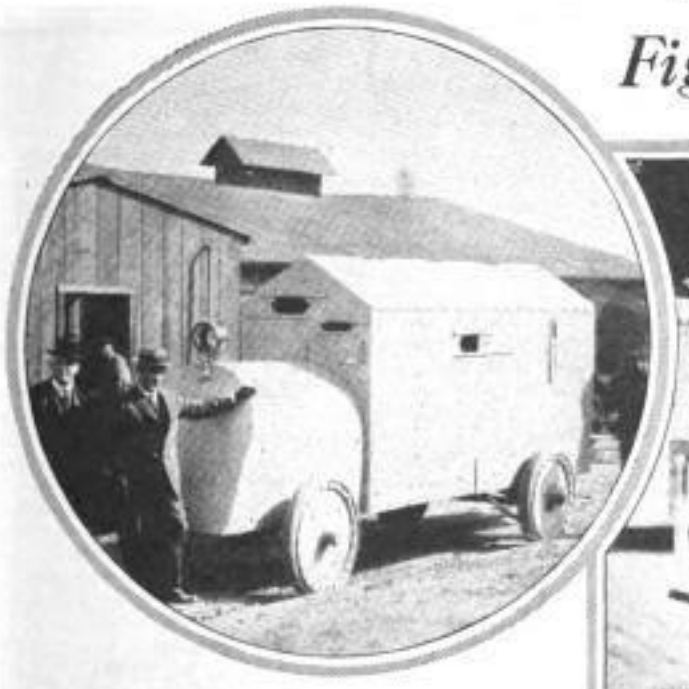
THE big series for the championship of Mexico—Huerta's Federals vs. the Sockless Constitutionalists—opened March 9. There is Huerta's word for it. The Dictator picked the date: "To-day the Federal Government begins a campaign against the rebels of the North." We are to assume that the little affairs at Ojinaga and Juarez were only practice games.

How many men the Provisional President has available for his big campaign is not accurately determined, but trustworthy authorities agree that it is much less than Huerta's advertised "250,000." Apparently, "Huerta's word for it" is not quite the same thing as a guarantee of veracity. The lowest estimate of the number of troops now under arms in Mexico is that shown in a census gathered by American officials and other reliable correspondents and printed in the New York "Times" and the Chicago "Tribune." This found a total of 83,000 soldiers, of whom 40,000 were Federals. In Mexico City the count showed a number not larger than 6,000.

In its comment on this news the "Times" came to the conclusion that Mexico's present warlike aspect was revealed as somewhat superficial—"less than one-third of one per cent of its population is actively concerned in its present troubles, except in the character of unresisting sufferers."

WORK BEGAN *on Chicago's new Federal League park March 4. It will be completed by May*

Thomas Wood Stevens (at the left) and Joseph Lindon Smith at work upon a model of the stage for the St. Louis pageant



Count 'em—7,500!

ST. LOUIS is to celebrate her 150th birthday in May with a party to hundreds of thousands of guests. To entertain them a cast of 7,500 is to act in a historical pageant and a masque in a natural amphitheatre in Forest Park.

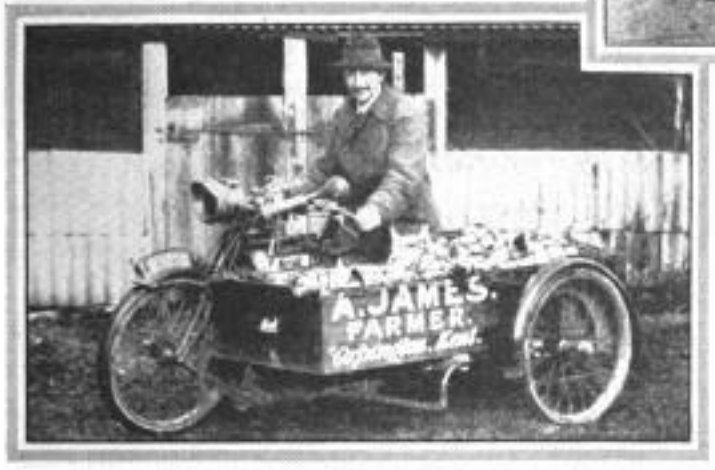
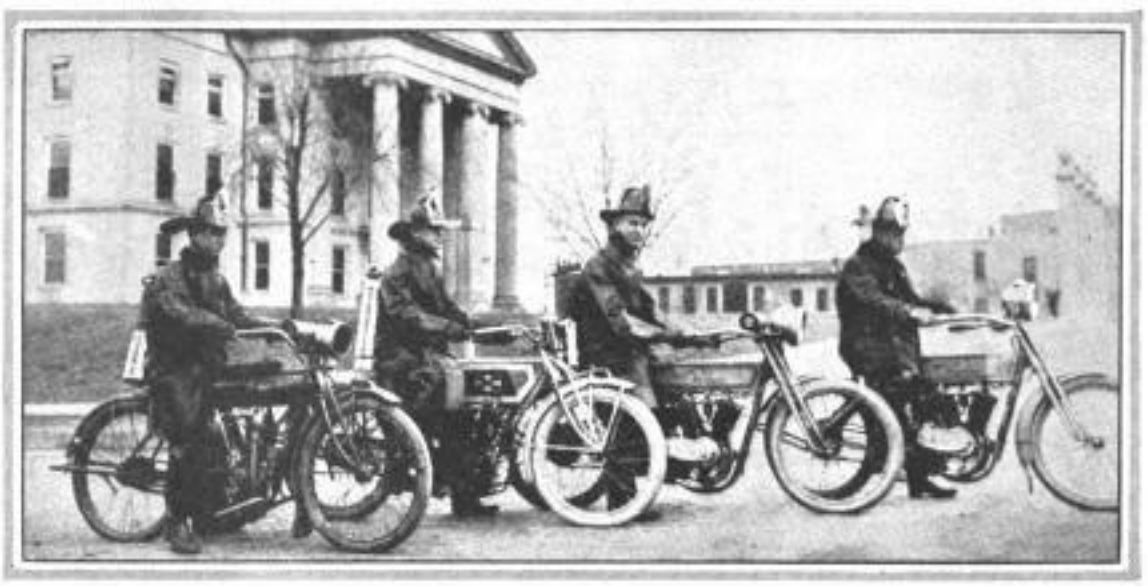
Fighting Fire, Freight Rates, and Bullets



Copyright by The American Press Association

VILLA'S *preference in armored motor cars is a type which, with a change of wheels, can run either upon ordinary roads or upon railway tracks*



DICTATOR HUERTA *has given his word for it that 500 "land battleships" manned with Mexican Federal soldiers are to be dispatched next month against Villa and Carranza. The car shown above is the type*

A Gasoline Tricycle as a Stock Train

THOUGH it does not run on railway tracks, as two other vehicles shown on this page are able to do, the gasoline tricycle pictured above does the work of freight or express trains. A. James, a farmer of Orpington, England, has found that with good roads and a motorcycle delivery wagon he can reduce his freight bills to the cost of gasoline and can ship in small lots and at his own convenience. Our snapshot shows him transferring a freight of pigs from one of his breeding farms in Grove Park to Orpington, Kent, to be fattened for the market. His savings on freight charges have repaid the original outlay.

FOUR SPEEDY MOTORCYCLES, *which transport firemen and chemical extinguishers to a blaze even faster than motor trucks or galloping horses, are the latest additions to the fire-fighting equipment of Columbia, Mo.*

BY REMOVING THE RUBBER TIRES *from a light runabout and refitting the automobile with iron flanged wheels, the Forest Service in the Sierra National Forest, California, was furnished at a minimum cost with a speedy gasoline fire patrol wagon. The car pictured above, with a forest ranger at the wheel, easily "negotiates" the 5 per cent grades and sharp curves of a mountain railway, sometimes carrying, in addition to its own weight, a load of 3,000 pounds. The photograph here reproduced was taken by the Forest Service*

Steamed Beans or Baked Beans

Which Do You Prefer?

IT'S only a question of what you want. Only a question of getting what you ask for.

We have no quarrel with the manufacturer who offers *steamed* beans—or with the grocer who sells them—or with anyone who wants to buy them.

The Government permits no misrepresentation on the can. Only beans that are really baked may be labeled "Baked."

Steamed beans cannot lawfully be labeled "Baked." So, to be sure of the kind you are getting, you must *read the label on the can.*

Heinz Baked Beans

are labeled "Baked" and they *really* are baked—in great ovens under intense dry heat; not simply boiled or steamed like most canned beans.

They come out of our ovens brown, mealy and tender—delicious—digestible, and with all that real Boston baked bean flavor that cannot be *brought out* by any other than the baking process.

That's why Heinz Baked Beans are preferred by all who understand the difference between steamed beans and baked beans—why they are today the largest selling brand on the market. They have no equals.

There are four kinds of Heinz Baked Beans:

Heinz Baked Beans with Pork and Tomato Sauce.

Heinz Baked Pork and Beans (without Tomato Sauce)—Boston Style.

Heinz Baked Beans in Tomato Sauce without Pork—(Vegetarian).

Heinz Baked Red Kidney Beans.

Try Heinz Baked Beans at our risk. If you do not prefer them to any other you have ever eaten, your grocer will refund full purchase money.

Others of the famous "57": Heinz Spaghetti, cooked ready to serve; Preserved Sweet Pickles, India Relish, Chili Sauce, Pure Vinegars, Cream of Pea Soup, Cream of Celery Soup, Cream of Tomato Soup, Tomato Ketchup, Fruit Preserves, Apple Butter, Grape Fruit Marmalade, Prepared Mustard, Olive Oil, Olives, Peanut Butter, etc., etc.

H.J. Heinz Co.

—57 Varieties

More than 50,000 Visitors inspect Heinz Pure Food Kitchens Every Year

A Son of the Middle Border

(Continued from page 7)

undoubtedly was, such an experience should have shaken her faith in Western men and Western hospitality. But apparently it did not, for I never heard her allude to it with bitterness."

IN addition to his military character, Duncan also carried with him the odor of the pine forest and the skill and training of a lumberman, for in those early days nearly every young man who could get away from the farm or the village went north early in November up into the pine woods which covered the entire upper part of the State, and Stewart, who had been a raftsman and timber cruiser ever since his coming to the State in 1853, continued even after his marriage to boss a crew of woodchoppers somewhere on the Wisconsin or Chippewa Rivers. It was a rough life, but not vicious, for the men were nearly all of native American stock, and the young farmer was none the worse for his winters in camp.

As a result of all these experiences in the woods, he was almost as much the hunter and woodsman as the soldier in his talk, and his knowledge made him very wonderful in his sons' eyes. "According to his account (and I have no reason to doubt it), he had been exceedingly expert in running a raft, and could ride a canoe as well as any Indian.

"As I remember him on his coulee farm, he was slender, sinewy, deft with an ax, sure of hand and foot, and able to hold his own with any man of his inches. He was a little stooped from carrying a knapsack, and he walked with a soldier's swinging stride. Amid much drinking he remained temperate and, strange to say, never used tobacco in any form. While not a heavy man, he was tall, deep-chested, and broad-shouldered. He knew nothing of fear. 'God forgot to make the man I could not follow,' I once heard him say. The quality which defended him from attack was the eaglelike blaze of his gray eyes. Terrifying eyes they were at times, as I had many occasions to note.

"As he gathered us round him at night before the fire, he loved to tell of riding the whirlpools, of shooting the rapids, of spending weeks on a raft with the water up to his knees, or sleeping at night in wet clothing, sustained by the spirit of reckless adventure. His endurance even after his return from the war was marvelous."

IN all of these early records which Lincoln Stewart has laid before me, I find frequent, almost worshipful, mention of his uncles David, Luke, William, and Franklin McTurg. They seem to have been almost equally wonderful in his eyes, and they fill larger space than any other of his relatives or neighbors. He says: "Frank, the smallest of all the seven sons of Hugh, was not what an observer would call puny. He weighed nearly one hundred and eighty pounds, and, so far as I know, never met his match except in his brothers. William could outlift him, David could outrun him and outleap him, but he was more agile than either. He could turn a somersault like a circus man. His muscles were prodigious. The calves of his legs would not go into his cavalry boots.

"I have heard my father say that once, when the tumbling in the little country circus seemed to be not worth the price of admission, Frank sprang over the ropes into the arena and went around the ring in a series of flip-flaps and somersaults to the unrestrained delight of the spectators and the rage of the ringmaster. I did not see this performance, I am sorry to say, but I have witnessed other of his acrobatic tricks. He was always smiling, but his temper was fickle. Anybody could get a fight out of Frank McTurg by simply hinting at the desire for it, and to call him a liar is still equivalent to contracting a doctor's bill.

"HE loved hunting, as did all the McTurgs, but was too excitable to be a very successful shot—whereas William and David were veritable Leatherstockings in the skill with which they used the heavy, old-fashioned rifle. They were dreaded competitors at every turkey shoot, and were not infrequently barred out of the contest.

"William, who was over six feet in height and weighed two hundred and twenty pounds, was a veritable giant. He was black-bearded and shock-haired, with laughing eyes and a fine nose set slightly awry. To us he seemed a monstrous but perfectly gentle black bear, and we firmly believed he could master any man in the world—even Uncle David—if he chose to do so. We never expected to see him fight, for we could not believe anybody would be foolish enough to attack him. Such a man did develop, but not until the giant was gray-haired with age.

"But even then it took two strong young men to engage him fully, and when it was all over—and it lasted only a few seconds—one assailant could not be found and the other needed a surgeon to piece him together again.

"William did not have a mark. *His* troubles began when he met his quaint little old wife. She had heard the rumpus, and in some strange way learned that he had been fighting. She gave him the worst rating of his life. 'William McTurg!' said she severely. 'Hain't you sense enough to keep your temper and not go brawling around at your age in a school meeting?'

"William hung his head and replied: 'Well, yes, but I guess my dyspepsy has kind o' made me irritable.'"

DUNCAN was the historian of most of these exploits on the part of his brothers-in-law, for he loved to exalt their physical prowess at the same time he deplored their lack of enterprise and system. Certain of their traits he understood well. Others he was never able to comprehend, and I am not sure that they ever quite comprehended themselves.

Says Lincoln on this point: "A deep vein of poetry, of sadness, ran through the entire family. It was associated with their love of music, and was for the most part wordless. Only hints of it came out now and again, and to this very day my father still expresses wonder at the curious combination of bitterness and sweetness, sloth and energy, slovenliness and exaltation which made Hugh McTurg and his children the puzzle and the admiration of those who knew them best.

"Undoubtedly to their definite, practical, orderly, and successful New England neighbors the McTurgs were merely a good-natured, easy-going lot of fiddlers, but to me, as I grew old enough to understand them, they became a group of potential poets, a family of bards and dreamers, struggling to adapt themselves to border conditions which were alien, harsh, and barren. They all fell easily into dark, sad moods. Even Frank, the most boisterous and outspoken of them all, could be thrown into sudden melancholy by sweet music or poetry or beautiful color."

The point of all this—if the point needs to be stated—lies in Lincoln's acknowledgment of indebtedness to his mother and her family for much of the mystic joy of his childhood. "Nearly all that I possess in the way of musical feeling or love of poetry is derived from my mother's strain, which was Celt in almost every characteristic."

DUNCAN was a natural orator and a lover of prose. He admired warriors and politicians almost equally, and though he enjoyed certain kinds of music, he could not sing a tune. "So far as I am aware," writes Lincoln, "he never read poetry if he could help it, yet he was naturally refined of speech and manner. His mind was clear, positive, and definite, and his utterance fluent. He was orderly and thorough as a farmer. To him William McTurg's disorderly habits shaded upon the criminal, and David's lack of push, of business sense, was deplorable. And yet he loved them and respected his wife for defending them.

"To me, at least in those days," adds Lincoln, "the agricultural shortcomings of my uncles were more than compensated for by their skill with rifle and violin. All our neighbors were living in log houses and frame shanties built beside the brooks or against the hillsides, and Uncle William's small, unpainted dwelling seemed only another fact of pioneer life.

"My grandmother McTurg's death came

Digitized by Google

soon after my father's return from the war, and I have no memory of the event, but my mother often described it to me. The setting of the scene was humble. One of the younger daughters was washing clothes in the yard and the silent old housewife was getting dinner. David, glorious young giant, came in from the field, and Samantha left her work and joined him in the sitting room to rest a few minutes and to chat.

"DAVID, looking toward the kitchen, said: 'Isn't there some way to keep mother from working so hard? She doesn't look at all well to-day.'

"'You know how she is,' replied Samantha, a lovely young girl. 'She has worked so long I don't suppose she knows how to stop. I try to get her to sit still, but she won't.'

"David was troubled. Something he had observed in his mother's face worried him. 'She'll have to stop some time,' he said. And then they talked of other things, hearing meanwhile the tread of busy feet.

"Suddenly grandmother appeared at the door, a strange look on her face.

"'Why, mother! What is it?' cried her daughter. Grandmother pointed to her mouth and shook her head, to indicate that she could not speak. David leaped toward her, but she dropped before he reached her. He lifted her in his strong young arms and laid her on her bed and hastened for the doctor. All in vain! She died in a few moments without a word of farewell.

"She fell like a soldier under arms and in the ranks. She had served uncomplainingly up to the very edge of the noonday resting time, and there she stopped. I find something fitting and splendid in such a death. To have lived on into helplessness would have been for her an intolerable punishment.

"As things are generally reckoned in this world, Edith McTurg did little. Her narrow field lay between the cradle, the washtub, and the stove. She was unlettered, untrained in anything polite or beautiful, and yet she shows favorably in comparison with the highest—the conditions of her heroism being taken into account. To have given birth to fourteen handsome sons and daughters, to have served faithfully as a pioneer wife and mother, is as worthy of high honor, in my eyes, as the killing of a thousand warriors or the conquering of a walled city."

The next installment, "Following the Sunset," will appear in an early issue

Ambitions

By WALT MASON

Illustrated by Rodney Thomson

AH, ONCE, in sooth, in days of youth, I longed to be a pirate; the corsair's fame for deeds of shame — all boys did once desire it. At night when gleamed the stars I dreamed of sacking Spanish vessels, of clanging swords and dripping boards, and bloody scraps and wrestles. Then "One-Eyed Lief" the pirate chief my hero was and model; in dreams I'd hold his stolen gold till I could scarcely waddle. But father took his shepherd's crook and lammed me like tarnation, till I forgot that sort of rot for milder aspiration.

And still I dreamed; and now I seemed to be a baseball pitcher, adored by all, both great and small, in wealth grown rich and richer. My dreaming eyes saw crowds arise and bless me from the bleachers, when I struck out some pinch hit lout and beat those Mudville creatures. I seemed to stand, sublime and grand, the idol of all fandom; men thought me swell, and treasured well the words I spoke at random. Ah, boyhood schemes, and empty dreams of glory, fame and riches! My mother came and tanned my frame with sundry birchen switches, and brought me back to duty's track, and made me hoe the onions, dig garden sass and mow the grass until my hands had bunions.

In later days I used to raise my eyes to summits splendid. "I'll hold," I'd swear, "the White House chair, before my life is ended." The years rolled on and dreams are gone, with all their gorgeous sallies, and in my town I'm holding down a job inspecting alleys.

Thus goes the world; a man is hurled from heights to depths abysmal; the dream of hope is golden dope, but waking up is dismal. So many dreams, so many schemes, upon the hard-rock shiver! We think we'll eat some sirloin meat, and have to dine on liver. We think we'll dine on duck and wine, with garlands hanging o'er us, but when some dub calls us to grub, stewed prunes are set before us. And yet, my friends, though dreaming ends in dark-blue taste to-morrow, build airy schemes! Without your dreams, this life would be all sorrow.

Anastigmat Advantage

At No Sacrifice of

Kodak Simplicity

Superior speed is the real advantage offered by the modern anastigmat to the hand camerist. While high speed is necessary in arresting extremely rapid motion (as shown in Graflex focal plane shutter work), the appeal to the average amateur lies in the fact that it enables him to make slow snap shots on days that are too dark for such work with the ordinary lens; to shorten his indoor exposures, and to make snap shots on bright days, with a simple shutter, in from 1-200 to 1-250 of a second.

There is also an improvement in sharpness that becomes especially apparent when enlargements are to be made. In the very small sizes—such, for instance, as the Vest Pocket Kodak—it is not so much for a gain in speed, as for increased sharpness that such lenses are used, because the pictures are so often enlarged.

Kodaks in nearly all sizes are now furnished with the finest anastigmat lenses, at prices no higher than prevailed but a few years ago, for cameras for the same size pictures, when fitted with ordinary lenses.

The Kodak advantages lie, not only in their simplicity, superior workmanship and absolute reliability, but in the fact, that *Kodak films that fit* are on sale the world over.

Kodaks with Anastigmat Equipments.

"Safety First"

in the *Quick Stops!*

Safety *must* go deeper than the tread. It has to be *made* into the tire itself. It has to be *quality*. Goodrich Tires are quality through and through. Goodrich Unit Molding—the original Safety First idea in tire-making—produces a tire which wears as a unit—every part helping every other part to render the service demanded of it.

Goodrich Safety Tread Tires

Best in the Long Run

The Safety First Symbol—Five Bars and a Crosstie

It Makes the Brake Effective

The five thick, tough Goodrich rubber fingers dig down through the mud, slush and ooze—they clean and grip the road.

The extra thickness of Goodrich rubber in the tread at the point of contact gives you longer wear, longer service and lower cost mileage.

We have been pioneers in bringing tire prices to their present low level, and, besides we set the standard of quality by which others are judged.

Here are the prices to pay for the best tires ever produced in the Goodrich factory:

Size	Smooth Tread Prices	Safety Tread Prices	Size	Smooth Tread Prices	Safety Tread Prices
30x3	$11.70	$12.65	34x4½	$33.00	$35.00
30x3½	15.15	17.00	35x4½	34.00	36.05
32x3½	16.75	18.10	36x4½	35.00	37.10
33x4	23.55	25.25	37x5	41.95	44.45
34x4	24.35	26.05	38x5½	54.00	57.30

You can get Goodrich Tires of your dealer or at any of our branches or depots.

Have We Blundered in Mexico?

MR. F. J. SPLITSTONE, Managing Editor of Leslie's, has been rushed to the hostile camps of Mexico. He does this in accordance with Leslie's policy of giving its readers an accurate and vivid account of things as they are.

Mr. Splitstone writes from the field and tells in words and pictures a vivid story of what we hope are the closing days of this brutal contest. He has free access to the leaders on both sides and is securing interesting facts and unusual photographs.

His first article appears in the current issue of Leslie's.

GENERAL VILLA WITH THE SPOILS OF WAR

Birdie, the Strikebreaker

(Continued from page 10)

"Yes, but it wouldn't help much if they went by," Sheehan observed. "The big idea is to make 'em come in. What's the joke about Mrs. Haskins?"

"It seems as if this ought to be just what the old girl is looking for," Birdie said after telling the tale, "and there's a good chance for her to make some money without taking much risk. Here she's got those twelve hundred iron men loafing and Novak would sell out for half that—it's a cinch."

"It certainly listens all right," Billy admitted. "She could learn the business end of it from the lantern man as she went along—there's nothing much to leasing the reels and all that."

"Well, believe me, I'm going to put it up to her," Miss McMullen declared. "You happened along at the right minute with your neighborhood chatter this time, son. And if Captain Price tried to get gay around there after I put this thing over, I'd have him detecting prairie fires inside of a week."

IT required but little of Birdie's finesse to bring the deal to a successful termination the next day.

"I am leaving you a good crew to run the theatre, Mrs. Haskins," Novak said when the papers were finally signed and the farewells were being said, "and I hope you don't have any trouble with those lowlifes of police."

"Leave 'em to me," said Birdie with convincing finality. But it was not police, but internecine troubles, that developed, and that within a week. Of course, Mrs. Haskins came weeping to Birdie and hunting for more advice.

"It's that piano player of mine," she explained. "There's no doing anything with her. Mr. Novak told me he paid her nine dollars a week, and here she is asking me ten and a half, and she says if I don't pay it she'll have 'em all go out on a strike—the lantern operator and the door tenders and all. She told me she could close my place up like somebody in the family was dead—those were her very words, Birdie—on account of her bein' secretary of the Amalgamated Moving Picture Theatre Musicians, or something like that."

"The idea is that she isn't earning any ten and half—is that it?" Miss McMullen asked.

"She was willing enough to take nine dollars from Mr. Novak," the widow wailed, "and she doesn't have to work a minute longer or a bit harder for me than she did for him. It's just because I'm a poor, helpless woman trying to make a living—"

"All right," Birdie tersely announced. "It's a hold-up, and they've got to get us with a forty-four at the mouth of a dark alley before they get by with any hold-up stuff."

MRS. HASKINS looked at her blankly. "Birdie, do you know, sometimes I haven't the least idea what you're talking about," she confessed.

"Don't worry about that, Mrs. Haskins," the girl blandly returned. "President Wilson and I both have that to struggle with right along. What is this fairy's name?"

"Pansy Miller."

"Pansy, eh?" Birdie repeated. "Pansy, the piano pounder. I'll bet her poor old father called her 'Lena' when she was wanted to wash the dishes four or five years ago."

"She wouldn't be so brash about it, I'm sure," Mrs. Haskins volunteered, "only her and Nolan, the operator, are goin' together and he'll do anything she says. So you see it makes it kind o' bad for me, Birdie, to have her set against me and talkin' about a strike. I don't know what I'd do if they walked out on me next Saturday, the way she says."

"Don't cry. It makes your nose red and it never settled any strikes," Birdie advised. "Since I lured you into this game it's up to me to stick around with you until the riot is over."

"I was hoping maybe you could think of something," Mrs. Haskins faltered; "you do so many things."

BIRDIE smiled, but it covered a little sigh of resignation.

"Yes, I'm a bear at doing stunts where I'm not on the pay roll," she said.

She took Billy Sheehan into conference as usual that evening. Not only was Miss McMullen in a way morally responsible for the safety of the widow's investment, but as the details of the deal had been widely disseminated throughout the neighborhood, its failure would be a serious reflection upon her judgment.

"Nothing is deader than a moving-picture house that's been closed up for a while," Sheehan declared. "People seem to get a jinx on it after a while and they sidestep when it's opened again. We'll have to flag this Miller person somehow before she puts anything across."

"I think that union stuff of hers is a lot of noise at that," Birdie returned. "Jobs aren't sitting around on the corners in that business waiting to be picked up. But there's no use taking any chances. I think I'll step around and have speech with Pansy in a day or two."

"Where do I kick in?" Sheehan wanted to know.

"Well, I can see a couple of places for you to stir around and act like a plain-clothes man," she returned. "First of all, to find out how strong the enemy is it wouldn't be a bad idea for you to get a line on this union Pansy's been babbling about. If it's the real article she might be able to make a muss that would spread all over town. And then there's this fellow Nolan, the lantern operator. Mrs. Haskins tells me he's trailing around with Pansy and the kid figures she can make him sit up and beg. If I could get something on him I might be able to call her off."

"Now you've got it!" Billy declared admiringly. "I was afraid the whole business would be up to you, but if you want some sleuthing done, I'm there."

SHE looked at him reflectively a few moments.

"That looks better to me the more I think of it," she said. "Suppose you do rubber around among the movies along Halsted Street and see what you can land about the Amalgamated Musicians, or whoever they are, and about this Nolan. You ought to get the story of his life in an hour by squandering five or six cigarettes. I'll be looking for some big information from you before I go into action."

The next afternoon Sheehan called Miss McMullen on the telephone, bristling with news and importance.

"Well, you've got to hand it to me for being there with that secret-service stuff," he said. "That union of piano pounders is down and out. The treasurer of the outfit is about three jumps ahead of a couple of coppers and they expect to have him chained in a couple of days."

"What's the idea?" Birdie demanded.

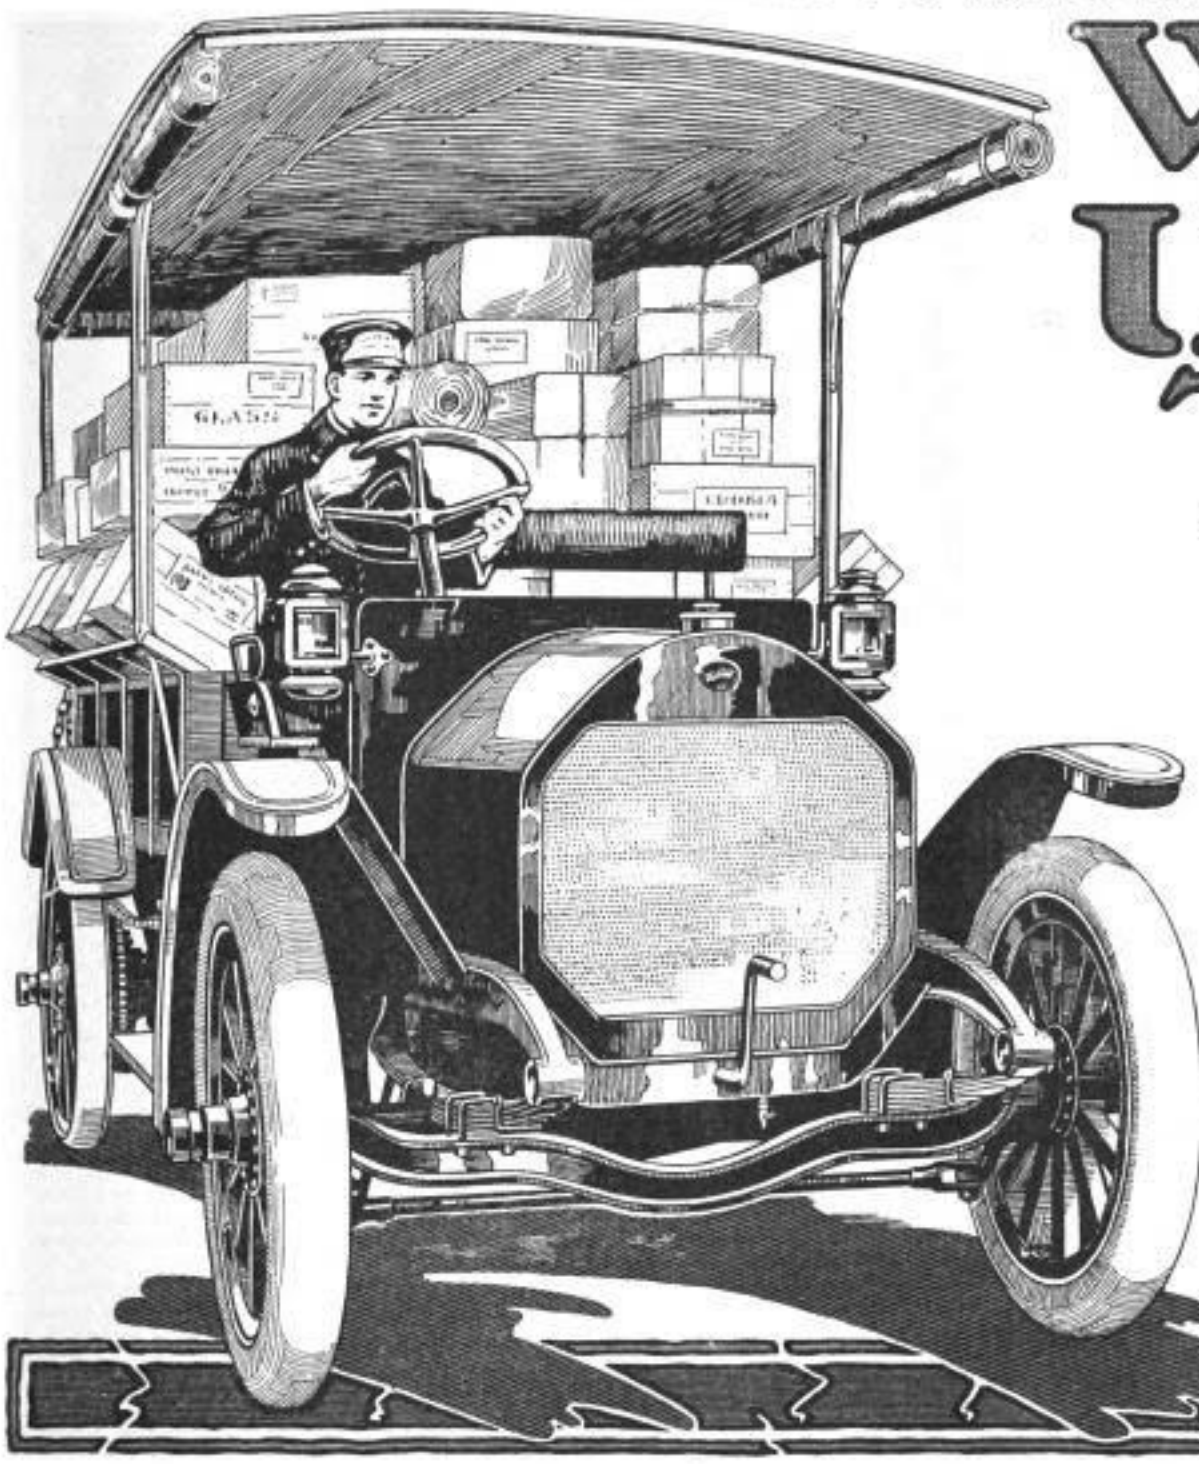
"Oh, it's the old stuff," Sheehan explained. "A couple of wise gillies among these piano players got tired of beating the ivories to death and went out after some easy money."

"I can guess the rest," Miss McMullen interrupted.

"Sure you can," Billy said.

"But the second verse of this little ballad is just as good as the opener. It's about Nolan, the operator. They tell me he's a married man."

"Fine work, Mr. Burns," she returned. "Where did you get this?"



"Oh, a lot of the operators along Halsted Street know about it," Billy explained. "It's one of those secret things, but of course it got around in the show business. He ran away with a girl named Helen Wolnitzky, or something like that, about six months ago, I understand. She was afraid to tell her people about it and she's been living at home, but these fellows tell me they see him around with her every little while—he doesn't seem to be keeping it under cover very much."

"But he's holding out on Pansy, all right," Birdie declared. "He's like the rest of the sassy heartbreakers—he wants to have something in sight in case the marriage doesn't take. I guess all this inside dope may keep Pansy rooted to the spot. I'll have to hand her a little social gossip for her own good."

BEFORE the doors were opened for the show that evening Miss McMullen tapped at the door of Mrs. Haskins's little office. The time and the place had been carefully selected. Pansy usually came early to practice at the piano, while Nolan was inclined to slip into his sheet-iron coop at the last possible moment.

"You'd better tell her I'm a sort of partner of yours or she'll close up on

Willys Utility Truck

$1350

Three-quarter Ton

(Chassis only)
f. o. b. Lima, Ohio
Body as shown $150 extra.

The Modern American Business Getter

WILLYS-UTILITY TRUCKS are making money for thousands and thousands of merchants.

How?

Simply by saving time and getting new business!

Concerns who have abandoned horse equipment testify to the astonishing economical fact that one Willys-Utility Truck can do the work of three teams and six men—and still have time to spare!

We can send you letters by the score, from men right in *your* line of business telling how Willys Trucks are opening up new channels of business and cutting operating expenses. And these men didn't believe it was possible. Note the fact that we said in "your business" for no matter what your business is, if you haul things, we can show you where and how you can save money every day in the year.

Don't be a doubter. Take our statements as established facts; at least assume that our statements are correct for the purpose of looking into the merits of the proposition. You'll never regret it.

Practically every merchant now using Willys-Utility Trucks first thought they could not economically use them. They too, said their business was different.

But it wasn't!

Neither is yours.

If *more* business men would take advantage of *more* of the commercial economy devices and inventions now on the market, *more* business men would make *more* money.

The Willys-Utility Truck is a business getter—a business developer.

Please address Dept. 153.

And it costs you 30% less than any other similar truck made. We are producing this truck in great quantities and consequently are able to get our price below the market.

Let us send you the unbiased facts as expressed by others. These are the statements of converted business men, who, like you, once said, "No, we cannot use them. Our business is different."

But we proved that their business was not different. And in doing so saved them the money you are losing. Every day lost is money lost. Let us tell you more about this modern business getter and how it can save money for you.

Full information and all data from our dealer in your town or from us direct.

Red Wing Grape Juice is sold for 10, 20, 30 and 55 cents east of the Rockies.

If your dealer is unable to supply you, send us his name and address and $3.00 and we will send you a trial case of a dozen pints by prepaid express, to any point East of the Missouri River, or for 10c. we will mail you a sample four ounce bottle.

Manufactured by
Puritan Food Products Co., Inc.
Fredonia, N. Y.

me," she suggested to the widow. "I've got to have some license for giving her the third degree."

Accordingly Mrs. Haskins, flurried and apprehensive, bore down upon her rebellious employee with Birdie in tow and introduced her tremblingly.

"Miss Miller, this is Miss McMullen," she quavered; "she's interested here with me in the theatre—she wants to talk to you a little."

Whereupon she fled to the shelter of her office and left her champion to face the music and the musician.

"What's all this I hear about more wages and strikes and so on?" Miss McMullen plunged in at once. "You were getting nine a week from Novak right along. What's the idea of the big boost all of a sudden?"

Pansy twirled on the piano stool and faced her. "Say, listen, Miss Mac," she said; "honest, I gotta get more money outa this dump. The cost of things is gettin' somethin' fierce and I been standin' it as long as I can. As I was tellin' Mrs. H., I was just ready to put it up to Novak that he'd have to come across with a little more jingle in the envelope, when he got out. Now of course the new management has gotta face it."

"You think pretty well of yourself," Miss McMullen interposed. "Suppose the new management went out and hired a new piano player—do you think you could grab off ten and a half at the first movie you came to along the line?"

MISS MILLER tossed her head and adjusted her delicate waist line with both of her capable hands.

"Say, listen. Far be it from me to toss any bluffs, Miss Mac," she returned with a smile; "but lemme tell you somethin'. You're new to this business and I s'pose you don't know. But it's as I was tellin' Mrs. H. If she tried to give me the gate because I asked for more money, I'd have her lights out in twenty minutes. You don't know what an organization we got, Miss Mac. It's somethin' surprisin' for a union only three weeks old. I could keep this place closed up the rest of the season if Mrs. Haskins refused to gimme my raise—and you know what that would mean if you've got any money invested here."

Birdie smiled down on the confident musician quite as knowingly as Pansy had smiled up at her. "And you think these people would jump their jobs and go out hunting free lunches just to help you get your raise, eh?"

"They sure would," Miss Miller declared. "Anyhow, the operator would, and you know as well as I do, Miss Mac, you can't run a picture house without a licensed machine operator."

"Yes, I know that," Miss McMullen returned, "and I know a lot of other things that haven't got around to you. When does your union hold its next meeting?"

"To-morrow night," Pansy proudly declared; "we meet every Wednesday night after the movies has all closed up."

"Well, you needn't break any speed records getting around there to-morrow night," Birdie advised. "There won't be any meeting."

"What do you mean?" demanded the planiste.

"Only that your friend Mr. Woods has faded away with all the money you people poured into the treasury and there are thirty-seven detectives on his trail right now. Brother Dagenthal, the happy little soul who got the thing up, is foaming at the mouth because he didn't get a split of the coin as he and Woods had agreed, and the Amalgamated Musicians aren't going to amalgamate for quite a while to come. You get it, don't you? Your union has blown up."

Pansy stood up, one thin hand pressed against her bosom, her eyes dilating with amazement as she listened.

"She was right, then!" she whispered. "There's six dollars gone up the flue!"

"Who was right?" Miss McMullen asked curiously.

The girl sat down weakly on the piano stool, her elbow striking a harsh discord on the open keys.

"One of the girls. She telephoned me to-day that she'd been tryin' to locate this fellow Woods and nobody knew where he was. He'd jumped his job at the Palace Nickelette, and she says to me—just by way of a joke, I thought—she says: 'Wouldn't it be fierce if he'd ducked out with the union's money?' But I never thought another thing about it."

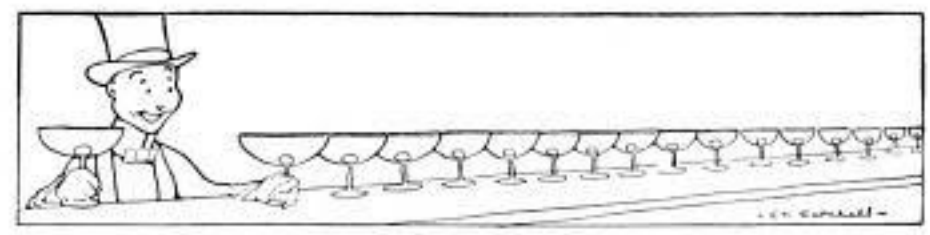
"You've got a couple of long, steady thinks coming to you now," Miss McMullen suggested. "There's plenty of time for you to get it all good and straight between now and Saturday night—when you're figuring to walk out on us. That nine-dollar envelope will look awfully fat compared with an empty one."

"Say, listen, Miss Mac," Pansy stammered, putting a timid hand on Birdie's arm, "that was only a lot of talk. I wouldn't think of walking out of here and leavin' Mrs. H. flat like that. But I thought if I *could* get a little more money—"

HER voice broke and she turned to the piano, playing chords absently to hide her tears of disappointment and chagrin. The strike was over.

"By the way, there's another thing you ought to know about," Miss McMullen went on after a tense moment; "you said something about Nolan, the machine operator, sticking to you if you quit. Mrs. Haskins has told me about you two trailing around together, and I think I ought to divide up a little information about him that comes to me from parties that ought to know." A frightened look flashed across the girl's painted face as she whirled about on the stool. "What is it?" she whispered.

"Why, this fellow Nolan is a married man!" Birdie continued. "He ran away with a girl named Helen Wolnitzky a little time back and married her—they're around every place together."



"Say, listen," Miss Miller interrupted eagerly, "you ain't got it straight. Lemme tell you somethin'. I'm Helen Wolnitzky—or I was before me and Henry Nolan got married. That's why I'm tryin' to get a raise. Pansy Miller is only my professional name. Me and him was married nearly six months ago, but I didn't dare let my folks know—my father woulda broke my back! But now I—well, now I'm—we're goin' to tell 'em—and Harry and me are goin' to get a little place somewhere and start. And, honest, livin' is so fierce these days—he only get's ten a week himself and—and—"

Again her voice quavered and the eyes she lifted to the other girl's were bright with tears. Birdie leaned over and patted Mrs. Nolan's shoulder consolingly. This was different. Birdie faced about with truly Irish ease, grace, and completeness.

"It's all right, girlie," she said, "somebody gave me the wrong number. You just quit fretting and play that old music box to a fare ye well and the management will try to dig up that raise for you if they have to pull off a benefit or something every week."

IT was the hour for the opening of the theatre. The lights flashed up suddenly, the door was thrown open, and the crowd that had been waiting outside began noisily piling into the seats. Pansy turned hurriedly to the piano, and as Miss McMullen walked up the aisle she was followed by the crashing chords of that young woman's favorite overture. It was "Somebody's Coming to My House." Birdie was smiling softly when Mrs. Haskins came lumbering out of the office to meet her.

"You needn't worry about that strike. It's all off," she said. "But you'd better slip Pansy that extra one-fifty a week after this—she'll need it."

The Great White Way—A Definition

Where the irresistible thirst confronts an inexhaustible supply

Digitized by Google

World's-End

(Continued from page 12)

"He hurt her! He hurt my baby! I could kill him! I could kill him!"

It was a long time before Owen could quiet her.

THREE days before the New Year the weather turned bitter cold; the roads became like iron and the little Green-Flower was stiffened from bank to bank in a mail of gray ice.

"If this continues for a few days longer we shall have skating," Owen had said at dinner that night.

On the second morning, however, the thermometer suddenly dropped: thick, yellowish clouds heaped themselves along the horizon and, as twilight gathered, a feathery snow began to fall.

All night it snowed, and dawn broke over a white world.

On that morning, although it was the middle of the holidays, Owen had an engagement in Charlottesville with his attorney. There were some last matters to go over before his new will could be put in its final form, and he was very anxious that Sally should have a copy of it at the earliest date possible. Perhaps, in the softened mood which would result from Sally's knowledge of the inheritance with which he had provided Richard, he might be able to suggest to her that on account of the evident antipathy which existed between him and Phœbe it would be better that he should not come to World's-End in the future while they were stopping there. He thought that he could make her see the reasonableness of such a proposition, merely by referring to the painful scene which had taken place only two days ago in the rose room, when Phœbe had thought that Richard purposely hurt little Diana. Owen himself, while all one ache of sympathy for Phœbe, had not for a moment shared her opinion in the matter, although he did not let her see this. But in one way or another she must be shielded from such suffering, and the sooner the copy of his will was in Sally's hands the sooner he would be free to make some move in that direction.

PHŒBE drove with him to Crewe, wrapped in the white fox furs which had been his Christmas gift to her, and which Sally had told Mary were absurdly inappropriate for anything but evening wear.

"What difference does it make here in the country?" Mary had replied. "She looks such a darling in them—like a lovely little Mrs. Santa Claus—and she won't wear them in town except to the play or a dinner."

Sally said contemptuously: "He decks her out as if she were a doll."

And Mary demurely retorted, thinking of Phœbe's pounce on Richard in the rose room: "She's rather a lively sort of doll, I must say."

"A little like the Iron Maiden of Nüremberg," Sally capped it.

Mary said to herself: "Phœbe is really right. Sally detests her."

Returning from the drive to Crewe, Phœbe made David stop at the stone bridge and got out. In spite of her fur coat, she was chilled by sitting motionless for all those miles, and she turned off along the river to lengthen the walk. She would go around by the boathouse and so up through the rose garden—quite half a mile more than if she had followed the avenue from the bridge.

AS she passed the boathouse and turned into the narrow path between box hedges that led through the garden past the maze called "Queen Charlotte's," she saw Richard coming toward her.

Her first impulse was to turn back. Then, as every form of cowardice was hateful to her high-spirited nature, she went quietly on, that white, still look which the sight of him always brought freezing her face under the soft snow of her cap.

When he was directly opposite, she pressed herself among the stiff box leaves for him to pass, but he stood still, looking steadily at her.

FROM this point the columns of the west wing were hidden by the huge mass of box that walled the garden from the lawns; only the chimney stacks were visible and part of the railing of the roof and south portico. They were as much alone in the winter garden as though the walls of pale blue air had been marble.

When she had waited for a moment, Phœbe said in her lowest voice:

"Let me pass, please."

Her eyes looked levelly past him, and he could see that she was holding her inner lip between her teeth.

In a smooth, monotonous tone he replied:

"Do you think it wise on your part to show your feeling for me so very openly?"

It had not seemed as if her face could grow whiter, yet it did so.

"Please let me pass," she said again.

"Pardon me—I confess that concern for myself mixes with my motive, yet concern for you moves me too."

She stood perfectly silent, but one nostril trembled slightly. It was the quivering of the muscle which marks contempt in a human face.

"You may sneer," he said with sudden violence. "But I suppose that you have some sort of regard for my uncle."

SHE put up her hands and jerked open the fur at her throat with a startlingly quick, mechanical gesture. He saw her swallow, once—twice.

"Don't dare to speak of him," she said, still in that very low voice, scarcely moving her lips.

His narrow eyebrow lifted like his mother's—those opaque black eyes of his swam a little more toward the upper lids.

"Really—" he said in a dry tone. "I am not to be allowed to mention my own relative?"

She repeated in exactly the same voice and cadence:

"Don't dare to speak of him."

Richard gave his short laugh.

"Come," he said, "this is going a little too far. He was my uncle, you know, before he was your—husband."

Nothing could exceed the insolence with which he uttered this last sentence.

"Don't dare to speak of him! Don't dare to speak of him!" she said again, exactly like one talking in sleep.

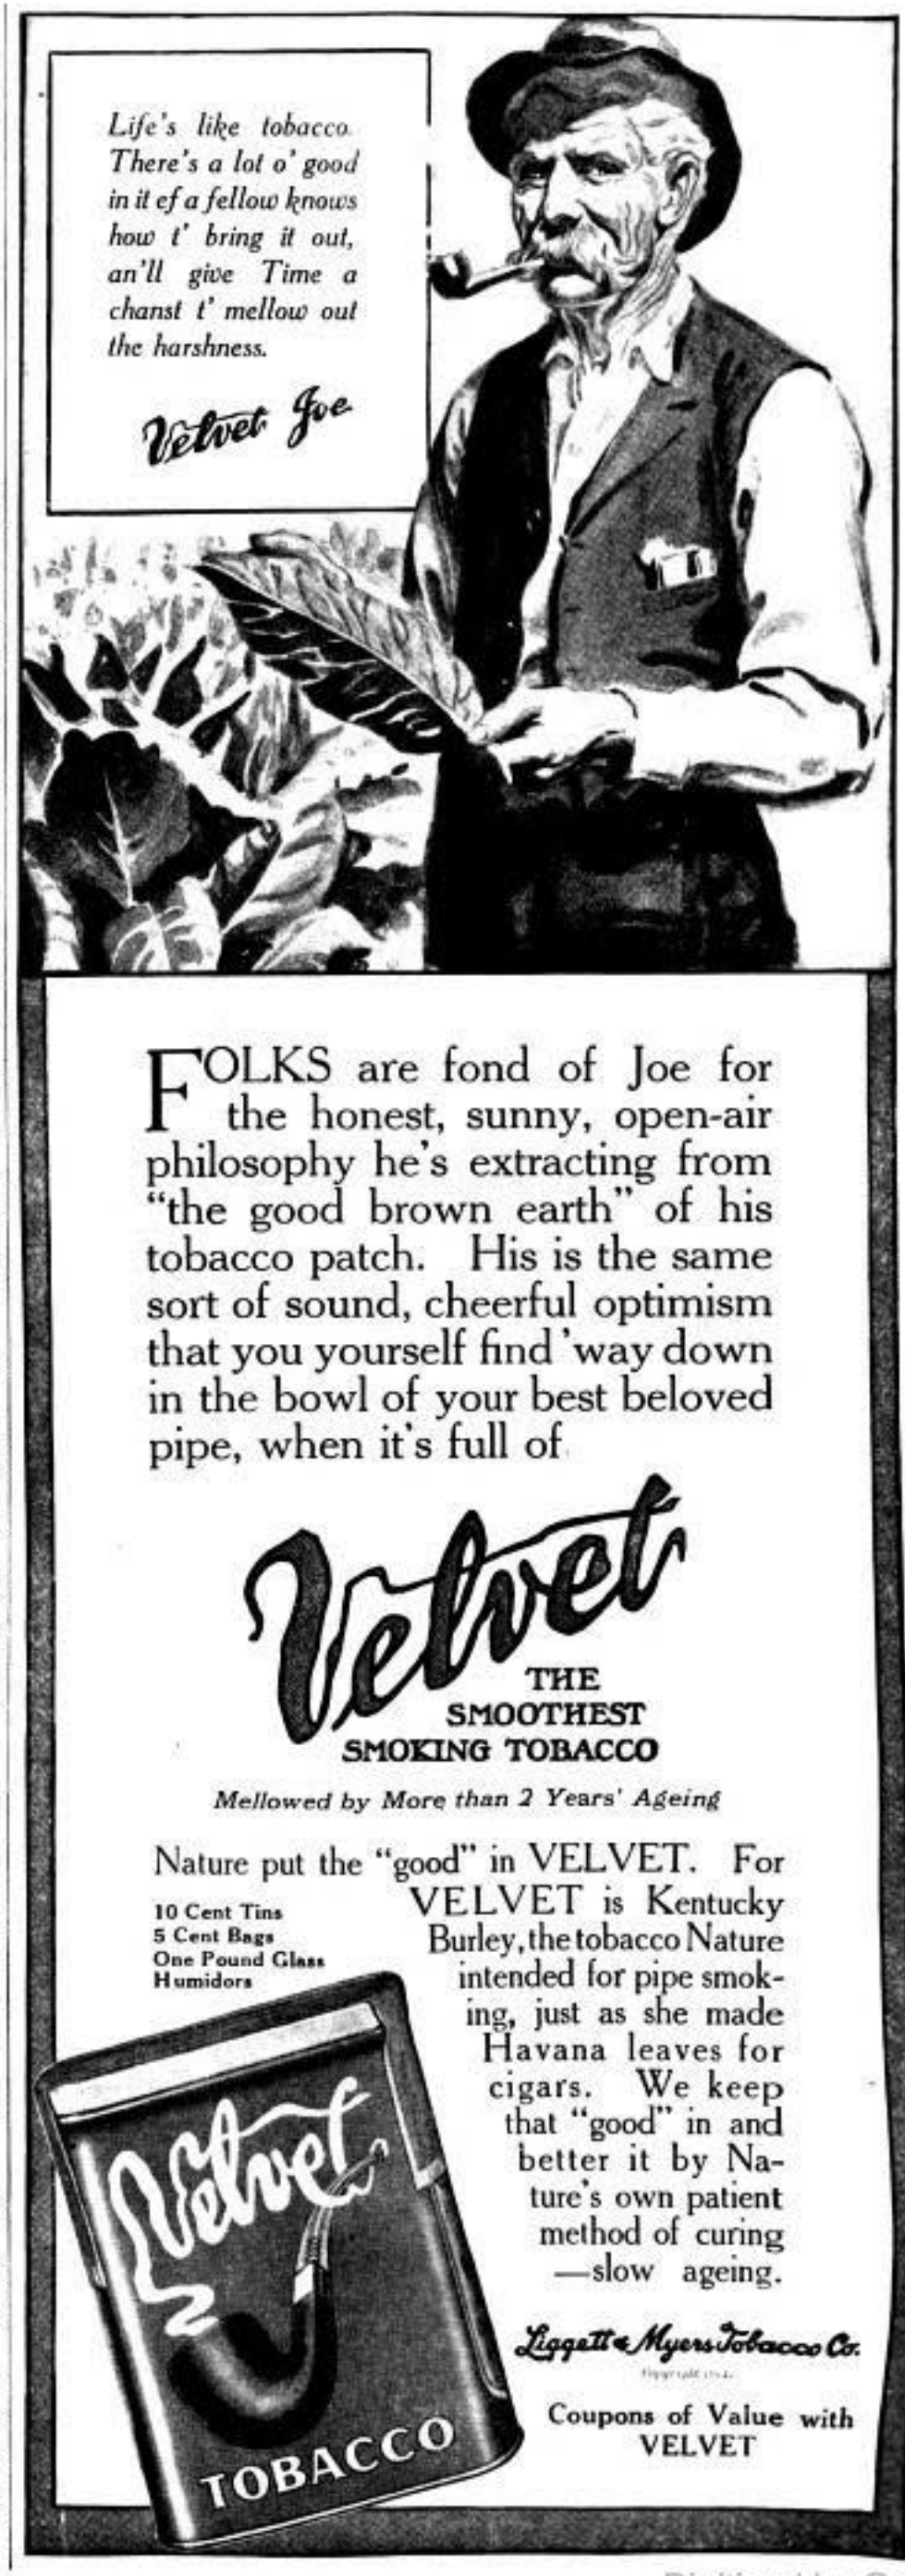
He looked at her with a concentrated gaze, curiously hateful.

"And why?" he said. "You did not always count me so unworthy."

He felt as though he had stabbed a snow image.

She stood just as still, just as frozen, her eyes even did not quiver. They looked past him blank and fixed.

HE went on:



"There are several things, in fact, that I must say to you, and they include my Uncle Owen—"

At this name she leaped to life as though he had kindled resin. Her eyes blazed full on his, her breast heaved. She clenched her hands, pressing them against it.

"If I were a man I'd kill you," she said.

Richard smiled. This was a more womanly mood. He quite understood it. He felt more at ease.

"Yes—I dare say," he said. "But as you're not a man, don't you think we'd better be practical? It doesn't matter when we're alone as now—but when

FOLKS are fond of Joe for the honest, sunny, open-air philosophy he's extracting from "the good brown earth" of his tobacco patch. His is the same sort of sound, cheerful optimism that you yourself find 'way down in the bowl of your best beloved pipe, when it's full of

we're with others, don't you think you'd better restrain the outward signs of your —a—dislike of me? Your present happiness has a frail foundation at best. If you continue to treat me as you've done—lately—" (He smiled again.) "My uncle can hardly help having his suspicions aroused, and then—"

HE shrugged one shoulder slightly, still smiling.

"Oh, coward! Pitiful coward!" said Phœbe, almost in a whisper, and her voice was like the moan of one only half chloroformed. "If he had not gone away you wouldn't dare—"

"You give me," said Richard, "no credit whatever for a possible consideration for yourself. And yet you were mine before you were his wife."

It was these words, uttered with clear deliberation, that Owen heard as he came swiftly up over the soundless carpet of snow. He had in his hand the ash stick that he usually carried, and as these words came from Richard's lips he struck him with it across the face. It laid his cheek open from chin to temple, and the blood gushed forth startling as a red flower in that winter garden.

And at the sight of that blood and the stricken face of her he so loved, Owen went suddenly "berserk."

Thrusting out his great hand, he caught Richard by the collar of his coat, and, jerking him from the ground, beat him as a vigorous wench beats a carpet.

A screamas of a snared hare came from Phœbe, and she sprang to them.

"Owen! Darling! Stop! O God! O God!"

And she clung to his arm, reaching wildly toward the hand that held the ash—sobbing—seeing nothing in her terror but rivers of dreadful scarlet—a crimson world—

Suddenly Owen's arm fell—his grip on Richard loosened, and like a doll of rags the beaten man subsided in the snow at their feet.

Owen stood like a figure of stone staring down at him, the ash still clenched in his hand, but Phœbe dropped on her knees beside the huddled, blood-smeared form, and began wildly searching for signs of life in it.

"O God! O God!" she kept sobbing. "I can't feel his heart! You've killed him! O God! O God!"

All at once Owen roused. He threw the stick from him and, stooping, lifted Richard in his arms. He went straight toward the house, and Phœbe followed, her hair fallen loose about her head—her white furs blotched with blood. More than ever she looked like some wild, soft wood creature mangled by fangs that only half kill.

BUT when he came to one of the old marble vases that stood at the head of the first terrace, he stopped and eased his burden upon it. Despite his enormous strength, the dead weight of a man nearly six feet tall was too much for him; the sweat poured from his face in the cold air, as it had done when he carried Phœbe herself from Hollybrook Wood to Nelson's Gift. Besides, he had suddenly begun to think with astonishing clearness.

She stood beside him straight and stiff—the attitude of a soldier awaiting orders. She, who fainted so easily over her own troubles, felt firm as iron to help him bear his. He was staring out at the snowy ground with bent brows. Suddenly he turned his eyes on her. His look was hard and impersonal—the look of an officer appraising the force of a lieutenant to whom he is about to give nerve-testing orders.

"Can you help me? You don't feel faint?" he said.

"No, I can do anything. Tell me."

"Then go and send Jonathan and David. Find Mary and tell her to keep Sally out of the way. Send Hannah to his room. Wait—" he said sharply, as she sprang forward. "Take off your coat." She did so. "Fold it inside out." She obeyed him deftly. "Tell Mary—tell anyone who asks—that Ironmonger savaged him." (Ironmonger was a colt that had only been handled a few times, and was feared to be vicious. Downer and Owen had put him in a loose box at the house stables, hoping to "gentle" him by constant kindness and handling.) "Do you understand?"

"Yes."

"He went into the box, and the colt got him jammed and kicked him. Tell Mary to break it to Sally. Now—quick!"

She was off like a lapwing, her hair beating loose upon her shoulders as she ran, and hanging at last in a great, unraveled knot below her waist.

"Love at First Sight"

The swinging of that bright rope seemed to fascinate his eyes—they remained fixed on it until she was out of sight. Then he looked down at the head hanging like a broken manikin's over his arm; the eyes showed in silvery streaks and a half moon of dim black under the purplish eyelids.

At first he had not struck to kill, else Richard would have dropped like a bullock—but afterward—The old human threat, "I'll break every bone in your body," came back to him. Yes—he had meant to beat that body to a pulp—he had not cared while that ecstasy of rage held him whether he took one or twenty lives. Was he dead? Was it a corpse that he was holding against the great vase as against a funeral urn? And would Sally, too, fall dead with the shock of it? In that moment he felt curiously indifferent. Glutted rage resembles at first the plethora that follows the glut of animal food. He had sent Phœbe on those precautionary errands from a motive that had nothing to do with emotion or the instinct of self-preservation. It was civilization reclaiming him. He who so lately had been a mere savage—clubbing what had maddened him with the single fury of a cave man battering his enemy with a stone—had waked with cool wits to the necessity of preventing scandal, of protecting others, of shielding Sally from unnecessary shock and Phœbe from the sinister results of his outbreak. Personally, whether Richard were alive or dead mattered nothing to him at that moment. He who shrank from wounding a bird felt a cold, aloof indifference to the shattered thing that lay there, half in his arms, half on the marble vase.

And then he saw that Phœbe was returning, still at a fleet, light-footed run over the noiseless snow, followed by old Jonathan and David, also running, but out of respect keeping a little behind her.

OWEN took Richard's body under the armpits, and the two others supported his back and legs. They walked slowly to the house, breaking step so as not to jar him more than was inevitable.

And Phœbe, in her thin blouse and skirt, her hair still loose about her,

walked close to Owen, talking in low, quick tones.

"I found Mary. She's with Cousin Sally now. Hannah is getting everything ready. I told them what you said I was to tell them. What must I do now?"

"Phone Patton. He's at Warwick. He has a motor to-day. He brought me here. Tell him life or death."

She was off again, elbows to sides, chin up, like a boy running.

THEY got Richard to his room; Owen helped Hannah to cut away his clothes and lay him in the bed. They had scarcely finished when the door was thrust open and Sally entered with Mary close behind her. Her black eyes were fixed like a somnambule's. She went straight to the bed and fell on her knees beside it. One arm curved above the stark head on the pillow, the other she stretched out along the limbs outlined by the counterpane. These arms, in their sleeves of black velvet, were like the wings of some great bird striving to cover a shattered nestling.

Mary stood quiet and still behind her, her fingers plaited together, great tears running down her face. The servants were huddled in a dark, silent knot near the door. Owen stood at the head of the bed, his face like stone. They all thought Richard dead.

"Bring me cloths and hot water," said Sally's voice.

Mary knelt down beside her and put her arm about her shoulder.

"Hadn't we better wait, dear?" she whispered. "Dr. Patton will be here in a little while. We might do harm—"

"Very well," said the impassive, slightly croaking voice. "I shouldn't like to do him harm."

Mary hid her face in her free hand, and the tears ran through her fingers.

THE door opened and Phœbe came in. "Dr. Patton is on his way now," she said in a clear, quiet voice. "What else can I do?"

"Nothing," Owen answered her. "Go to your room and try to rest."

"I can't rest," she said. She looked from one to the other.

No one returned her look, they were all gazing at that dreadfully quiet form on the bed. She stood there a moment longer, then stepped quickly backward and went out.

She went straight down the wide stairs, across the hall, and out again into the snow. As she neared the garden hedge she broke into a run. Faster and faster she ran, until she came to the place in the narrow path near Queen Charlotte's Maze, where they had been standing when Owen came on them. Dropping on her knees, she began scooping the snow with both hands over the red stains that marred it here and there. This accomplished, she looked about her with that look of a trapped, desperate hare. On every side her dark, scared eyes quested. Then she began making little rushes to right and left. At last, beyond the box hedge, in a furrow between the rose beds, she saw what she was seeking.

Pressing through the stiff twigs, she went swift and light-footed as a mousing cat, and picked up the big ash stick. As she grasped it, a shuddering fit seized her for the first time, her teeth chattered, and the blood rushed over her white face. Then, mastering herself, kneeling down in the fresh snow, so as to be less easily seen by anyone chancing to cross the garden—she examined the stick inch by inch.

Yes—there—some dark stains. Involuntarily her hands opened, the stick fell again upon the snow. Again mastering herself, she seized it and began scrubbing at those red smears with a handful of snow. They seemed grained into the wood.

After some moments of this vain labor, she hid the stick under the dark cloak that she had snatched up in the hall and went rapidly back again to the house.

SHE stopped to listen. Except for the ticking of the big clock in the upper hall, the house was still as death. She shuddered again, then skimmed swiftly and noiselessly to her bedroom. She shut and locked the door. As usual a great fire of cedar logs burned on the wide hearth. Kneeling before it, she thrust the end of the stick into the coals. It ignited slowly, the ferule becoming incandescent and the wood burning to a glow like coal. As it burned she thrust it farther and farther in. Now all was consumed but the big knob, polished by the grasp of generations of Randolphs. She thrust this, too, into the lambent mass under the bellies of the huge logs—struck it home

"Well That's Fine!!"

IN shaving yourself is your real difficulty dull blades—or possibly a poorly adjusted frame? Both of these bad features are overcome in the present day perfect *Gem Damaskeene Safety Razor*—the result of years of experiment and study. Insert a *Gem Damaskeene Blade* in a *Gem Damaskeene* frame and shave—that's all there is to it.

Stop the Automobile Hold-Up Man

Suppose your car is held up by thugs to-night in some lonesome country spot, how would you fare?

Be prepared! Carry a Colt. Slip it between the cushions, in the tool box, or in your pocket. Have it ready for instant action. Doesn't matter how hard your car hits the pike, the Colt can't go off accidentally, because, when you load and cock it, the Grip Safety (see circle) *automatically locks it.*

At "Hands Up!" you just grab your Colt and cover your man in the twinkling of an eye—you can beat the hold-up man—you can "fire the first shot first," because you don't have to fiddle with or think about "safety" devices. When you pull the trigger you automatically (without thought) press in the Grip Safety and the Colt shoots.

For car and home protection the Colt is ideal, because it's the quickest to get into action and it is positively—*automatically*—safe. Ever pulled up on the road to have target practice? It's great sport—keeps a crowd happy.

Don't be stalled off a Colt if you want the best pistol—it costs you no more. Write for catalog 14.

COLT'S PATENT FIRE ARMS MANUFACTURING COMPANY, Hartford, Conn.

Colt FIREARMS

Say "Colt" when you want a revolver or pistol. That name stands for sterling quality in small firearms.

The Standard for 70 years. Adopted by United States Government.

WANTED—RIDER AGENTS

IN EACH TOWN and district to ride and exhibit a sample 1914 Model "Ranger" bicycle furnished by us. Our agents everywhere are making money fast. *Write at once for full particulars and special offer.*

NO MONEY REQUIRED until you receive and approve of your bicycle. We ship to anyone, anywhere in the U. S. without a cent deposit in advance, prepay *freight*, and allow **TEN DAYS' FREE TRIAL** during which time you may ride the bicycle and put it to any test you wish. If you are then not perfectly satisfied or do not wish to keep the bicycle you may ship it back to us at our expense and you will *not be out one cent.*

LOW FACTORY PRICES We furnish the highest grade bicycles it is possible to make at one small profit above actual factory cost. You save $10 to $25 middlemen's profits by buying direct of us and have the manufacturer's guarantee behind your bicycle. **DO NOT BUY** a bicycle or a pair of tires from anyone at any price until you receive our catalogues and learn our unheard of factory prices and remarkable special offer.

YOU WILL BE ASTONISHED when you receive our beautiful catalogue and study our superb models, at the wonderfully low prices we can make you. We sell the highest grade bicycles at **lower prices** than any other factory. We are satisfied with $2.50 profit above factory cost. **BICYCLE DEALERS,** you can sell our bicycles under your own name plate at sight our prices. Orders filled the day received.

TIRES, COASTER BRAKE rear wheels, inner tubes, lamps, cyclometers, parts, repairs and everything in the bicycle line at **half usual prices.**

DO NOT WAIT but write today for our Large Catalogue beautifully illustrated and containing a great fund of interesting matter and useful information. It only costs a postal to get everything. **Write it now.**

with the heavy poker of wrought steel and raked the glowing embers over it.

Then only did she sink back upon the hearthrug with a long, long heavy sigh.

THE fire had scorched her eyes—her eyelids seemed to have no moisture in them. The loosened hair, hanging in heavy snarls about her cheeks, troubled her suddenly.

Springing to her feet, she went to the dressing table and began to comb and brush it. Her own eyes looked back at her, serious, almost angry, but they held no meaning to her. Her mirrored face was like the face in a picture which has no meaning save to the artist who painted it.

It was like a mask—and she felt masked to herself. She had lost her feeling of identity. She was some one moving through a play the whole of which she had never read, her own part and the "cues" were all that she knew of it. Now it was her part to make herself neat and go and sit in the upper hall in case she might be needed. Presently she knew that the curtain of the first act would fall. Her part would be over. She was only cast for that first act. What was Owen's part? She could not tell. But the play would go on without her presently and he would still be in the play. Her part was a very short one. It must be over after Dr. Patton came. When Owen had heard what he had to say, then he would spare the time to come and tell her that she must go. It was strange—long ago—in a far country—she had wondered what he would do if he ever found out—whether he would kill them both. Now he had killed Richard.

As she pinned up the last coil of her hair the chugging of a motor sounded just under the window. She looked out, holding the embroidered curtain before her face. Yes, that was Dr. Patton. He got out with a black case in his hand and came quickly up the steps, looking neither to right nor left. Once, though, he lifted his head and stared up at the blank face of the quiet house. Then he disappeared.

Phebe slipped noiselessly into the hall and sat on a little chair just behind the first archway where she could see part of the lower hall and the door of Richard's room without being seen herself.

BUT now a little regular, muffled noise on the stairway made her look up, startled. It was Wizzy, coming up with stolid, infirm perseverance, one step at a time, in search of his master. Phebe slipped to the stairs and met him. She lifted him up in her arms and pressed down his sleek, resisting head against her breast.

"Be good, dear—be good," she urged lowly. "Owen's in trouble. You can't see him now. Stay with me. Owen's in trouble."

The dog gazed up at her out of the tears in his aged eyes, and though the words were inscrutable to him, the tone he understood quite well. He stopped resisting and lay limp and forlorn within her arms.

So passed a long, long time. Hannah came and went with various things. Joe followed, bringing cans of hot water from the bathroom. A strange hospital odor of disinfectants began to steal through the hall.

SALLY came out of her room again, still with Mary's arm about her, and stood listening. Niobe must have looked like that as she stood listening for the deadly twang of the god's bowstring.

Mary, still holding her by the arm, as though she feared to have her out of touch for even an instant, reached out and dragged a hall chair nearer. But Sally merely moved a step away from it, without impatience, with a sort of fatal determination, as of one resolved to die standing.

Then Owen and Patton came from behind that door, which somehow seemed the door of Fate, and the four went again into Sally's bedroom.

Wizzy whined and struggled when he saw Owen, but Phebe put her hand quickly over his little snout, and whispered vehemently to him to be still, and again, as if by a sort of telepathy, he subsided and ceased to whine.

And now again they were coming out; this time Sally walked between Charles Patton and Mary, each of whom supported her. Phebe could see the muscles in her thin throat working convulsively, dragging down the corners of her mouth in a grimace of anguish. She was fighting with all her harsh, imperious will for self-control. Owen followed, still with that face of stone, and this time they went again into Richard's room.

Another long, long time—then Owen and Dr. Patton came once more into the hall, leaving the door slightly ajar. They walked toward the staircase. No sound came from that darkened room.

JUST as they were about to descend the stairs Phebe stole forth, with Wizzy still in her arms, and went up to them.

She fixed her big, strained eyes on Patton's face.

"Is he— Is he—" she whispered.

"He's very ill, my dear," said Patton. "Concussion of the brain. But I can't stop now. I've some things to talk over with Owen. Go and lie down. I'll come to you presently. Tell her that she must lie down, Owen."

Owen said in an expressionless voice: "Go and lie down to please me, Phebe."

"I will," she whispered, and went quickly away from them, her head bent down over the little dog, which was again beginning to whimper and resist.

(To be continued next week)

Contemplation

By RACHEL HOPE

WHEN on the fragile woodland flower I gaze,
My thoughts arise to Thee;
When to Thy starry heavens my eyes I raise,
Dear God, I think of Thee.

In all the plenty of the sunlit meadow,
Thy loving hand I see;
And, in the glory of the moonlit shadow,
Dear God, I think of Thee.

The majesty of mountains old and hoary,
The ever restless sea,
The opalescent sky in sunset glory,
Lead me, dear God, to Thee.

Why do the wonders of Thy vast creation
Draw me to Thee?
Why am I gently urged, when in their contempla-
To raise my heart to Thee? [tion,

It must be that these tokens of Thy love,
These gifts to me,
Are stepping-stones that lead my erring feet,
Dear God, to worship Thee.

A Professional Jailer

(Continued from page 8)

the bundles, nor even looked them over covetously. They observed him patiently climbing tiers and cross-examining to see that the right man got the right goods; and made up their minds that here was a man who was strictly on the square. Indeed, it was not an hour till Whitman got his first "come back," or sympathetic response on the part of a prisoner to sympathetic treatment on the part of the guard. One of his duties was to take prisoners to the lawyer's cage. Occasionally in his haste to be accommodating he had left the door of the bundle cage unlocked while he was performing this other duty.

Nerve and Heart

A PRISONER approached and warned him that this was an imprudent thing to do. Another gave him some technical information as to how to detect contraband in the articles he was passing. From that hour a spirit of friendship, or, at least, of *entente cordiale*, began to develop between the wild men inside and the mild man in the bundle cage.

Nor was it necessary to prove to these men that Whitman, while gentle, was not weak; that he had "nerve" as well as heart. Somehow they sensed that instinctively, and, when occasion arose, were not surprised to see him step into danger, not brazenly nor foolhardily in braggart fashion, but coolly with a kind of wide-eyed courage. If any did doubt the presence of this quality, they were convinced when Whitman, alone and unarmed, went into the crowd that time and brought out his man, and again when he wrestled his way to the fighters and led them like shamed children to the solitaries. In fact, no man has ever seen John L. Whitman in a place so tight that his head was not cool and his nerve like steel. Yet there are jailers a-plenty of whom this can be said who are hated with a passion as hot as the flames of hell, while Whitman is respected and even loved.

The secret of Whitman's power, then, utterly aside from that dominance which proceeds from great physical courage, lies in the fact that from those twenty-year-gone days in the bundle cage down to this present he has been able to give the clear impression in every contact that he desired the prisoner's good above his own convenience. That was why the man in the crowd came out with him. Whitman persuaded him that it would be better for his case. "He's come at me right and I'm goin' down—see!" was the man's own explanation of his surrender to his fellows who still incited him to resist. That was why the voice from behind had saved his life when the fight was on. "Mr. Whitman," his protector explained. "I have been in prison a great many years—more than half my life—and in prison we so seldom come across a man that's on the square that, when we do find one, we don't want to see him hurt."

In those times there was much brutality in dealing with prisoners. Men were clubbed and beaten daily. It was supposed discipline could not be maintained otherwise. But Guard Whitman never laid a violent hand upon a man, and he thought he noticed that he had as good discipline as the sluggers.

Kindness Is the Key to Hearts

AN election rolled round and James Pease became sheriff, yet Whitman's record, as he gradually rose in the prison to assistant chief clerk and then to chief clerk, had been such that Pease appointed Whitman jailer. The apostle of kindness had now an opportunity to put his theories into practice broadly, to make his personal principles the prison principles. But this could not be done by the writing of an order. It was a problem in human equations, and this time the equations were not prisoners but keepers. Summoning these men, the new jailer made them a speech, saying:

"Although jailer, I can accomplish little without the united assistance of all my guards; they are just as necessary to the success of my ideas in the management of this jail as my own acts. . . .

"Always keep in mind that *kindness is the key* to all human hearts, and sympathy the password to good fellowship. Men imprisoned here are human, and are entitled to every consideration they can consistently receive at our hands. *Never strike a blow, never abuse an inmate.* Rather give a kind word, a little sympathy, and the necessity for harsh treatment will soon vanish. Get the men to believe that you are their friends and not their natural enemies, and that you are here merely to do a plain duty as kindly as it can be done. When you will have done this you will have done everything."

There is a speech almost Lincolnian in its unfrilled dignity and sympathetic force. I think that speech marks simple-hearted John L. Whitman as a great man.

Violence Gave Way to Discipline

WITH the cessation of violent punishments, to the surprise of all but the jailer, discipline, instead of deteriorating, improved 100 per cent. Yet this, in a sense, was a negative remedy. Whitman was contemplating something positive. Holidays, in prison, are always blue days. As the Fourth of July approached, Whitman decided upon an entertainment for the men. This practice, now becoming quite common, was then a daring innovation. Excitement ran high. Never had it been the custom to allow more than half of the prisoners out of their cells at one time; yet it was apparently Whitman's purpose to have them all in the schoolroom at once for this entertainment. Some of the prisoners even came to him with the warning that this would be a dangerous thing. Finding him determined, they offered to organize themselves and police the meeting; but the jailer declined this also. "They will not take advantage of me," he said, "when I am doing something for them."

His judgment and faith were confirmed. Six hundred men enjoyed that first entertainment and their conduct was above reproach. At its conclusion the jailer stepped forward and called for three cheers for those who had helped entertain them. The men hesitated, they could hardly believe their ears, that they were to be allowed to express themselves like free men, but Whitman's manner reassured them. They made the iron bars reverberate with the mighty shout raised, and then added three hearty rounds for Whitman himself. That was the beginning of a new era in the jail, one in which the prisoners began to rediscover themselves both individually and socially. Soon entertainments were being held almost weekly, and the jailer saw to it that many of them had an educational value.

Without Attending Ceremony

PRESENTLY there was a request from among the men to organize something to be called "The John L. Whitman Moral Improvement Association of the Cook County Jail." Whitman consented, and named a committee of ten men, one from each tier of the new jail and two from the old jail, to draft a constitution and by-laws. The governing body was a committee selected like that on organization from the tiers. From a pamphlet written in the jail by a prisoner to give a history of this association, and in which the speech of Jailer Whitman to his guards, quoted above, was found, I clip a few lines.

"The committee [governing] has power to exercise their own discretion in selecting speakers and talent for their meetings, and they act just as any other deliberative body. The absence of a guard or keeper of any kind during deliberations of the committee gives these meetings the same complexion of meetings of societies of any kind the world over. After meetings the committeemen return to their respective tiers without attending ceremony." *Without attending ceremony!* Did you get that? "Without attending ceremony" is a euphemism. It means: "Without a guard."

And isn't this pride in honor conduct rather a fine thing to have been developing in a prison nearly fifteen years ago?

Sometimes the program of these meetings was provided entirely by "home talent," and this did not prevent it from being of a high order. Extremely talented people find their way in considerable numbers into jails. Sometimes a debate was the special order. The theme for one of these was: "Is birth or association responsible for crime?"

Human Entertainment

FREQUENTLY no guards were present and a sergeant-at-arms named by the association, marshaled the prisoners in and out and attended to the lockup. Of one of these meetings a daily paper said: "There could have been no more

The General says:—
No test can tell you how long a roof will last—but this label can and does.

The three biggest roofing mills in the world are behind our 15-year guarantee. It protects *you* when you buy the *best* protection for your buildings—whether for business, industrial or residence—

Certain-teed

Quality *Cert-ified* **Roofing** Durability *Guaran-teed*

It is the highest grade roofing felt, saturated with our properly blended mineral asphalt, soft center—protected by a harder asphalt surface. Roofs do not wear out—they dry out.

We use no coal tar in this roofing—because coal tar is of gaseous origin and naturally returns to gas, thus drying out too quickly. Our properly blended asphalts are the result of a quarter century's experience and tests. They are not of gaseous origin and dry out very slowly. There are roofings priced lower than *Certain-teed*. Your saving at most is but a few dollars, however—and it's poor economy. *Certain-teed* is always reasonable in price—and least expensive in the end. Sold by dealers everywhere.

General Roofing Manufacturing Co.

World's largest manufacturers of roofing and building papers

E. St. Louis, Ill. York, Pa. Marseilles, Ill. New York City
Kansas City Minneapolis San Francisco Seattle
Boston London, England Hamburg, Germany

A *Certain-teed* Construction Roof

for buildings of the most permanent type appeals to architects, engineers and builders as well as to owners.

A *Certain-teed* Construction Roof is a built-up roof and is the modern scientific process of covering—whether a gable roof or a flat roof with poor drainage.

A *Certain-teed* Construction Roof does away with the smoky tar-pot and as no gravel is used does not collect dust and the roof is washed clean after every rain. It is a sanitary roof.

Costs more—but worth more. Applied only by responsible roofers.

Cut a Big Slice off Your Building Bill

We can help you do it because we ship Lewis Easy-Built Homes direct from the mills to you. You get the jobber's and middleman's profits. Free yourself from exorbitant lumber prices and high labor costs. Save money on building your home.

Get The Lewis Easy-Built Book. It tells the whole story—proves our money-saving claims conclusively. It's your key to the building business. This book will show you how to make every dollar do double duty.

Lewis Easy-Built homes are shipped all ready to erect. All materials are sawed and worked to fit. The planning and designing, all the detail, the worry and work of figuring is lifted from your shoulders. Our way means substantial, big value homes, at low cost, with all your building troubles left out.

Planned By Experts

Every Lewis Easy-Built home is the result of careful planning and designing by experts—men with a lifetime knowledge of this work. With over 19 years experience in the business, together with our two large manufacturing plants and our extensive lumber interests, is it any wonder that Lewis Easy-Built Homes offer you unheard-of values?

You will be delighted with the many original plans and building ideas for bungalows, cottages, and other types of houses described in the Lewis Book. It shows you how Lewis Easy-Built homes are efficiently laid out, windows located for proper lighting and ventilation, rooms planned for suitable placing of furniture. Well balanced design is a feature of Lewis homes. Every house is attractive and pleasing in appearance, both inside and out.

$248.00 and Up

Lewis Easy-Built homes are made in various sizes and styles ranging in price from $248.00 up. You have an almost unlimited choice. A house for every need, built to meet that need. Every house a marvel of comfort, convenience and utility.

Lewis specifications include the best grade of lumber. We furnish all lumber for frame work, siding, sheathing, flooring, exterior and interior finish, roofing and millwork (with windows glazed), all sawed and worked to fit; hardware, nails, paints, varnish and plaster. Complete working plans come with each house.

This attractive semi-bungalow type of house, seven rooms and bath, big porch, good sized rooms, and handsome design, shipped direct to you, with all materials ready to put up. Get our price on this home.

perfect order had there been an armed guard to every man."

These weekly meetings not only broke the monotony of prison life, but were valuable as a means of discipline. To forbid a man the privilege of attending the entertainment which his fellows were enjoying was a punishment more condign than to smash him on the jaw, as would have been done in the old days.

A Spirit of Cooperation

WHEN in the course of time he was transferred, or promoted, one might call it, from the County Jail to the House of Correction, he had to deal with 3,000 men instead of 600, and with longer terms and a consequently more settled state of prison society; but aside from this the general conditions were much the same and the same remedies were required. The prison body social was in a sullen, desperate mood. Various industries were carried on in the prison, but tasks were grudgingly rendered and slightingly performed. Suspicion, enmity, craft, and cruelty were on every hand. Sunday was a day of rest—and torture, because the guards took a vacation and the men, perforce, were locked in their cells. By three o'clock in the afternoon, confinement and enforced idleness had begun to tell; men became moody and ugly, so that the solitaries were always full on Monday.

Whitman abolished violent punishment and discipline improved as it had at the jail. He provided Sunday entertainments and the Monday morning line-up for punishment became the shortest of the week. He enlisted a spirit of cooperation among the men, actually developed something like an esprit de corps in behalf of the institution that confined them. He made the prison as happy a place as it could possibly be for those who had to live in it.

A Hospital, not a Jail, in Many Cases

WHEN a new cell house was to be built, the plans, under Whitman's direction, were prepared by a prison architect, and provided for a big, light, airy, almost cheerful-looking place, with a long courtlike area in the center upon which the cell tiers on two sides opened; and they painted the whole inside a joyous white instead of the dismal prison gray. This was contrary to the then accepted rules of prison construction. Whitman was warned that the men would shout and whistle across the areas at each other, that pandemonium would reign and culprits be impossible of detection. Nothing of the kind resulted. The place is as quiet as the reading room of the Boston Public Library.

Here, too, as in the County Jail, Whitman gets an unbroken series of "comebacks" from the men.

"Do you think I'd throw that guy? A square 'screw' like Whitman?" was one desperate criminal's explanation of his childlike tractableness under the kindly one's handling.

Hardened as are the majority of these men, all are subject to impulses that are highly sentimental. At one of the Sunday entertainments a singer rendered "The Last Rose of Summer," using a splendid American Beauty by way of illustration, which later fell upon the floor near the front of the platform. As the convicts were filing out, one suddenly reached over and plucked a petal from the fallen rose. This action was instantly repeated by the next man behind, and the next, till the petals were all gone, when others began to take the leaves, and finally even the stem was broken into bits and carried away like relics from a shrine.

Frequently the singing of a song by the whole audience, or the rendering of a musical number will leave the men in a rarely good mood. Whitman is extremely tactful in seizing these strategic moments, when imagination has been kindled or hearts have been softened, to sow the seeds of better impulse. Here is one of his little homilies slipped in at just such a time:

"You are in a happy mood for men in confinement in prison. Now while you are in that mood just you think along lines that might be of lasting benefit. If you have any idea of making anything of your lives in the future you can prepare for it here. You can make a resolution to do right, and be prepared to keep that resolution; and you can use every minute of your time in here to strengthen yourself to live correctly when you go out. As you are in a happy mood, now keep that mood."

Good common sense, that, unembroidered but forceful!

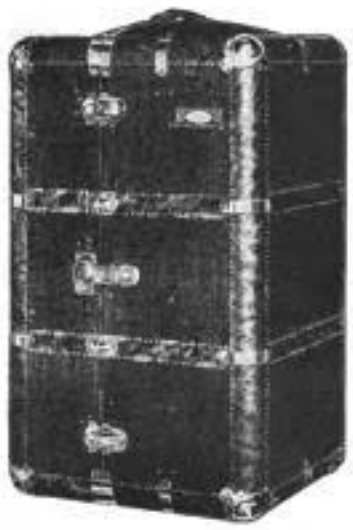
"And I would that my tongue could utter the thoughts that arise in me"

At the House of Correction Whitman had trouble, at times, getting his board of directors to agree with him. Once he had to offer his resignation before they would open the doors for some of his reforms. But his sincerity conquered. Subsequent results have made some of those opposing directors his most loyal advocates.

He had trouble with his guards, too. It is hard to teach an old guard new tricks. Count that day lost whose low descending sun sees no head cracked or convict's blood to run, seems to have been their motto. "Don't put yourself on a pedestal. Get down among your men," Whitman had to say to them repeatedly. To the prisoners he was always passing the word: "Be quiet; keep clean; obey orders."

One of the older methods of punishment was to give a recalcitrant a more difficult task, and if he continued rebellious to increase the tale of bricks and take away the straw; but the result was not always happy. Whitman reversed this and tried giving the man an easier job.

Almost invariably the response was an upswelling gratitude that softened the man surprisingly. Quite obviously this practice is one to be followed with discrimination, but it shows the efficacy at times of cracking a man over the heart with a club of kindness.



"Sixty per cent of them," the superintendent said to me, "need a hospital and not a jail anyway when they come in here. They are sick or run down physically, and their moral character has deteriorated along with their bodies. Most of these men are here because they have not learned sufficiently the lesson of self-control. You can get them into such a mood that they cooperate with you in everything that they do, and my object is to maintain such discipline that while cooperating with it they remaster this necessary lesson of self-control."

Little but hard sense in that, is there?

Get Down among Your Men

NOW, of course, it costs to be kind—just as it did when, twenty-five years ago, Whitman was supporting two or three families besides his own—but the man pays the cost unwhimperingly. His family must live in a house with 3,000 criminals; and that is not nice; but it is necessary. "Don't put yourself on a pedestal. *Get down among your men!*"

The Final Escape

(*Continued from page 13*)

It was quite dark when they crossed the river at a ford. Not far from this place was the thicket into which the Black Knobber gang had dragged Eb Holt years before, to flog him for beating his wife, who had been a Spencer. And the words of the victim that night had remained unforgotten by Holts and Spencers alike: "Ally Spencer, I 'low the day will come when I stan' thar under the gallows in town en see you hung. En I cayn't take no rest tell that day is here."

IN crossing the ford the outlaw found himself for a moment at Holt's side. A whisper reached his ear: "Three year ago, Ally Spencer, I 'lowed to come even with you. En I ain't took no rest since."

"Hit ain't time for you to rest yit, Eb," replied Spencer. "They ain't got no han'le on me fer this hyah crime. Maybe they'll fix the next again' me—when I git atter them that guv me over to the sheriff they *mought* hang me."

He knew perfectly that his case was a hopeless one, but the assurance he assumed struck his enemy silent. He had the satisfaction to see Eb Holt fall behind him in the posse and ride without a word to anyone—frightened and preoccupied—toward the county seat.

By and by the moon rose, revealing a mist white and delicate as a spider web, which rested on the woods. Most of the trees were buttonwoods, and their saplings—slim, white, nymphlike—could easily be mistaken for naked figures fresh from bathing in the river. An old ram rushed from a thicket. As one looked back through the mist, he seemed to show a laughing, bearded face below his horns.

Upon this bewitching night the outlaw turned his back—forever. They left the woods and approached the county seat.

The road by which they entered the town became a street, with board walk and cobblestones. It ran before the jail, which they reached as it grew light.

THE horse of one of the posse reared suddenly, and they all paused in alarm. The outlaw noticed Sam Hope's hand—thick, stodgy, covered with reddish hair. It trembled on his bridle rein, as if from guilt; as if, in doing his work of three days before, he had been a murderer. For the alarm had been caused by three shadows, which had seemed to leave the jail by its front door and move across the bare, dusty yard against the high board fence. They came as far as the place where that sinister framework of boards had been, and it was gone—the sheriff had knocked it away on Friday. Here they appeared to huddle together in bewilderment. Then they disappeared.

In the quiet of the chilly morning a man's teeth knocked each other audibly. But the sheriff recovered himself. "Them's shadows of men out somewhar with a lantern," he asserted. "Shadows fling pow'ful far this time in the mornin'."

He unlocked the jail and took the outlaw to a cell. A man without imagination, he had no cruel intent in placing his prisoner. But the outlaw recognized a tobacco sack in one corner of the cell. He sat down—on the cot in which one of his friends had slept the night before his death—and smoothed the scrap of cloth on his knee.

After a time sunlight reached the grating above his head. He heard various sounds from the town streets, and, in the jail itself, the rattle of cooking things and escaping steam of food. A mop knocked noisily as a negro washed the stone floor of the hall.

THERE was a circus in town that day. Many of the mountain people would come in to see the parade; and, if any should remain overnight, there was the possibility of a midnight rescue. For the outlaw was a man of magnetism and great popularity. The sheriff decided to take him to the jail at Springfield; and before noon put him again on the spotted pony, to ride to the station.

It was a beautiful first of May. Along the river were wild crab-apple blossoms, one cloud of pink, like a sunrise. The town itself was an orchard of white fruit bloom; the wind was blowing petals, brown and curled at their edges.

The sheriff, his deputy, and his prisoner turned into Main Street. The outlaw rode jauntily, in spite of his handcuffs, now and then nodding to an acquaintance in the crowd. As a figure of interest, he rivaled the two sickly

This Man Has the World's Master Memory Can Give You an Unfailing Memory

He can instantly give the population of any place in the world of over 5,000—

He can give without hesitation every important incident and date in the world's history—

He can give the dates of birth and death of the great men of history—

He has 300,000 Facts and Figures stored away in his brain, ready for instant use.

Felix Berol is his name, and a few years ago his memory was distressingly poor. His present amazing efficiency has been developed through his own simple, practical method.

He is now teaching his system with great success to large classes at leading educational institutions in New York City, and by mail to thousands of people throughout the country.

Let Him Teach You How To Remember—

His Simple System Will Strengthen Your Powers of Observation, and Concentration; It Will Develop Will Power.

You will be able to recall Names, Faces, Dates, Telephone and Street Numbers—

You can remember the salient Facts in a Book or anything else you read—after one reading—

You can instantly recollect important Business and Professional Facts or Memoranda—

You can become a clear thinker and in Public Speaking retain a firm grasp on what you desire to say.

FIRST LESSON ALONE WORTH $500 TO HIM

"Although I received the first lesson only one week ago, and have only partly mastered it, I have already had the repeated pleasure of recalling instantly the names of persons on their second and third calls after my first introduction. The first lesson—I would not take $500.00 for it, or rather I would prefer losing $500.00 to being now deprived of the 'CUE' that you have furnished me."—J. W. Webb, Athens, Ga.

Give Mr. Berol a few spare minutes daily at home and you will be astonished at the change for the better which he will accomplish for you. He makes no promise to students that he cannot substantiate by what his method has done for him personally.

Send This Coupon Today for Full, Interesting Particulars—This will cost you nothing, nor will you incur any obligation by doing so. You will be interested to learn the story of Mr. Berol's remarkable mentality and a description of his method for making men and women bigger earning factors.

elephants just turning a corner below the station. To see him thus was drama. He appeared in a lurid light—of his fate. Laughing and calling out to his friends, he moved on the other side of such a line as separates a stage and an audience. But he was somehow more real than they.

As the circus parade approached, the sheriff halted before a dry-goods shop.

THE outlaw twisted his arm, that one of the handcuffs—which, by a deft manipulation of the wrist, he had prevented the sheriff from locking—should not slip from about it. Then he sent a careless glance into the dry-goods shop, which was a one-story shack, with its rear door open into an alley. Looking away, he spoke to a friend of his. And just then the elephants turned another corner.

The sheriff's horse snorted indignantly. Again the prisoner glanced into the shop at the long counters covered with calico, coarse shoes, and straw hats trimmed with blue and pink cotton satin. His hand tightened masterfully on the pony's bridle; but he made no move in the direction of liberty.

The sheriff's horse began plunging about the street, and the deputy lost control of his brown mare. There followed a general riot among the animals: women screamed, babies cried, wagons bumped each other and locked wheels; a team of mules plunged up Main Street with reins dangling. But the spotted pony remained docile, for the outlaw was one of those men who have their way with horses. He suddenly turned his mount toward the dry-goods shop, dashed across the sidewalk, and rode in at the open door. There were screams from the women and children gathered there to see the parade. Hats and shoes were trampled under the pony's hoofs. Frail wooden boxes crashed as the fugitive rode out by the alley door.

Escape was impossible—thus through a crowded town, in which the feeling was very strong against the Black Knobblers. The docility of despair was the intelligent course. No civilized man would have attempted to get away. Still, there was no one in the alley to stop him. He turned a corner and rode up an almost deserted street, still unmolested. At last he reached the Methodist Church, which stood opposite the jail. Here a bullet went by him, to strike the cobblestones of the street, and a voice cried: "Halt!"

HE urged his horse on toward the bridge which crossed the river at the town. On the other side of the stream were overgrown paths leading up the mountain; could he gain these he would have a faint chance of escape.

But the bridge was, of course, guarded; two men were waiting, ready to seize his bridle; and he took instead a road that ran alongside the river. Three or four men from the town went by a short cut to intercept him at the Fork. Seeing that his capture was a certainty, the rest lagged in their pursuit.

It was a lovely road down which he galloped toward capture. The bank beside him was blue with violets, and at his other hand, in a thicket, grew dogwood as white as lilies. The air was bright and cool; it was one of those days when the blue sky and gleaming white pillars of cloud are scarcely dense enough to conceal God.

As the outlaw rode, something struck him in the back; and he wondered what it was—but especially, in case it was a bullet, that it did him no harm. Thus he came to a bend in the road where a spring was and a path going down to the river.

Unexpectedly he found himself sliding from the saddle and was not able to regain his place. He fell to the earth.

THE spotted pony paused obediently, but at sight of a great deal of blood galloped on in fright. Soon the sheriff and his deputies came up with the prisoner.

Everything by this time was becoming misty and uncertain for the outlaw. Sam Hope's big body wavered before him. "Y're a plumb fool to try en git loose that a-way, Ally Spencer!" Hope began.

But he stopped abruptly as he perceived the truth. And a great change came over him. With his deputies he stood awkwardly silent, abashed and awed by the evident nearness of death. "Well, Sam," said the outlaw, "I reckon I'm shot." The men began doing little things for him; and two of them went to the spring for water.

Soon after this the outlaw fell to watching that gap among the trees across the road and the path which led down to the river. It looked as if it might offer him a chance of escape from pursuit. While he looked Viola's face floated before him, and he thought she said: "Ally, thar's a river to cross over."

So he decided he would get up and go down to it. He tried and could not. But very soon he did make his way into a river—he knew it was another and different one, but that seemed to make no difference at all; it was a way of escape. He found the water quite cold and, as Viola had said, very misty. Soon he was struggling in the deep places.

At last it began to grow shallower toward the farther shore; he stood and looked back. And he could realize that what he had crossed over was impassable by the others. He could still see Sam Hope's face—but dimly, as if a long way off. None of them were even trying to follow him. He had escaped.

Then, suddenly, he seemed to comprehend what was happening—had indeed happened to him. He turned his face the other way, and he saw!....

Eluding an Adjective

By C. J. MANNING

IN THE offices of the penny "yellows" professions have their set adjectives. The contractor always is "wealthy." He cannot escape the term, even if the news item deals with the bankruptcy courts. The physician is "prominent," though starving until his first patient shall arrive. The attorney is "rising" and forever threatening the limits of altitude. The country editor is "poverty-stricken." He was impoverished long before the day of the "yellows," because fiction had named his title. Therein is ground for protest. Country editors throughout the land are backing a demand that fiction and the city newspapers shall drop the adjective "poverty" as a qualifier for the noun "editor."

It no longer is the vogue for the country editor to come breakfastless to work, a profane prayer on his lips that a sale bill may turn up during the day, thus helping to pay for lunch and dinner. It is no longer is the custom for the editor to feed on contributions brought by the folks of the countryside, as a modest exchange for the newspaper he gives them. Introduction of the perfecting press, the linotype and the gas engine in the country newspaper offices has taken from the business the haphazard methods that marked its early day. The veteran "print," who wandered from town to town, establishing newspapers that flourished a few short weeks, has written "thirty." His class is extinct.

Among the "home folks" the editor is not considered "poverty-stricken." His automobile takes him to and from work. His income is rated equal to that of other professional men. A change in administrations has given him opportunity to refuse post-office appointments and embassies that would take him from his lucrative field.

From his pedestal of affluence it is quite natural that the country editor should find much that is objectionable in his own pet adjective, "poverty." Also it is natural that he should seek, through his own channels of publicity, to let the public know that: "We (the editor and his wife) drove our machine to the county seat Tuesday and later attended the opera."

LOWVILLE, N. Y.

I LIKE your political page in COLLIER'S. This week's analysis shows pretty clear vision of a very clouded situation. Your page makes deeper my conviction of the necessity of the Progressive party. You do this in a very inoffensive way.

O. B. PHILLIPS.

✚

Mark Sullivan's political romances.—Waltham (Mass.) *Free Press-Tribune.*

✚

One of the most noted political writers of the country is Mark Sullivan, who is the author of the series of articles that have appeared in COLLIER'S WEEKLY for many years under the head of "Comment on Congress"; and while others may differ with him on many questions of policy, none have questioned his facts. He praises or criticizes without fear or favor.—Montgomery (Ala.) *Journal.*

✚

Some of the folks who look at the pictures in the current COLLIER'S will be surprised to learn, doubtless, that the Hetch-Hetchy affair has nothing at all to do with Oriental dancing.

—Johnstown (Pa.) *Democrat.*

✚

LANSDALE, PA.

I am, and always was, an admirer of your drawings and writings, but I wish to commend your picture in the recent issue of COLLIER'S WEEKLY. I studied the picture, and recognized two of my former officers before I noticed the description of the article. Anyone who has been shipmate with Admiral Cameron McR. Winslow and Lieutenant Rufus F. Zogbaum, Jr., will recognize them at a glance. I always admire your writings, as you see things from the viewpoint of the sailor in its reality instead of by hearsay in the wardroom and mess hall.

ROBERT J. HULSHOUSER.

✚

COLLIER'S is a great paper. Its habit of talking right out in meeting and giving names and dates when it talks about patent-medicine fakers, fortune telling, and other grafters and fake advertisers in general, is refreshing and admirable. It would seem that it would be compelled to follow its own rules. And yet in a recent issue it earns a few dollars by publishing such stuff as this: "Be a detective; earn a large monthly salary; easy work; we show you; open to all; experience unnecessary," etc.

—Newman (Cal.) *Index.*

✚

PERTH, W. AUSTRALIA.

There is something wrong in this office, and, after making investigation, I find it is due to COLLIER'S no longer being received here. Can you suggest any remedy? N. W. BURKE,

American Consular Agent.

✚

It is the first time that I have felt impelled to write to an editor, but I wish to thank you for giving me an opportunity to read that enchanting tale, "Their Story's End," so wholly original, so full of charm, and told with such economy of effort, and to beg, if possible, for more from the author, quite unknown to me.

May I add that your serial announcement is itself as full of promise, and that I have heard several comments on your pictures lately that were very favorable?

M. LOUISE NIXON,

Ritz-Carlton Hotel, Madison Avenue and Forty-sixth Street.

✚

NEW YORK, N. Y.

You may not be interested at all to know—but I feel I must tell you—that "Their Story's End" is about the biggest short story I have ever read. It is remarkable in its simplicity, beauty, and purity. For the sake of the reading public that story should have been announced from the housetops, and I shall do all I can—in my small way—to pass it on, and I know many will share my opinion that it is a pearl of a story. Thank you for publishing it.

CONSTANT HOLLY MACRAE.

✚

BRADFORD, PA.

There is enough of the true American citizen and patriotism in me to stir me to shout aloud over the article in your issue of January 3, 1914, by Isaac F. Marcosson, "Business-Managing a City." It is so well written and so inspiring to a hungry soul, struggling and fighting for the uplift and betterment of the people of our urban communities! Surely Dayton, Ohio, has arisen from her ashes and will be a gleaming light and a profound example, a source of encouragement, to all those cities which are struggling for municipal righteousness and honest administration of public affairs. I wish most heartily to congratulate Manager Henry M. Waite of Dayton, Ohio, sincerely wishing him and the citizens of Dayton prosperity. And to COLLIER'S I would offer sincere praise for the grand and noble work being done in the cause of the rights of the people. Your hand, heart, and brain are always in the foreground in the fight for progression and right. I wish for you many happy new years. SPENCER M. DEGOLIER, Mayor.

✚

BELGRADE, MONT.

I suppose it will do no harm to tell you that I enjoy greatly the stories by George Weston which you are running; especially the last one, "Madame's Doctor." I think them the best you've had in a long time. Indeed, if you would "dump" Roosevelt and cease from your treacherous little under-the-belt jabs at President Wilson through Bryan, I believe I could give COLLIER'S my entire approval as a subscriber of ten years' standing. WALTER AITKEN.

✚

SOUTH TACOMA, WASH.

The article or story, "America Expects This Day—" I enjoyed more than any other of my Christmas presents. It is worth to me the price of COLLIER'S for at least a year, and it balances that magic ring and other impossible stories. Give us *more* of the former and you will get *more* subscribers. A. W. MALMSTROM,

✚

"Their Story's End" is the best story that COLLIER'S has published in many a day.—Paducah *News-Democrat.*

✚

I congratulate you on the change you have wrought in COLLIER'S fiction.

No Breakfasts Like This

In the Days When We Were Young

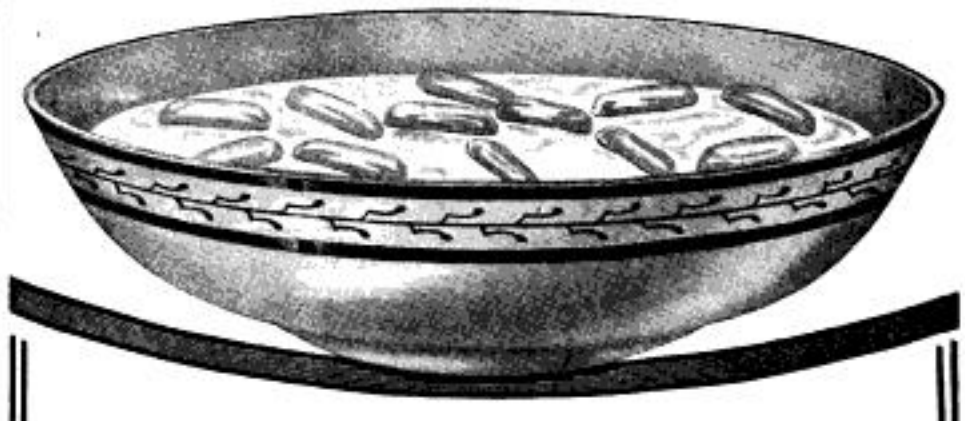
No Puffed Wheat or Puffed Rice.

No bubble-like grains, thin, crisp and toasted, puffed to eight times normal size.

No cereal foods with a taste like confections—with the flavor of toasted nuts.

And no whole grains were made wholly digestible in those days of long ago.

We never knew grains that would melt in the mouth, into almond-flavored granules.



We never had grains to use like nut meats in home candy making. Or to eat like peanuts when at play. Or to mix with fruit to give a nut-like blend. Or to greet us on the morning table, served with cream and sugar.

For, though wheat and rice had been known for ages, nobody knew how to puff them. Nobody dreamed that the moisture in grain could be turned to steam and exploded. And that every food granule could be blasted to pieces, so digestion could instantly act.

All this came a few years ago, when Prof. Anderson discovered a way to shoot these grains from guns.

Puffed Wheat-10¢ Puffed Rice-15¢

Except in Extreme West

No Suppers Like This

In those days, frequently, our supper dish was crackers or bread in milk. And neither was made of whole grain.

Now we have whole wheat or rice. Dainty morsels of grain, thin, toasted and crisp, and four times as porous as bread.

These grains float in milk. They have an enticing flavor. And never before were cereal foods made so easy to digest.

Now, at a million meals or more each day, folks serve these delightful dishes. But there are countless children today who don't get them, just because mothers forget.

You'll make the children happy with Welch's at the party

Every mother whose child comes to your house for a party will be glad if she knows you are going to give the children Welch's. You get Nature's best AT its best in

Welch's

"The National Drink"

This pure, unfermented juice of the finest Concords is pressed from the full-ripe grapes and is hermetically sealed—all by the exact sanitary Welch process. Thus Welch's is a most agreeable and healthful beverage for children and grown-ups.

Book of games for children's parties, free

We have compiled a book of jolly games for children of all ages, and are glad to send it to any address free upon request. It will make many a happy day for the youngsters.

For a children's party, serve Welch's in the individual 4-oz. bottles, or in this deservedly popular Welch Punch—

For a dainty, unfermented punch, take the juice of three lemons, juice of one orange, one pint of Welch's, one quart of water and one cup of sugar. If desired, all or part charged water may be used. Add sliced oranges and pineapple and serve cold.

Do more than ask for "Grape Juice"—
say WELCH'S and GET IT!

If unable to get Welch's of your dealer, we will ship a trial dozen pints for $3.00, express prepaid, east of Omaha. Sample 4-ounce bottle by mail, 10 cents.

STARTING MOTOR

Fac-simile of tester's report on Starting Motor

WHEN purchasing a car equipped with the Gray & Davis starting-lighting system you have the satisfaction of knowing that *this* system has been put through complete tests, far more drastic than actual service in the hands of the car owner.

Nothing is left to chance, nothing is taken for granted in the Gray & Davis factory.

The system is designed with the experience gained during 23 years of dynamo and motor construction. It is manufactured to outlive the car and to give absolute satisfaction under all conditions. It is built in the largest factory devoted to starting-lighting systems.

After each Gray & Davis starting motor is finished, it is given a minute mechanical examination. After the inspectors pass it, the motor goes to the testing rooms. Here an expert puts it through its paces. He proves the speed, torque, and voltage. He is but one of a squad of men who give their whole time to determining motor efficiency.

Each dynamo is similarly inspected and tested for hours at a speed of over 1000 revolutions per minute without stopping. The machine is also tested for output and defects, so that any dynamo surviving the gruelling ordeal will generate its full quota of current.

Finally comes the O. K. of the Chief Tester and a review of the records of each unit. The system has then proved its ability to meet every road and weather condition.

That is one reason why the Gray & Davis system occupies a distinctive position and the *big* reason why you should demand it on the car you purchase.

Press a pedal and the engine starts. A simple switch on the dash controls all lights. Occasional lubrication and replenishment of the battery with distilled water are required—that is all. 63 Service Stations stand ready at all times to assist our users or give advice.

Send for the Gray & Davis catalog, which gives full information.

WE SAY to men everywhere: it is very much your affair, this matter of Kuppenheimer Clothes in your locality. It should be of interest to you to examine clothes that have such a wide following among those who know what is appropriate and what is practical in men's attire.

Here is a business that achieves the very front rank of a great industry on the sheer merit of what it has to offer.

It is the fastest-growing clothing business in this country—through the influence of the men who wear the clothes and the success of the dealers who sell them.

Your Kuppenheimer clothier believes in success through service. You are pretty sure to find that both he and his salespeople are practical clothing men—who know they can rely on the clothes and on the co-operation of the House that is back of them.

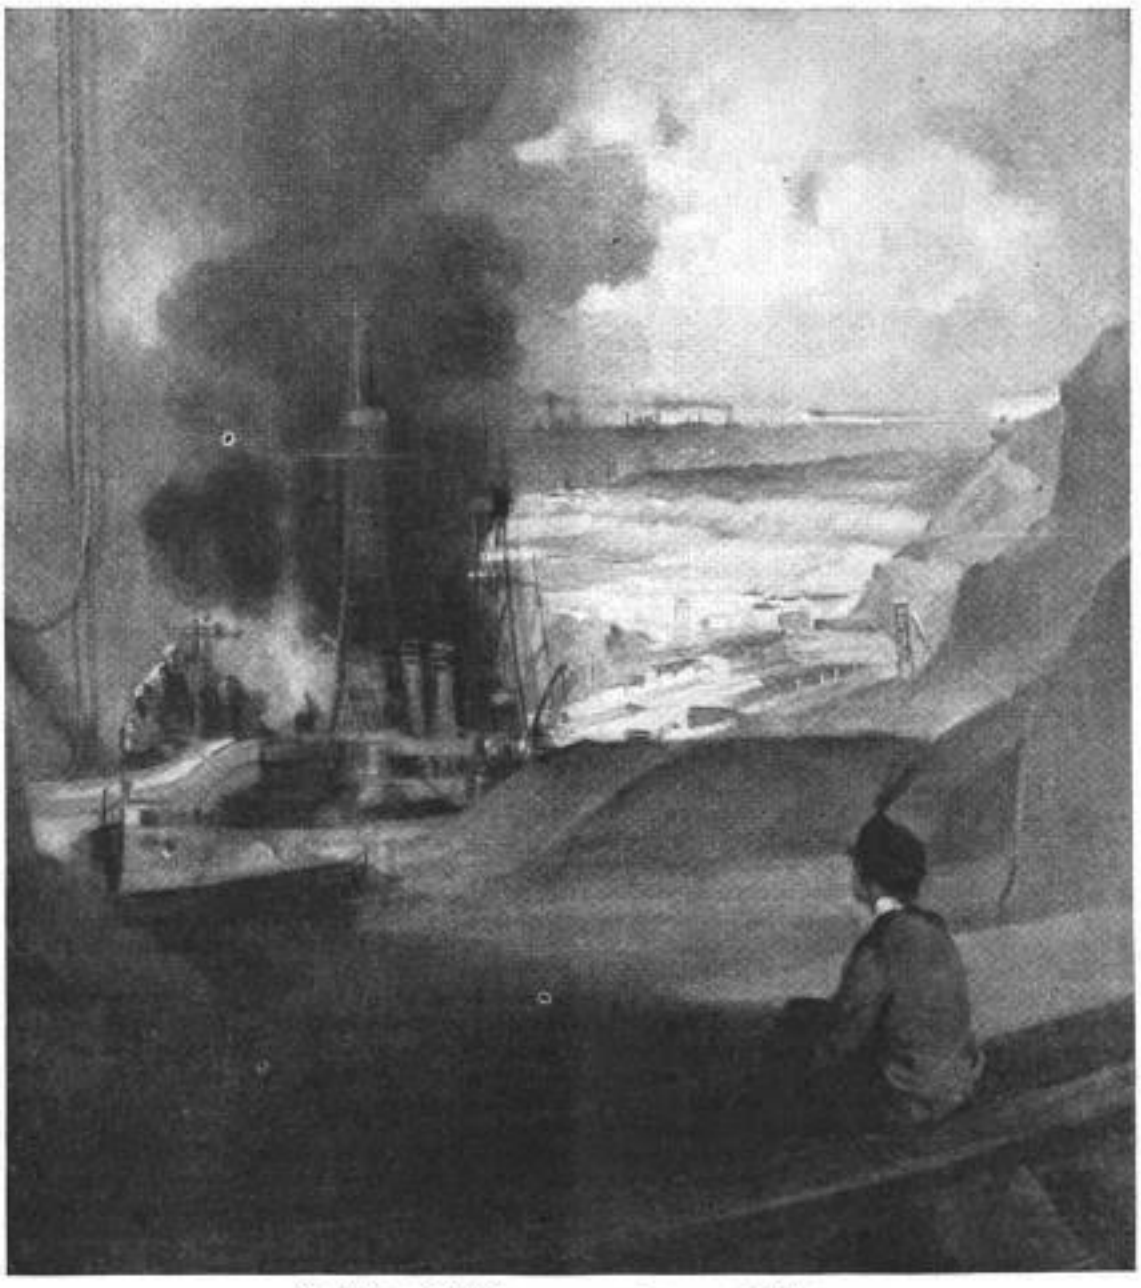
The Painted Scene

By Henry Kitchell Webster

ILLUSTRATED BY WALTER GOLDBECK

THE beginnings were conventional enough: not very edifying, not in the least worth telling the story of, if they had gone on and led to what such beginnings generally do. But because, at a certain point, there came a difference, I am going to ask you to bear with me patiently while I get the rather shabby and shop-worn preliminaries out of the way, and get down to the point where the difference began, as briskly as I know how.



She was a chorus girl in a show which we will call, to avoid being unpleasantly personal, "La Revue Folle," a vividly orchidaceous dramatic entertainment which flourished annually on Broadway. She was the one—if you care about particulars—who came out in the first act with apparently nothing on but a hat, a feather boa, and a large muff. A second glance corrected this impression, to be sure.

As for him, he was a young man—thirty perhaps—and he sat in the front row. At the end of the first act he found out, from an adequately tipped usher, that her name was Daisy Reddesdale, bought a bunch of orchids at the hotel florist's around the corner, and sent them back to her with a note to the effect that he was lonesome, that he was sitting on the aisle in the front row, and that wouldn't she please glance down that way and see if she liked his looks?

SHE slanted a half-defiant and, perhaps, a little contemptuous nod at him during the second act—enough so that he came around to the stage door. And he lifted his hat and said "Good evening" when she came out. And she said, to make it seem a little less raw somehow: "I *thought* I saw you out in front." And a taxi driver, with an eye on the cop at the Broadway corner, came swooping up on the wrong side of the street, knowing a sure-fire fare when he saw one. Then the young man, about thirty, put Daisy Reddesdale into the taxi and took her to one of the regular restaurants and ordered the regular supper, including a quart of the regular champagne.

The conversation halted and creaked more or less while they were waiting for the champagne to come and really start things. She said New York was a great little old burg, wasn't it? And he said it certainly was. And she asked him if he lived here, and he said no—she was the only person in the town that he knew. Then she asked him if he had got that coat of tan (there is something very classy about tan in winter) down in Palm Beach? And he said no—he was just up from the Zone.

Right there is where things began to get different. Because she didn't say, as would nine out of ten chorus girls with a bitten-down yawn: "Oh, yes, of course," and change the subject. Nor, as would the tenth chorus girl: "What's the Zone?"

As I have said, Daisy was mooning around at large when this was tried out for the first time. It caught her eye

She said something that made him set down his just-filled glass and stare at her.

The first of the series of happenings that made the difference was the discovery by the producer of "La Revue Folle"—a discovery not made until rehearsals were in full swing—that he was shy a climax for his first act. The next thing was the submission to him, by an extraneous song writer, of a really cracking tune called "Panama." The producer heard the tune and decided that Panama was good dope. So he ordered a new set of costumes and sent for the head of the scenic studio that had built the production, telling him what he wanted in a few well-chosen words, and urging him to cut loose and hustle.

With the intermediate processes we have nothing to do, the next fact that matters to us being that Daisy Reddesdale, who had not been nicknamed Moony for nothing, was wandering at large on the stage when they ran down the new back cloth, which represented, more or less, the entire Isthmus of Panama, with a fleet of battleships going through the canal. The scenic artist had followed instructions and cut loose, and no important feature of the big job was omitted. By a miracle of perspective, you were able to see the Gatun Dam, Gatun Lake, Culebra Cut, and, as I said, a fleet of white battleships with practicable searchlights steaming through at eighteen knots or so an hour. The upper part of the stage was built up on parallels, and by this means one of the locks was presented on the stage itself; the vessel, steaming in at the low level, showing only her masts and funnels, was locked through and out again at high level—all in less than thirty seconds—a record which may well overwhelm Colonel Goethals with despair.

AS I have said, Daisy was mooning around at large when this was tried out for the first time. It caught her eye. It, as it were, hypnotized her, and she stood at gaze until somebody in authority wanted to know what in blazes she was doing there and ordered her out of the way.

She was always doing things like that. In nicknaming her—half in affection and half in contempt, which is the regular formula for producing nicknames—"Moony," her associates had characterized her pretty well. "Nosey" wouldn't have done at all, although she was always asking questions, because they weren't inquisitive questions. The swift-running current of dressing-room scandal was never troubled by her oar.

Daisy's questions generally began with "Why," like those with which a small boy poses his father, and they were generally received with shrieks of derision.

This never troubled Daisy, who, as a rule, stood by her guns until somebody had been found who, between amusement and exasperation, would give her an

Digitized by Google

answer that satisfied her. It had occurred to her to wonder, for instance, why a spot light "stayed little"; why the pencil of light shot from the back of the topmost gallery consented not to spread out. Somebody told her this was because it had to go through a hole; whereupon Daisy punched a hole in a shoe box and demonstrated, with a single incandescent light, that it didn't work that way. She kept the question alive for two weeks, until it was finally laid to rest by the chief electrician, who drew for her a diagram of a hyperbolic paraboloid reflector and expounded the matter to her.

When anything big happened in the world, like the sinking of the *Titanic*, for instance, Daisy was unbearable for a month.

This capacity of hers for wonder—an excellent, almost an essential, thing in a poet—is not precisely one of the qualities demanded of a chorus girl, and the absence of mind, and the trick of losing herself to all mundane considerations which went with it, would have lost her her job a hundred times had it not been for the fact that she had an infallible sense of rhythm, that she could sing in tune, and that she had a shape which was simply a producer's dream. These assets made her one of the Old Guard—that small battalion of chorus girls who, though shows may come and shows may go, are never out of a job and never leave New York; whose world is bounded by One Hundred and Twenty-fifth Street on the north and Herald Square on the south.

BUT, though she was never out of a job, she gave up more of her weekly salary in fines, I suspect, than any other member of the battalion, and was bawled at oftener by irate stage managers. Her absent-mindedness was one of the reasons. The other was—can I find a polite way of putting it?—that she was not brought to the theatre in a motor car.

There was, of course, a certain fatuity in fining a girl a dollar when she had a thousand dollars' worth of diamonds on her fingers at the moment. And, besides that, she might get sore and make things really unpleasant if you did. You had to keep up the appearance of discipline somehow, so it was natural to make a girl like Daisy the goat.

Why she had neglected to supply herself with the perquisites of her position is perhaps a little hard to explain. She wasn't conscious of any great moral superiority to her more luxurious sisters. All she had to offer was the statement that she couldn't be bothered. The fact remained, anyhow, that she went on living pretty exclusively on her thirty a week, and that it was by her own election that she did so.

Well, there you have all you need to know about Daisy to account for her rapturous absorption in the contemplation of the new back cloth which they unrolled at rehearsal for the first time that day, and of the practicable lock which the carpenters were building upstage; also, for the extreme discourtesy of the stage manager's request to know what she was doing out there in everybody's way, and his order that she move on.

She didn't get sore and say anything fresh; withdrew meekly enough, but simply to another point of vantage, where she could go on gazing at this new wonder. She was fined and otherwise remonstrated with on numerous occasions during the next two or three days—and all of that before she ever asked a question. But when she began—when the flood broke loose—you simply had to stand from under.

The other chorus girls drowned her out in derisive shrieks as soon as they heard the word "why," and her friend, the chief electrician, who began incautiously by admitting that he knew all about it, soon was fleeing her as if she had the bubonic plague. Then somebody, trying to be funny, picked up a steamship folder somewhere that advertised a special cruise to Panama—devoting a page or two to the wonders of the canal—and presented this derisively to Daisy.

SHE ignored the derision and took it in good faith, and other literature of the same sort followed. The effect of all this had not been foreseen. It simply provided her with new and more unanswerable questions. When she was heard asking what a suction dredge was, and how a steam shovel worked, people realized that the joke went a good deal deeper than they had thought.

One of the simplest forms of humor in the world (there is only one simpler, and that consists in laughing at people who are getting hurt, tortured, hanged, and so on) expresses itself in laughing at people who, bodily or mentally, are different—the dwarf, the witol, the lunatic. If you want a sample consider the court fools who used to amuse the barbarous kings and barons of the Middle Ages. Well, my notion of Daisy's associates in the chorus of the "Revue Folle" is that if you could set them back a thousand years into the court of one of those barbarous barons, most of them, after a momentary gasp of astonishment, would find themselves quite at home.

Anyhow, with a nudge here and a grimace there, the suggestion was passed around that Daisy was—well, of course, not a lunatic, nor even what is meant by a nut, but—an alien—that's the word I want.

Anybody who has lived or spent much of his time in a small, compact society—a college fraternity or a business office will do for an example—will remember that while nobody was immune to jokes, there developed, in course of time, the tradition of making some one person the special target for them—the butt. You all felt that that one person was more different from all the rest of you than any of the rest of you were from each other. Tacitly, there was a ring drawn around him, which he inhabited all by himself.

She came out in the first act with apparently nothing on but a hat, a feather boa, and a large muff. A second glance corrected this impression

Probably you never gave any serious thought to the matter unless you happened to be the person within the ring. In that case, if you were a reflective soul, you indulged in the consolations of philosophy and told yourself that you had been paid a compliment. If you were not, you just felt lonesome and unhappy and wondered why.

However, living with a ring drawn around you is a wonderful cultivator of reflections.

WHAT Daisy Reddesdale did was not to stop asking questions, but to begin asking them of herself instead of other people. And mostly they began, as before, with "Why?" Don't think she made a tragedy of it. She was no sensitive plant shriveling at an unfriendly touch. And the fact that her vocabulary of introspective terms was strictly limited saved her from going very far. The upshot of her reflections came to about this: that she and her companions in the chorus, and the principals and the audiences out in front, were a bunch of shines. Not very real and not very important. There were real people in the world—people who did things that mattered. But her world didn't touch theirs at all.

Certainly the front of the house was no better than the back. They wanted—out there—precisely the sort of thing that she and her colleagues on the stage were giving them. One was a perfect complement to the other. Those people in the first four or five rows, whose faces she could distinguish—people who had paid five dollars a pair for their seats in order to be close enough to be sure of seeing everything there was to see—were acting really, just as much as anybody in the show. Each of them was almost painfully anxious to convince his neighbors that he was wise all right—nothing was getting by him. But she and her companions had nothing to feel superior about. They were trying their best, all of them, to give those imitation rounders what they wanted.

Occasionally, of course, her eye picked an exception—somebody out in those five front rows who looked as if he didn't belong. And the most striking of these exceptions was the deeply tanned young man about thirty, who one night sat on the aisle. She saw him in a minute, and it wasn't very long before she was aware that he had seen her. What the devil had he come here for? she wondered.

Well, at the end of the first act she got his note. And she gave a harsh little laugh and shrugged her bare shoulders and asked herself: "After all, why not?" What was the use of being lonesome and asking questions and letting them draw a ring around you?

Have I accounted for that half-defiant, half-contemptuous nod she slanted down at him when she first came on the stage in the second act? I don't know. She never explained it to me. I have just pieced it together from scraps too fragmentary to be called confidences. But I imagine it was something pretty much like that. Anyhow, I know that she did nod to him, and that from that point things went on just as I have told you.

When he told her that he was just up from the Zone, what she blurted out, with a sudden stare of incredulity and a setting down of her own glass, was: "My G.wd! What are you doing here?"

BUT she didn't give him the time he needed in his astonishment to answer the question. She flushed, bit her underlip, and, catching up her glass again, nodded at him across the rim.

"Here's luck!" she said.

There was a bit of silence. He hadn't found his conversational feet yet.

"Been working down there on the canal?" she asked. The question came out with something of a rush, as if she had not meant to ask it and then had done it anyway.

He released a rather explosive sigh. "Four years," he said. "And I struck New York this afternoon."

"Kind of funny," she said, "that you should come to our show and see it again first thing."

"See it?" he echoed rather blankly.

"Sure," she said. "The canal and the lock with the battleships going through."

"Oh, yes—yes. Sure," he said vaguely.

Because, the gospel truth was, he hadn't seen it at all. His seat was over on the right aisle, and he had been looking at Daisy in her flesh-colored tights and her tunic of American flags that came up only over one shoulder.

She looked very different now, across the table from him, in her little round hat with its high interrogation-point feather and her simple little V-necked blouse. It took a certain effort of mind to realize that she was the same girl. It wasn't so much her clothes, either, as the way she was looking at him.

"I wish you'd tell me something," said Daisy. "Why—" She hesitated and glanced around. None of the company was within earshot. "Why do they have locks and gates in the canal? Why don't they have it all open, so a boat can go straight through?"

The question made her seem more different a girl than ever. He didn't answer it at once—stared across at her a little blankly, and once more set down his glass—blankly and, though the feeling didn't show in his face, almost resentfully.

He didn't want to talk about the canal. At least he would have told you with a good deal of confidence that he didn't.

He had lived four years in a lattice workhouse with a galvanized-iron roof with six or eight other bachelor engineers and got his meals in the "gold" side of a commission hotel. He had spent his days in the big resonant repair shop up on the brink of the Culebra Cut. Strenuous, fierce, exhausting days they had been, because when a thing breaks down it's wanted again in a hurry, and as it always breaks in unexpected ways you can't be sure of having the right material at hand for repairing it. The tension of the big job—the tension that never slacked—drew up unexpected expedients out of your mind, made you a better man than you had any right to be, got more—oh, ever so much more—than your regular horsepower out of you.

IT WASN'T a thing you romanticized about. You hadn't any spare energy for that, and, besides, it was against the traditions of the place. Nobody wore an oriflamme or carried a motto on his shield. You grunted and swore, knocked the incompetents, wriggled your shoulder into as comfortable a position under the load as you could find, and pushed. That was the day's work.

When it was over, you sat around in the veranda with your six or eight messmates and talked about the job. Or else you went over to the Y. M. C. A. and played pool on the crooked table—and talked about the job. And then you went to bed—and dreamed about the job. On Sunday, perhaps, a married friend asked you to dinner down the line somewhere, or

Digitized by Google

there'd be a ball game, or a concert by the Commission band. But you found it a little irritating to have nothing to do, and when you talked about the job, your comments had more acid and pepper in them than on week days. Because, of course, whether at your friend's table, or at the ball game, or in the veranda at the Tivoli listening to the band, the job was still what you talked about.

So you can imagine that it wasn't to talk about the job that this young man about thirty, who sat in an aisle seat at "La Revue Folle," had flagged Daisy Reddesdale and asked her out to supper.

He had reached New York, as he had told her that very afternoon, at the end of six days of passionate hurry—he had to hurry, you see, even in a deck chair—six days of consulting the chart and the log and counting the revolutions of the screw in an eagerness to get back to what he had for four years been calling God's country. Then New York—New York that didn't know him (he lived out in Ohio) nor care a curse about him; New York that, after all his eagerness, terrified him with its strangeness, its newness, its complete absorption in its own affairs. There wasn't a friendly, casual word to be had out of anybody. He had tried to get into conversation with a man on the roof of a Fifth Avenue stage, and the man had changed his seat as if he had suspected him of being a pickpocket.

Writing that note and sending those orchids around to Daisy had been rather a last resort. He had never done anything just like that before, and when it was done he was seized with a feeling not far from panic. He almost didn't go back to his seat in the front row at all. The slanting nod of assent she gave him was the first communication he had had from anybody, because you can't count the fixed smile of the hotel clerk, nor the "Thank you, sir," of the bell boy whom you have just given a dime.

A MOCKING devil in his ear suggested that Daisy's greeting was of the same order, but he managed at first not to pay much attention to it. It kept on making itself heard, though, in the taxi, and began again in the restaurant while they were waiting for the champagne. After they'd drunk enough of that perhaps he'd be able to forget it altogether. Perhaps even she would, too.

Well, the champagne had come and they had had one look at each other across the rims of their glasses, and then—right then—just when things were starting, she had asked him—what a lock was for!

I don't wonder he looked blank. A very little would have made all the difference. If the girl's voice had rung a little flat, if the interest and concern in her face had looked a little meretricious, why then he would have laughed and said: "'What are locks for?' Why, to make little girls ask questions." And he would have reached out to change glasses with her.

But as he looked at her—blankly, as I said, and at first a little resentfully, for queering the game just as it was getting started—he realized all at once that the eager question in the girl's voice and eyes was not something that he had paid for. Her interest in locks and gates was not any part of any contract implied.

Somewhat to his own surprise, he smiled at her—a smile of rather a different quality from that with which he had greeted her at the stage door, too.

"Why," he said, "the locks are just a flight of stairs that the ships go up on. Three steps up on one side and three steps down on the other. They go up thirty feet at a step—higher than the ceiling up there. Big ships—liners—battleships."

"What do they have to go up the stairs for?" demanded Daisy, and he told her that, and she said "Gee!" and her eyes fairly shone as she looked across at him. There was no champagne about it either. After that first sip she hadn't touched her glass.

His own eyes kindled, too, as the potent lure of her eagerness drew him on. A stronger lure it must have been than the insolent loveliness of the girl in the feather boa and the large muff, because it made him forget all about her. About, I mean, the girl to whom he had written the note.

HE TOLD her why they had to build the great dam clean across the lower end of the valley, and how they had wondered whether the soft, treacherous land would hold; of the frantic rages of the Chagres River, and how they had tamed and harnessed it; of the deadly fever that had conquered the French, and how, under Gorgas, they had learned to smile at it. Finally he told her of the work of biting out the backbone of a hemisphere—the cut through the Continental Divide at Culebra; and of the cold, slimy malice of the monster Cucaracha, whose first veiled threat had brought despair to the engineers under De Lesseps; how, after lying apparently asleep for weeks, it would come crawling down into the canal overnight and bury a train of cars and a battery of steam shovels. How Gaillard had fought the thing week by week, month by month, year by year, with the only weapon there was—an indomitable patience that never yielded to panic. And how, finally, he had died, as truly in battle as if he had fallen leading a forlorn hope under the colors.

He told her how, when they had had to withdraw the steam shovels to let water in, the monster had come sprawling down in his insolence clear across the cut, and how, with a swarm of dredges like angry bees, they had attacked it all over again—eaten a channel through what, for its inertness, dynamite could not touch. How they were going on—how they would go on—biting away at it until the last ton of slimy clay that could slide had slipped to its position of final repose.

IT WAS a queer place to be telling that story, there in the regular restaurant, with its regular habitués all around applauding the regular music, laughing at the regular sort of jokes. And she was a queer little Desdemona to tell that sort of a tale of conquest to, leaning forward there with her elbows on the table and the regular champagne going flat in its glass beside her hand.

But Desdemona herself never listened to the Moor's stories with a wilder wonder in her eyes, though I'll admit a doubt as to whether Desdemona, when the tale was told, said "Gee, that's great!" and gave her head a hard little shake in an unsuccessful attempt to recover the present again, as Daisy Reddesdale did.

He was lighting a cigarette with the same end in view, and there was silence for part of a minute. Finally:

"What did you do?" asked Daisy. "Did you run one of those dredges?"

HE SHOOK his head. "Repaired them when they broke down," he said, and then he flushed a little as it occurred to him, somewhat unaccountably, that he hadn't yet told her his name. It hadn't been signed to the note that went with the orchids. It seemed almost as if they couldn't both be real—the man who had written that note to the girl who had acknowledged its receipt across the footlights with that slanting, half-contemptuous nod, and the man who now fumbled for his pocketbook and drew out one of his cards and handed it across to her.

"That was what they called my job down there," he said a little awkwardly.

She looked at him very straight and rather intently before she read what was on the card, and when she did the color had flushed up into her cheeks, too. But something in what he said caught, a little tardily, her attention.

"'Was?'" she questioned. "Do you mean you've quit?"

"I don't know," he said. "I've earned a three months' leave. I swore when I left Colon that if I could get any decent sort of a job up here I wouldn't go back."

The girl gave an incredulous little laugh. "That's funny," she said. "If I'd 'a' had a job like that, you couldn't have pried me loose. It's none of my business," she went on apologetically and rather embarrassed, for he was looking at her intently with a frown between his brows, "but I should think you'd want to stay right there until you'd put that hunk of mud on the everlasting blink. Somebody'll stay there, I suppose, till it's done, but—well, it won't be you." She looked away from him and laughed rather nervously. "That's a real job," she concluded. "Gee!"

THEY flickered the lights just then as a hint that it was one o'clock; and the waiter was demonstratively waiting to be asked for the check. But the abstraction into which her last comment had thrown him was too deep to be broken, even by paying it. He would, indeed, have handed over his watch to a regular highwayman without paying him the compliment of full attention.

"It's easier to see that," he said at last, "when you get away from it than when you're right down there in the ditch. Down there you know the grind that begins every day at half-past six, and you know the heat and the wind that comes roaring down the cut all the time and never stops. And you know that you're trying to deliver a little more than a man really can. You feel a long way off—feel that life—a regular white man's life—is going on without you; that nobody knows what you're doing and nobody cares. And at night you get frightened—lonesome."

The word rang a bell somehow. He didn't know why. He'd forgotten that he had used it in the note that went with the orchids, but it waked him up with a jerk—brought him back to the restaurant where the others were making up for their diminishing numbers by an increased hilarity—brought him back to the champagne bottle in its bucket of half-melted ice, and to what had long ceased to sparkle in their glasses.

He thrust back his chair a little abruptly.

The girl had sat back a little, too, but there was no relaxation about her attitude. Every line of her was drawn taut, and her hands were gripping the sides of her chair.

"I mustn't keep you up any longer," he said. "You've got a job, too. And you aren't on leave. I'll get a taxi and send you home."

Still he didn't move to rise and neither did she. But she leaned suddenly forward with wide eyes and parted lips. He was looking at his hands, which showed so brown against the white table edge they were gripping.

"And to-morrow," he said; "to-morrow, if I may, I'll try to say thank you for—for having held out a hand to a fellow that needed it."

"Oh!" said Daisy.

IT'S a funny world, to be sure, and the morals of things are obscure and hard to find. You would hardly have picked her out at first glance for a good Samaritan as she came out on the stage in her feather boa and her large muff. Nor, for that matter, the man in the first row, writing his note and sending his orchids. Yet that is what each of them turned out—so far as the other was concerned—to be. And without in the least meaning to. There must have been a spiritual prophylactic somewhere in the situation.

They didn't waste much time on the puzzle—had something better to think about, I suppose. But ever since I heard the story I've been wondering.

It seems absurd to give the credit to the scene painter. And yet—where else?

The question made her seem more different a girl than ever. He didn't answer it at once — stared across at her a little blankly, and once more set down his glass

Baseball and the Briton

By Henry Beach Needham

***KNOWING** that the Giants and White Sox were to conclude their world tour in London by displaying America's national pastime before the English sporting colony, Collier's sent Henry Beach Needham to find just what impression baseball would make upon the British mind. The American players and their game had been received with vast delight in China, Japan, and other parts of the world. Baseball over this wide realm had been acclaimed as a wonderful sport, but England, with her greater and deeper sporting tradition, and her greater and deeper exclusiveness, was more of a guess. And England was waiting grimly for the test—to "be shown" that baseball was a greater game than cricket. The Americans furnished London a wonderful game. They came—they were seen—and Mr. Needham tells who conquered.*

"Bleacher talk" put this smile on King George's face. "That's right, kill him," yelled an American fan as a batter ducked a wild pitch—and the smile came

WE GAVE the English too fast, too exciting a game! They simply couldn't make out what baseball was all about. Bewildered, puzzled as to what to criticize and how to frame their criticism, yet obliged in self-defense to condemn, they could only repeat as if by rote: "It isn't cricket." No, it isn't. By this time every fan in America is familiar, through the press reports, with the game of baseball played before the King and 27,000 people. From any angle it was a great game, and if one considers it from an inside standpoint the contest—it was not an "exhibition"—was nothing short of marvelous. The teams had been on shipboard from Alexandria to Naples, and had been nineteen days ashore—a week in Paris!—with but one afternoon's practice at Nice. The ground was soft and the ball slippery. Yet these handicaps (scarcely mentioned by the British "critics") had practically no effect on the play. Except for the failure to field a couple of bunts—due to the treacherous turf—which did not affect the result in any way, the game was perfectly played. Indeed every man was keyed up to championship form by the presence of loyal Americans, by the big crowd, and by the interestedness of the King of England.

The King's a Fan—He "Doubted" the Umpire

HIS Majesty sat directly back of the home plate, and when a man scored or a batsman returned to the bench or the men raced in from the field, they could study his face and, seeing plainly that he was absorbed in the play, find that inspiration for superior effort which the home fan ordinarily supplied.

The King came well prepared. In general he understood the game. But he wasn't content with his rudimentary knowledge. "Why did they do so?" or "What's the meaning of that?" were questions he fired at Irwin Laughlin, First Secretary of the American Embassy, who acted as Keeper of the Royal Score Card. This interest was constantly reflected in the King's face, and his approval he showed unmistakably. Also, the humor of the "bleacher talk" did not escape him. When "Buck" Weaver dropped to the ground to avoid a wild pitch, and an American yelled: "That's right—kill him!" the King laughed heartily. Later when Weaver got his base on balls, the King remarked: "Well, he deserved something."

But, most pleasing of all, his Majesty took exception to a ruling of the umpire! A slow, tantalizing ball toward the second baseman was stopped by the pitcher, who slipped on the green turf and got the ball to first well, a little late, "Gus" Axleson of the Chicago "Record-Herald" and I agreed. The King concurred.

"I should doubt that!" he exclaimed to Mr. Laughlin. Thus was the judgment of Bill Klem questioned by George the Fifth.

Notwithstanding the fact that the game in London was on foreign soil, the players suffered not at all from the absence of the fan. True, there were American fans present—the whole American colony of 'em!—and they reeled off the fan's vocabulary from "Play ball!" to "Kill him!" But it is no bit of idle compliment to say that it was the King who nerved the Yankee ball tossers to play better than "condition" and the state of the diamond warranted. In so far as the players themselves were concerned, the King acceptably filled the place of the American fan.

Henceforth, in listing the virtues of his Majesty George V., let his Boswell conclude: "—a true sportsman and a real fan."

An Eleventh-Inning Finish—and They "Didn't Get It!"

BUT the missing fan had the effect of checking the enthusiasm which the exciting contest naturally generated. We Americans found ourselves internally moved to jump up and yell, but externally constrained from such undignified behavior. England saw a game of baseball that would have set the Polo Grounds or Comiskey Park crazy—and England retained its sanity to the last half of the eleventh. Think of the climax!—or let me tell it again in an incident which emphasizes the sudden turn in the tide of victory.

Every American in London, including the players' consorts, demanded a souvenir of the game—a baseball that was actually in play. Three dozen baseballs, no more, remained of the reserve stock. These were put in play in rapid succession, for one reason because the soggy grounds soon made a ball heavy, but more particularly to supply the demand for souvenirs. In the last half of the tenth inning, with the Giants two runs ahead, a White Sox on second, and one man out, Tris Speaker came to bat determined to pull the game out of the fire. All White Sox rooters expected him to do it. Unlike the renowned Casey, Speaker did not dent the London fog thrice and sit down; but he failed to hit safely. Two out!

At this point "Bud" Callahan, son of James J., but more particularly mascot of the White Sox, could not keep back his tears. "Bud" is a fine mascot, therefore a poor loser. As his father remarked: "With nine players like Bud you'd never lose a game." Naturally, Callahan, junior, takes some of his fighting qualities from his dad, who holds the reins over the White Sox, but on this occasion the father of Bud, his hand still tingling from the hearty grip of his Majesty, therefore unwontedly sane, was ready to quit. Yes—Jimmie Callahan was ready to chalk up that game, on which hung the baseball championship of All England, to the Giants' credit. Let the Irish in the vicinage of White Sox Park blush for him!

Tactful is James J. Callahan—he made a speech in London second to none, and he was thinking of the souvenirs he had promised to members of the American colony. So with two out and the Giants two ahead, he grabbed the reserve balls, every one, and passed them out to the relic hunters. Then came the unexpected—that turn of events which makes baseball so unlike cricket. Big Sam Crawford lofted the horsehide into the bleachers of left center, scoring Weaver ahead of him! Think, for one moment, of the effect that would have been electrically produced at any ball park in America. Then turn to this picture: Buck Weaver waving his cap as he crossed the plate, White Sox jumping around in delight, Americans indulging in denatured cheering, the King applauding in kingly fashion—and the English as stolid as the reactionary delegates in the act of renominating Taft! It was the humiliation of a great moment.

The British Enjoyed the Game Anyway

NOW, I don't mean to say that the Englishman didn't show a semblance of real feeling. He did. Although completely encompassed by British avoirdupois, I felt the general tensity of the situation when Speaker and Crawford faced the Giants' pitcher in the tenth. If we eliminate from our conclusions the legion of experts and the vast army of cricketers, each with a slab of oak on his shoulder (which I admit considerably reduces the attendance) the "re-sid-u-um" consisted of good-natured Britons looking for amusement and surely finding it. They didn't know the game and made no bones about it; they asked questions freely, regardless of the incidental display of ignorance. They laughed merrily at the effort of the pitcher to catch the runner napping at first, and at the latter's slide back to the bag. Moreover, they grasped the meaning of a double play, observing: "They got two that time, didn't they?"

As for the center-field "bleachers," Mike Donlin's opinion is truly expert. Mike, you know, was the idol of the bleachers at the Polo Grounds—before the theatrical bug got him. He caught on in less than three innings with the half-shilling bleacherites, and they cheered him every time he returned to the field.

"What were they like, Mike?" I asked him.

"Just like at the Polo Grounds—no different. Except," he qualified, "they lacked the wit of the home bunch. But they don't know the game—nor the lan-

Digitized by Google

guage," he added in excuse of his center-field English admirers.

Right here, before we pass to the lofty experts and the cricket cranks, is the place to observe that if it were not for tradition, precedent, and a haughty egotism which would have brought the blush to Cæsar or Napoleon, baseball would have an even fighting chance in England. As it is, it's an uphill fight, with the promoters of baseball heavily handicapped in one important particular. The game, certainly the game played by major-league players, is too fast for the English mind. To take the sting off this—remember that mental caliber and quick thinking are not necessarily synonymous. Dr. Johnson may have been a fair cricketer—I don't recall—but he never would have "made" a fast ball team, simply because he couldn't think quickly enough.

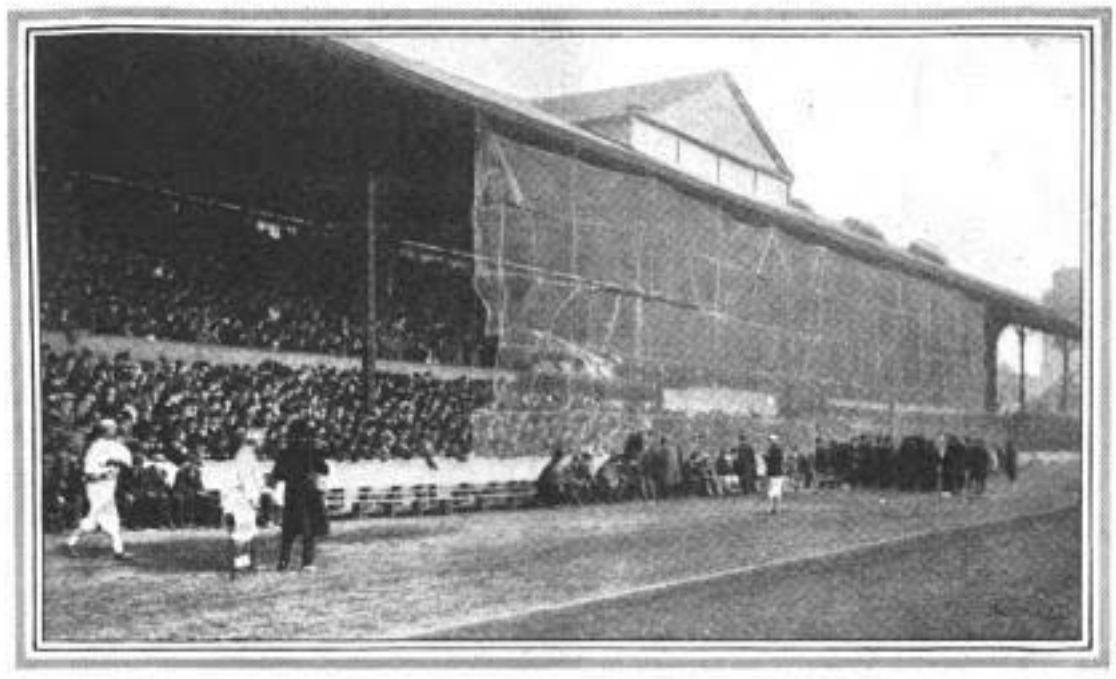
Before the game at the Chelsea football grounds, I might have ventured to opine that experts were pretty much alike the world over. No—not sporting experts of Old England! For the British (using the inclusive form) journalist I have the highest regard. As news gatherers, writers, and above all, highly intelligent, thoroughly cultured men, Fred Grundy, London representative of the New York "Sun," and Hamilton Fife, the globe-dashing correspondent of the London "Daily Mail," have no superiors. Few do I know at home who are their peers. But following an afternoon spent in close communion with the experts and reporters assigned to the "match" by the London dailies, I must confess that Grundy and Fife are probably rare exceptions.

One excellent quality possessed by the American newspaper man is resourcefulness. Assign him to a cricket match or to a game of knur and spell, and although ignorant of the dominating *idea* when he sits down to follow the sport, you may be sure he will know—or give the impression of knowing—all about it in his story of the game. On the contrary, the London sporting writer, an expert in one line (baseball suffered from cricket experts!), seemed rather proud of his ignorance of the primary rules of baseball when he sat down at the Chelsea grounds. If confronted with his ignorance, no doubt he would have replied: "Of course I know nothing about baseball—why should I?"

Seeing Darkly—through a Cricket Wicket

THERE is no malice in what I am saying—merely the distressed cry of a patient soul. I was so unfortunate as to be consigned to the division allotted to the press. Except for Joe Farrell of the Chicago "Tribune," whose attention was given to writing a report in the manner of Charlie Dryden for the "Mail," I was completely surrounded by "pressmen" who saw everything through a cricket wicket—worse than through a glass darkly. I was kept busy explaining. What happened I would relate to an American fan in this way: "Remember, Davie, when you took your aunt and I took my cousin to that World's Series game 'tween the White Sox and the Cubs? Remember how carefully we explained—"

"Yes, and what fool questions they asked afterward!" he breaks in.



Well, I'd far rather take any American girl or woman to a ball game than sit at the side of the most renowned English sporting expert! Which, you'll admit is enough said. But let me illustrate.

Before the King arrived and the game began the experts critically examined a baseball. It was taken fresh from its tin-foil wrapper, and the red and blue stitching on the snowy white cover stood out prominently. One expert immediately discovered the "secret of the curve." He told me so plainly, and nothing I could say was sufficient to dissuade him from exposing the "secret." In his paper appeared next morning this astonishing exposure: "The ball, by the way, is about the same size as an English cricket ball, but it is white, and *seamed quite differently*. It is evidently from this fact that the players derive their extraordinary powers to swerve and curve."

This might lead an English punster to rise up and remark: "Pitching is not what it seems."

Original Observations by New Experts

STILL more remarkable was the "observation" made in print by another expert who handled that new ball. To appreciate the full humor of his deep reasoning, let the fan remember that the turf was soft, hence soon dug up by the players' spikes, and in a few minutes of play the white ball resembled the pigskin on a muddy gridiron. Yet *after* the game this expert attributed the scientific batting to the "white ball—therefore much easier to see."

The screen behind the plate made a vivid impression on the British mind, but its utility was not questioned after a few hot foul tips had smashed against it. The royal box, provided with gilt chairs and banked with flowers, was behind the protection

Like all experts the English differed as to the merits of the batting or hitting. Few thought it at all clever. "There can be little artistry in playing the ball," said one, referring to the batting. "It is a swipe with the full arm; and a neat turn of the wrist which will dispatch a cricket ball to the boundary by a crisp late cut, or the leg glide, or even the full leg hit, or cow shot, finds no place in the game."

The scientific bunt was lost on this expert.

Except for failure to field a couple of bunts, attributable to the slippery ground, the fielding was clean and fast, worthy of the Athletics' "hundred-thousand-dollar infield" in the World's Series. This is not a boast but a plain statement of fact. Therefore it illuminates two other "observations" made by English visitors. The first did not question the cleverness and surety of the fielding, but explained it thus:

"The assistance of the big catching glove [fielder's glove] was held by critics at the game to make the retention of the ball, once it encountered this artificial aid, *little short of assured*."

Could Percy "Act Catcher" to Walter Johnson?

WHICH of course explains the beautiful stops made by Lobert, Egan, Wenner, Doolan, Shaefer, and Doyle. But the best is yet to come. Because Speaker failed to hold the ball after a long run—it would have been a sensational catch had he made it—and because of the two excusable plays on bunts already mentioned, another expert declared that the ball was "frequently fumbled." But with gracious charity the expert provided this "alibi" for the Americans:

"It appeared that the players were pretty well padded, and perhaps that prevented them from stooping well to a low ball."

'Pon my word, that's a literal quotation!

The "Observer" on a religious weekly in the Fiji Islands couldn't have done better.

The "armour" worn by the catcher annoyed the experts from beginning to end of the contest. I tried to explain the necessity of it by emphasizing the speed of the pitching. No impression! Then I ironically said that the only good feature of cricket grafted on baseball, and that a very recent departure, was the wearing of shin guards by the catcher. This was received in silence. Next day in his column I got my answer from the pen of one of the authorities, Moss by name:

"An English wicket keeper would not have a chest guard, a wire guard for his face, and a left glove that practically prevents injury to one hand. I fancy Gregor McGregor or Percy Sherwell would act catcher with cricket implements."

Will Gregor kindly "act catcher" for Christy Mathewson and Percy "act catcher" for Walter Johnson—and then will the sporting writers of England please omit flowers of rhetoric?

The truth is these experts had no idea of the speed or science of the pitching. I know you won't believe this, but Charles A. Comiskey will bear me out when I tell you that a cricket authority, with a camera man in tow, came to the hotel the day before the game and seriously proposed to take snapshots for his paper of the outdrop, the jump ball, the fade-away, and the spitball. When Mr. Comiskey, hiding his smile as cleverly as a catcher conceals his signals, advised the enterprising sporting writer that this would not be an easy undertaking, it was with great difficulty that the enterprise was halted. Evidently the expert had in mind that a curved ball began to describe an are from the moment it left the pitcher's hand—something that could be photographed as readily as a balloon drifting idly down to earth. I confess I am not an expert on "bowling," but if it is anything like an English expert's idea of pitching, it's a wonder to me that a clever batsman ever retires save from fatigue or ennui.

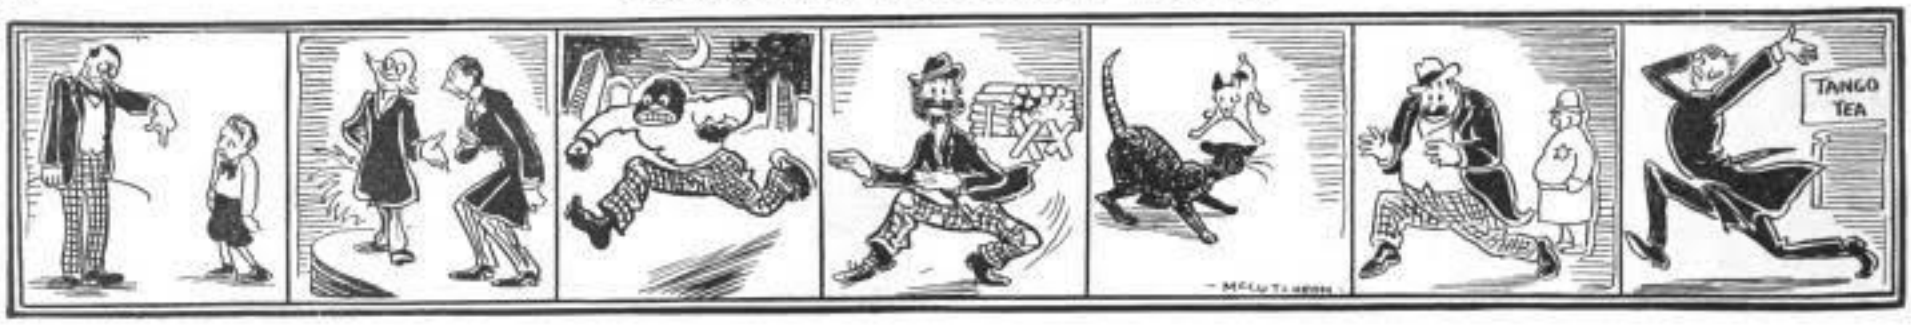
Baseball and the Tea Interval Collide

REALLY, I don't mean to be hard on the English scribes. But after you have explained the game for fully twenty minutes, with the help of remarkable pencilled diagrams, it is rather discouraging, at the end of three innings of play, to hear the English reporter say to you:

"Why—nine men are playing against one?"

The one? Why—the man at bat.

You must not forget when you read this, that throughout the period of explanation on my part and of occult observation on the English expert's part, I was intensely interested in a thrilling game of ball. It's a fact that one may see one hundred major-league games at home without witnessing so acutely exciting a contest. Imagine therefore, if you can, my awful predicament. Lobert had just hit the ball into the bleachers, scoring a run ahead of him and tying the game. You will admit it was a feverish moment. Notwithstanding it was the precise moment chosen by the man on my left, an expert to declare in my hearing:



"I think there will be an interval now."

An interval? My mind was on baseball and it was with difficulty that I (Continued on page 26)

"Nothing but glorified rounders," was the verdict of the English experts upon the claims of baseball as a sport. The photograph below is that of a game of rounders. Do you find any relationship?

Joy-Riding With Progress

"Spring Is Here"

(From the Almanac and Other Fiction)

And now comes Spring with such sweet eagerness
As fills the son who creeps, with shufflings sad,
To the stern father with the truculent pad;
As thrill the feet, snarled in a hopeless mess,
Of the pale senior rising to address
The admiring throng with his fast fading speech;
As lures the darky toward the graveyard screech
And brings the tramp, the hacksaw to caress.
As eagerly comes Spring in flowered dress
As comes the Maltese at the terrier's call;
As runs the uncaught grafter to confess;
As leaps the preacher for the tango hall.
Ah, may foul fortune dog me with such vim
As Spring displays in chasing winter grim.

Then Tammany Will Learn Manners

WHEN lovely woman gets into politics the first thing she does is to teach it manners. A Chicago girl served as election judge during the recent registration, and one of her fellow judges, not realizing the change which had crept over affairs, unleashed a little of the language which is so popular when a few strong-armed men get together to settle election details. For this he was promptly and explosively fired by the election board. We should like to see New York State adopt sexless suffrage, if only for the pleasure of watching Tammany drape its tail neatly over its paw and try to learn to purr.

There Wasn't Room

AFTER reading the list of superlatives claimed by American cities and towns, and published recently in this column, a reader of COLLIER'S who lives in Ashtabula, Ohio, rises up in indignation to inquire why there was no mention of the fact that Ashtabula is the greatest ore-receiving point in the world!

The sole reason for this omission was lack of space—which lack also crowded out Rock Island, the home of the largest fraternal order in the world; Johnsonville, Tenn., the Ashtabula of the peanut-shipping trade; Elgin, Ill., the international watch-making metropolis; Belle Plaine, Iowa, which once had an artesian well which was worse than the Dayton flood; and Greencastle, Ind., whose output of Methodist bishops through Depauw University has been unrivaled and unapproached. The list is as long as the post-office directory, but we hate to omit any worthy claimant and shall gladly give credit upon application.

Who Is Boss?

WHEN the experienced traveler passes a farm he looks over the buildings carefully and from their relative size determines whether the husband or the wife issues the ukases about the place. If the house is small and mean, and the barn is a mammoth, well-painted affair with a cupola and a rooster over it, that farm is bossed by the husband, and the woman probably gets up the dinners for the harvest hands without help. If, on the other hand, the house is large and neat and is fitted up so recklessly with conveniences that it is more comfortable than the barn, the wife in that family has a mind of her own and a method of expressing it to her husband, and of reiterating, dwelling upon and embellishing her desires, which is as likely as not to make him trade a fat pig for a washing machine to secure peace.

This is the old country saying, and, thanks to the automobile, the same method of judging the comparative influence of husband and wife in the home can now be brought into the cities. If the husband owns a rakish runabout and rams it merrily through the country as well as other things while his wife comes downtown on the street car, that home is run by the man, at least until such time as the sheriff may take it over. If, on the other hand, the wife comes downtown in one of those portable parlors known as an electric, driving it haughtily through the traffic cops, while her husband sits wearily by her side and tries to find as much excitement in the performance as he would get from swatting flies, the woman in that house is queen, general manager, judge, jury, and supreme court. There are comparatively few electric cars in this country, and almost none in Europe.

The Very Poor Golfer's Corner

THE APPROACH

NOTHING in golf is so difficult as the approach, unless it may possibly be the putt, the drive, and the bunker shot. Men who have driven 250 yards steadily without failure for months have been known to approach a difficult hole for a half dozen strokes and then to ruin a perfectly good sapling by wrapping a mashie around it.

The approach, for the expert golfer, is a stroke involving great concentration and nerve restraint. Fortunately it is not a serious business for the dub. This is because his approach is more gradual. He has three or four strokes in which to do what the expert must accomplish in one. But for all this some dubs worry about approaching, and thus lose much of the pleasure of the game. This is unfortunate and unnecessary. Quite as bad golf can be played without worry and far more amusement can be obtained.

We will ignore the petty details of holding the club. Nothing is more profitless than to spend the bright afternoons of a perfect summer matching your wits against the natural depravity of a mashie or midiron. The way to approach is to make a game or diversion of it. Forget the bare duty of approaching in a straight line to the hole. Imagine the putting green to be a hostile camp and try to approach as the Indian would—stealthily, unobtrusively, and from the least expected side.

When you have made a warrior's enterprise of the approach you will presently find yourself aiming carefully for the lower side of the hill to the left where you will be hidden by trees from the garrison at the cup; or you will be choosing the bushes at the rear as the most likely point from which to attack. And you will put your whole soul into the task of getting into these vantage points.

Perhaps you will fail. Failure will lead you to the green where you must hole out ignominiously before the whole world. But success gives you many pleasant opportunities. There is nothing more pleasant than to pitch the ball on to the green from thirty yards in the rear, and then reprove haughtily the man behind who has played up under the impression that there is no one in sight.

QUESTIONS AND ANSWERS

A. C. B., Chicago—Our course crosses two creeks and a small lake, and I have been playing in wading boots. But the golf committee object. They say it attracts attention and throws the other players off their game. Shall I stick to the boots?

ANSWER—*Counterirritants are efficacious. Try a bathing suit for a week. The waders will be hailed with relief after that.*

C. G. G., Palm Beach—When I am putting, my caddie never lifts the flag until I have putted three times. What if I should hit the rod some day and spoil a good putt?

ANSWER—*Accidents will happen, but it is best to trust your caddie. He wants to save you the mortification of missing the cup and his feet too.*

Reckless, Pittsburgh—My friend and I have an unfinished game because of a dispute. I approached under the clubhouse porch. It is not specifically out of bounds because no one has ever accomplished the feat before and he wants me to play the ball out from where it lies. Which is right?

ANSWER—*You have played the nineteenth hole by mistake. Go back and play the eighteenth.*

Those Were Good Old Days

AS THE weary-eyed seeker after truth plows through the dusty best sellers of the extreme past, he discovers much mislaid and startling information. A little journey through Saxon history recently unearthed the fact that in those early English days mild offenders were punished by being deprived of warm baths. Serious offenders were not allowed to bathe at all, while deep-dyed villains who mocked the saints and shot dice in the king's highway were compelled to take cold baths.

There was a time then, it seems, when the man who took cold baths didn't make the rest of mankind tired and sad by alluding to the fact in countless indirect and ingenious ways. There were some very attractive things about the good old times.

Overlooked

THE claim of railroad executives that this Government has not the financial genius to operate the transportation systems of the country is founded on fact. The Government itself has proved this. It is lamentably dead and decomposed when it comes to recognizing real opportunity.

There is, for instance, the tunnel between the Capitol and the Senate building. It is a Government enterprise. A car runs from building to building, conveying Senators and other

Madame's Mexican Mix-Up

By George Weston

ILLUSTRATED BY MAY WILSON PRESTON

He uncorked it with a great show of strength (a pleasing pantomime appreciated by none but madame)

MADAME called *him* M. Frou-Frou.

(Loud applause from the faithful, and cries of "Yes, yes! Tell us about that one!")

Merci, mesdames. And merci to you as well, messieurs. Rising, then, to a labor of love, I repeat that madame called him M. Frou-Frou because of his whiskers. And, ah, he was the bold and bullying villain with a complexion like mahogany and a beard which was the complement of Mona Lisa's smile—haunting, captivating, sinister, fascinating, mysterious: anything you like!

Every day for a week, at half past one precisely, he stalked into the Restaurant Dejoie on West Twenty-sixth Street, and seated himself at the table by madame's desk with the air of one who has sovereign rights. And every day from half past one to three, when he wasn't either eating or using the telephone, he was practicing all the wiles of man to break poor madame's heart with the beauty of his foliage. In vain croaked Doctor Faust "Good night! Good-night!" In vain M'sieur Dejoie frowned frightfully from his comptoir opposite madame's desk. Day after day M. Frou-Frou inclined his features toward madame and ogled her from behind his black lace curtains like a conquering son of a Don Juan who gloried in his power; while, as for madame, every time M. Frou-Frou uttered a particularly killing sentiment, she glanced around the dining room and winked at a secretly appreciative audience.

"But, m'sieur," she laughed upon the day in question, "how can I fly with you, when I have two hundred pounds or so to chain me to ze restaurant?"

"What? What?" demanded M. Frou-Frou, appraising her with eyes that were overbold and black. "You weigh two hundred pounds?"

"It is ze weight of M. Dejoie, my husban'!" she replied with a warning tilt to her chin.

"Bah! He!" scoffed M. Frou-Frou, heeding not, caring not. "And who is he? A restaurateur! A caterer! A cook! You compare him with me? Por Dios! Wait!"

HE LOOKED cautiously around from behind his whiskers, as a villain on the stage will sometimes peep around the edge of the portières to see if all is clear upon the scene of crime. Then from his pocket he produced a card, prettily printed in red, black, and gold. In the upper left-hand corner was a coat of arms and underneath it was a Spanish title which required two lines of a very fine script to express itself.

"Madame," said he, "my card!" And he applied himself to his coffee with a noble gesture which was evidently intended to tell upon the mind.

"M'sieur, then, deals in huile d'olive?" asked madame, looking up from the card with her innocent look. "Or in vin d'Oporto, perhaps? Or ze famous Spanish oignon?"

M. Frou-Frou nearly choked in his coffee, and for the second time looked around with his dramatic air of mystery. "Listen!" he whispered, inviting her ear to the cage. "Listen! Sh! A salesman—me? Maledictions, no! Sh! I am a secret agent!"

"Morbleu!" whispered madame.

"H-h-h-h-hem!" coughed he.

She paid him the tribute of a long, lingering look then she bent her ear a little closer, thinking: "At ze lowest, I will pump him dry!"

"I am," he whispered in accents of grandeur, "a secret agent of the Government Mexican! A secret agent on a mission of importance!—of the very first rank!"

"Que diable!" whispered madame.

"H-h-h-h-hem! H-h-h-h-hem!" coughed he.

Again she encouraged him with her eyes and again she bent her ears for more, the French in her vibrating to these whispers of court intrigue and the woman in her alive with curiosity.

"So madame perceives!" he said, fluffing his beard. "In Mexico I am one of the great most high! If the present head of the Government falls indeed, it is even I who may take his place! In that event the woman I love will become one of the grand characters of history—a Cleopatra—a Pompadour—a Du Barry, in fact!"

At this the Staten Island element in madame asserted itself, but still she preserved that innocent look like a baby's.

"But ze ladies which you mention," she murmured, "are zey not dead ones?"

"Dead ones!" protested the other. He leaned forward with such subdued violence that even his beard seemed to stand in awe of him. "If I am made the Emperor of Mexico," he whispered, "you think my wife, the Empress, would be a dead one? Ha! Listen! My mission here is nearly done! To-morrow I sail for Mexico! Come with me!"

"Ze Emperor Frou-Frou is like all Frenchmen and Spaniards," thought madame with a tolerant smile. "If zey do not make ze love, you know zey are ill!" And aloud she said: "But, m'sieur—" And, lowering her voice to a murmur which would have drawn confidences from a brass statue: "You haven' yet told me your secret!"

WHEREUPON M. Frou-Frou smiled shrewdly down his nose and made much of his beard.

"Of course, if m'sieur has no secret to tell—"

Whereupon the future emperor winked one eye.

"Or if he doesn' want to trus' me wiv it—" added madame with a sniff; and staring at his capric trimmings, she secretly cried in her heart: "Na-a-a-a-a!"

Whereupon M. Frou-Frou winked the other eye.

"On' the day you sail with me for Mexico," he slowly answered, with just that touch of condescension which causes frying pans to smite men's heads, "I will tell you my secret! But not till then! But—not—till—then!"

"But, m'sieur," protested madame again, "you forget my husban'!"

"Your husband! Bah! For me he has never existed!"

"Zen," said madame, that warning tilt more than ever in evidence, "you forget my reputation!"

"Your reputation!" stormed the other, unwisely carried away. "Madame sits all day in a public restaurant—"

At this point, fortunately, M. Frou-Frou was called to the telephone. "It is my own fault," though madame. "I might have known zat whiskers like his are not to be trust'. But to say such t'ings to me! Yes, assuredly, Marcel shall bounce zis noble emperor an'—Ma foi! What's zis?"

On the other side of her desk a long spiral of paper had been thrust forward and it was bashfully wagging away at her like a little dog's tail.

"One encourage' ze uzzer," despaired madame. "I am getting to be a regular mush sandwich!" She snatched the paper and, spreading it out on her desk, read the following spirited line:

"I will pull his nose if it give you pleasure."

THIS prospective nose puller was tousle-headed, swarthy, with a young and passionate expression, and every time he moved his head his bangs tossed to and fro.

"M'sieur address' to me zis billet-doux?" asked madame, frowning at him, and to herself she whispered: "Anuzzer Mexican! What is zis which is going to happen?"

"Ah, señorita, forgive me if I offend," he earnestly whispered, "but I saw him from my table. He is a bad, bad 'ombre. I know him from old in Mexico."

"Oh-ho!" said madame, contemplating him with growing interest. "You follow him here, perhaps?"

"I follow him; yes, yes."

"Zen you, too, are a secret agent, perhaps?"

"So he told you *he* was?" asked the young man after a pause.

"Oh, he has tol' me many, many t'ings," she answered, hastily glancing at the back of M. Frou-Frou in the telephone booth. "But what is his secret mission, m'sieur? Do you know so much?"

"DO I know!" The young man made a gesture which shook him to the bangs. "Por Dios!" said he. "He has come to New York to buy rifles and cartridges to shoot down honest patriots who are struggling for their rights!"

"Oh-ho!" said Madame again. "Then you are a hones' patriot?"

"I am here to watch him," nodded the other. "But that clever devil, he is too much for me. They sent me because I speak United States, but—"

"Yet why should you want to watch him?" she asked. "To protec' yo'ng ladies in distress?"

"Ah, no, no, no! But the shipment of arms from the United States was forbidden at Washington. And if I find out where he has them, they could all be seized!"

"An' you t'ink he has zem, all right?" asked madame thoughtfully.

"Oh, I know it! I know it so well! But he has them hidden away and, do my best, I cannot find where. And some bright day he will sneak them on to a waiting steamer, and then—"

"But—ciel!—why don't you follow him an' find out where zey are?"

"I have tried and tried—but, oh, he is a clever devil! He goes down into the subway—you know?—and stands in a car near the door. Then, when the guard is shutting the door, he springs out at the very last moment—springs out laughing in his evil, black beard!—and I am left, a fool most young, lamenting!"

"An' nobody knows where his guns an' bullets are store'?"

"Ah, señorita, that is his grand, grand secret! He has probably changed their address from one place to another half a dozen times to throw everybody off the track. And they are such innocent-looking boxes, who would suspect? The cartridges may be labeled 'Soap.' An' the guns may be marked 'Stovepipes.' Then when he has chartered his boat and is ready to sail, these innocent-looking boxes are taken to the ship, and then—Buenos noches, señorita, I assure you!"

"He sails to-morrow," mused madame.

He looked at her with a growing melancholy that you could have leaned against as though it had been a lamp-post.

"Then I have lost," he mourned in lugubrious tones, "and my poor friends, who relied on me—"

"Wait, wait, m'sieur!" whispered madame hurriedly. "There may yet be a way—who knows? Ha! M'sieur Frou-Frou hang' up ze receiver. Take care!"

Obeying her gesture, the young man quickly seated himself at the table to her right. He had just managed to hide his face behind a newspaper when M. Frou-Frou returned to his chair on her left.

"HOW can I get him to tell me his grand secret?" Such was madame's consuming thought as she alternately attended to her line of customers and bent her ear to the sinister eloquence of M. Frou-Frou. "If I could on'y hypnotize him, waving my hands before zose jet-black fringes an' making him tell me all of ever-ting!"

But here—hélas!—poor madame sighed. "No, no," she murmured. "I cannot hypnotize him—or at leas' I cannot hypnotize him *so!*"

"If I could on'y coax it out of him!" she pondered, "an' save ze lives of zose hones' patriots who are struggling for zeir rights!"

But here again—hélas!—madame at once perceived

Digitized by Google

the futility of such an enterprise: a perception sharpened to a razor edge by that great honing stone which is sometimes called the world. "Yes, yes," she sighed. "Even if I did coax it out of him, he would tell me a fairy fiction wiv his tongue stuck in his cheek!"

Another thought presented itself. "Suppose I went wiv him to-morrow—to ze steamer—an' jus' as soon as we reach ze wharf, I summon ze gendarmes to arrest ze ship!"

But the thought retreated before the sensuous stare with which M. Frou-Frou was even then regarding her. "No, no," she sighed. "Not for one single minute could I trus' myself wiv him," and, starting on the proverb, "When one plays with tar—" she suddenly broke off: "Grâce à Dieu, I live in ze States United where ze men are clean!"

SHE disposed of half a dozen customers, chatting gayly for a minute with each, and then she returned with interest renewed to the problem which confronted her and flanked her on both sides.

"A clever devil, yes," she thought, listening to his whispers. "But, oh, how I would like Marcel to bounce him! How I would like Marcel to bounce him on his bean!"

But here once more—hélas!—there was that sorrowfully banged young patriot to be considered, to say nothing of all those other struggling patriots in Mexico as yet unshot and depending on madame to save them. And then the added attraction of conquering with her wits this black-bearded Beelzebub beside her! Ah, yes, that was an item most distinctly worth while! Besides, she owed him that.

But how? But how? "Voilà le hic!" breathed madame. Or, as Shakespeare would have breathed it for her: "Ay, there's the rub!"

She glanced at the clock. It was a quarter to three. In fifteen minutes, if M. Frou-Frou followed his usual procedure, he would depart, this time probably never to return.

He had finished his fromage Roquefort and was giving Louis his customary after-luncheon order for a pint of Riesling. Already he had taken from his case one of those black cigarettes which were madame's aversion. Ah, mesdames, if you ever smell one! Madame turned her head away to escape the first cloud of smoke and stared thoughtfully out of the window. From a truck outside a consignment of wine was being unloaded into the cellar below, and the moment madame's eyes fell upon that truck she gave a tableau vivant of those immortal lines:

"I started once, or seemed to start, in pain
Resolved on noble things, and strove to speak
As when a great thought strikes along the brain
And flushes all the cheek."

And simultaneously she had slid from her stool and was hurrying to the pantry, where she met Louis coming out with a small bottle of Riesling.

"LOUIS!" she breathlessly whispered, and she backed him in again.

The prince of waiters took two steps to the rear and regarded her with that magnificent impassivity for which he is famous.

"Yes, madame?"

"That is M. Frou-Frou's bottle?"

"Au vrai, madame."

"Then wait! Get a pint of champagne—of ze best! An' pour it in an empty Riesling bottle! An' serve it to M. Frou-Frou as zo it were Riesling itself! You understand?"

"Perfectly, madame!"

She returned to her desk and almost immediately Louis followed her, bearing the false bottle. He uncorked it with a great show of strength (a pleasing pantomime appreciated by none but madame), and after he had placed the bottle before M. Frou-Frou he discreetly disappeared.

"It is very simple," M. Frou-Frou was whispering as he poured out the wine. "You shall meet me to-morrow afternoon, wherever you wish. I will have a taxicab, and—" He lifted the glass, and, placing it down again empty, he was about to resume his remarks when a subconscious sense of supersatisfaction seemed to strike him, and he rolled up his big, black orbs as an intelligent duck rolls up its eyes at thunder. "Ah!" he breathed with a rapturous sigh, and he looked at the bottle before him. "That is an excellent wine," he said, and he poured out another glassful.

"It is a new brand we are trying," said madame in a faint voice—"a sparkling Riesling. M'sieur likes it?"

"A most excellent wine!" He verified his judgment. "No, never before have I tasted such wine at twenty cents a pint. Where's that waiter? I must have another bottle of this—a quart!"

Madame's French-American sense of economy made her wince a little. "At $3.15 a quart, wholesale, zose hones' patriots t'reaten to struggle expensively," she thought.

Oh, but it was a huge affair, that hogshead, and when the young man stood erect in it, nothing was visible but his face, his joy, and his bangs so tossed with emotion

And aloud she added, almost sternly: "It on'y comes in pints, m'sieur!"

"An excellent wine for the money," he thoughtfully repeated after he had given Louis the order.

MADAME waited, breathless, while M. Frou-Frou sampled the second bottle.

"Have you," he asked in studied carelessness, "much of this wine in stock?"

"About t'ree hundred bottles, I t'ink," replied madame, with a carelessness even more studied than his.

"Ah, yes, three hundred bottles. But, of course, if I take them all, you can make a better price than twenty cents?"

"For an order so much," murmured madame, "I could make m'sieur a price of—yes—fifteen cents a bottle—wiz five dollars extra for bottles and packing, of course."

"Of course. Of course. And when could you have it ready?"

"Oh, in half an hour, m'sieur." She dropped her voice to a serious key. "But first I mus' tell you somet'ing about zis wine," she said. "It is a wine ver' sparkling, an' never—no, never—mus' it be rudely handled. If it is bump' unduly, or knocked around, ze bottles break. We have to be mos' careful!"

"It will have excellent care," nodded M. Frou-Frou. "And shall I pay you for it now, or—"

"Any time will do, m'sieur. I pride myself I know when a man can be trus'."

M. Frou-Frou closed his eyes for a moment and seemed to smile behind his natural ambush.

"Very well," he said. "My own truck will call for it in half an hour. About our other affair, I shall see you in the morning. And in the meantime—"

HE PAID his check, tried to press her hand, gave her a smile that closely resembled birdlime, and departed as the month of March comes in when it goes out like a lamb.

"Yes, yes!" muttered madame, her mouth tightening, "a clever devil! But maybe yet he will take a lesson in devilishness from Gaby Dejoie!"

And, sliding off her stool for the second time that afternoon, she turned to the young man on the other side of her desk.

"Come, m'sieur!" she briskly exclaimed, "I have somet'ing to show you!"

SHE led the way down into the wine cellar where Emile and Jules were taking the bottles from a large barrel which had just arrived from Havre.

"Look, look, m'sieur!" said madame with eyes that sparkled brighter than any Riesling. "You see ze pigshead—"

He looked at the hogshead attentively, all eyes to see, all ears to catch the meaning that already peeped out from underneath the inflection of her words.

"Your honored compatriot has jus' purchase' t'ree hundred bottles of wine. La-la-la! So I shall pack t'ree hundred empty bottles in ze big barrel, an' say it was our mistake. You begin to see ze points, m'sieur?"

"Yes, yes!" he muttered, still staring fascinated at the hogshead.

"You say his bullets an' guns are in boxes which no one could identify. But a pigshead so large as zis—ciel!—why, one could see it from ze Battery to ze Bronx!"

"Ah, señorita!" he exclaimed then in a diapason rich with rapture. "You are to me as a light in the ocean!"

"An' I tol' him," continued madame in triumph, "zat he mus' never bump ze case, or handle it too much, or ze bottles will break. An' I t'ink," she added in rare delight, "I *t'ink* he will take it direc' to ze place where his bullets an' guns are stored, for zey all go down to Mexico togevver, an' he leaves to-morrow! You understan'? You understan', m'sieur?"

"Ah, señorita!" he exclaimed again, with the air of a man who is rapidly getting his stride, "you are to me as a star in the sky!"

"So all you have to do is to follow ze barrel!" beamed madame. "An' when you see where he has hid zose t'ings, every gun an' every bullet must be seiz'. Zen zose poor hones' patriots will not be shooted, an' zeir wives an' children will not be lef' wiv no one to provide—"

"Ah, the great heart, the great mind of señorita!"

"So Rosie tol' her momma!" laughed madame, not ill pleased. "But now we mus' hurry. His truck will call in less zan half an hour. You mus' get a taxi an' follow ze pigshead at ze distance of discretion. He cannot dance ze tango in an' out ze subway wiv zis! Wherever it go, you follow it—"

"No, no!" cried the young man, his voice palpitating with inspiration; "I shall go *with* it!"

"But, m'sieur," objected madame, "such is impossible. You would be seen!"

"No, no!" he cried. "I will go *with* it—INSIDE IT!"

"Mon Dieu!" muttered madame.

"Por Dios!" cried he, and as Jules drew the last two bottles from the hogshead, he sprang over the side. Oh, but it was a huge affair, that hogshead, as large around as an old-fashioned alderman immediately after rising from an old-fashioned clambake—a hogshead of girth, of might, and of majesty; and when the young man stood erect in it, nothing was visible but his face, his joy, and his bangs so tossed with emotion.

"But will not m'sieur be hurted when ze pigshead is roll' on his side?" asked madame.

"With straw you shall stuff me!"

"An' how will you get out?"

"With a hammer you shall supply me!"

"But if it is dark in ze warehouse—"

"With a lantern you shall equip me!"

"Mon Dieu!" muttered madame.

"Por Dios!" cried he.

"Get a pint of champagne — of ze best! An' pour it into an empty Riesling bottle! An' serve it to M. Frou-Frou"

IT WAS a situation which deeply appealed to Mme. Dejoie—a situation with a note that echoed in the depths of her heart. Here were drama, movement, mystery, the salvation of struggling patriots, the triumph of virtue, and—best of all, perhaps—a swift, staggering swat for the villain. But time presses, mesdames! Tempus fidgets, messieurs! "Quick, Jules, quick! An' you, Emile, as well! Straw! Un martel! Vite! Vite! Une lanterne—"

They stuffed him carefully into place, leaving his arms free and boring a bunghole with the bung inside ingeniously equipped with a nail so that the prisoner could remove it at will whenever he wished to take the air or enjoy the scenery. And ten minutes later, when madame watched the hogshead depart on a slowly moving truck, the bunghole seemed to open and shut—once, twice, and again.

World's-End

Chapter XIX—The Outcome

By Amélie Rives

(Princess Troubetzkoy)

ILLUSTRATED BY ALONZO KIMBALL

OWEN closed his study door and turned to Patton: "I needn't tell you that it wasn't a horse's hoofs did that work."

"No! I saw that," said Patton quickly.

Owen looked at him.

"I did it," he said.

Patton returned his look, unmoved.

"Yes? Doubtless he deserved it," he replied as quickly as before.

"At first," continued Owen, "I didn't strike to kill, but afterward I meant to, I think. At least, I didn't care whether I killed him or not. No—" he added in a firm voice, "I meant to kill him. Will he die?"

"Sit down, old man," said Charles Patton.

Owen obeyed mechanically.

Patton went on speaking in a quiet, professional voice.

"I can't tell anything until he comes out of this stupor," he said, also taking a chair. "It may be very serious—it may only be a matter of careful nursing. By the way, did you have Miss Carney and Miss Lee phoned for? The case will need a night and day nurse."

"Yes," said Owen. "I sent Jonathan to attend to it at once. They will motor down this afternoon."

"Good. That compound fracture of the right arm is going to be troublesome. I don't think there are internal injuries, but it's all a matter of guesswork for the next twenty-four hours or so."

Owen got up rather slowly and went to the window. After five or six minutes Patton rose and followed him.

"Don't 'eat your heart,' old man," he said.

Owen made no reply. After a while, without turning around, he said: "If he dies, I shall consider myself legally answerable."

PATTON scowled to himself, thrusting out his heavy underlip and staring at Owen's broad shoulders, which half filled the window.

"Quixotism is a rum thing," he remarked finally. "It deals chiefly with the tender conscience of the quixotist and is apt to leave out other people."

"I can't sneak out of a just debt of manslaughter, Charles," said the other dryly.

Patton said: "Do you mind if I light a pipe?"

"No. The matches and tobacco are in the usual place."

Patton lighted his faithful briar and then, after several considering puffs, said slowly:

"You know there are ways and ways of bearing a thing without having recourse to 'sneaking out of it.' In my opinion, the man who bears the burden of a fault—"

"Manslaughter is not a fault—it's a crime."

"Well, say of a crime then—the man who bears such a burden in private when no good whatever can be done by accepting public ignominy—who bears it alone, rather than cover his family with the reflex disgrace of his punishment—well, in my opinion, that man is a better citizen—more a man, in fact—than the purist who gives himself up to man-made justice for the assuaging of his own conscience."

"Charles, that is sophistry, and you know it."

"I beg your pardon. I know it's hard sense."

"He was defenseless and I struck him. I had a stick in my hand that would have broken an ox. I held him up and smashed him like an eggshell—my brutal strength against his weakness. If he dies, I am answerable to the law—and I shall answer."

"There are things in law called 'extenuating circumstances.'"

"Yes. They will do me no good."

PATTON thrust back a half-burned log with his foot as though he hated it. He went on, though he knew that he might as well beat with a feather against a wall of iron. What dark, evil mystery lay behind this appalling disaster he could not even vaguely surmise, but that it was very dark and very evil he felt assured.

The circumstances that had caused Owen Randolph to break another man in pieces, not only the law but the gods themselves might well deem "extenuating."

"Look here, Owen," he said in a voice of sweet reasonableness, "as man to man—as brother to brother, I may say—tell me this: Do you honestly consider that to rot out the better years of your life in a penitentiary would really avail anything with gods or men? Do you honestly believe that—in case—well, in case of Richard's dying—that it would soothe Sally, even if she knew the facts, which mercifully she does not, you tell me; that it would assuage or comfort her in the least to know that her only brother was a convict? [He pressed it home.] And your young wife—your child. What of them? And the old name—your father's name?"

She was lying on the sofa, the little lace pillow pressed against her cheek, when Dr. Patton entered

Owen turned a dreadful face on him.

"Forgive me," he said thickly. "I find I can't discuss it."

He went quickly to the door and was gone.

Patton's teeth nearly met in the mouthpiece of his pipe. He started toward the door, then stood stock-still, scowling at it from under his shaggy brows. His face worked. He put his hand over it and stood a long time in the darkening room without moving. Then he strode forward, jerking open the door as if he were wroth with it, just as he had kicked back the fallen log, and went up to Phœbe's bedroom.

SHE was lying on the sofa, the little lace pillow pressed to her cheek, gazing at the gray cornucopias of the carpet.

Wizzy lay in the curve of her waist, and as Patton opened the door looked up eagerly, working his black nose, dry with age, in search of the beloved aroma he so yearned for.

Phœbe sat up as Patton came toward her and gazed at him with those strained, dilated eyes that he had noticed just now in the hall.

He went over to a carafe of crystal that stood on a table near the bed and, pouring out a glass of water, brought it to her with two little white pellets, which he handed her, all in silence.

She swallowed them with the sweet obedience which made her so touching in her times of trouble.

"Now," he said cheerily, "lie still a little longer. I'm going to sit here by you and pamper Wizzy till those little chaps get their work in."

After five minutes had passed, and still he sat there silent, she said timidly: "Doctor Charlie—"

"Bless me," he said, smiling and putting out his hand, "I was hoping you had dozed off."

"Oh, no!" she said. "I couldn't sleep. I don't feel as if I should ever, ever sleep again."

"You don't, eh? We'll see about that later on. What were you going to ask me?"

"About—about—Owen. Where is he?"

"I think he went for a walk," said Patton with kind mendacity.

She sank back with a little resigned sigh that struck him as piteous. Presently she said: "Doctor Charlie, has he told you? Did he tell you that I—"

"He told me about nothing but his own part in the matter," said Patton quickly.

"Ah—" said Phœbe. Her face began to quiver. She turned her head against the little pillow to hide it.

The door opened. Phœbe started violently. The desperate jerk of her whole body as it lay prone on the sofa made Patton think of a just caught fish jerking for breath on a bank.

"Hello!" he said cheerily, rising. "Here's Owen now."

He took out two more little pellets and twisted them in a leaf torn from his prescription book.

"Just take these in another hour," he said. "I must be having a look at my patient. See that she takes them, Owen."

"Very well," said Owen in his level, lifeless voice.

Patton went out. Owen locked the door, and when Phœbe heard that sound a fierce wave of mingled terror and joy broke over her.

"Now—now—" she thought, "he's going to kill me, too!"

She lay with her eyes shut, waiting, and she seemed to be swaying back and forth through space in a great swing. Then she felt his cheek against hers on the little pillow, and one of his arms went over her.

"My heart—my little heart—what have I done to you?" he was whispering.

Phœbe had a sensation as though she had fallen from an immense height upon a cushion of air that kept her from being crushed.

"My sweet—my winsome—what have I brought on you? What have I brought on you?" the hoarse, anguished whispering went on. And now his face was buried on her breast, his arms held her to him as though they would drag her back from some awful abyss.

Light struck her like a blow.

"*He didn't believe him,*" whirled the wild revelation. "*He didn't believe what Richard said.*"

ONLY at a place "run" as Owen ran World's-End could the story of Ironmonger's savaging Richard have been plausible for a moment, but during the Christmas holidays the servants there were always given an unusual amount of freedom, and on that day every groom had been absent from the stables since nine o'clock in the morning. David, after driving his master to Crewe, was to stable the bays, feed them, and then also take to himself a leisurely afternoon.

It was because he was aware of all these facts that Owen had thought of fixing the disaster upon Ironmonger. He knew that David's devotion could be trusted, and when he left Patton in the study he sent Jonathan to tell David to meet him at the foot of the western lawn.

The white man and the black man stood facing each other in the winter twilight.

"David," said Owen, "I am going to give you a proof of the entire trust that I have in you."

"Yessuh," said the taciturn negro.

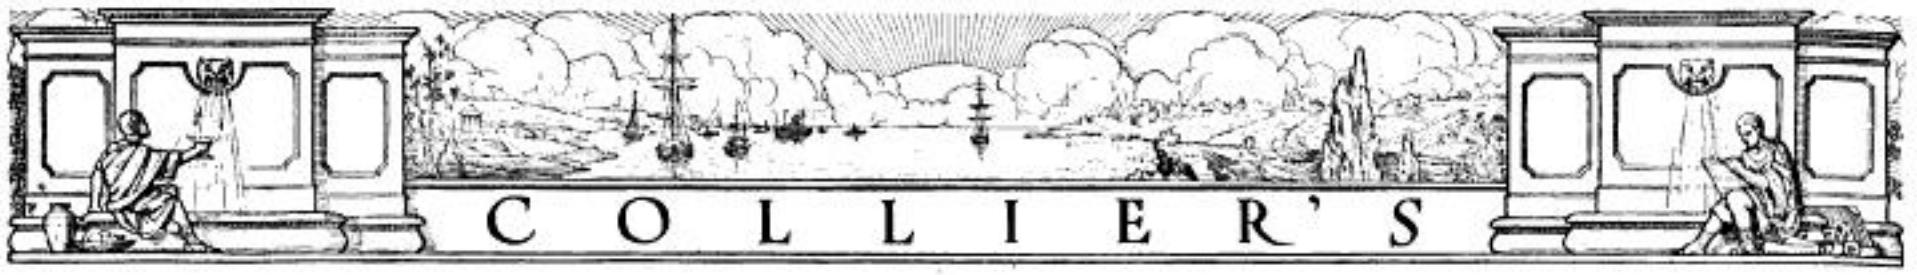
"I have said that Mr. Richard's accident was caused by the colt—that he went into Ironmonger's box and the horse savaged him. Do you understand?"

"Yessuh."

"No one must ever guess that this is not the truth. I have grave reasons for wishing it."

THE negro's soft, heavy eyes gazed at him unflinchingly. There was in them a look much like that in Wizzy's melancholy gaze when he regarded his master.

"Yessuh, Mr. Owen, suh. You kin count on me."



"I know that, David. Thank you."

"Yessuh. Thank *you*, suh."

"Ironmonger must leave the place to-morrow. Mr. Downer's nephew, Mat Goodeloe, is anxious to have him. Take him there. Say the horse is my New Year's gift—that I consider his present viciousness only due to his not having been

A Bad Bill

TALLEYRAND'S cynical saying about language as an instrument for concealing thought has a fine modern example in the Bacon-Bartlett Anti-Injunction Bill now before Congress. A part of the bill, to be sure, is easy and disagreeable reading. The proponents of this bill ask Congress to provide, for example, that it shall not be unlawful for employees to make "*any* agreements or combinations with a view of lessening the hours of labor, or of increasing their wages, or of bettering their condition." It also asks Congress to provide that farmers can cheer up the high cost of living by making *any* agreement or combination for the purpose of enhancing the price of agricultural and horticultural products. The extent of the indulgence in advance given to labor organizations and farmers' associations implied in the little word "any" would put the TETZEL of LUTHER'S time to shame.

Concealed Purposes—

BUT IT IS ONLY after four or five readings and a considerable amount of thinking that one begins to appreciate the laboriously concealed scheme in this part of the bill. It starts out by declaring that no injunction shall issue against employees or farmers on account of any of these combinations, or on account of any acts they may do in carrying them out, unless they occasion irreparable injury to property or to a *property* right of the party making the application for an injunction. This seems familiar enough. Injunctions have usually issued to restrain injury to property, though we do remember a case, in Texas to be sure, where the court issued an injunction restraining an amorous gentleman from making "kissing signs" to another man's wife. Having provided that injunctions shall issue only to prevent irreparable injury to property, the ingenious gentlemen who drafted this bill then provide for a new classification of what constitutes "property" and property rights. They make a new line of cleavage between "personal" rights and "property" rights, and declare that "the right to enter into the relation of employer and employee . . . and to . . . carry on business in such relation . . . shall be held and construed to be a *personal* and not a property right." Under this interesting bill, if a mob of strikers gets in front of a factory, and by threats and violence prevents other employees from going to work, and thereby compels the owner of the plant to close down through the intimidation of his prospective employees, the owner would have no right to an injunction against the acts of the mob, since *the right to do business*, if this bill becomes law, is a "personal" and not a "property" right, and the bill only permits an injunction to restrain injuries to "property."

—And Class Privilege

THE MEASURE IS PROPOSED, we regret to say, by the American Federation of Labor. It is substantially the bill which President ROOSEVELT condemned in a special message in December, 1908. In this message, after stating that the bill provided that the right to carry on business should not be construed as a property right, that it legalized blacklisting and boycotting in every form, including the secondary boycott which the Anthracite Coal Commission unreservedly condemned, and that it took the right to carry on a business explicitly out from under that protection which the law throws over property, Mr. ROOSEVELT declared of the bill as a whole:

> This represents a course of policy which, if carried out, would mean the enthronement of class privilege in its crudest and most brutal form, and the destruction of one of the most essential functions of the judiciary in all civilized lands.

What was true of the measure President ROOSEVELT denounced is equally true of the Bacon-Bartlett bill. COLLIER'S does not believe in one law for the rich and another law for the poor even when the proposal comes from an organization which purports to represent wage earners.

A King of Men

GEORGE WESTINGHOUSE, one of the greatest leaders of our age, died on March 12. Many of the basic services of our time depend upon the improvements in electrical and mechanical engineering practice which his stubborn genius wrested from the hard world of nature. Before he was twenty-two years old he had served four years in the Civil War and had invented the air brake which made possible the modern use and control of high-speed railroad trains. Over three hundred patents stand to his credit, and his name is inseparably connected with electric light and power, steam turbines, air springs, and many other modern wonders. While lights flash and trains run, GEORGE WESTINGHOUSE will be remembered. His mechanical and organizing abilities brought him to the headship of corporations using capital by the hundred millions and numbering employees by tens of thousands, and yet every one of them knew that "the old man" could take the tools and do a better job. He was the first great employer in this country to put in the Saturday half holiday, and he never had a dispute or a strike in forty years. Hard work, justice, and honor were the standards of his life, a life singularly free from the vanity, greed, and deceit that mar so many able men. When he went to his grave the coffin was carried by eight gray old veterans who had been with him since the shops were started in Turtle Creek Valley, near Pittsburgh, and the many thousands employed there quit work to honor him. In all our modern world there is not a monarch fit to stand with GEORGE WESTINGHOUSE.

Amateur Economics

UNDER THE PROVISIONS of the Income Tax Law a large Eastern corporation withheld $3,000 for the Government. The law is so complicated and difficult to work under that the corporation had to spend $2,800 to do this. Now, the income tax is a good measure; it should be upheld and extended, but what are we to think of the business sense and administrative ability of the Democratic leaders when they give us a law like this? The example is perhaps an extreme one, but it is also a fact. To spend 93 cents of other people's money in order to get $1 for the Government is neither just nor honest nor sensible. The Democrats must do better than this.

An Easter Anniversary

EASTER this year falls upon almost the identical date which marks the second anniversary of that terrible night when the *Titanic* sank in mid-ocean. The first thrill of horror, the first hot emotions of indignation, have long since dwindled. Perhaps some memories of them may always linger. But deeper than those are the great qualities enshrined by that awful night: the two ideals of duty and courage. Even after these twenty-four months the recollection of duty fulfilled has increased rather than diminished in beauty and inspiration. To *know* one's duty is no tremendous thing; to *do* it in a crisis is to achieve nobility of character. WORDSWORTH has told of the man,

> Whom neither shape of danger can dismay,
> Nor thought of tender happiness betray;
> Who, not content that former worth stand fast,
> Looks forward, persevering to the last,
> . . . . . .
> Finds comfort in himself and in his cause;
> And, while the mortal mist is gathering, draws
> His breath in confidence of Heaven's applause:
> This is the Happy Warrior; this is he
> Whom every Man in arms should wish to be.

Along with duty went courage—so great that the very quality has taken on a new glory. From a mere image of philosophers courage became a real thing. That cowardice lurked in a few quarters only renders the true quality more conspicuous. Some have long been inclined to bewail the gradual disintegration of all the finer parts of character. They have cried that so-called civilization is only a mockery, a mask to cover the aspect of dwindling virtues. To such the disaster was a lasting rebuke. After all the months, like a trumpet call to mankind, comes the piercing recollection of bravery and self-sacrifice. It has helped to restore the vision that ennobles life in this workaday world. The pain was great, but greater still has been the inspiration.

On Going Courting

IN BOSTON they talk about "limiting by law the length of courtship." A bill fixing two years as the maximum legal limit of a "courtin'" is, says the dispatch, scheduled for appearance in the Great and General Court of that great grandiloquent Commonwealth. Everyone knows that the proportion of males to females is peculiarly inadequate in Massachusetts—hence the stir on Beacon Hill over the term of wooing. "If they can't marry all of us," one seems to hear some philandering spinster explaining in the lunch room of the Industrial and Educational Union in Boylston Street, "they can anyway give each of us a turn at being engaged." It is, all the same, a grave subject. Being engaged is in some ways more serious than being married. Personally, we reckon two years rather too long a time to allow by law.

Digitized by Google

Mrs. Kathleen Norris, author of "Mother," thinks six months long enough—"if a young man calls two or three times a week during that period." But is it possible that marriages ever result when he calls so often? It is risking a good deal—letting one's sweetheart know one that well before it's too late. But that is a side issue. Engagements were never all of man's making, and are less so than ever at the present time. Though the parental referendum has passed into innocuous desuetude, the girl in the case has the initiative nowadays, just as she has always had the recall. Perhaps the high cost of amusements may, in our larger cities, serve to shorten such courtships as it does not wholly wreck. Certainly a new law is not called for here—new light being quite another matter. By the way, at just what stage does courting begin, anyway?

A Correction as to the Railroads

IN A RECENT EDITORIAL DISCUSSION of the proposed increase in freight rates the statement was made that ". . . their earnings for the last fiscal year, both in gross and net, and the dividends paid, both in total and in per cent, were the greatest in their history. . . ." It should be noted that while this statement is correct for all the railroads in the United States, it is not correct for the railroads in the so-called "Official Classification Territory," and it is these latter (east of the Mississippi and north of the Ohio and the Potomac) that are requesting the 5 per cent increase in freight rates. For these railroads' net earnings were less in 1913 than in 1910, and the per cent of dividends paid was less in 1913 than in 1910 or 1912. We are especially obliged to Mr. R. M. Van Sant of Baltimore and Mr. Owen Ely of New York City for calling our attention to these facts which reinforce the argument of the editorial in question.

We're Off!

THE FLOWERS THAT BLOOM IN THE SPRING, TRA-LA, are showing up—and so are the flowers of speech that bloom on the sporting page. Drama and baseball demand collaboration from all the seven parts—as you will see illustrated in that portion of Collier's which Grantland Rice and F. G. Cooper share on terms of amity. Rice has a rival, however, for our mail brings us from Boise, Idaho, a "baseball sonnet" by A. J. Priest:

Baseball, thou art my god: I do adore thee.
My soul is thrilled when I see Johnson on the mound,
Or watch the runner's spikes tear up the ground:
In good sooth thou dost stir me unto ecstasy.

Impatiently I do await the coming spring.
For basketball but poorly fills the interim,
Utterly failing to appease the fan's fond whim:
We do attend thee, baseball; we would crown thee king.

Oh, Time, thy wings are leaden. Come, make haste
And bring these winter months unto their close.
Baseball's the only sport for my nice taste.
Speed, Time, or I will yank thy wrinkled nose.

Bring on King Baseball, crowned the greatest of them all;
Bring on the bat, the glove, and last, not least, the ball.

We are as glad to print these lines as their author was to write them. Their author is a high-school boy—one of the ten million boys excited at this minute over the new season. What future shall we prophesy for him? Will he write another "Casey at the Bat," or will he live to earn a bigger salary than Tris Speaker?

The Old-Time Garden

ARE THE TIMES GROWN TOO FEVERISH to admit of our still having an old-fashioned garden? Of course there is no direct "civic uplift" in hollyhocks; sweet William doesn't help to solve the "social evil"; the ragged sailor and the millennium aren't in any way allied. And yet the riot of color—at least we thought it riotous till the era of pointillism dawned—is still a pleasant memory, and at this time of year one wishes he had planted more seed last July and August. Moreover, we have Mrs. Charlotte Perkins Gilman's word for it that "a child needs grass as much as it needs a bed"—and if the child of the "larger feminism" needs grass, perhaps the grown-up is entitled to a few flowers. Already it is time, in this latitude, to think about Canterbury bells and the annual poppies and pansies. May is soon enough for your larkspur—without whose gay blue spikes the garden would be tame indeed. Yes, in spite of the risk of seeming reactionary, we unqualifiedly declare in favor of the old-fashioned garden.

Penrose and the Saloon Interest

IN HIS EFFORT TO GET REELECTED, Senator Boies Penrose of Pennsylvania has enlisted the support of the liquor interests. The result has been much dissension among the booze boosters themselves, some of whom do not think much of Penrose. George Mueller of Philadelphia, sometime educational manager (whatever that is) of the State Brewers' Association and later an editorial writer for the "Liquor Dealers' Journal," a man who knows the drink business from the inside, has contributed the following very complete analysis of the Penrose-Senate-saloon politics:

While I am an antiprohibitionist, I am more strongly an anticorruptionist, and I repeat that the liquor traffic deliberately aids the most corrupt political powers and backs with all its resources the most unworthy men, the most corrupt and recreant officials. Why? Because it has to ask immunity for its own lawlessness.

In the License Court to-day, listening to evidence against a prominent saloon keeper, I heard this significant phrase used by a witness: "Every streetwalker has a saloon headquarters."

Who does not know that? And every man who furnishes harboring for women and their patrons knows the facts.

Yet I, in a sense, pity the saloon man, for he is but the agent, the distributor, for the brewer, whose money backs the saloon and whose beer he sells.

Street and Morgan and the Colonels

WITH SOME TREPIDATION we are awaiting Julian Street's paper on Hannibal, Mo., the birthplace of Mark Twain. Street and Morgan have failed to report the exact happenings in that region. But the Louisiana (Mo.) "Times" informs us that

the Louisiana boys took the visitors from Colonels G. A. Mahan, J. C. Rohards, and C. M. Felty after they had gotten some Mark Twain dope and brought them to this city, where they were royally entertained at the magnificent home of Colonel Edgar W. Stark in the West End.

The menu was styled a country dinner, and it was certainly a real affair, consisting of old Pike County home cooking, Pike County capons, and other Pike County essentials, which included everything for the inner man.

Those present who fully enjoyed the delightful affair were Messrs. Morgan and Street of New York; Colonels F. W. and C. G. Buffum, John W. Matson, Dave Wald, Colonels Edgar W., L. C., and P. C. Stark, W. S. Forgey, Colonels R. H. Goodman, Clarence Buell, R. J. Hawkins, and Geo. S. Cake.

We have no quarrel with Pike County home cooking nor yet with Pike County capons. On the contrary. It is to the lasting discredit of Street and Morgan that not so much as a single wing came anywhere in the neighborhood of this office. But what do the colonels include in "other Pike County essentials"? We honor and respect our friends, but Collier's is an abstemious paper; we place full confidence in Street and Morgan at large, but we ask them herewith to report to us immediately what Pike County colonels mean by "essentials."

Vigor of Life

SO FAR AS FUNDAMENTALS GO, the Greeks left little unsaid. Thus Plato preceded Messrs. Wagner and Roosevelt in observing:

For living out of doors, and simple fare, and gymnastic exercises, and the morals of companions, produce the greatest effect in the way of virtue and vice.

From the Morning's Mail

SOMETIMES we like to yield the floor to one of our friendly correspondents:

Spokane, Wash.

I delight in your editorial references to Emerson and to the friendship of good books that have stood the acid test without tarnishing. The editorial sugar-plum seems particularly sweet after the spanking of some of your other comments. I also love to dig a fossil remnant out of the near past and to compare it to existing forms as a means of measuring the speed and quality of present-day progress. An editorial by the Rev. Davis W. Clark, D. D., in the "Ladies' Repository" for April, 1853, touches upon two editorial items of a recent Collier's:

Ralph Waldo Emerson—*We spent an hour, not many evenings since, listening to a "lecture" from this celebrated pantheist. Were peculiarly struck at the self-complacent and oracular manner of the lecturer. He seemed to regard himself as the very embodiment of all reason. This at first offended our sense of propriety. When, however, we came to reflect that this man, according to his own theory, is* God—*"a manifestation of the Infinite in finite forms"—our wonder ceased. Why should not a man who conceives himself to be a part of* God *be oracular? This modern divinity, however, does not appear to have many features of resemblance to* Jesus Christ. *We were rather pleased at the thin attendance. . . . For a long time these two men—*Emerson *and* Parker—*have been sowing "dragon's teeth" upon the soil of America. Were the result "armed men," we should have comparatively little reason to fear.*

It is good to hear from Mr. H. C. Hazelett, who sends us this letter and this quotation from the "Ladies' Repository" of sixty-one years ago. It is good, too, to be reminded of the failure many people make to recognize good encountered at first hand. All of us are broad-minded about Emerson and his heterodoxies to-day; our narrowness is, in the main, reserved for our own contemporaries.

COMMENT ON CONGRESS

THE cartoon reproduced on this page is the Philadelphia "North American's" conception of the way the Democratic party is handling the trust question. It does not exaggerate very much. Running around in circles represents about the state of mind of the Democrats at Washington. None of the leaders have any proposals which command much following among the rank and file. Some of the proposals that have come from the Administration are bitterly opposed by leading members of the House and Senate. Indeed, the evidence is pretty clear that the Administration does not have perfect confidence in its own proposals. The one thing to do about the trust question which would meet the hearty support of most of the Democratic leaders would be to do nothing whatever. But they don't quite dare think of adjourning, after all the promises and assertions, without passing some kind of trust legislation. They know the present situation is unsatisfactory and that the country can't very well go on without having something done; they know that business is hesitating and timid and will remain so until the legislation to regulate it is done and out of the way; most of all, it is borne in upon them that 435 Congressmen and 32 Senators are to be elected this fall, that the state of business and what to do about it will be the chief issue, and that it won't look well if the Democrats end the present session with nothing done after having promised so much. Nevertheless, if only they dared, there is nothing the Democrats would so much like as to go home and forget the trust question.

The Philadelphia North American's idea of the way the Democrats are handling the trust question

The Question Stated

THE truth is there is in this country at the present moment a head-on collision between two ideas as to how big business units should be treated; the Democratic view is very well understood—it is the view which has been held to be sound economic doctrine ever since the time of Adam Smith, 150 years ago. The Democrats believe in breaking up big units by prosecution and in passing laws which shall enforce old-fashioned competition, and by arbitrary legislation keep all business in small units. The opposite view is that under modern conditions a business should be permitted to grow as large as it can grow and still be economically efficient, *but that these big units shall be strictly and drastically regulated* by a commission at Washington which shall have, roughly, the same power over ordinary corporations that the Interstate Commerce Commission has over railroads. This latter view *does not contemplate the end of competition*, although its opponents frequently state that it does. One of the chief duties of this commission would be *to preserve fair competition by forbidding and preventing unfair competition*, just as the Interstate Commerce Commission now prevents improper practices. Finally, in stating this view, emphasis should be laid on the fact that *it does not contemplate industrial monopoly*, although the most frequent epithet of its opponents is "regulating monopoly." Persons of equal intellectual honesty hold one or the other of these views with equal conviction.

In the end, one of these two views is going to prevail. There isn't any middle ground, and there can't be any compromise, because the views are diametrically opposed. In the end that view will prevail, of course, which best represents the current belief of what is right, and which is most consistent with evolution, the advance of invention, efficiency, and civilization. Until one of these views does finally and definitely prevail, all of us, and especially those who are engaged in business, will have to reconcile ourselves to rather turbulent times.

Pretty Hopeless

THE most hopeless fact about it all is that the question has never been debated on its merits. It is pretty hopeless to find a Senator of the importance of Borah of Idaho, when he comes to discuss this question, descending to hurling epithets at the chairman of the national Progressive party, George W. Perkins. Senator Borah argued his side of the case by uttering an allegation that the International Harvester Company, with which Mr. Perkins is associated, employs girls at $5 a week (an allegation which, it should be stated in all fairness to the innocent bystander in this case, was promptly disproved). Why doesn't Senator Borah address his views to Charles R. Van Hise, president of the University of Wisconsin? He has no association with any trust, past or present. Or to Flavel S. Luther, president of Trinity College? He cannot possibly be charged with having a selfish interest in the Progressive attitude toward big business. It is probably fair to state that most of the more important teachers of economics in the country believe in the Progressive doctrine, yet they are not what Senator Borah would call "trust magnates."

Don't Ask for It

PRESIDENT WILSON does not pay any heed to letters of recommendation sent to him by office seekers. Almost the surest way not to get a job under this Administration is to apply for one. The President has said, in effect, more than once, that the usual type of letters of recommendation collected by aspiring candidates for office is never read by him. Men like Jim Yarborough of Oklahoma are responsible for the disrepute into which recommendations for office have fallen. Representative Carter of Oklahoma bears testimony in the Congressional Record that "Jim is a bully fellow. He is an A 1 boy to have with you in a campaign." But let Mr. Carter tell the story as he discloses it in the Record:

Mr. Yarborough, while one of the best fellows on the face of the earth, and a good man to have with you in campaigns, is a man of strong enthusiasm and imagination, and, with all due respect to his very good qualities, sometimes handles the King's English a little bit loosely. Mr. Yarborough did state to the committee that Judge Phillips had permitted fraud and graft upon two Indians who had their estates squandered under the jurisdiction of his court. A few months ago Judge Phillips made application for the position of superintendent of Platt National Park and asked to have my indorsement. I got many recommendations in his behalf. Among others I had one from Mr. James Yarborough, the same man who testified to Judge Phillips's bad character with relation to these probate matters, and I propose now to read that letter in the Record, in order that he who runs may read:

DURANT, OKLA., January 21, 1913.

HON. CHARLES D. CARTER, Washington, D. C.

DEAR SIR AND FRIEND: Judge Charles A. Phillips of Durant, Okla., is applying for the position of custodian of the Platt National Park at Sulphur, this State. He is an upright, honest, Christian gentleman, and I consider him thoroughly competent in every particular to fill said position, and I will consider it a personal favor for you to use your influence in his behalf.

Your friend, JAMES YARBOROUGH.

To this letter I replied, clipping the testimony Mr. Yarborough had given before the Burke Committee with relation to Judge Phillips, making the following brief comment:

JANUARY 13, 1913.

DEAR JIM: Can't you consider this sworn statement of yours as a complete reply to your letter?

Your friend, C. D. CARTER.

On February 14 I received a letter from Yarborough in which he said:

DEAR CHARLIE: In reply to your recent communication relative to the indorsement that I gave Judge Phillips for the position of superintendent of Platt National Park, Sulphur, Okla., will say that the attached affidavit or testimony of mine is all right. It was true and correct in every particular; but, you understand, the old man is doty, and I don't believe really at heart he is corrupt. However, he allowed himself to be the tool of certain grafters that got conditions badly mixed.

Faithfully, your friend, JAS. YARBOROUGH.

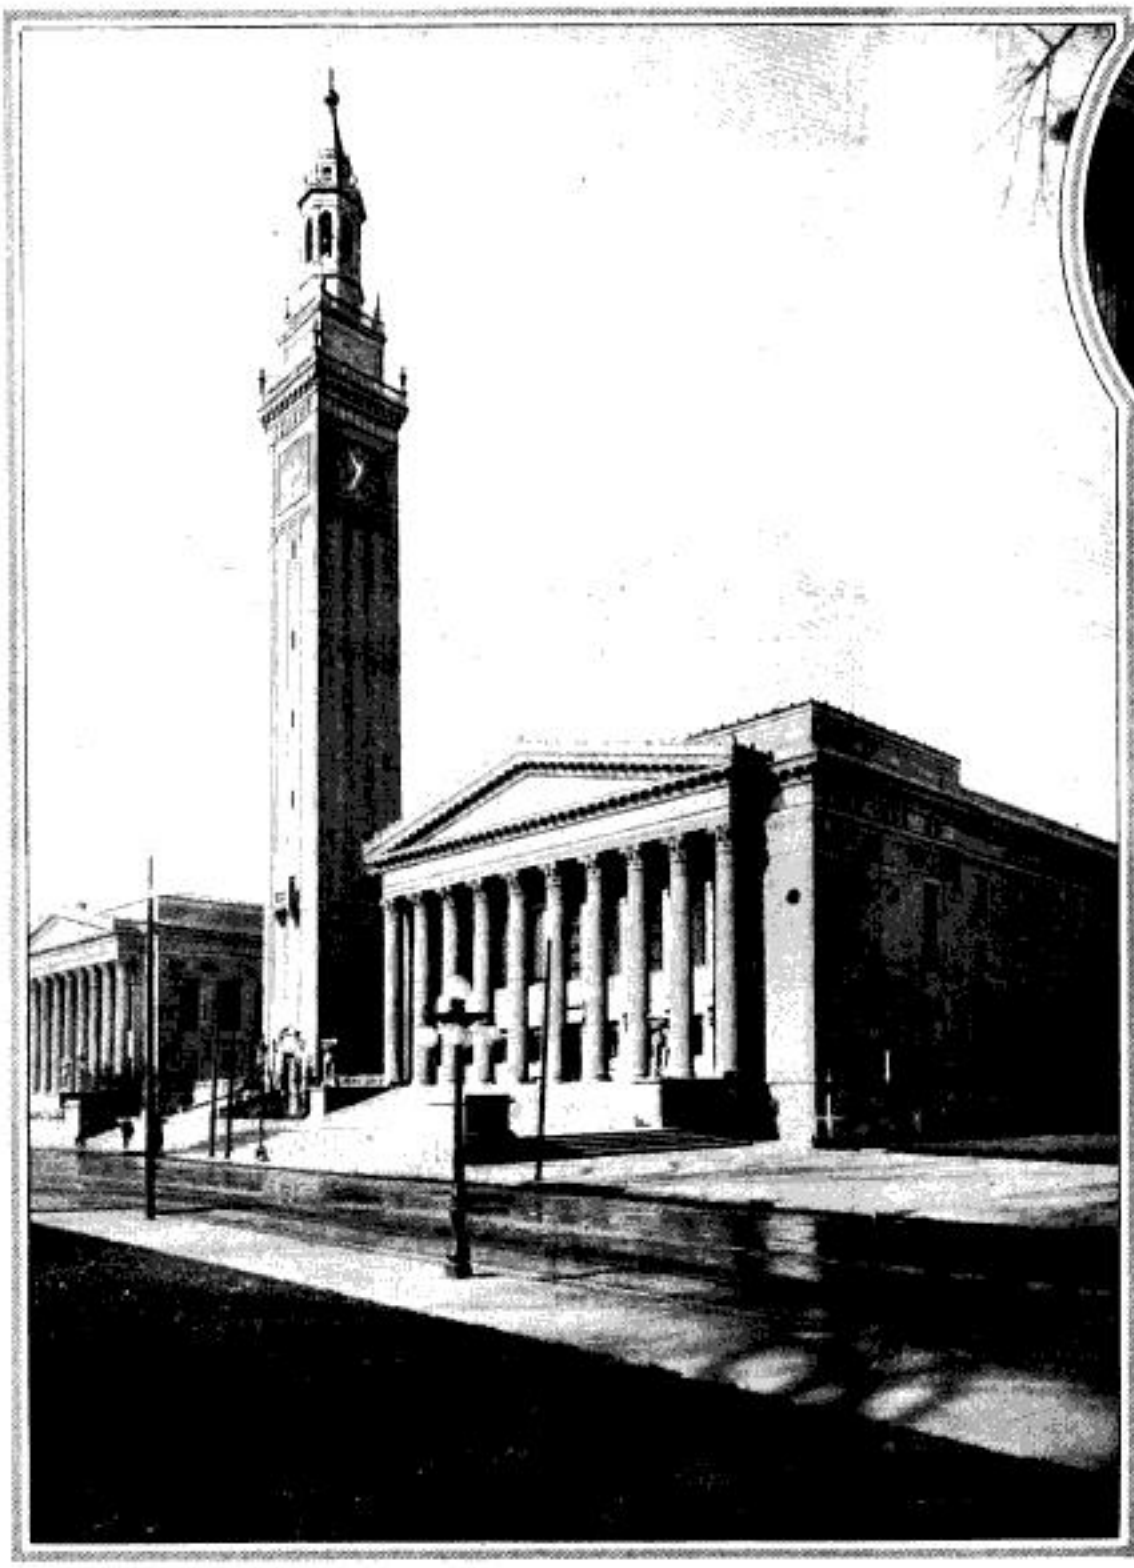
From the Battle of Sacramento: Featuring Kelly's Last Stand

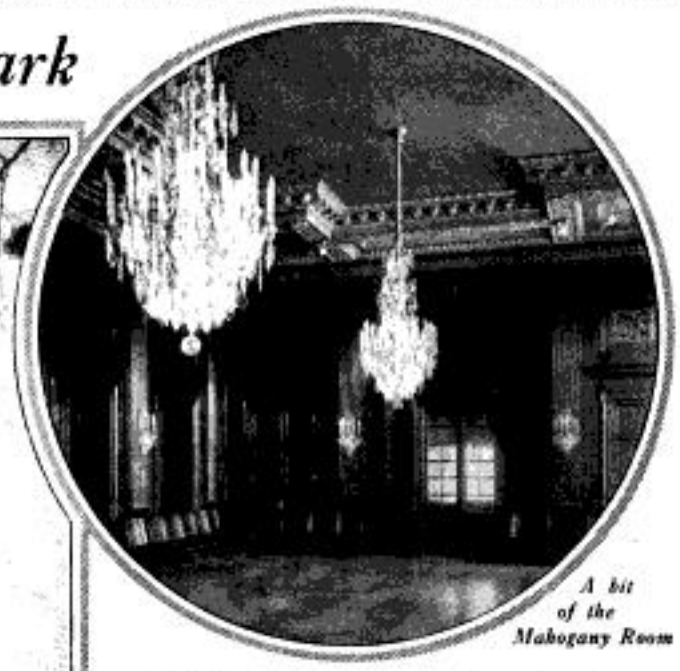
THE battle scene pictured above preserves to posterity Kelly's Last Stand at Sacramento. The Pacific Division of "General" Coxey's Second Army of the Unemployed had covered barely 100 miles of its march from San Francisco to Washington when it encountered in California's capital city a small but well-generaled force of bluecoats armed with locust sticks and a volunteer battery of Sacramento firemen manning half a dozen rapid-firing hose nozzles. When the outnumbered municipal infantry failed to drive "General" Charles Kelly's troops from 2,000 comfortable positions on the springy turf, the battery of fire hose opened, and complete rout was the result. A regiment of Industrial Workers of the World, commanded by "Colonel" Walter Thorne, sat the tightest and were rewarded with the most thorough drenching.

A TOURNAMENT OF MODERN KNIGHTS, *officially known as "the First Cavalry Brigade's Competition for Horsemen," was held last month at Fort Sam Houston, Texas. Our shapshot below shows their fencing armor*



Photograph by Leiter

A Torch Adrift



A BLAZE that destroyed two large grain docks in Portland, Ore., a few weeks ago set fire to the steamer *Cricket*, a coaster laden with asphalt, sulphur, and gasoline. The crew cut the ship adrift and leaped into the water. The burning vessel started downstream—a floating torch that started other fires wherever it drifted near the shore. Our photograph shows the stern of the ship when the fire was hottest. A fire boat kept busy as near as practicable to the *Cricket* and finally succeeded in grappling a chain and towing the blazing ship farther downstream, then beaching her where the flames could not menace more water-front property. Another ship, the *Glenrop*, caught fire, but was saved before the loss exceeded $20,000. The total damage of the conflagration to docks, grain, vessels, and a few small buildings in the neighborhood was estimated at $600,000 to $800,000.

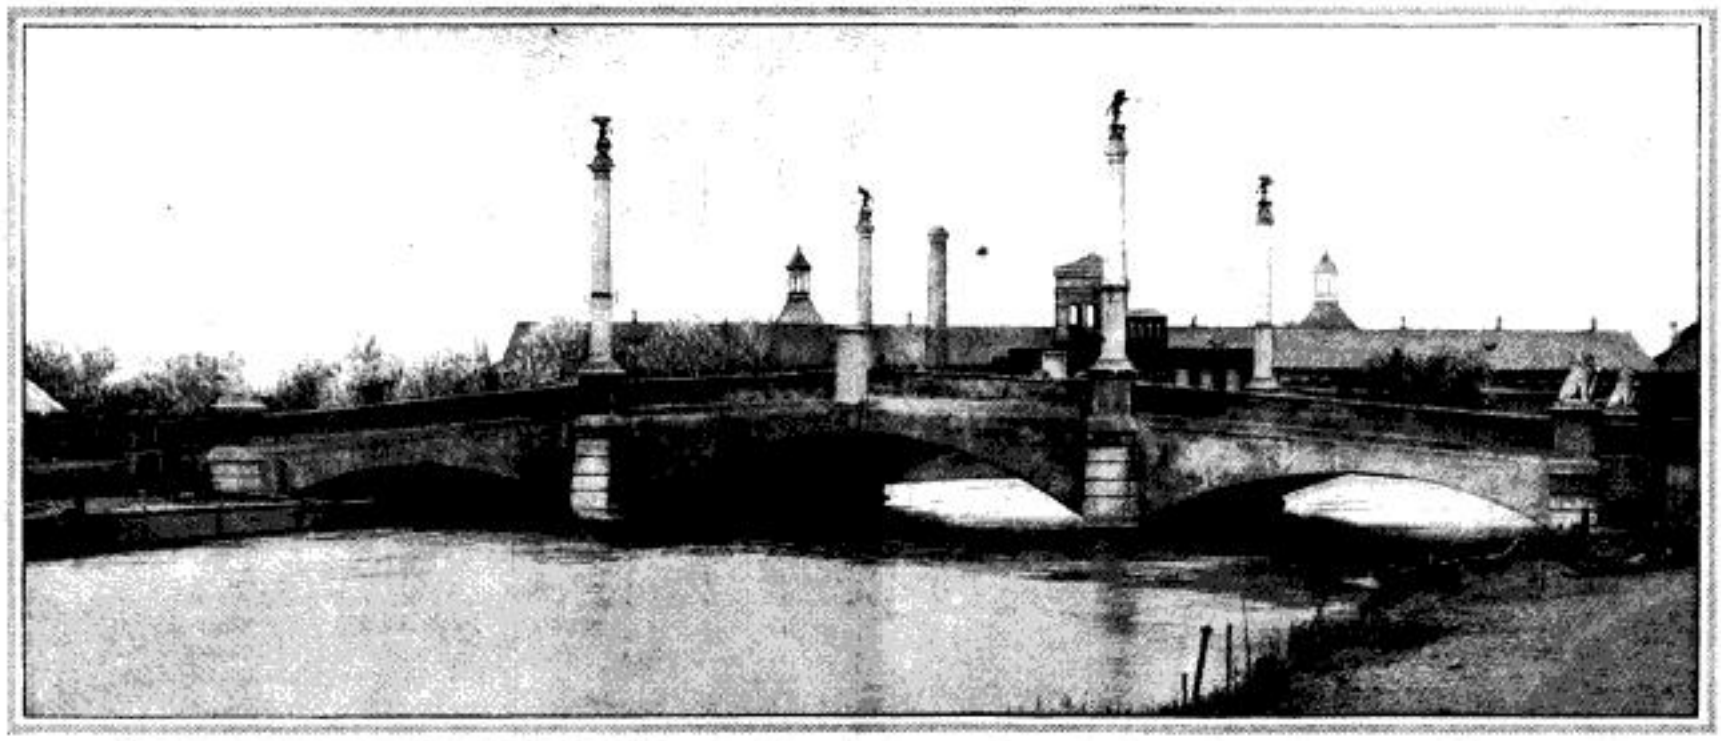
A City With a $2,000,000 Trade-Mark

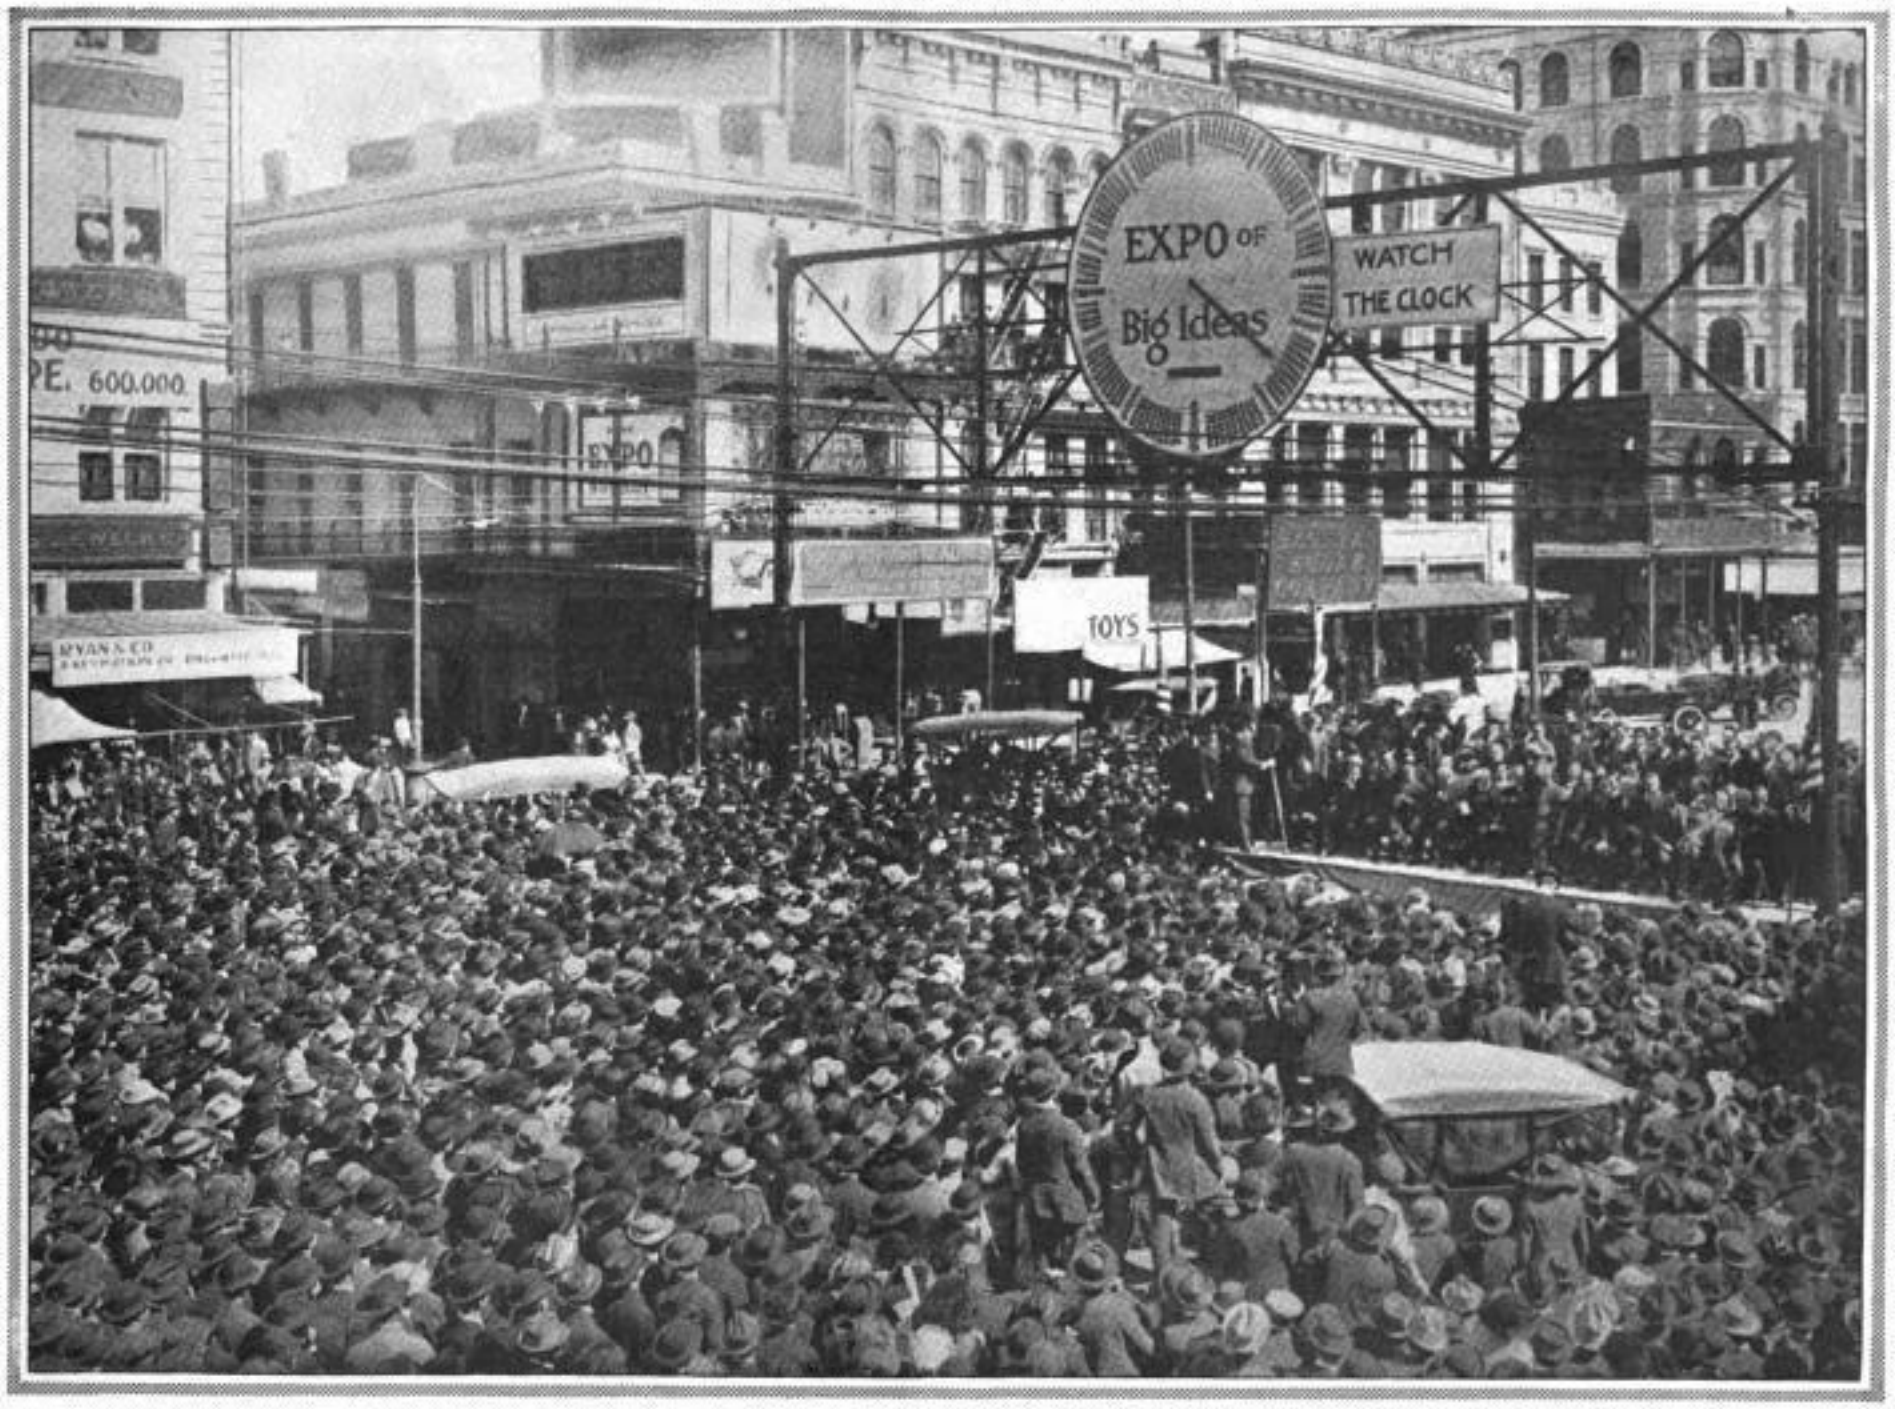
The new municipal group in Springfield, Mass. The Administration Building is at the right. The other building contains the auditorium, exhibition rooms, and the Mahogany Room for social affairs



A bit of the Mahogany Room

A MONKEY, name not given, tipped over a lamp in Springfield City Hall; City Hall was burned, and Springfield has new municipal buildings as a result. The pet monkey survived the fire, which occurred on the afternoon of Friday, January 6, 1905. It was, on the whole, a good day's work.

When the Springfield "Union" told about the blaze (can't you just hear it screaming: "This fire was the most notable in the city's history"?) it declared that the city would have to spend "$100,000 at least to build a City Hall adequate to our needs." Instead the bill came to $2,000,000, yet Springfield isn't sorry. The pictures tell why.



It is not just an esthetic satisfaction that the citizens of Springfield take in this group of municipal buildings. Civic pride is reinforced here by a keen sense of the advertising value of Springfield's Campanile. As the chairman of the Municipal Building Commission, George Dwight Pratt, remarked to me: "It will be the best trade-mark Springfield industries ever had." In the big auditorium, which seats 4,000 comfortably, trade conventions are almost as frequent incidents as symphony concerts. This week, for example, Springfield has a big industrial exposition by the United Commercial Travelers. There is a breezily Western booming spirit in this Eastern city to-day. Springfield has been an important manufacturing town for a good many years, though not quite ever since William Pynchon founded the town in 1636. It differs from Lawrence, Mass., in that its manufactures are wholesomely diversified. The trouble for a time was that nobody knew this. It is truly remarkable for a town of less than 100,000 inhabitants to have a group of municipal buildings unrivaled for beauty by any other public buildings recently erected in America.

W. B. BLAKE.

A MEMORIAL BRIDGE TO MAJOR ARCHIBALD BUTT *is to be dedicated in Augusta, Ga., on April 14 — the second anniversary of the sinking of the steamship Titanic. Ex-President Taft is to be one of the speakers. The bridge was paid for by popular subscription. It spans the Augusta power canal*

By one o'clock in the afternoon of the first day of its campaign to raise $5,000,000 to build an "Expo of Big Ideas" New Orleans had subscribed $310,000. A huge dial at Canal and St. Charles Streets kept the count

Launching Another 1915 Fair

NEW ORLEANS, as well as San Francisco and San Diego, is to celebrate in 1915 with an exposition. By the time this page is in print the hand of the huge cash-register dial shown in the snapshot above probably will point to $5,000,000. Our photograph was taken on the first day of the campaign for funds. By one o'clock in the afternoon $310,000 had been raised. The Mayor swung the hand of the clock around close to the one-third-of-a-million mark while a throng in Canal Street cheered and whistled and scores of cameras clicked. One of the local newspapers enthusiastically made the observation that the city that day was "afflicted with an epidemic of malignant expositionitis," which "caught hold of all classes, from Mayor Martin Behrman to the humblest toiler."

So Drink to Happy Days—Here's How!

OFTEN in the past it has been the unpleasant duty of this Weekly to point out certain grim and sordid features of the liquor traffic. That we may not fall under suspicion of being blind to the brighter side of the trade, we herewith reproduce two cheerful photographs. They are souvenirs of the happy days that Sir Thomas Dewar, the distiller, has been having on a hunt in British East Africa. He bagged eleven lions.

The trip cost a great deal of money, but Sir Thomas is not the man to spare expense upon himself when he goes out for a good time. He has journeyed in "every part of the British Empire, all over the Continent, United States, Japan, etc., and twice around the world." In his hours of ennui he writes books upon prohibition.

FIFTY NINE YEARS OF KNOWING HOW

Suppose That You Were Investing in a MAN—

Wouldn't you dig a good deal deeper than his *clothes* to get your inventory?

Put clothes of character on a characterless man and he is helped a lot. Put characterless clothes on a man of character and he is hurt a lot. But find a character combination of clothes and man, and *you have found your man!*

Now, in determining what's back of clothes, one must proceed just as in determining what's back of the man in the clothes. Exterior appearances are one thing; *but what's beneath?*

We see that which purports to be right style. How long will it be right style? We see a fabric which looks all wool. How much of it would a sheep own? We see lines that are taut. How many storms will they weather? The real trouble is we don't see the *insides*, wherein is concealed the mainspring of *clothes* character.

Stein-Bloch men's clothes are fashioned, made and sold *from the inside out.* For more than half a century the ardent aim has been that no stitch shall go into them that is not an honest stitch; no thread of fabric that is not an honest thread; no line that is not a right line; no intention that is not a right intention.

That, gentlemen, spells character—*from the inside out.*

The Stein-Bloch Co.

A Good Old Rebel

By Herbert Quick

WHAT is a ballad? Any high-school girl—and even some high-school boys—could tell. But the high-school definition would scarcely satisfy the American Folklore Society. Is "The Wreck of the Hesperus" a ballad? It has the ballad form, and is very, very popular. But it is not a traditional ballad, for the reason that we know its author, and it stands as he wrote it. In the true meaning of the word "vulgar," it is not a vulgar ballad, as is, for instance, that song of Young Charlotte, who lived on a mountain side in a wild and dreary spot, who perversely insisted on going to a dance without sufficient wraps, and was frozen to death by her escort's side for her vanity. Some of our older readers remember this sad tale.

Dr. H. M. Belden of the University of Missouri, who is making a collection of the ballads of the Southwest, thinks that this definition of the vulgar or traditional ballad is a useful one, though he does not accept it unreservedly: The traditional ballad differs in style and in origin from other poetry. It has no author—at least no single author. It springs from the homogeneous dancing throng. Among its peculiarities are the absence of the personal note, of reflection, and of conscious artistry.

"And I don't want no pardon For what I was and am"

All of which leads us to remark that we have been overwhelmed by the flood of replies to an editorial request for the remainder of what we supposed was a real American ballad in which an unreconstructed rebel declares that while he had catched the rheumatism a-fighting in the snow, he'd like to take his musket an' go an' fight some mo'. That reference touched the chords of memory in hundreds who had never seen the verses in print, and were even ignorant of the fact that they were ever printed.

But, alas! the quotation is not from a "vulgar" or traditional ballad—dozens of readers have shown us that. It is from a poem written by Major Innes Randolph, a member of General J. E. B. Stuart's staff, and a native of Virginia. He removed to Baltimore shortly after the war, and was a well-known member of artistic literary and musical circles in that city. He was a poet and essayist, rather than a ballad writer; but it is safe to say that few American ballads have had a wider vogue as real "traditional" ballads than his "Good Old Rebel"—which follows:

A volume of Major Randolph's poems was edited by his son, Mr. Harold Randolph, director of the Peabody Conservatory of Music, and published by the Williams & Wilkins Company of Baltimore in 1898. But "The Good Old Rebel" had long before that date gone into the songs of the people. It may have been, as is suggested by Mr. Richard N. Brooke of Washington, D. C., "a bit of fun, not supposed to reflect Major Randolph's own sentiments, but to illustrate the irreconcilable spirit of the illiterate element in some sections"; but if so, it was too successful for mere fun. It so embodied the bitterness of the reconstruction epoch—a bitterness which was created by oppression—that it was sung (to the old Forty-niners' tune of "Joe Bowers") by millions who never heard of Major Randolph.

Among the numerous readers who have very kindly sent us versions of the poem, only seven had any idea apparently as to its authorship — Senator W. E. Chilton of West Virginia; Mr. H. M. Chase of Wilmington, N. C.; Mr. Brooke, Laura Lee Davidson, and Mr. C. Powell Noland of Baltimore; Mr. G. L. Franks of Shreveport, La., and Berry Lee Priddle of Huntington, W. Va. Mrs. (or Miss?) Davidson says that the song has been sung "in many a Southern parlor in the bitter days of reconstruction; and to have heard the author himself sing it is a joy to be held in remembrance." She also informs us that once the Duchess of Manchester (then Lady Mandeville) sang "The Good Old Rebel" at a London reception, and was rewarded by repeated encores from the Prince of Wales, who called it "that fine American song with the cuss words in it."

But the ballad is truly traditionalized by the fact that it has run through all sorts of forms. We are not sure that we have given the name chosen by its talented author. Some readers call it by one name and some by another. Among the various versions of it, scarcely two are alike. We have chosen one sent in by a friend who appears to have the printed form, but we are not at all sure that it is not altered. One change made in the interest of effective singing is the repetition of the last two lines as a refrain, with a sharp accent on the first word of the refrain. It has passed from mouth to ear, and not from page to eye. Mr. Frank E. Cuddy of Baltimore sends

The Good Old Rebel

Oh, I'm a good old Rebel,
Now that's just what I am;
For this "fair land of Freedom"
I do not care a dam.
I'm glad I fit against it—
I only wish we'd won.
And I don't want no pardon
For anything I've done.

I hates the Constitution,
This great Republic, too;
I hates the Freedmen's Buro,
In uniforms of blue.
I hates the nasty eagle,
With all his brag and fuss;
But the lyin', thievin' Yankees,
I hates 'em wuss and wuss.

I hates the Yankee Nation
And everything they do;
I hates the Declaration
Of Independence, too.
I hates the glorious Union,
'Tis dripping with our blood;
And I hates the striped banner—
I fit it all I could.

I followed old Mars' Robert
For four year, near about.
Got wounded in three places,
And starved at Pint Look-out,
I cotch the roomatism
A-campin' in the snow,
But I killed a chance of Yankees—
And I'd like to kill some mo.'

Three hundred thousand Yankees
Is stiff in Southern dust;
We got three hundred thousand
Befo' they conquered us.
They died of Southern fever
And Southern steel and shot;
And I wish it was three millions
Instead of what we got.

I can't take up my musket
And fight 'em now no mo',
But I an't agoin' to love 'em,
Now that is sartin' sho';
And I don't want no pardon
For what I was and am;
And I won't be reconstructed,
And I don't care a dam.

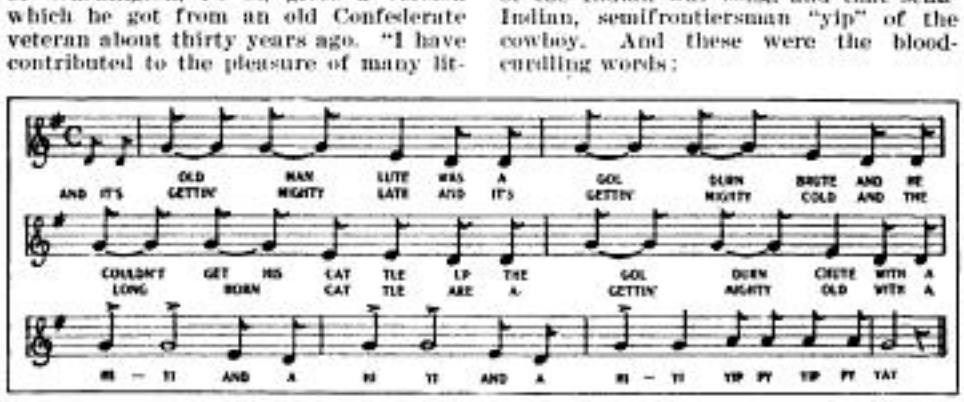
as the poem as he remembers it, having often heard it recited in his youth., Mr. W. S. Thomas of Texarkana, Tex., can remember only three stanzas from hearing his father and other old soldiers sing it. These three stanzas contain lines from all parts of the poem—showing the ballad in process of metamorphosis by oral tradition. Mr. E. W. Carr of New Orleans emphasizes the conversion of the last two lines into a refrain, and evidently relies on hearing rather than sight for the words. Mr. Arthur Bradley of Cleveland, Ohio, "never saw it in print," but sends a version dictated to him by a friend. He gives only five stanzas. Mr. Samuel N. Dickey of Marshfield, Mo., sends a version much like Mr. Thomas's and is convinced that it was written by a Missouri Confederate "who was probably vaccinated for reconstruction, but which vaccination evidently failed to 'take.'"

Passions of Long Ago

MR. JOHN WEYMOUTH of Hampton, Va., sends us a complete copy from an old scrapbook. "No author is given," he writes, "but it is supposed to have been sung with great effect by one Gregory, a sort of wandering minstrel of the Confederacy, who used to go about the country after the Civil War singing this and other songs." Here we have a glimpse of a Confederate representative of the type of singer to which Jules Lombard belonged in the North.



"This is the song," writes Mr. J. C. Tucker of Afton, Okla., "as I learned it from my father as I sat on his knees." Mr. C. W. Purcell of Middlesboro, Ky., draws upon the memory of his mother, "who lived in Virginia, and went through the reconstruction period." "It gives a very correct idea," says Mr. Purcell, "of the feeling which existed at that time, and which we are all happy to say has died a natural death." Mr. C. B. Lower of Washington, D. C., gives a version which he got from an old Confederate veteran about thirty years ago. "I have contributed to the pleasure of many little gatherings of both Confederate and Union veterans," says Mr. Lower, "by reciting this poem, and feel that your readers will pardon the slight touch of profanity for the sake of getting a glimpse into the heart of the genuine old unrepentant, unreconstructed rebel who gloried in the fact, and of whom there are only a few more left." We join in this hope. Surely it is worth while to look into the hearts of men—especially when these feelings were a national fact of such great moment.

The song is now a very concrete reminder of passions long dead. For instance, it was an old rebel, but a present lover of the flag, who gave the song to Major E. M. Supplee of the United States army, of Hollywood, Cal., who sends it to us. He received it at Anniston, Ala., in 1899 when he was mustering out the volunteers of the war with Spain. Mr. J. E. Wasson of Hilger, Mont., learned the song by hearing it soon after the war. Mr. Horace Kinne of New York City heard it in a Michigan lumber camp forty years ago, and through the kindness of Mr. S. M. Stowe sends us one of the most accurate versions derived from recollection. Mr. J. H. Morehead of Chicago learned the song as a student in the University of North Carolina, twenty or twenty-five years ago. One contributor to this discussion asserts that the poem was first read in the celebrated Whitechapel Club in Chicago. Other interesting versions have come from Mr. William Vizard of Mobile, Ala.; Mr. George E. Oliver of Delhi, N. Y.; P. T. Conrad of Richmond, Va.; Mr. George B. Enger of the Department of Law of the University of Virginia; Mr. J. H. Morehead; Mr. R. J. Mullaney of Chicago, and Mr. W. T. Tabb of Jersey City.

Mr. J. D. Atwood of Artesia, N. Mex., makes a point of the fact that the ballad is a protest, not a lament. "There has been only one reconstruction period," he writes, "in the history of the world. Let us hope there will never be another." Amen!

A Cattle Country Ballad

THE South is the richest field for the folklore lover; but the cattle country hasits "vulgar ballads" also. In a Missouri River town, one night, the members of a high-school literary club walked down the street at that awful hour which just precedes the departure of the last street car for the suburbs. They were making a night of it. They were full of ham sandwiches, coffee, and the wine of youth. The sleepy policeman on his beat was startled by a wild and barbaric chant. It had in it the monotonous lilt of the Indian war song, and that semi-Indian, semifrontiersman "yip" of the cowboy. And these were the blood-curdling words:

None of the boys knew where the song came from. It was their society song. It has the characteristics of a real ballad. It is of the West, Western. It has the meter which falls in with the beat of a horse's feet as he trots or paces. It belongs to the cow country—and the period after the appearance of the loading chute at the railway. Try it on your piano. Note the syncopations—and believe the assertion that when yelled into the midnight air of that Western city it was as effective a thing in ensemble singing as you are likely to hear. We place this in nomination as a real American ballad of the vulgar traditional sort, and invite additions or refutations.

Pounding away your energy

Your strength, gained from your daily food, represents a certain amount of useful energy.

If any of this supply of power is wasted by needless strain and shock it is gone **forever**—you cannot use it again.

The *labor* of taking thousands of steps each **day is not** severe, but the *jar* of your weight coming down on hard leather heels gives your nervous system a series of heavy shocks. This consumes, in enormous quantities, the strength upon which your earning power and your success in life depend.

O'Sullivan's Heels of new, live rubber interpose an easy, springy cushion between your heels and hard floors and pavements. They save your delicate nervous system the strain which otherwise uses up your strength and energy. They add to your efficiency, your health and your comfort.

O'Sullivan's Heels cost but 50 cents a pair, attached. All shoemakers and shoe dealers will attach them to your shoes when you buy them, or at any other time. If you prefer, send us 35 cents and a tracing of your heel and we will mail you a pair. O'Sullivan Rubber Company, 131 Hudson Street, New York.

O'Sullivan's HEELS of New Live Rubber

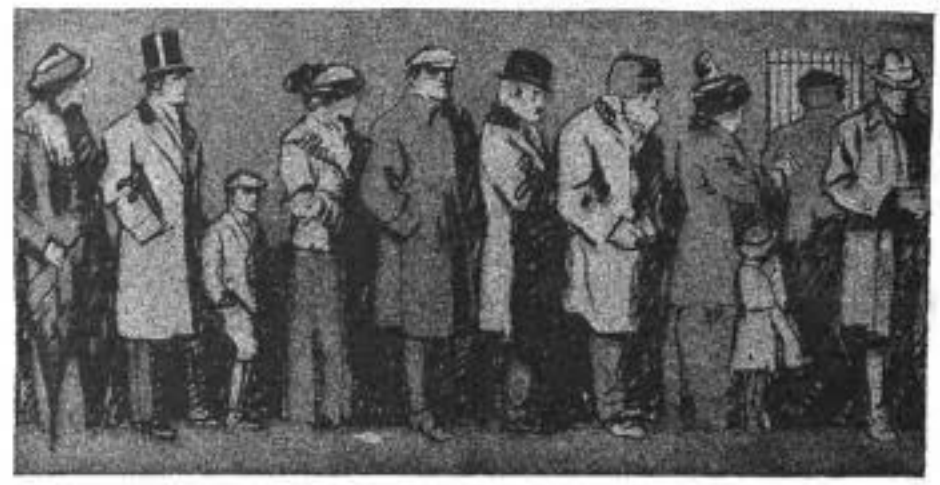
For Men, Women and Children

All Roads are Level Roads to the

Indian Motocycle

"Rushing" a hill is an unknown experience to the Indian rider. "A twist of the wrist" silently gives the command to the motor for more power. And the power is there. It responds instantly. The rider feels that peculiar "bite"—a thrilling, assuring sensation of the answering motor!—and then the speed deftly picks up—picks up—picks up—without a moment's hesitation. The steepest grade offers no trouble to the Indian-mounted man.

Rough roads, too, mean nothing to the Indian tourist. With his machine fitted with footboards and that incomparable, inimitable comfort feature, the Cradle Spring Frame, shocks and jars are dispelled. Indian riding is smooth riding, whatever the condition of the highway.



With stupendous power—with perfected comfort devices—all roads are level roads to the Indian

Boosting the Thrift Idea

By JOHN M. OSKISON

YOU and I and our neighbors really know nothing of thrift. Neither do the teachers in our schools nor the men and women who run the business of our country, on salary, and conduct the home—on credit. This generation has outgrown the plain maxims of Franklin's time, and as yet we have not formulated a new set of popular rules for thrift practice.

Instead, we have been educated in prodigality; we know the texture of luxury; ours is an exaggerated taste for self-indulgence; to us waste matters little. And this is true not because we are willful wasters, but because we have never heard, or have long since forgotten, any sort of thrift preaching which didn't make us tired.

Ignorant of the meaning of thrift, and trained to spend a dollar and ten cents for every dollar we earn, we attack a social system which attempts to make us pay the inevitable price of our extravagance. We search diligently for a way to override immutable economic laws, for we don't want to be made to suffer for what we haven't been taught to regard as a fault.

The Promotion of Thrift

IN 1910 (to illustrate the sad state of thrift in the richest commonwealth in this country) the Massachusetts Labor Bureau gathered statistics to show the average income, expenditures, and savings of ten groups of professional and salaried men. The first fact unearthed was that *30 out of every 100 of these men had never saved anything.* Those who did save—the 70 per cent—stood somewhere, in their saving capacity, between the express company official who put aside $250 a year out of a salary of $1,906 to the banker who saved $2,388 a year out of his earnings of $7,726.

Of course the Massachusetts report dealt with the best paid and the most intelligent class of money earners and spenders. It included bankers, brokers, professors, lawyers, doctors, clergymen, railroad, steamboat, and express company officials, and the superintendents of manufacturing plants—the sort of men you and I have a right to look to as setters of good examples.

Why are the doctrines of thrift unfamiliar? Why are its practices irksome? These questions are being asked by a lot of people who are affected by our lack of thrift—economically and morally. A nation-wide inquiry is about to be made. Up to this time we have not got far beyond vivid statements of the necessity for reform.

Three State executives, invited recently to join a movement for the propagation of thrift, have spoken urgent words on the subject. Governor Clark of Iowa says that too much cannot be done for the promotion of practical thrift. *"It ought to be urged upon the young in the home, in the school, everywhere. Thrift as a necessity, as a duty, ought to be insisted upon for everybody, in every place of public discussion. The want of frugality, the unlimited extravagance of the time is a public menace."*

Extravagance—a Contagious Disease

GOVERNOR MILLER of Delaware approached the same idea from another angle: "Extravagance becomes contagious and affects the whole community, the State, the nation, and tends to produce dissatisfaction and discontent. On the other hand, economy and thrift promote substantiality and produce happiness and contentment."

Governor Hunt of Arizona sees that "departure from simple living standards, especially by the middle classes who try to emulate the very wealthy, is having a deleterious effect upon our national life."

Thrift Can Be Made Popular Again

ONE of those invited to join the movement for spreading the gospel of thrift abroad is Professor Metcalf of Tufts College, teacher of economics, who is familiar with conditions in Massachusetts. In his letter to the promoters of the thrift campaign he called attention to a law of his State requiring teachers in the secondary schools to give instruction in thrift. "But the law is a farce," he wrote, "because *the average teacher knows nothing about the subject.*"

But thrift is to be made popular again in this country. "'Tis hard for an empty bag to stand upright," said Franklin; and too many bags are collapsing all about us to permit us to go on serenely indifferent to the causes of the collapse.

Of course, as yet, the campaign for the renewed popularizing of thrift is hardly under way. More than anything else, those who have undertaken to direct it want to find out about methods. They want to know how they can bring home to the average American the truth of the statement that upon individual thrift depends the prosperity of the nation. They must find a way to picture concretely the financing of wealth production by the aggregated small earnings of the thrifty millions. They are anxious to find such illustrations of the truth that extravagance and good wages can't long travel together as will appeal forcibly and instantly to the average money earner and money spender.

Still a start has been made. Thrift is mainly an attitude of mind, and the promoters of thrift believe that through a proper publicity the attitude of mind of the average American can be changed from one which welcomes extravagance and tolerates debt to that of a real belief in the desirability of spending a little less than he earns—and that is the essence of thrift.

Thrift Is Wisdom

FOR more than a year the American Bankers' Association, through the officers of its savings-bank section, has been conducting a thrift-preaching campaign. Brief sermons, in proof form, have been sent regularly to a large list of newspapers; local bankers have been urged to plant seeds of thrift in their communities—in the schools, in the Young Men's Christian Associations, in the organizations of young women, in the clubs, in the fraternal organizations, in their own literature, any way they can. In the bankers' campaign, of course, the emphasis has been placed on mere saving. In its wider meaning, few savings-bank officials can do very much to boost the thrift idea. Also, the appeal made by the professional banker is apt to sound prosy to the average money spender. Still, the campaign of the American Bankers' Association is worth making.

More recently, there has been organized the American Society for Thrift, with a Chicago investment banker, S. W. Straus, as chairman of the Organization Committee. Associated with Mr. Straus on the Organization Committee are the State chairman of the Illinois Equal Suf-

What are You Doing to Develop Your Eastern and Export Business?

How 200 Wide-Awake Concerns Have Solved the Problem

OVER 57% of all imports entering the United States land at New York. Over 40% of all exports are shipped from New York. The total value of foreign commerce from this city alone exceeds one and one-half billion dollars a year. In fact, New York leads all the cities of the world in volume of international trade.

Do you import?—export?—sell in foreign countries? Do imported raw materials enter into the manufacture of your product?

Have you an Eastern or Atlantic Seaboard market that is capable of greater development—of lower selling cost—of quicker deliveries—of cheaper transportation—of BIGGER PROFITS?

Do you, as a manufacturer or distributor, realize that for handling your Eastern or Export business New York offers advantages not to be found in any other city in the country?—that it is the *one logical* center for a manufacturing, assembling or shipping branch? Do you know that such a plant would have 27% of the buying population of the United States within one hundred miles of its door?

Perhaps you have felt that to locate in New York is difficult and expensive. It used to be, but now it is easy, simple, economical. The magic key that unlocks the door to these tremendous commercial advantages and makes it possible for YOU to secure them RIGHT NOW, to a maximum of efficiency and at a minimum cost, is

BUSH TERMINAL

A community of large, new, modern, fire-proof buildings where already over two hundred representative concerns (some of them in the ten million dollar class) are enjoying the most up-to-date industrial quarters that engineering skill can devise

SOME of these concerns use Bush Terminal as a branch distributing point, some an assembling plant, some storage warehouses, some manufacturing headquarters. Among them are many who have moved from distant places and according to their own statements, they save enough in cartage, freight handling, insurance, labor problems, etc., to *pay their rent.*

All railroads and steamships connect directly with Bush Terminal. Incoming goods are delivered at your door; outgoing shipments are taken from your elevator, practically eliminating cartage and hauling expense.

In Bush Terminal you can get the exact amount of space you need, divided to suit your needs. You can get additional space as fast as your expansion demands it. You can have your factory on one floor or on several floors. You get just what power, light, heat and water your business requires and pay only for what you use.

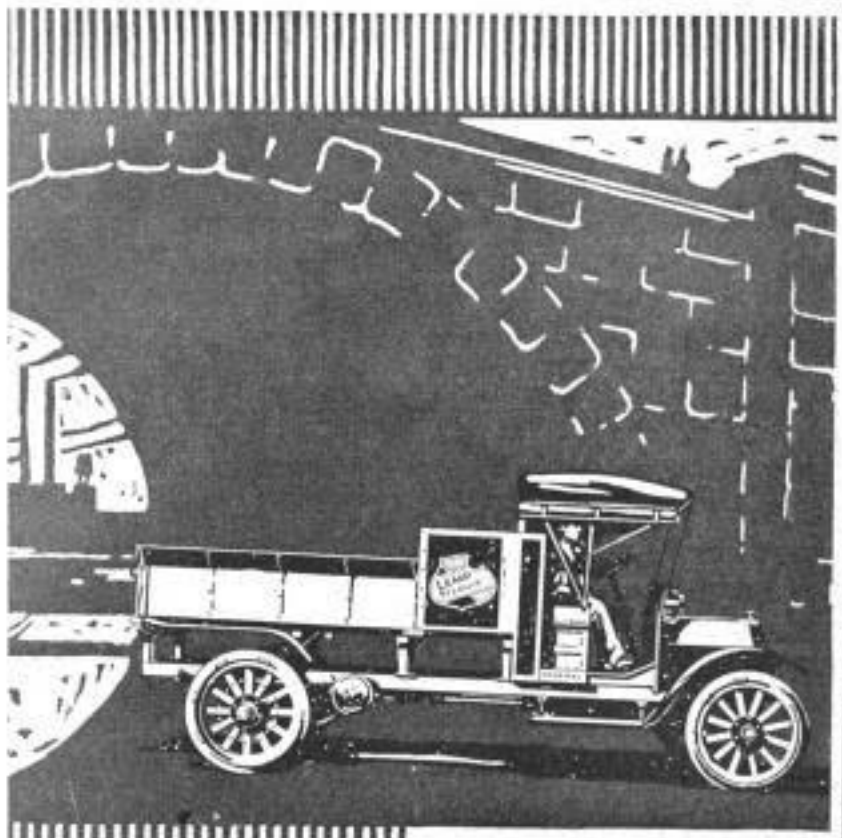
Bush Terminal Buildings have maximum daylight—cheerful, ideal. They are well ventilated and are equipped with all modern, sanitary arrangements. They are absolutely fire-proof, with the additional protection of a million dollar sprinkler system. Insurance in Bush Terminal costs 10c to 20c. a hundred. How much do YOU pay?

Labor supply is plentiful. Living accommodations for help are nearby and reasonable in cost. There are express, telegraph and cable accommodations in this modern industrial city; also regular post and parcel post offices.

BUSH TERMINAL cannot afford to have a dissatisfied tenant. You want us—and we want you—only if it will *save* or *make* money for you.

For your protection, we will make an analysis of New York facilities in the light of your own commercial activities and requirements. We will give you the full and unbiased facts on whether Bush Terminal, New York, as an operating point for your own particular business, would CUT PRODUCTION COSTS by reducing overhead, by solving labor difficulties, by reducing handling and transportation expense, thus netting you BIGGER PROFITS on present business—whether it would bring you closer to your raw material markets—whether it would enable you to develop MORE BUSINESS in the eastern, export or import market and enable you to make quicker deliveries, quicker sales, and outdistance competition.

For any concern, big or little, we shall be glad to make such an investigation without charge or obligation.



A Valuable Book, "How to Reduce Overhead Expense," Sent Free

WRITE TO US on your firm letterhead, and we will send you this interesting book on business economics, together with the names of 200 representative concerns now in Bush Terminal, and facts about the advantages THEY find in Bush Service.

BUSH TERMINAL COMPANY, 100c Broad St., New York City

Some Glimpses of Bush Terminal Activities

A Federal in the Service of the Lemp Brewing Company, St. Louis

FEDERAL

Not Merely *Sold* to You— But *Fitted* to Your Business

We pride ourselves upon the fact that so many concerns now using large fleets of Federals started with the purchase of one, and bought the others largely because of the assistance we were able to give them in economizing haulage and labor costs.

For instance:

> "During July, 1912, we purchased one of your Federal Trucks. After unloading from the shipping car we at once made a temporary body and started the rig on its way. With the exception of two weeks for painting last winter the truck has done daily work. Never in the last year's use have we been held up a minute. The truck has been used in hauling water from our spring to city warehouse, a distance of about four miles (round trip); roads are very poor in places in winter, but wherever the FEDERAL can get traction it will go through."—Rock Spring Water Co.

Many other bottlers, dairies and creameries have had similiar experiences with Federals.

Our advisory service—the result of years of experience in practically every line and under all haulage conditions—is free to any manufacturer. It is one of the best means of demonstrating conclusively the relative value of motor and other haulage in different lines of business.

Why not write us? One of our representatives will be glad to call; and he will not try to sell you a truck unless he has convinced both you and himself that you can use one profitably.

Federal Motor Truck Company
100 Leavitt Avenue Detroit, Michigan

frage Association, a well-known social worker, a member of the National Fraternal Congress, an officer of a big steel company, and the president of a university. Ten Governors of States and half a dozen college presidents and superintendents of education are members of the Advisory Council.

Mr. Straus has suggested the scope of the new society's work in these words:

"To promote nationally the individual thrift which is the basis of good citizenship and community prosperity, this organization, duly financed, has taken up a nation-wide inquiry to determine how best and most quickly to change the prodigal spirit of our times to the spirit of thrift."

That is the simple purpose of the new society. As to its program of action, its promoters are frankly seeking lines of appeal. First of all, they are working at a definition of thrift which shall be acceptable. Mr. Straus's own characterizations are interesting:

"Thrift is not a mere forced rule; it is a virtue and principle. Thrift is not an affair of the pocket, but an affair of character; it is not niggardliness, but wisdom.

"Thrift is not so much a matter of money as an attitude of mind. Our people, our communities, our Government, will all be better from the practice of thrift. . . .

"Thrift is creative economy—and Emerson said: 'Creative economy is the essence of magnificence.' . . .

"Thrift does not simply mean that a man shall deny himself food and clothing—no, the thriftier he is, the more money he and his family will have for these purposes."

This new society wants everybody's help to bring about the change. In the first bulletin sent out it asked for "the help of every thinking man and woman, the head of every organization of influence — commercial, industrial, financial, labor, agricultural, educational —for it will require wisdom little short of divine to make every step in the campaign an effective step and judicious."

I have said that getting a good definition of thrift fixed in the minds of the people is one of the first tasks to be undertaken by the thrift promoters. The new society, as a first practical move in this direction, offered prizes for the best short definition and also for the best short story illustrating individual thrift. The prizes were offered to the students in the primary and the secondary schools of the country.

More than 2,000 children sent either definitions or stories —and 75 per cent of them were girls! Both first prizes were taken by girls. Hazel Haag of the Warren (Pa.) High School submitted the best definition:

"Thrift is the management of one's affairs in such a manner that the value of one's possessions is being constantly increased."

Other high-school students offered definitions less striking, in the minds of the Organization Committee, but worth considering by those who want to get the essentials of the thrift doctrine fixed in their minds. Nelson Crow of St. Joseph, Mo., said that "thrift is the economical management of either business or domestic affairs. It assumes the frugal management of the resources of the family, the prevention of waste, the avoidance of useless expenditures, and the practice of industry."

That definition carries a first-class little sermon. Florence Palmer of Mobile, Ala., preached another: "Thrift—the 'eclipsed virtue'—embodies industry, frugality, prudence, method, perseverance, temperance, economy, punctuality, and ability—especially in details. Economy signifies saving, while thrift signifies both saving and increasing." Myrtle Cantwell of Ogden, Utah, defined thrift as "willingness to work, capability of earning, being industrious, planning for the future, conserving and increasing what you have by good management." Raymond Vollert of Fond du Lac, Wis., said that thrift is "economy and conservation in the home, in industry, and in natural resources. . . . Thrift is accomplished through careful study, some deliberation, and good management."

So a good modern version of "Poor Richard's Almanac" is growing. In the "Primer of Thrift," which the new society plans to publish soon, I expect to read many more attractive definitions of thrift.

Begin with the School Children

A GIRL in the Seventh Grade of the Lowell School of Sioux Falls, S. Dak. (Winifred Wilson), won the prize offered by the society for the best 200-word story illustrating individual thrift. Here is her story:

"I have observed that a boy who lives near us is a thrifty person. There are six in the family. His father works in a store and his mother does all she can to keep the children dressed neatly. This boy takes care of other people's chickens and raises and sells chickens himself. He sells newspapers after school and runs errands. He has a vegetable garden every summer and sells his vegetables from house to house.

"The neighbors all like him — I think because he is thrifty and will work honestly for them. He does not spend his money carelessly, but buys his clothes and other things he needs. He saves his money and puts it in the bank every Saturday. He dresses neatly, too, and often buys things for the home and for his father and mother. He is ten years old, and in the Fifth Grade. He has over twenty-five dollars in the bank now. I think this boy is thrifty and will be rich when he is older."

Schools and colleges, the society believes, offer the best ground for the propagation of thrift. One member of the Advisory Council, President Rovard of the University of Southern California, has suggested a practicable beginning of the teaching of thrift in the colleges. He says that the subject fits into the courses on economics, and that in his own institution "the whole matter of the prodigal tendency of Americans, in the face of high living costs, is considered and methods of meeting the difficulties are discussed."

The Possibilities

TALKS, plans, and mechanical devices for the encouragement of regular saving; legislation and specific counsel against the get-rich-quick schemes that shake owners of money from a belief in the modest earning power of money; the appeal to a man's love for his family; the teaching of thrift in the schools with the same enthusiasm and system as are shown in the teaching of other vital subjects; the distribution in the homes of thrift sermons which will be read—these are some of the possibilities which lie ahead of the promoters of thrift.

A New Serial

The Tyranny of Beauty

By "JANE BUNKER"

Will begin in the next issue of Collier's, April 11

It is the story of how Maggie McNulty turned in the twinkling of an eye into Mme. Del Mar and made a fortune. Madame is an amusing get-rich-quick artist. She does not know much about anything except what her mother wit teaches her, and she gets trouble and gets glory, gets money and gets an expensive husband all with a facile genius that makes her experience as a beauty sharp an exciting, entertaining tale. It is easy to say a heroine is clever, but Mme. Del Mar puts it across right before your eyes — you see for yourself how smart are her doings, how witty is her tongue, and how wonderful is her instinct for the weaknesses of human nature.

A Real Stage Need

By LABERT ST. CLAIR

Illustration by Herb Roth

TO PREVENT theatrical managers from advancing a time-worn excuse for refusing to take my advice on how to elevate the stage, I vow that on only one occasion have I ever accepted a complimentary ticket to a show. That was to a one-man entertainment given by Walter Crow, fiddler and impersonator, in Nixon's Hall, our town, back in the 80's. I obtained the pass by distributing bills, and lost the pasteboard before the curtain rose. Therefore I criticize from the standpoint of a paid patron.

EXPERIENCE also entitles me to criticize. I have seen all the stars of recent years from Joe Jefferson to Corse Payton, attended Shakespearian drama in Bangor, Me., movies in Muscatine, Iowa, and vaudeville in San Diego, Cal., paid the fares of four Greek classic dancers from Atchison, Kas., to St. Joseph, Mo., and painted the chariot scene on the front drop of our new opera house.

My protest is that American managers are unwilling to aid aspiring playwrights and actors without established reputations.

Complaint constantly is made that few new meritorious plays are being written and that the only stages which most young thespians are qualified to mount are drawn by horses and controlled by foot brakes. Facts warrant no such statements.

The trouble is, managers do not seek new talent. They should go out and hunt it. How long would Connie Mack have a championship baseball team if he or his scouts, armed with nice bags of warm peanuts, did not invade the hazelnut belt occasionally in search of new hired help?

There is no reason why theatrical managers should not do the same.

I THINK the employment of theatrical scouts for bush duty only would be a good thing. Not to go to small theatres and dramatic schools to obtain half-baked talent, understand me, but to locate promising, untrained playwrights and actors in fields and villages. There are many such amateurs who need only a little training or encouragement to make them stars. Read any country weekly immediately following a home-talent play in the town of publication if you do not believe me.

Right now I recall a playwright and an actor in our town who gave up in despair merely for lack of a good theatrical scout to set them right.

Kit Bemis was the writer. At ten years she wrote a poem, submitted it anonymously to the "Weekly Friend" competition and won first prize. The award was a silver-mounted mustache cup. Thus was she convinced poetry did not pay and she turned to playwriting.

Her first play, consisting of three acts, five murders, a suicide, and a wedding, was produced at the brick school when she was fourteen years old.

I WAS then doing literary tinkering in the way of sale bills and obituary poetry, so Kit frequently came to me for advice. But one day she stumped herself and me, and that marked the beginning of the end of her playwriting. She had written a melodrama around the Dalton desperadoes and was preparing to lay siege to a manager. The first two acts ran smoothly, but in the middle of the third act she got Frank Dalton, clad in handcuffs, leg irons, and a straitjacket, in a hermetically sealed, underground cell. To make the play end well, it was necessary to get Dalton out, and that was beyond Kit.

WEEPING, she brought me the manuscript. For four days I struggled with it, and the only means of release I could think of was a writ of habeas corpus. So to save my reputation, I handed the manuscript back to Kit and told her it would be best for her to work out her own problem. Of course I admitted that I had a solution.

She called me many hard names and accused me of wanting to corner the writing market, but I remained firm. She went back to work. For two weeks she struggled without budging Dalton an inch.

Then along came the Boord boy and proposed to her. She accepted, moved to a farm, and, as far as Kit is concerned, Dalton still sits in that underground prison.

A good scout, I maintain, could have given her a little advice, kept Dalton above ground, and, perhaps, made a great dramatist of her.

Ed Day was our actor. He was very versatile. For twenty-one years hand running he was in every home-talent play we had.

He was bald and forty, but he could play anything from Uncle Tom to Sappho and do right well, considering.

IN the spring of '89 we presented "Little Orphan Annie" as dramatized by Kit.

Ed was cast for the leading male part, but at the eleventh hour "Annie" was taken ill and he had to substitute for her. He made up right well, being small, but he had difficulty remembering his lines on such short notice. In the middle of the second act he held the stage alone.

From the wings Kib Simpson, our blacksmith, was blowing a terrific wind with his second forge bellows, and from above newspaper snow was filtering down on Ed. He stood in the center of the stage and moaned:

"Home, home; I have no home!"

There he stuck. The wind blew harder and the snow fell thicker. Whispered cues gave him no aid. He advanced a step and fairly shouted:

"Home, home; I have no home!"

Further words would not come, so he sawed the air with his arms, leaned out even with the footlights, and repeated his plaint about being homeless.

SUDDENLY, down in the center of the hall, up rose Sidney Helms, our editor, and asked:

"Ed, why in thunder don't you go to the poorhouse?"

The remark not only broke up the show, but it ended Ed's stage career. He was almost heartbroken, and to this day, even though he is in the produce business and has thousands of eggs stored away, his secret sorrow can be seen plainly.

Think what a kindly word and a pat on the back from a theatrical scout would have done for Ed!

1914  ? 1915

Your car starts in trim for 1914
How will it end?

Friction is relentless.

It steals mileage that belongs to you. It means lost power, and worn metal. In the end it destroys all motors.

A canvass among New York repair shops showed that about one-half of the automobile engine troubles are caused by incorrect lubrication.

Correct automobile lubrication is an intricate, scientific problem.

Motors and feed systems differ widely. *No one lubricating oil can be efficient for all cars.*

This is absolute.

You selected a car that suits you. Now select an oil that suits your car.

Your motor has approximately 1500 parts. To reach all friction points properly your oil must suit *your* motor.

Words and claims cannot meet this condition.

Your business sense must ask:

"Who made the oil?"

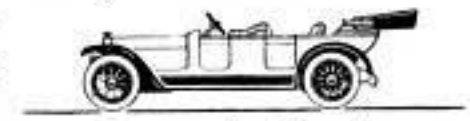
"How did they determine its fitness for my motor?"

Throughout the world, the counsel of the Vacuum Oil Company on lubricating problems relating to every class of machinery is sought by engineers who must meet the most rigid efficiency standards.

Lubrication with us is both a business and a profession.

The Lubricating Chart, printed in part on the right, represents our professional advice on automobile lubrication. It is a result of the most far-reaching and thorough study of automobile lubrication that has ever been made.

It was prepared after a careful analysis of the motor of each make and model of American and foreign car.



The oils specified have been thoroughly proven by practical demonstration.

For a number of years this Chart, which is annually brought up to date, has been the standard guide to correct automobile lubrication.

Make a note of the grade specified for your car. Then make sure that you get it.

It is safest to buy in original barrels, half-barrels and sealed five and one-gallon cans. See that the red Gargoyle, our mark of manufacture, is on the container.

On request we will mail a pamphlet on the Lubrication of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

Correct Lubrication

Explanation: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." For all electric vehicles use Gargoyle Mobiloil "A." The recommendations cover both pleasure and commercial vehicles unless otherwise noted.

Styleplus Clothes $17

TRADE MARK REGISTERED

"The same price the world over."

The dawn of a new day came in the clothing industry when Henry Sonneborn & Co. launched Styleplus Clothes $17! The day of genuine all-wool, perfect-fitting, long-wearing clothing ***for $17.*** The day of *real* style combined with *real* economy.

And now everywhere—from the Atlantic to the Pacific—men are seeking the store that flies the Flag of Styleplus! In each leading town only *one* progressive merchant is privileged to sell Styleplus Clothes $17. Join the army of smart men who are saving $3 to $8! Visit the Styleplus Store in your town.

You can tell a genuine Styleplus by the Label in the coat, the Ticket on the sleeve, and the Guarantee in the pocket.

Send for our book, "As Others See You."

HENRY SONNEBORN & CO., Founded 1849
Baltimore, Md.

Baseball and the Briton

(Continued from page 9)

switched to my limited vocabulary of English sports. Oh, yes—an interval was a cessation of play to pay homage to the English teapot. It seemed most absurd, but the King was present, and perhaps some concession had to be made to royalty. Therefore I throttled my subterranean expletive, and inquired simply:

"Why?"

"Because it is quite customary," he replied in a tone of finality peculiar to the Supreme Court of the United States.

The King "stopped," as they say in England, throughout the eleven innings. Yet, odd to relate, there was no "interval." This may explain why the tea-thirsty expert on my left concluded his analysis of American baseball in next morning's paper with these words:

"The game is sadly lacking in variety. Not a bad game to play, perhaps, but a little tiresome to watch after cricket, particularly good club cricket."

Who but an Englishman and a lifelong resident of England could have made that observation?

"Who Landed the King?"

THE trouble with these experts, aside from their woeful lack of preparation, was the embarrassing predicament in which they found themselves. In Paris John J. McGraw submitted to an interview at English hands on the ticklish subject of baseball versus cricket. In this interview the manager of the Giants was made to sound the death knell of cricket. As a matter of fact he was not correctly quoted, but the damage was done. When the Giants and White Sox reached Charing Cross, English cricketers—grandfathers, fathers, and sons—aided and abetted by sporting experts, were making a futile attempt to conceal their rage.

Here were a cheeky lot of American invaders with the effrontery to suggest that baseball—"nothing but glorified rounders"—was to supplant the grand English game of cricket. Indeed the invaders were themselves to force the supplanting! You can picture the average cricket-playing Briton's indignation. No—you can't. We seemed to be in for a scorching. And if a game were played, the probabilities were that the attendance would about equal that of a Monday's game in St. Louis between the tail-enders and Cincinnati.

Suddenly all was changed. In big, black type the newspapers announced:

THE KING WILL ATTEND
BASEBALL GAME

At this point of our narrative might be inserted a mystery story, entitled "Who Landed the King?" I confess I don't know. But this I do know, that four prominent members of the American colony in London, each wealthy and of surpassing social prominence, took me clandestinely aside and, each prefacing his remarks with "I don't want to boast, but—" told me how, through his influence, and that alone, the King's patronage was secured for the game. My understanding is that several other American gentlemen aspire to the same honor, and I believe that the American Ambassador would not dodge the credit if it were thrust upon him. But if you want my guess—and it is as good as anybody's "knowledge" on the subject—King George attended the game both because he is a lover of sport and because he saw in the occasion an unusual opportunity to further cordial relations between Great Britain and America.

"Rounders with a Bigger Stick"

THE King's attendance made it obligatory upon the press in general to "play up" the game. It is fair to say, however, that the "Daily Mail" did this from the very first, even before the King's presence had been assured. With his Majesty a certain spectator, and with the consequent publicity in the papers, a big attendance was almost inevitable. It is no exaggeration to say in this connection that with a week more in which to advertise the contest fully fifty thousand people would have attended on a good day—the Chelsea Grounds have held seventy-nine thousand—and the best American record would have been broken.

Next to the King, America's acclaim should go to Old Sol. After rainy Rome and watery Paris, the sun broke through the London fog and shone upon the American baseball men. It was a conspicuous finish to a notable tour.

But these rhetorical "intervals" are trying on cricketer and expert. We must get back to them. Neither an earthly monarch nor an empyrean ruler must be permitted again to intervene. They were on their good behavior, these cricketers and experts, but they did not forget their grievance. It broke forth in print and in seemingly friendly discussion after the game. Knowing not what else to say in criticism of America's national pastime, all of the experts agreed in describing it as the "old English game of rounders, played with new rules and a bigger stick." Without commenting on this relationship of baseball and rounders (something akin to the descent of man from the ape), I have asked the editor of COLLIER'S to reproduce the picture, which, insists the "Mail," shows the similarity between the two games. I can hear the American fan howl in his delight when he gets this remarkable comparison.

English Games We Borrowed

IT was unfortunate, I think, that the idea was ever suggested of trying to transplant, or better, plant, baseball on English turf. Especially unfortunate was the erroneous impression created that the purpose of our visit was to drive out cricket with baseball. That was not in any sense the purpose of Comiskey, McGraw, or Callahan. They are far too sensible for that.

Besides, it is not the American idea. Think a moment, John Bull. We took your Rugby football, introduced it into our colleges, deformed and then reformed it. We took your game of tennis, and lately have beaten you at it. We

The Sphinx and the Pyramid know that there is something new under the sun. While they did not see a game of American baseball, they heard about it from the party of world-touring players and their families — and in their age-old wisdom they knew its novelty

TRADE MARK REG. U.S. PAT. OFF.

took polo, and ultimately proved your victors. We seized upon the ancient and honorable game of golf. It has made our fathers young and our youngsters the peers of seasoned experts. If this strikes you, John Bull, as a trifle exaggerated, remember Ouimet and Evans in conjunction with Varden and Ray.

What I'm getting at is that the origin, the locale, of a game is no bar to its introduction into America. All games are on the free list. But with the English it appears to be different. Baseball is objected to because it is American, or, taking the rounders joke seriously, because it has been developed outside of England. More particularly, perhaps, it is taboo because there is a fear it may hurt cricket. One might gather that something like "forcible feeding"—in paraphrase, forcible playing—was likely to follow.

If President Wilson and the Congress of the United States can give assurances in any form to satisfy you, John Bull, that we are not seeking to "tie the can" to cricket, such assurances will be generously given.

Why Not Beat Us at Our Own Game?

WE know that we couldn't club cricket to death with a baseball bat, and we haven't the slightest desire to try. If cricket is to survive this changing age, it will survive. If it is not to survive, it must die a natural death—and, naturally, it will be a slow death. So far as anybody knows, ten years from now the survivors of us may see cricket-playing England completely surrounded by her baseball-loving colonies—and still fighting a cheeky American invasion!

Get this into your noodle, John Bull: The American idea is to take any good game, become expert in it, and then, out of pure devilry, beat the man who invented that game or who claims patent rights. In that spirit we'd like to have you take up American baseball, become proficient in it, and in the course of time beat us at our own game. Why?

Because it would then be all joy and no sorrow for every American fan to see the Athletics, the Giants, the White Sox, or mayhap the St. Louis Browns, win a simon-pure world's championship.

Come in, John Bull, the water's fine!

Averageboy

By LEE SHIPPEY

AVERAGEBOY is much like George Washington at times. He is particularly like George when company is present. At such times he cannot tell a lie.

If you are one of Averageboy's friends, you will appreciate an incident which occurred the other day, when he bounced into the living room to get Mother to help him put on his mittens, while Mrs. Grumble was calling. Mrs. Grumble, who does not like children, attempted extreme graciousness in greeting him, but he stuck out his tongue at her.

"Speak to Mrs. Grumble, dear," commanded Mother. "Say: 'Hoddydo, Mrs. Grumble?'"

"I don't want to," replied Averageboy rebelliously.

"Now, don't be a silly," urged Mother warmly. "Why don't you want to speak to Mrs. Grumble?"

She should have known better. Instantly the young disciple of Washington replied:

"I don't like her."

"Why, son," exclaimed Mother, in horror, "you *know* you *do!*"

"No, I don't," replied the possible future President, stoutly. "And you don't either. I heard you tell Daddy only last night she is a sour—"

Mother pounced on Averageboy just then and carried him out of the room. She remembered what she had said.

THEY returned a few minutes later, a smiling but determined-looking woman and a wide-eyed, scared little boy. The boy walked straight to the visitor, held out his hand and said:

"I'm sorry I said that, Mrs. Grumble. I was a bad little boy to say that— But it's true, just the same."

Then, turning innocently to Mother, he asked:

"Now, Mother, kin I have those cookies?"

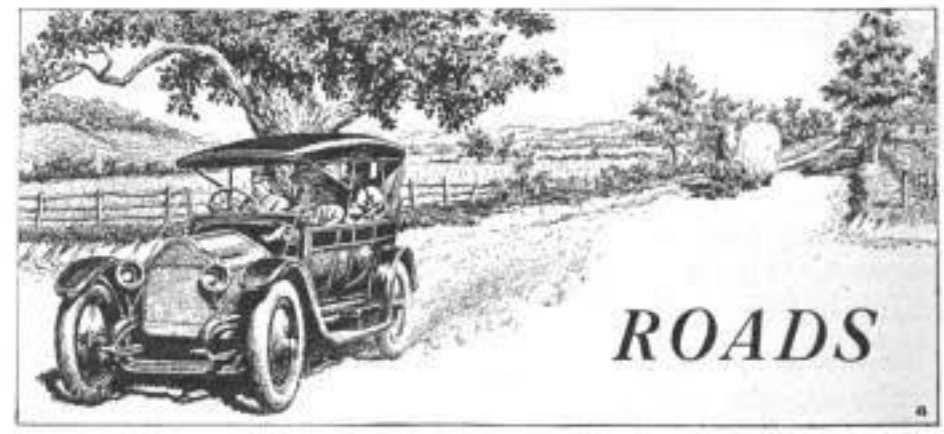
COLDWELL LAWN MOWERS

The Reason

for the wonderful efficiency of Pompeiian Bronze Screen Cloth is the remarkable bronze wire (90% pure copper and 10% a secret alloy) from which this enduring screening material is woven.

No paint or protective coating is used. The bare wire *can not* rust—it actually repels the harmful climatic influences that so quickly break down the meshes of the ordinary wirecloth.

Season after season screens filled with Pompeiian Bronze retain their beauty, their strength, and their ability to resist deterioration. *In any climate* they are a permanent protection against all insect pests.



POMPEIIAN BRONZE SCREEN CLOTH
LASTS AS LONG AS YOUR HOUSE

Don't screen with any other material. It is as suitable for the city home as for the farm or country estate. It is equally efficient in mammoth office buildings or modest mountain camps.

When you ask your dealer for Pompeiian Bronze Screen Cloth, look for the removable red string in the selvage. If there is no red string it isn't Pompeiian Bronze. If your dealer can not or will not supply you we will—promptly. Send to-day for book.

CLINTON WIRE CLOTH COMPANY
65 STERLING STREET, CLINTON, MASS.

First weavers of wire by power in the world. Makers of Clinton Wire Lath—the first metal lath produced and the best to-day for stucco and inside work. Interesting book of "Stucco Houses," showing many types, sent upon request.

Campaigning That Counted

By EWING GALLOWAY

HERE is convincing proof that a few earnest, public-spirited men can accomplish wonders in road promotion work in a comparatively short time if they know exactly what they want and how to get it.

The Good Roads Association of Spokane County, Washington, has been in existence for a long time, but until three years ago it was like many organizations of its kind—dormant. At that time the county had only eight miles of what could, by stretching the imagination, be classified as hard-surfaced highway. For twenty years the people had wanted good roads, but their ideas of how to get them were vague and there was an absence of real leadership.

Vigorous from the First

THE county awoke from its protracted doze when several men in different lines of endeavor realized that only by making a business of securing first-class highways could anything definite be accomplished. The old association was reorganized and about twenty-five men of the city of Spokane agreed among themselves to subscribe each year to a fund which would approximate $5,000 for such work as was needed to get results. This sum was quite modest when you consider the fact that the population of the county at that time was approximately 150,000.

W. H. Cowles, a wide-awake business man, was elected president of the association, and seven enthusiastic good-roads boosters representing as many subdivisions of the county were picked for vice presidents. Each of the vice presidents became the leader of a branch organization. Frank W. Guilbert was chosen secretary and actual leader of the association. Mr. Guilbert was eminently qualified for the job, and did not have to depend solely upon his salary for a living.

Mr. Guilbert and his associates did not begin by feeling their way; they started a vigorous campaign at once. The newspapers of Spokane and the small towns were quick to assume their share of the work, the aid of good spenkers was enlisted, and for several months good-roads gospel was dinned into the ears of all doubtful voters. The newspapers and orators argued that first-class thoroughfares were an economic necessity, and used facts and figures to prove that they knew what they were talking about.

But of course the crusaders did not have a walk-over. There was enough opposition to make the campaign interesting. A great many conservative farmers had to be convinced that they would not be burdened with a heavy tax and that the expense of keeping their horses shod all the year round would be trivial compared with the saving from decreased horse feed and quicker transportation. And this task was not always easy.

How Opponents Were Handled

THE Spokane newspapers were frequently called upon to publish letters taking issue with the statements of Mr. Guilbert and his colleagues. Mr. Guilbert made it a point to answer these letters by personal correspondence rather than through the columns of the papers. One particularly vicious attack was made upon him by a farmer named I. B. Welch. Mr. Guilbert wrote the farmer a courteous letter, inviting him to call at the headquarters of the association and talk over their differences. Mr. Welch came, and ever since that day he has been one of the county's most ardent promoters of rural highway betterment. He is also one of Mr. Guilbert's best personal friends, and every now and then makes him a present of a barrel of apples.

Noise for Noise

SOME members of the Legislature from isolated districts have always been hostile to the movement because they believe the good-roads crusaders are presuming when they invade their territory and endeavor to educate the farmers to what the association considers to be the right way of thinking.

At a meeting in a theatre at Deer Park, some twenty-five miles north of Spokane, Mr. Guilbert was attacked on the floor by a legislator who regarded the speaker as an intruder. The meeting became so heated that the audience could hardly understand what Mr. Guilbert was talking about. The secretary realized that the only way to hold his own was to make more noise than the belligerent politician, and he won.

The people in some of the remote districts had crude notions about what roads ought to be. Some time ago Mr. Guilbert motored over a township road, not far from Spokane, that had been surfaced in the old-fashioned way. The material had been dumped in the middle of the road and the overseer had trusted traffic to level it down. The thoroughfare was so bumpy that Mr. Guilbert broke the steering gear of his machine.

"Why didn't you spread that material so as to make the road smooth?" he asked the overseer.

"I didn't think of that," replied the township official. "It would have been all right had all the wagon loads of stone been the same size."

Results in Spokane County

THE actual results obtained in Spokane County in the last three years were recently summed up for COLLIER'S by Mr. Guilbert.

"*We have built,*" *he said, "forty miles of hard-surfaced roadway at a cost approximating $300,000; and we are building right now eighteen miles of first-class highway at a contracted price of $165,000. We have also provided for the expenditure of $250,000 in 1914, which should give us at least twenty-five miles more of hard-surfaced road. The standard width of our roadbed is sixteen feet, which is above the average for the country at large. In three years as an organization we have provided for something over eighty miles of so-called permanent highway.*

"The expenditures I have mentioned are in excess of outlays by the State, county, and townships from other funds. In 1914 the State will expend in this county for a permanently located and drained standard grade something over $100,000. The county road and bridge fund each year is something over $100,000, and the township levies call for a little over $175,000. *Thus in two years, 1913 and 1914, I figure, there will be expended in Spokane County approximately $1,100,000 for road improvements. A little less than half this amount will go for hard-surfaced roads.*"

The policy of the association is to get properly located and permanently drained highways, using at this time the surface which the traffic seems to demand, with the idea of laying a foundation for a surface of any width increased traffic may necessitate.

"We feel," says Mr. Guilbert, "that by

Build your home around ideal heating

A house in which waste and extravagance have a loose rein is never a happy home. *Genuine economy* does much to favor domestic peace. Old fashioned heating methods afford little protection to the windward side of the rooms — waste the valuable heat up the chimney — or overheat some rooms in the effort to drive needed heat to exposed rooms. The ideal in heating comfort and fuel economy is reached and *permanently guaranteed* by an outfit of

AMERICAN RADIATORS & IDEAL BOILERS

IDEAL Boilers and AMERICAN Radiators utilize no more than the exact amount of fuel needed to warm rooms uniformly. Automatic regulators stop all fuel waste by instant control of draft and check dampers. Besides, fuel can be saved by turning off radiators in any rooms where warmth is not always needed.

IDEAL Boilers and AMERICAN Radiators are made for every size of cottage, mansion, flat, church, school, store, garage, or public building. They produce the most healthful warmth known—free from ash-dust, coal-gases and soot—thereby also saving much cleaning labor and damage to furnishings.

In choosing from the big IDEAL Boiler line, you can select a type just right for your needs—for water, steam or vapor, for hard coal, wood, gas, soft coal, lump, run-of-mine or screenings; or, you can choose our new DOWN-DRAFT type for *smokeless* burning of low-grade soft coals (plentiful and cheap in many localities.)

IDEAL - AMERICAN heating outfits will wear for a century or more; require no annual over-hauling to keep in order. Sectional parts go together by finely machined iron-to-iron water-ways which never require packing or attention. Consider *present attractive price* and low cost of upkeep and absence of repairs, with the fact that our outfits increase rental and sales values—and you will see that the outfit is more than a choice—*it's a big paying investment.*

Let us help you to choose wisely. Build around the heart of any home—which is *ideal* heating. Whether seeking to comfort your present building or you are planning a new home or other building, our booklets (mailed free) and special information will be worth your while—put you under no obligation to buy. *Act now!*

A No. 8-22-W IDEAL Boiler and 400 sq. ft. of 38 in. AMERICAN Radiators, costing the owner $230, were used to heat this cottage. At this price the goods can be bought of any reputable, competent Fitter. This did not include cost of labor, pipe, valves, freight, etc., which are extra, and vary according to climatic and other conditions.

AMERICAN RADIATOR COMPANY

Showrooms in all large cities

Write Department 31 CHICAGO

getting mileage of reasonably good type of hard surface we are giving service to the taxpayers, and we are constantly demonstrating to a greater number the economy of grades and all-the-year-round roads.

"If we built short stretches of the costliest type of highway, we would not be giving the service, consequently dissatisfaction would arise and we would have a hard time securing from future legislatures reasonable levies for road purposes.

"*We are preaching maintenance, maintenance, maintenance; and I can assure you that at this time the county commissioners are doing more toward maintaining Spokane County's hard-surfaced roads than they have ever done before.*

"*The satisfactory things are those we come across after a road has been improved. We find that the men who were our opponents, and who fought to the last ditch against improvements, are not only pleased with their own highways, but are willing to go out and help the association better other people's roads.*

"Our activities are not limited to Spokane County. The association works for better roads throughout the State. We even take a hand in the movement in Idaho. One of the first things we appreciate is that it takes money to build roads, and in Washington we set about getting appropriations from the State, which means like appropriations from each county. As yet we have not been able to secure a good road law in Idaho."

The Spokane County Good Roads Association's success has been due to the fact that it started out with a business plan and worked systematically. One of the wisest things it did was to employ a leader who was not only enthusiastic but capable. Campaigning for public improvements does not require much money. A harmonious organization and a good campaigner are the main essentials.

Spokane County does not lead in large expenditures, or mileage, but the progress it has made in three years affords a splendid example for other localities.

Good Idea!
Push It Along

FREDONIA, KAS.

EDITOR COLLIER'S:

I HAVE been a customer of COLLIER'S for ten years, and your book department is certainly the best ever. . . .

COLLIER'S a while back ran an editorial regarding the advertising in Mr. Bryan's "Commoner." These quacks and patents who have been advertising in the "Commoner" have been an eyesore to me for years, and I think I remonstrated with the "Commoner" once. It is just possible that Mr. Bryan gives to others the business policy of his paper, like many editors of religious papers. Lover of Mr. Bryan that I am, since I first voted for him in Helena, Mont., in 1896, I am today writing him about the frauds he is constantly advertising, and hope the letter will get past his secretary. I feel sure that Mr. Bryan does not realize the awful harm he is assisting, for there are more than six millions of voters in the United States that would ordinarily take his word against that of any man. I want to thank you for that editorial. Why not all the Bryan admirers write him about these quack and patent-medicine advertisements that his paper constantly carries, and let COLLIER'S put the proofs before him that he is, in this one respect, doing an immense amount of harm?

I SHALL take the liberty of saying to Mr. Bryan that you will present the facts of this matter to him in such a manner that he cannot fail to see, and I hope you will not fail me. (I don't mean "me," but don't fail the tens of thousands of "Commoner" readers.)

E. C. DUNCAN.

BOHN SYPHON REFRIGERATORS

PRESERVING the appetizing flavor and healthfulness of food depends, not only upon temperature, but upon proper air circulation. Both these features are provided in the fullest measure in the

Bohn Syphon Refrigerators

A temperature 10 degrees colder than obtained in other refrigerators is maintained through use of Flaxlinum, the most efficient insulation, and the Bohn Syphon System of air circulation. Flavor and healthfulness of foods cannot be affected in Bohn Refrigerators where such perfect circulation of cold dry air is maintained. And the ice saving is remarkable.

The walls and shelves are lined with genuine porcelain enamel (not white paint) providing easy cleaning and long wear.

The Bohn Syphon System is adopted by the Pullman Company and all American Railroads.

Road south front of White House, Washington, D. C. Constructed with "Tarvia X". Showing U. S. Treasury building.

In front of the White House

THE roadways leading to the White House, U. S. Treasury and State, Navy and War Departments, in Washington, illustrated above, were constructed with "Tarvia X" in 1911.

The above photograph shows the condition of these roadways two years later. They are quiet, clean, smooth and dustless, entirely suitable for so exacting a location.

The Tarvia forms a tough matrix around the stone, holding it firmly in place. Automobile traffic simply rolls down the surface and makes it smoother.

The maintenance cost of tarviated roads is insignificant, and their first cost is only slightly higher than that of ordinary macadam. Tarvia has no odor and does not track.

Tarvia is made in three grades—"Tarvia X" is a dense, viscid coal tar product of great bonding power, suitable for building Tarvia-macadam roads; "Tarvia A" and "Tarvia B" are thinner grades suitable for roads already in use, to preserve them and make them dustless.

ANNOUNCEMENT was made the other week that COLLIER'S has a new editor. The "new" was unnecessary—"an editor" would have been sufficient and surprise enough in itself.—*Publisher and Retailer.*

✚

COLLIER'S WEEKLY has a new editor. According to announcement sent out this week by P. F. Collier & Son, Inc., Mr. Mark Sullivan will serve in that capacity hereafter. Mr. Sullivan has everything to gain and nothing to lose. He has the satisfaction of knowing that he cannot make COLLIER'S any worse than it is. He may be able to make it better. —Lyons (N. Y.) *Republican.*

✚

Mark Sullivan is the newly appointed editor of COLLIER'S. And the "Madisonian" is free to admit that Mark sometimes has the John L. punch.

—Virginia (Mont.) *Madisonian.*

✚

KNOXVILLE, TENN.

For one, I am so tired of the exploiting of a one-man cause by COLLIER'S that if I had not subscribed far ahead your paper would stop.

Why not advertise soap? Soap would be good for some of the Roosevelt clan! Most east Tennesseeans are of the opinion that if anything of a serious nature happened to the Colonel on any of his tours of "exploitation" the Progressive movement would go to the devil, too.

J. P. STALEY.

✚

COLLIER'S WEEKLY voices the sentiment of the majority of thinking people in the country when it declares that since the recent meeting of the Republican National Committee at Washington the proposition of amalgamation of the Republicans and Progressives has been falling rapidly from par toward zero.

—Biddeford (Me.) *Record.*

✚

MEEKER, COLO.

I am a forest ranger, and I can assure you that your magazine is a good one for a busy man. I especially enjoy the editorials and Mark Sullivan page—say, why does he take a vacation and fail to give us a page now and then? Although I did not vote for him, I am a great admirer of President Wilson. However, I am proud to say that I am a Bull Mooser and hope to have a chance to vote for Teddy again, as I have done twice already. DR. W. FRANK BATES.

✚

ROCKY MOUNT, N. C.

I have been a subscriber to the Weekly for some years, but a month or more ago it stopped coming. I thought after the price was reduced that my subscription was extended and that it had some time to run; at any rate I received no notice of my subscription expiring. Please look into this and let me hear. I am not so keen on the Weekly except for Mark Sullivan's letter. I must have that each week. ALEX. P. THORPE.

✚

For many years Mr. Sullivan's weekly "Comment on Congress" has been regarded as law and gospel by thousands of readers. In that page he has shown the discernment, the grasp of affairs, the independence, the absence of prejudice, and the well-balanced judgment that supremely qualified him to interpret national affairs to the people.

—Kansas City *Times.*

✚

The probabilities are that the Republican party, in spite of Mr. Sullivan of COLLIER'S, will refuse to be destroyed. It has made an attempt to reform itself, and though it did not go far in this direction, it ought to be commended for what it has done.

—Providence (R. I.) *Bulletin.*

✚

GEORGETOWN, S. C.

MR. SULLIVAN:

I have read your "Comment on Congress" without missing a single article. I have been a reader of the Weekly for a number of years and have found it a source of inspiration. I can truly say that what I have seen in those columns has made me a better citizen than I would otherwise have been. I say this in all sincerity and with the request that you will convey this sentiment to the publishers; for, if I have correctly "read their minds," the statement that they have sent out through the medium of their publication has contributed toward making even one man a better citizen than he might otherwise have been will cause them as much gratification as anything that could be said. ARTHUR L. KING,

Editor, the "Progressive Democrat."

✚

During the last weeks we have been asked several times, "What kind of a paper is COLLIER'S?" Last week COLLIER'S carried some editorials that are good enough for the columns of any newspaper. So, in order to give you an idea of what COLLIER'S is, we are practically turning over our editorial columns to reprint some of their views upon questions of national importance.

—Oak Hill (Ohio) *Press.*

✚

No illustrated paper in the world can compare with COLLIER'S WEEKLY in the matter of text.

—London (England) *Tablet.*

✚

"GETTING THE WORK DONE"

COLLIER'S WEEKLY, which is among the few periodicals that still print editorials worth while, says that, in business, sheer weight of money of itself seldom wins.

—*Advertising Digest* for January, 1914.

✚

TOUCHED THE HEART OF IT

COLLIER'S magazine has touched the very heart of reforms in this declaration: "The first step toward the elimination of sin is to get after the man who makes money out of it."

—Los Angeles (Cal.) *Voice.*

✚

TOWER, MINN.

COLLIER'S WEEKLY comes in bright and new like a coin from the mint.

J. A. TOBEY.

✚

MINNEAPOLIS, MINN.

"The Jinx" is the poorest excuse for a story I ever saw in print—if you can't get anything better than that leave the pages blank. It is pure rot. I couldn't keep my opinion of the story to myself—I wanted you to know it. It was simply awful. J. E. O'ROURKE.

✚

PHILADELPHIA, PA.

I read Mrs. Magruder's story, "Feud and Flood," in last week's magazine, and liked it very keenly. There is an unexampled and individual quality here, and the woman has the shory-story instinct.

FRANCIS HILL.

✚

NEW YORK, N. Y.

I must tell you how tremendously I enjoyed "Feud and Flood" in COLLIER'S.

DANA GATLIN.

✚

SCOTTSBLUFF, NEB.

I have read carefully your article in the 7th of February issue of COLLIER'S, and it is certainly a great review of "The Issues at Calumet." Now I will give my view of the above. The cause of the whole suffering is locked up in one word—"greed." Greed is called in the Bhagavad-Gita one of the three gates to hell, and I think it has proved its title clear beyond a reasonable doubt in Calumet. And, when the mine owners pay in suffering the suffering they have caused, I do not think they will do it again. They are a very silly lot if they think they can cause such misery and escape rigid justice. I will leave them to their Karma. You have my permission to print the above letter if you think proper, and it's not breaking any of our laws, over my signature and address.

Is a Burglar Dangerous?

Face these facts: Burglary is increasing, as proved by leaping burglary insurance rates. The burglar is not a romantic adventurer. He is of the lowest type of foreign criminals—cruel, debased—half idiot and half brute—with a cocaine courage as irresponsible, dangerous and hysterical as the frenzy of a cornered rat. Would you temporize with a cornered rat?

IVER JOHNSON
Safety Automatic REVOLVER

Self-contained safety—automatic safety—absolute safety. There's only one way an Iver Johnson can be fired—by a long pull on the trigger.
Drop it—throw it against a wall—Hammer the Hammer—it cannot go off.
Equipped throughout with permanent jewels, and unbreakable wire springs—reliable for a lifetime.

Madame's Mix-Up

(Continued from page 12)

"Ma foi!" cried madame in keen delight. "Ze pigshead wink' his eye at me!" And after she had laughed until she had to wipe her own bright eyes: "Ah, zis life, zis life—" she murmured—"it is immortal droll!"

WHEN madame reached the restaurant next morning, she was dressed like the queen of diamonds on the king's birthday. "For I," she thought, "I am ze maker of history! Du Barry made history—yes!—but she was what she was, an' she made ze soldiers fight. An' I am what I am, an' I keep men from being shooted, an' anyhow I bet me zat Du Barry never had a pigeon egg velvet like zis!" And so she had paraded around the upper deck of the Staten Island ferryboat, her nez retroussé on high, glorying in the glances which she drew from the crowded benches. "Yes, look!" beamed madame to herself. "Look your fill, good peoples! For it was I—and I alone—who have save' t'ousands of men in Mexico from being puncture' wiv bullets—I, Gaby DeJoie!"

Where the News Is

Managing Editor — *Why aren't we getting better photographs from Mexico? Haven't we a man down there?*

City Editor — *No, sir; baseball season's opened, so we sent him over to Texas to the training camps.*

She stepped upon the Sixth Avenue L like a princess entering the royal coach. For had she not received a mysterious telephone message the night before? "Tell señorita I have found them!" That had been all. But the words were still echoing through her mind like a prideful procession as she glanced through the mail which Louis had placed upon her desk.

"An' whose writing is zis?" she wondered. "Pos'mark' 'Brooklyn, 11 p. m.'"

"DEAR SENORITA," read the letter. "The truck, with me in barrel, crossed the ferry. It drove up and down deserted streets to see if anyone followed. But no one followed. At dusk we reached a building near the ships, and I was rolled gently in a cellar and placed 'This side up with care.' I waited till all was quiet and then I let myself out. The cellar was full of long boxes and square boxes. The long boxes were marked 'Whips,' and were full of rifles. The square boxes were marked 'Prunes,' and were full of cartridges. I was still looking into these things when I heard a key in the door. It was *he*—"

"Ze emperor!" muttered madame.

"I took him around the neck," continued the letter, "and he made no noise. I tied him, blindfolded him, and gagged him—"

"If I had been zere I would have shav' him, too!" madame couldn't keep herself from thinking.

"There were ten thousand rifles and two hundred thousand shells—"

"Mon Dieu!" commented madame. "So

THIS season, "the simpler, the smarter" is the decree of Fashion. The Oxford, shown above, with the *plain-stitched tip* invites attention by seeming to avoid it and has the supreme "smartness" of extreme plainness.

"ARLINGTON" Corded-Tip Oxford—$4.50

Russet Calf; semi-slender, receding toe; plain stitched toe-cap (no perforations) with raised or "corded" effect between rows of tip stitching; broad shank; solidly planted heel; invisible eyelets; English cord laces; back seam locked with an "anchor stay;" expressly shaped and steadied to clasp the ankle and hug the heel. Also available in Black Calf.

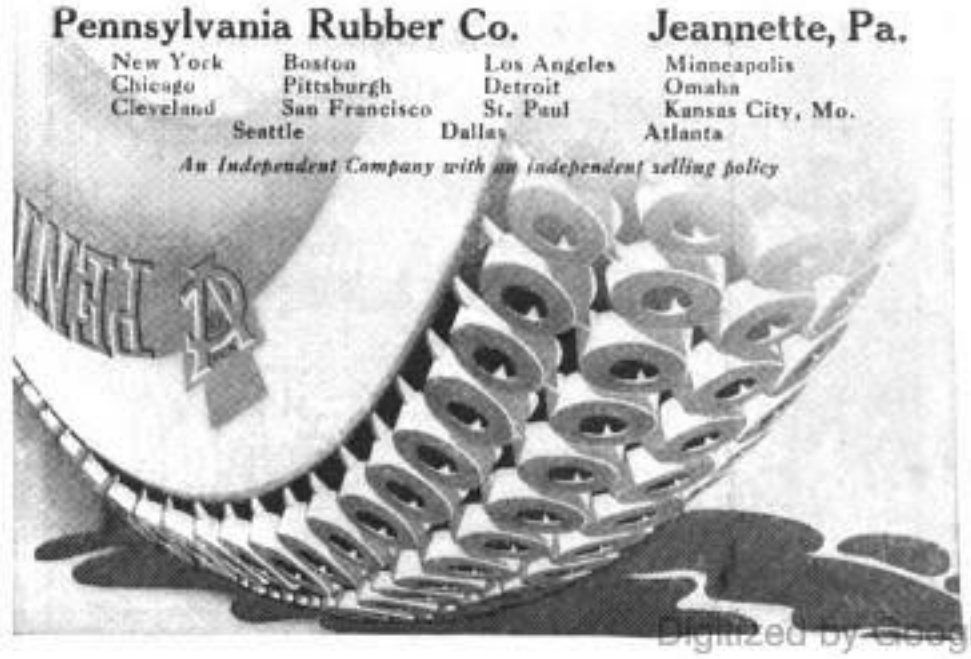
Tire Words— Tire Deeds

THE guarantee that these tires will not skid on wet or greasy pavements—else returnable at full purchase price, after reasonable trial—is based on complete and positive, not partial and doubtful, non-skid efficiency.

PENNSYLVANIA Oilproof VACUUM CUP TIRES

The further guarantee of 4,500 miles actual service is for the user's protection only. It is based on years of experience proving this mileage to be a low minimum. There is involved no *expectation* of adjustment, as the average mileage is far greater, there being numerous records of over 12,000 miles on heavy cars.

The guarantee of absolutely oilproof quality still more definitely fixes Vacuum Cup Tires in a place entirely apart—in every consideration of safety and service.



Start the season with this matchless tire equipment.

To the man about to paint a house we say one word:

Zinc

To all paint from which the best results are desired Zinc should be added because it enhances everything that is expected of paint. It makes the paint whiter or makes it take the color better; it greatly increases the durability of the paint; it forms a stronger protection for the painted surface than paint without Zinc can.

Hence do not make a brush move until you have sent for the booklet, "Your Move."

many poor wives an' mommas can t'ank me for such!"

"There were letters in his pockets. He had hired a steamer to carry the goods to Vera Cruz. So I went to see the captain and explained that I had taken charge of the shipment. We changed the port to Tampico, where the rifles and cartridges will be forwarded to the hands of the patriots. And won't he feel sick when he reads in the paper that President Wilson lifted the embargo on arms this afternoon?"

"Lift ze embargo on arms!" gasped madame. "What is zis which he means?"

"They load all night on some of the docks," continued the letter, "so we started in right away. By the time you get this note we shall be out at sea—"

"Then he did not have them seiz'!" groaned madame, her eyes hurriedly sweeping over the rest of the letter. "An' all zose guns an' bullets will go right on shootin' lil' round holes out of a lot of poor devils who don't know what it's all about! . . . Mon Dieu! If zis is history in ze making, I do not like ze recipe, to say not'ing of having my fingers burn' at las'! . . . Well, Louis?" she asked, looking up at the prince of waiters, who was standing by her side.

"To-day's menu, madame."

SHE glanced it over thoughtfully. "At leas'," she reflected, considering the item of roast duck and apple sauce—"at leas' I have cook' ze emperor's goose! Zat is wort' somet'ing!" The sun of her smile pursued the shadows from her face, and she nibbled the end of her pen, leaning over the bill of fare: "Louis!"

"Yes, madame?"

"Less-ten! Zis 'Soupe à la Julienne'—change it to 'Soupe à l'Empereur.'"

"'Soupe à l'Empereur,'" noted Louis.

"An' change ze salad from lettuce to 'Barbe de Capucin.'"

Louis wrote it down.

"An' to-day we will have a dessert extra special—Ciel, what inspiration is zis!—'Pr-r-r-r-rune Whip! Voilà tout!"

She smiled—a knowing smile—and when two o'clock arrived and M. Fron-Fron still failed to appear at the table by her desk, madame smiled again. Suddenly above the hum of the restaurant she heard the word "Mexico." Madame bent her head and listened for more.

"I see," the voice was saying, "that General Carranza captured six guns from the Federals to-day, and lost two hundred men."

"Pooh-pooh!" thought madame, curling her nose as much as the retroussé would allow. "General Dejoie captur' ten t'ousand guns an' two hundred t'ousand bullets to-day—an' ze only man ze general lost was ze man she wan' to lose!"

A Letter from Gifford Pinchot

The following letter has been received from Mr. Gifford Pinchot with a request that it be made public through Collier's:

MR. MARK SULLIVAN,
EDITOR COLLIER'S, New York City.

MY DEAR MR. SULLIVAN:

THE question was raised in my hearing recently as to what American now in private life would be most useful as a member of the United States Senate? The subject is one upon which it would be possible to write or talk a long time. My own opinion, however, is perfectly clear, and I venture to submit it to you in the hope that the expression of it may be of use at this time.

Francis J. Heney, in my judgment, is better fitted and more needed than any other man in America to serve our people at this juncture in the Senate of the United States. His wide familiarity with the country and its needs, his thorough knowledge, gained in battle, of how special privilege works against the general good, his absolute fearlessness, his proved devotion to the public welfare, his distinguished ability and strong will—all these great qualities combine to make him an ideal public servant.

Such men are rare and as greatly needed as they are hard to find. The man who is willing to fight and die in the last ditch for a good cause is, I suppose, the most valuable kind of human being.

If I am elected to the Senate, there is no man I would rather have beside me when the fight grows hot than Frank Heney. He is all man and true blue.

Sincerely yours,

(Signed) GIFFORD PINCHOT.

Overheard at the "Movies"

By LEONARD HATCH

"I WONDER who thinks up all these pictures anyhow?"

"Gee, wouldn't you think the pianist would get tired! He sure earns his wages."

"I just { hate / love } these sort of pictures."

"Looks awful healthy to be starvin'."

"I've seen that feller in lots o' pictures before."

"Let's just wait for one more after this."

"See the wind blow."

"Wait till the old man finds out what's going on. There'll be something doing."

"Gee, that picture gives me a thirst!"

"The next ought to be a funny one."

"'S a cute youngster all right."

"They take all these Wild West scenes in New Jersey."

"Look how that horse stands without hitching."

"I should think those actors would get killed—trying stunts like that."

"He's a good-looking chap all right."

"He's sure got what was comin' to him."

"Served him good and right, too."

"Now he's going to kiss her. . . . *There!* What did I tell you!"

"That's 'The Rosary' he's playin' now. *Some song*, believe me!"

"See 'em grin. They know they're bein' took."

Joy-Riding

Concluded from page 10

precious perishables. This enterprise has been conducted for years, and although business has been good, the concern doesn't owe a cent.

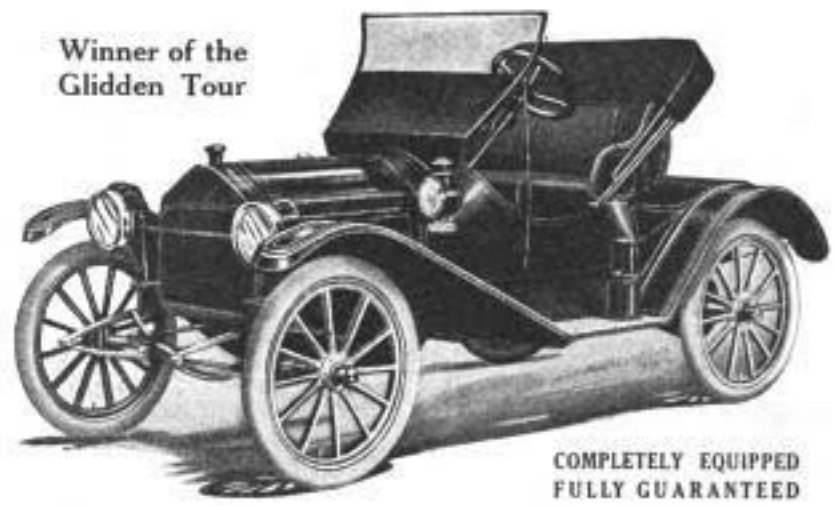
Think of the scandalousness of the wasted situation! Think what the nation laboring along under a billion-dollar public debt could do with this tunnel if it had any real railroad financing ability! In the first place, the tunnel ought to be bonded. The assured appropriation for its maintenance each year ought to make it possible to sell at least $10,000,000 first mortgage bonds on the thing. Of course, no charge is now made for transportation, which makes it awkward. But suppose the appropriation were to be increased to provide for the distribution of books of ten-cent coupons to the Senators, and tourist cars were also run. This would provide a balance sheet and any good bookmaker could do the rest.

Was It Ever Done?

NOW, having the tunnel organized and in successful operation, the next thing is to provide feeders. These are always necessary in railway operations. Fortunately these feeders are available. There are two of them. One feeds the Senate and the other feeds the House. Congress should capitalize these restaurants for $10,000,000 apiece, and then sell them to the tunnel company at 90. This, of course, would load up the tunnel company, but to offset this a holding company should be organized with a capital of $50,000,000 preferred and $200,000,000 common to take over both tunnel and feeders. On the basis of the $28,000,000 cash assets of the subsidiary companies, the holding company could then issue $100,000,000 worth of collateral trust to $50,000,000 worth of equipment bonds, secured by a first mortgage on the tunnel automobile and the hatracks of Congress, and $1,000,000,000 worth of general refunding bonds, secured by a prior lien on the undeveloped territory of the original company lying between Congress and Wall Street.

With the money thus secured the holding company could buy up the national debt, thus freeing the nation of its obligations and giving the company a nice line of property corresponding in value to a dismantled steamship line or a $1,000,000 trolley survey. About this time the preferred stock of the holding company would become much depressed and its 4 per cent bonds would fall to $.01, thus creating severe criticism. But the country would be out of debt and the slight losses sustained by private citizens could be wiped out by reorganizing and exchanging $1.50 worth of preferred stock for $1,000 in bonds and a $2 bill.

When we see Congress slumbering loudly along with this opportunity sizzling beneath its pillowed ear, we are forced to acknowledge with humility the superior genius of private management.



METZ "22"

THE METZ "22" is everything you want in a strictly first class car of the roadster type—stylish, speedy and wonderfully economical in operation. It is a thoroughly practical car, built to give enduring satisfaction. It saves you money when you buy it, and every hour you run it. It

$475

won the last Glidden Tour, competing with cars that cost from five to ten times as much—the three cars comprising the METZ team being the ONLY cars that held PERFECT scores, without time extension or additional allowance of any kind, for the entire eight days of the contest.

Winner of the Glidden Tour

COMPLETELY EQUIPPED
FULLY GUARANTEED

The gearless transmission of the METZ "22" is one of the big features of its construction. It has no clutch to slip, no gears to strip—thus doing away entirely with gear troubles. Its equipment includes four-cylinder water-cooled motor, Bosch magneto, full elliptic springs, extension top, wind shield, artillery wheels, best quality Goodrich clincher tires, 5 lamps, horn, tools, etc. It travels 28 to 32 miles on one gallon of gasoline, makes 5 to 50 miles per hour on the high speed, and is a splendid hill climber.

New Illustrated Catalog "C" now ready. Representatives wanted in every city and town. Write for special terms.

METZ COMPANY, WALTHAM, MASS.

$72 Saved On One Winter's Coal Bill
—With an Underfeed!

Here's testimony that convinces. Read Mr. Wirth's letter. Think about it. Let it sink in. It's one of the greatest money-saving pieces of evidence we ever heard of. Mr. Wirth writes: "My Underfeed is the most economical I could have installed. During the last very cold winter I burned only 18 tons of soft coal screenings at $4 per ton for my 15 rooms. Hard coal would have cost double the amount." To add emphasis to his recommendation, he said: The three Minneapolis park buildings heated by the Underfeed have given *very good* satisfaction." Others write: **"Heats 12-room house for $40." "A great fuel saver." "No repairs in 7 years." "For economy and heat, can't be beat." "Ten rooms heated for $28." "Saved $122 a season."**

Over 25,000 Underfeed users have *proved* our claim that

WILLIAMSON UNDERFEED
Furnaces and Boilers
Cut Coal Bills ½ to ⅔

Cut-Out View of Underfeed Furnace

The Underfeed principle is different from all others—and it's better. Coal is fed from below. All the fire is on top. Smoke and gases are consumed, making more heat with *no* soot, smell, smoke, clinkers or dirt, and few ashes. *Cheap* slack soft coal or pea and buckwheat sizes of hard coal yield in the Underfeed as much clean, even heat as *highest* priced coal in other heaters. The Underfeed is adapted to warm air, steam or hot water in buildings of all kinds, large or small. Soon pays for itself.

50% Saving Guaranteed With an Underfeed

We guarantee a saving over your present coal bills of at least one-half by means of the Underfeed, when properly installed and operated. Every Underfeed carries this guarantee, which is backed by a $750,000 company. So you take no risk. The burden of proof is on the Underfeed. It has satisfied thousands—it will satisfy you. If you are tired of paying big coal bills, or if you are going to build, send the coupon for full details of the Underfeed. The result will pleasantly surprise you. (2)

World's-End

(Continued from page 13)

handled from a foal as we handle our colts here at World's-End. He is by Ironsides out of a Coxcomb mare. I bought him from a man named Ladd in the other valley. If Goodeloe wishes to sell him, he is at perfect liberty to do so."

"Yessuh."

"You've got that straight, David?"

"Yessuh."

He repeated Owen's instructions and stood waiting.

"Take him off by daybreak to-morrow. I am keeping the motor that Dr. Patton came in at World's-End for the present. When you come back from Goodeloe's take the colts and the light wagon and go to Warwick for gasoline. I will let you know later how much to get. Where has the motor been put?"

"In dee second ca'yage house, suh."

"Very good. That is all, David."

The cause of Owen's unexpected return to World's-End within twenty minutes of his arrival at Crewe had been the collapse of a railway embankment near Charlottesville. Despite the calm assertions of science and philosophy, there seems to be a force at work in the lives of men called variously Fate, Nemesis, Karma, Destiny.

It seemed to Phœbe that the following week was passed in another state of being. Everything looked strange, phantasmal, curiously unfriendly. She saw sinister faces in the winter branches, the shadows thrown on chairs or bed formed themselves into skulls or death's heads. The pictures in her fire were goblinlike. When she took up a book to try to divert her anxious, harrowed mind it seemed always as though a mocking chance led her to phrases and descriptions that had a horrid likeness to her own case or the ghastly events that had just befallen.

And the two trained nurses, in their bleak white linen gowns and caps, stealing everywhere through the silent house like preoccupied ghosts, added painfully to her illusion. They seemed to her like true astral bodies—clad differently, moving differently, speaking in different tones from the denizens of the familiar everyday world.

She went rarely to the nursery in those days, and when she did, it was merely to kiss the baby swiftly and go out again.

Giles had a very severe air toward her. She considered that no event less upheaving than that of the last day should interfere with all due attention to her nursling. So one morning she appeared firmly in Phœbe's room with Diana and placed her without a word in her mother's arms.

Phœbe held her a moment, kissed the top of the little hay-scented head, and then, rising, put her back in Giles's arms.

"I—I can't—Giles," she said. "I'm too miserable. I can't play with the baby while I feel like this."

"If you'll pardon me, m'm," Giles had said with grim firmness, "your child should be a consolation to you, m'm."

"Yes, yes—I know," Phœbe had said irritably, "but I can't have her now, Giles. I really can't."

With infolded lips Giles had marched to the door. Reaching it she turned.

"If this blessed lamb falls ill, m'm," she said dourly over the baby's head, "*then* you'll know *real* misery!"

And with this parting shot she went out, closing the door so softly that it was a more seething exit than a bang would have been.

If Phœbe rested badly during these feverish days and nights, Owen could not have been said to rest at all. He slept on a couch in Richard's dressing room, to be within call at any moment, for it took both Patton and himself to assist in moving Richard without giving him too much anguish.

The chauffeur plied constantly on errands of all sorts, in addition to taking Patton during such hours as he could be spared to the houses of his more seriously ill patients.

Phœbe saw very little of Owen. After the momentary breakdown, when he had come into her room, locking the door, on the day of the misfortune, he had turned again into a man of stone. Phœbe kept to her room most of the time, but now and then Patton would burst in tempestuously and drive her out for a walk. He also bullied her into taking a strong tonic. But nothing succeeded in rousing her from her pale listlessness.

Some one's done this

NEXT to a sputtering pen an anæmic ink is the worst plague known to all who write. Carter's Inx, long ago, laid this trouble by the heels. Carter's Inx flow smoothly, gum up less, corrode less, and dry into permanent records that defy time.

Now there is a new Carter's Ink made especially to settle the bother of having one ink for fountain pens and another for inkwell use.

Carter's Pencraft

Combined Office and Fountain Pen

Ink

flows freely enough for fountain pens and has just body enough for steel pens. It writes a brilliant dark blue and dries an intense, non-fading jet black.

Stationers say Pencraft Ink fills a great need. You will find it at your dealer's in various sizes at prices from $1.00 (quart) to 15c per bottle—the larger bottles are the truly economical, satisfying way to buy ink. Buy a large bottle for home use.

After all, no ink like Carter's.

THE CARTER'S INK COMPANY
Boston, Mass.
New York Chicago Montreal

Largest Manufacturers of Writing Inks, Adhesives, Typewriter Ribbons and Carbon Papers in America.

"RANGER" BICYCLES

Are equipped with puncture-proof tires, imported roller chains, imported English flanged sprockets, English featherweight steel mud guards, imported hanger pedals, motor style saddles, bars and grips, and other distinctive features possessed by no other bicycle. No effort or expense has been spared to make the "Ranger" the World's Best Bicycle. Improved factory methods and greatly increased output for 1914 enable us to make a marvelous new price offer. Something very special in the first purchasers of 1914 models in each town. Write today.

WE SHIP ON APPROVAL without a cent in advance, to any person, anywhere in the United States, and prepay the freight. We only ask you to examine and try the "Ranger" without a cent or promise to yourself before you think of buying any other bicycle.

10 DAYS FREE TRIAL is allowed on every "Ranger" bicycle. *Not a cent* need be sent if you do not wish to keep it after riding it for 10 days and putting it to every test. Our "Ranger" bicycles are of such high quality, handsome appearance and low price that we are willing to ship to you, *prepaid*, for your examination and trial, and leave it entirely to you whether you wish to keep it or not.

LOW FACTORY PRICES Our great output, perfected methods and machinery enable us to offer you direct from the factory the best bicycle ever produced at a price that will be a revelation to you. Do not buy a Bicycle or a pair of Tires until you receive our large complete catalog and learn our direct factory prices and remarkable special offer.

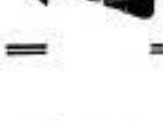
SECOND-HAND BICYCLES—a limited number taken in trade by our Chicago retail stores will be closed out at once, at $3 to $8 each. Descriptive bargain list free.

RIDER AGENTS WANTED in every locality to ride and exhibit a sample 1914 "Ranger" bicycle furnished by us. In your spare time you can take many orders for our bicycles, tires and sundries. Write at once for our large Catalog and a remarkable special proposition we will make you on the first 1914 models going to your town.

TIRES, rear wheels with coaster brake, inner tubes, lamps, cyclometers, parts, repairs and everything in the bicycle line at half usual prices. Do not wait—write today for large catalog containing a great fund of interesting, useful bicycle information. It only costs a postal to get everything. Write it now.

MEAD CYCLE CO., Dept. P-54, Chicago

Plant the TAPE



It's the Scientific Way
Make Vegetable Gardening Easy

Just unwind American Seedtape from spool and plant as directed. Selected seeds, properly spaced inside paper tape and fastened with glue fertiliser, insures a quick, sturdy growth, because the paper attracts moisture to the already fertilized seed. Sprouts much earlier than seeds planted in soil. Proper spacing means no seed wasted—no thinning out. You save time and back-breaking labor.

Send ONE DOLLAR for 50 ft. each of White and Red Radish, Boston and Curly Lettuce, Onion, Spinach, Beet, Turnip, Carrot and Cabbage Seeds. 500 ft. in all. Correct planting instructions in each package. Send the dollar now. NO AGENTS.

THE AMERICAN SEEDTAPE CO.
1624 Walnut Avenue Cleveland, Ohio

Nothing Down — Free Trial. Less than Agents' Prices. Shipped on approval. If you want to keep it, send us $4 a month. Our booklet is worth reading for, because it tells you how to save $41.95. It's FREE.

Typewriters Dist. Syndicate
166 R-22 N. Michigan Blvd., Chicago

Sally she never saw, except sometimes on her way to and from Richard's room. Mary was nearly every moment with Sally. Phœbe's only real companion and approach to comfort in those days was Wizzy, and the little dog followed her everywhere like a small decrepit shade, and slept close to her at night, wrapped in his little blanket, where he could nudge her with his hot, dry nose when evil dreams harassed him. In some dim, doggish way he certainly felt that being near Phœbe was the next thing to being near his master.

ON the tenth of these dreadful, unreal days, near six o'clock in the morning, Phœbe had just sunk into a troubled doze, when a wild, inhuman scream roused her. She sat up, trembling all over, and Wizzy started up, too, his scruff bristling. If it had not been for the dog's action she would have lain down again, thinking she had dreamed, so deathly was the stillness of the house after that one awful cry. But as it was, she lighted her candle as soon as her shaking fingers could find the matches and, throwing on a dressing gown, went out into the hall.

A low wind was making a harp of the outer door, the old clock beat immovably on. These were the only sounds. But then she saw a band of yellow light under Sally's door. As she gazed at it Miss Lee came running out.

Phœbe rushed to her.

"Can't stop now," she said, running on down the stairs. Phœbe was after her like a deer. She gasped as she ran:

"You *must* tell me. Is he—dead?"

Miss Lee was passionately breaking ice from the big lump in the refrigerator.

"No—get me a bowl, please. No—it's his mother—doctor told her—out of danger—went off like that—sorry can't stop," and thus telegraphically speaking, Miss Lee seized the bowl without ceremony, clapped the ice into it and was off upstairs again in a fleet run.

PHŒBE followed slowly. Her knees felt as though made of wet blotting paper now. She helped herself up each step by the banisters.

What seemed to her long hours afterward, Mary came out in her soft, white dressing gown. Her face was very pale but quiet, and hope stirred in Phœbe's heart. Holding Wizzy to her, she stumbled forward.

"Mary—" she called in a hoarse whisper. Mary—"

Mary turned with a start and came toward her. She took her and Wizzy in her kind arms.

"You poor dear little soul," she said. "You look half frozen. It's all right, darling. Don't shake so. Dr. Patton has pulled Sally through. It was the shock of joy after her long despair. Come back to your room, poor baby. We shall have *you* ill next thing."

SHE drew Phœbe into her bedroom and made her get into bed.

"My poor, poor baby!" she said, cuddling her. "I'm afraid you've been dreadfully neglected all these sad days. Your little patties are like ice. Are your feet cold?"

She slipped her hand under the bedclothes and felt the marble-cold feet.

"Just you wait a minute," she said, nodding and smiling.

She went quickly out and came back in a few minutes with a bottle of hot water in a crocheted cover. It seemed to Phœbe that she had never felt a more blissful sensation than the contact of that bottle's warmth with her frozen feet. Tears came to her eyes.

"Cousin Mary, you're an *angel!*" she cried, choking and dragging Mary's head convulsively down to her with both arms.

"Now—now—" murmured Mary. "Don't you be imitating poor Sally. There—there—" She patted and soothed her as if she had really been a tearful baby.

"I'll tell you what I'm going to do!" she cried suddenly, straightening and putting her finger wisely to her lips. The little dance had come back to her light eyes. "We're both rather cold and forlorn—I'm going to make us both a cup of nice hot tea!"

"Oh, Cousin Mary—*dear* Cousin Mary," murmured Phœbe, between tears and laughter. "It's like when you read of good things to eat in a book and get so hungry. It seems I'd rather have a cup of tea right now than go to heaven!"

"But first, Madame Greedy," replied Mary, "we're going to have a nice blaze in this vaultlike apartment of yours. Where does America keep her kindling?"

Unexpected!

"Why, John, you said it was an *old* house!"

"And so it is. But the painter has been at work. That's the difference."

A house is only as old as it looks. A house painted in colors tastefully selected and with paint mixed of

Dutch Boy White Lead

and Dutch Boy linseed oil looks new, and long retains that look of freshness.

Such paint wears long and smoothly, without cracking and scaling. Consult your painter as John did his. Make your house new. No other improvement so satisfactory can be made for the same money.

Write for our Paint Adviser No. 75 —a group of helps, Free

Starrett Combination Square

Here's a tool that every mechanic and every man who works about his home should have.

It's a try-square with a *sliding* head which may be fastened at any point on the grooved scale which serves as the blade. In the head is a spirit level, and one face is at an angle of 45 degrees so that this tool may be used as a rule, square, level, bevel, depth gage, and marking gage. In addition it may be purchased with protractor head and center gage for fine work.

Ask your hardware dealer to show you this and other Starrett Tools. Send to us for our new, free 320-page catalog No. 20 S. B., showing 2100 styles and sizes of tools with prices.

All her life long Phœbe recalled that cup of scalding tea—drunk as the gray dawn broke over World's-End on that day of deliverance—as something nectarous, ambrosial, divinely lifted above all other food that she had ever tasted or ever would taste. And she asked Mary to warm a little saucer of cream dashed with tea for Wizzy, to whom this beverage was a consolation for most of the ills of life. She got up when Mary had gone, too restless to stay in bed.

WRAPPING her warm, fur-lined dressing gown about her, she went to the window and looked out. She always slept with her shutters open, as Owen liked them, and now she saw the pale scarf of the dawn floating above the dark horizon, beyond the winter twigs, like a white signal waved by Hope it seemed to her, and yet—and yet— Oh, where was her resolution to tell him all just as soon as she knew whether Richard would live or die? If only he had believed those cruel, true words! The door opened as on that other day and Owen entered. He was very pale, but the stony look had gone from his face. He came over to the window and stood beside her.

"He will live," he said in a low voice.

Phœbe took his hand timidly—then held it to her lips and heart, and he did not seek to stay her. She did not look at him, and he, too, was gazing at the quickening east. A redbird streaked by like a flame springing from the ashen branches. Owen was speaking again—to himself now. He was speaking his thoughts aloud, muttering distinctly:

"It was those words," he said—"those words—" Suddenly, in that cold, bleak dawn, standing there actually touching the one desire of her heart, little Phœbe was caught up on that Mount of Transfiguration whose arid splendor breaks, if only once, through the dark mists of most human lives.

SHE stepped back a little from him and said in a small, still voice: "But—they were true words—"

"Eh?" he said, like a man rising confused to the surface of his own thoughts.

"What—Richard said—that day—about me—was true—"

There came a silence. She saw his hand go up over his eyes. Then he reached out his other hand behind him without turning and drew her to him. He held her so tight against him that he hurt her, but this pain was beautiful. If he would only hold her tighter—tighter—until the crushed life stopped aching—

"You—you—didn't understand—" she faltered piteously. "Oh, put me from you! It was true. I was his—"

"Don't!" he cried sharply. "There's no need—I've always known it—I knew it when I married you—and—I knew you would tell me—some day—"

HE caught her up to him in both arms now, and she felt his cheek pressed down upon her hand and the tightening of the muscles in his jaw as he set his teeth together. He caught her still closer. "Darling—darling—darling—" she heard him whispering.

"Then—it—it—was pity—" she stammered. "You—you—didn't—love me—"

"Phœbe!" he cried. He tried a second time to draw her to him. But she held him off, saying:

"No—no— Wait— It was pity—all the time it was just—pity— Oh, my God!"

And flinging herself down, she buried her face on her arms against the window sill.

Now he had drawn her up into his arms again. His voice had a sort of tremulous anger in it.

"Phœbe! Phœbe! I loved you from the first minute I ever saw you—not as I do now, but dearly. Do you think I could have married you if I hadn't loved you?" He gave a sort of broken laugh, then rushed on vehemently: "There was pity, too, yes—an infinite compassion for a lovely nature wronged and hurt, but I believed in you. I always believed in you—I knew I had only to wait. I knew the truth there was in you—the courage. I knew that you would tell me. When I married you, you were sick to death in spirit—a poor little stricken thing: but you, the real you, *my* Phœbe—you were there under it all. And for that I loved you and believed in you and waited for this precious hour. Oh, Phœbe!—little heart—don't say these cruel things to me."

To be concluded next week.

Unseen Forces Behind Your Telephone

THE telephone instrument is a common sight, but it affords no idea of the magnitude of the mechanical equipment by which it is made effective.

To give you some conception of the great number of persons and the enormous quantity of materials required to maintain an always-efficient service, various comparisons are here presented.

The cost of these materials unassembled is only 45% of the cost of constructing the telephone plant.

Poles
enough to build a stockade around California—12,480,000 of them, worth in the lumber yard about $40,000,000.

Telephones
enough to string around Lake Erie—8,000,000 of them, 5,000,000 Bell-owned, which, with equipment, cost at the factory $45,000,000.

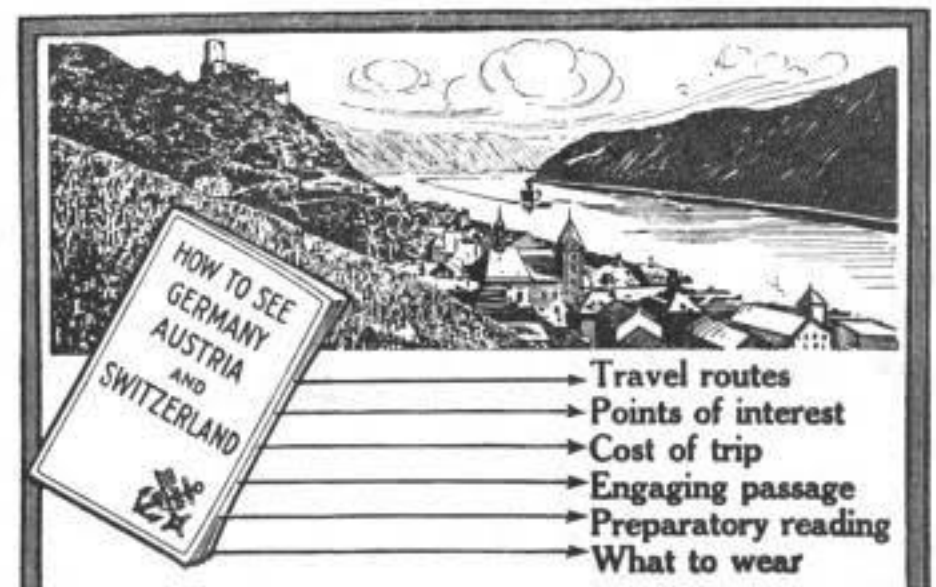
Wire
to coil around the earth 621 times—15,460,000 miles of it, worth about $100,000,000, including 260,000 tons of copper, worth $88,000,000.

Switchboards
in a line would extend thirty-six miles—55,000 of them, which cost, unassembled, $90,000,000.

Lead and Tin
to load 6,600 coal cars—being 659,960,000 pounds, worth more than $37,000,000.

Buildings
sufficient to house a city of 150,000—more than a thousand buildings, which, unfurnished, and without land, cost $44,000,000.

Conduits
to go five times through the earth from pole to pole—225,778,000 feet, worth in the warehouse $9,000,000.



People
equal in numbers to the entire population of Wyoming—150,000 Bell System employes, not including those of connecting companies.

The poles are set all over this country, and strung with wires and cables; the conduits are buried under the great cities; the telephones are installed in separate homes and offices; the switchboards housed, connected and supplemented with other machinery, and the whole Bell System kept in running order so that each subscriber may talk at any time, anywhere.

JIMMY Pipe joy is yours *right off the bat* if you'll beat it to the nearest shop and buy some Prince Albert. Here's tobacco *every* man can smoke and smoke all he wants without a tongue-bite. You'll be one of millions of men who, through pure joy, call

PRINCE ALBERT

the national joy smoke

Such smokings, such jimmy pipe sunshine! Why, you just can't believe how much fun there is in that old "hod" of yours. Take our say-so, jam it brimful of P. A. and make some fire, and you'll join the Prince Albert band in your town before sunset!

Never forget that P. A. is *reason-why* tobacco. It can't bite, because that bite is *cut out by a patented process!* No other tobacco can be like Prince Albert!

Toppy red bags, 5c; tidy red tins, 10c; also handsome pound and half-pound humidors. You can get P. A. in every civilized country in the world.

The Humorous Side of an Earthquake

By LOUISE POND JEWELL

DURING a recent earthquake at Panama, the severest that has visited the isthmus in thirty years, the onlooker possessed of firm enough nerves or philosophic enough disposition to forget possible danger and watch his fellow human beings with a casual eye would have voted the experience one of the most amusing of a lifetime. Such onlookers are few and far between. If a house burns, there's the street to run to; if a train falls over an embankment, there's the bottom of the ditch finally to fall upon; even in an accident at sea, there's the buoyant water to intrust oneself to, as a last resort, after the big ship has been abandoned. But when the solid earth itself yawns beneath you—"Where are you?" as one frightened-eyed young woman said with a graphic, wide-armed gesture.

For example, at intervals along the line of the Panama Railroad one sees abandoned railroad box cars converted into dwellings for the switchmen and other employees to be housed between the regular villages. When the earth tremor first shook the isthmus on the night of the first of October, a workman occupying one of these improvised dwellings, awakened from sleep by the sudden jar, thought some misguided locomotive had just coupled onto his house by mistake and was about to pull it off down the track. Hastily seizing and lighting his student lamp, he rushed out of the house at full speed, waving the improvised signal madly back and forth in the air, in the vain effort to attract the attention of the erring engineer and get him to stop backing and filling in such an unseemly manner. Needless to say, the Big Engineer took His own time about obeying the signal; and when he became fully awake a half-clad man found himself standing alone in the middle of an empty track, waving a lighted student lamp excitedly back and forth—at vacancy.

A little lady living at Culebra, where the slides into the cut have been most numerous, waking suddenly, clutched her husband's arm and cried:

"We're sliding into the cut! We are on the edge! I can feel the house slipping down!"

Alert, he waited an instant, then reassured her:

"No, it isn't a slide; it's only an earthquake."

"Only an earthquake!" she cried indignantly, and with the utmost contempt that he should presume to pass upon it: "How do *you* know? I tell you it's a slide, and *we're in it;* I know!"

Another practical young matron in the same town exclaimed despairingly as she felt her house rock and sway:

"Oh, I shall die, I know I shall! We shall all die! *And there isn't a drop of whisky in the house!*"

Still another, hearing some one stumble and fall in the upstairs apartment, gasped:

"Oh, hear them all falling and dying all around us!"

THE Tivoli Hotel, at the Panama end of the line, gave many funny pictures—funny *afterward*, mind you! There were fearful and wonderful costumes in the broad, staid lobby that midnight hour, and at least one case of hysterics; and there were very white-eyed Jamaican negroes, who probably, if the truth were known, suffered most of all.

It's funny when it's all over. But in a real earthquake there are, it is safe to say, very few who do not at the time echo the quake inside. For, as the girl said: "If the *earth* goes back on you—*where are you?*"

You, Too, Should Wear Holeproof Hosiery

A Style for Every Occasion
A Grade for Every Purse

MORE than 1,000,000 men, women and children know that the wonderful success of Holeproof is due to an *unusual quality*. Every hosiery advantage is provided—in *style*, *comfort* and *light weight*.

The guarantee of six months' wear with every six pairs of Holeproof is only one of the reasons for its great popularity.

Another reason lies in the result of our policy of constantly watching the World for every hosiery improvement. And our ability to pay the costs of adopting the best—an ability that is made possible by our great volume of business.

Holeproof Hosiery

FOR MEN, WOMEN AND CHILDREN

We send for the World's finest cotton yarns —Egyptian and Sea Island. We pay for these yarns an average of 74c per lb. Common yarn in this country costs 32c.

And we have lately imported, at a large expense, a great Swiss machine to do our own mercerizing because this machine adds a beautiful lustre and 22 per cent more strength to the yarn.

Don't you want such hose? With all their advantages, they cost no more than common kinds.

The genuine Holeproof is sold in your town. Ask us for the dealers' names. We ship direct where there's no dealer near you, charges prepaid, on receipt of remittance. Write for free book that tells all about Holeproof. See if you, too, don't want this style, comfort and wear.

BY INVITATION, MEMBER OF RICE LEADERS OF THE WORLD ASSOCIATION

HOLEPROOF HOSIERY COMPANY, Milwaukee, Wis.

Holeproof Hosiery Company of Canada, Ltd., London, Canada
Holeproof Hosiery Company, 10 Church Alley, Liverpool, England

$1.50 per box and up for six pairs of men's; $2.00 per box and up for six pairs of women's and children's; $1.00 per box for four pairs of infants'. Above boxes guaranteed six months. $1.00 per box for three pairs of children's, guaranteed three months. $2.00 per box for three pairs of men's *silk* Holeproof socks; $3.00 per box for three pairs of women's *silk* Holeproof stockings. Boxes of silk guaranteed *three months*.

Holeproof Silk Gloves For Women

Write for the free book about Holeproof Silk Gloves, and ask for the name of the dealer who sells them. These are the *durable*, stylish gloves that every woman has wanted. Made in all sizes, lengths and colors. (884)

SAFETY FIRST

It's the Tough Goodrich Safety Tread that Prevents Tough Luck

The Goodrich Safety Tread

Five Bars and a Crosstie the "Safety First" Symbol

Just the unit-group of bars and crosstie to grip the road and distribute the jolts and strains evenly, so that the Safety Tread runs like a smooth tread and gives longer wear and service.

This picture from a photograph shows how the Goodrich Safety Tread Tires on the rear wheels overcame the skid of the smooth tires on the front wheels.

Goodrich Safety Tread Tires

Best in the Long Run

The thick, tough Goodrich rubber fingers of the Safety Tread dig down and grip the road. They stop the skid before it starts. They make the brake effective and steering sure. Goodrich *quality* in the tire backs up the Goodrich Safety Tread.

The extra thickness of tough Goodrich rubber in the treads at the point of contact with the road gives you longer wear and lower-cost mileage.

Here are the prices to pay for the best tires ever produced in the Goodrich factory:

Size	Smooth Tread Prices	Safety Tread Prices	Grey Inner Tube Prices	Size	Smooth Tread Prices	Safety Tread Prices	Grey Inner Tube Prices
30 x 3	$11.70	$12.65	$2.80	34 x 4½	$33.00	$35.00	$6.15
30 x 3½	15.75	17.00	3.50	35 x 4½	34.00	36.05	6.30
32 x 3½	16.75	18.10	3.70	36 x 4½	35.00	37.10	6.45
33 x 4	23.55	25.25	4.75	37 x 5	41.95	44.45	7.70
34 x 4	24.35	26.05	4.90	38 x 5½	54.00	57.30	8.35

Dealers almost everywhere have Goodrich Tires in stock or can get them for you from one of our branches or depots

Factories: Akron, Ohio — **The B. F. Goodrich Co.** — Branches in All Principal Cities

157,000 Miles in a Taxi

One hundred and fifty-seven thousand miles of the hardest kind of riding! It's night and day with the taxi. Always in a hurry—take the shortest road no matter how rough—anything to gain time! Pell-mell across car tracks! Rush! Make the train!

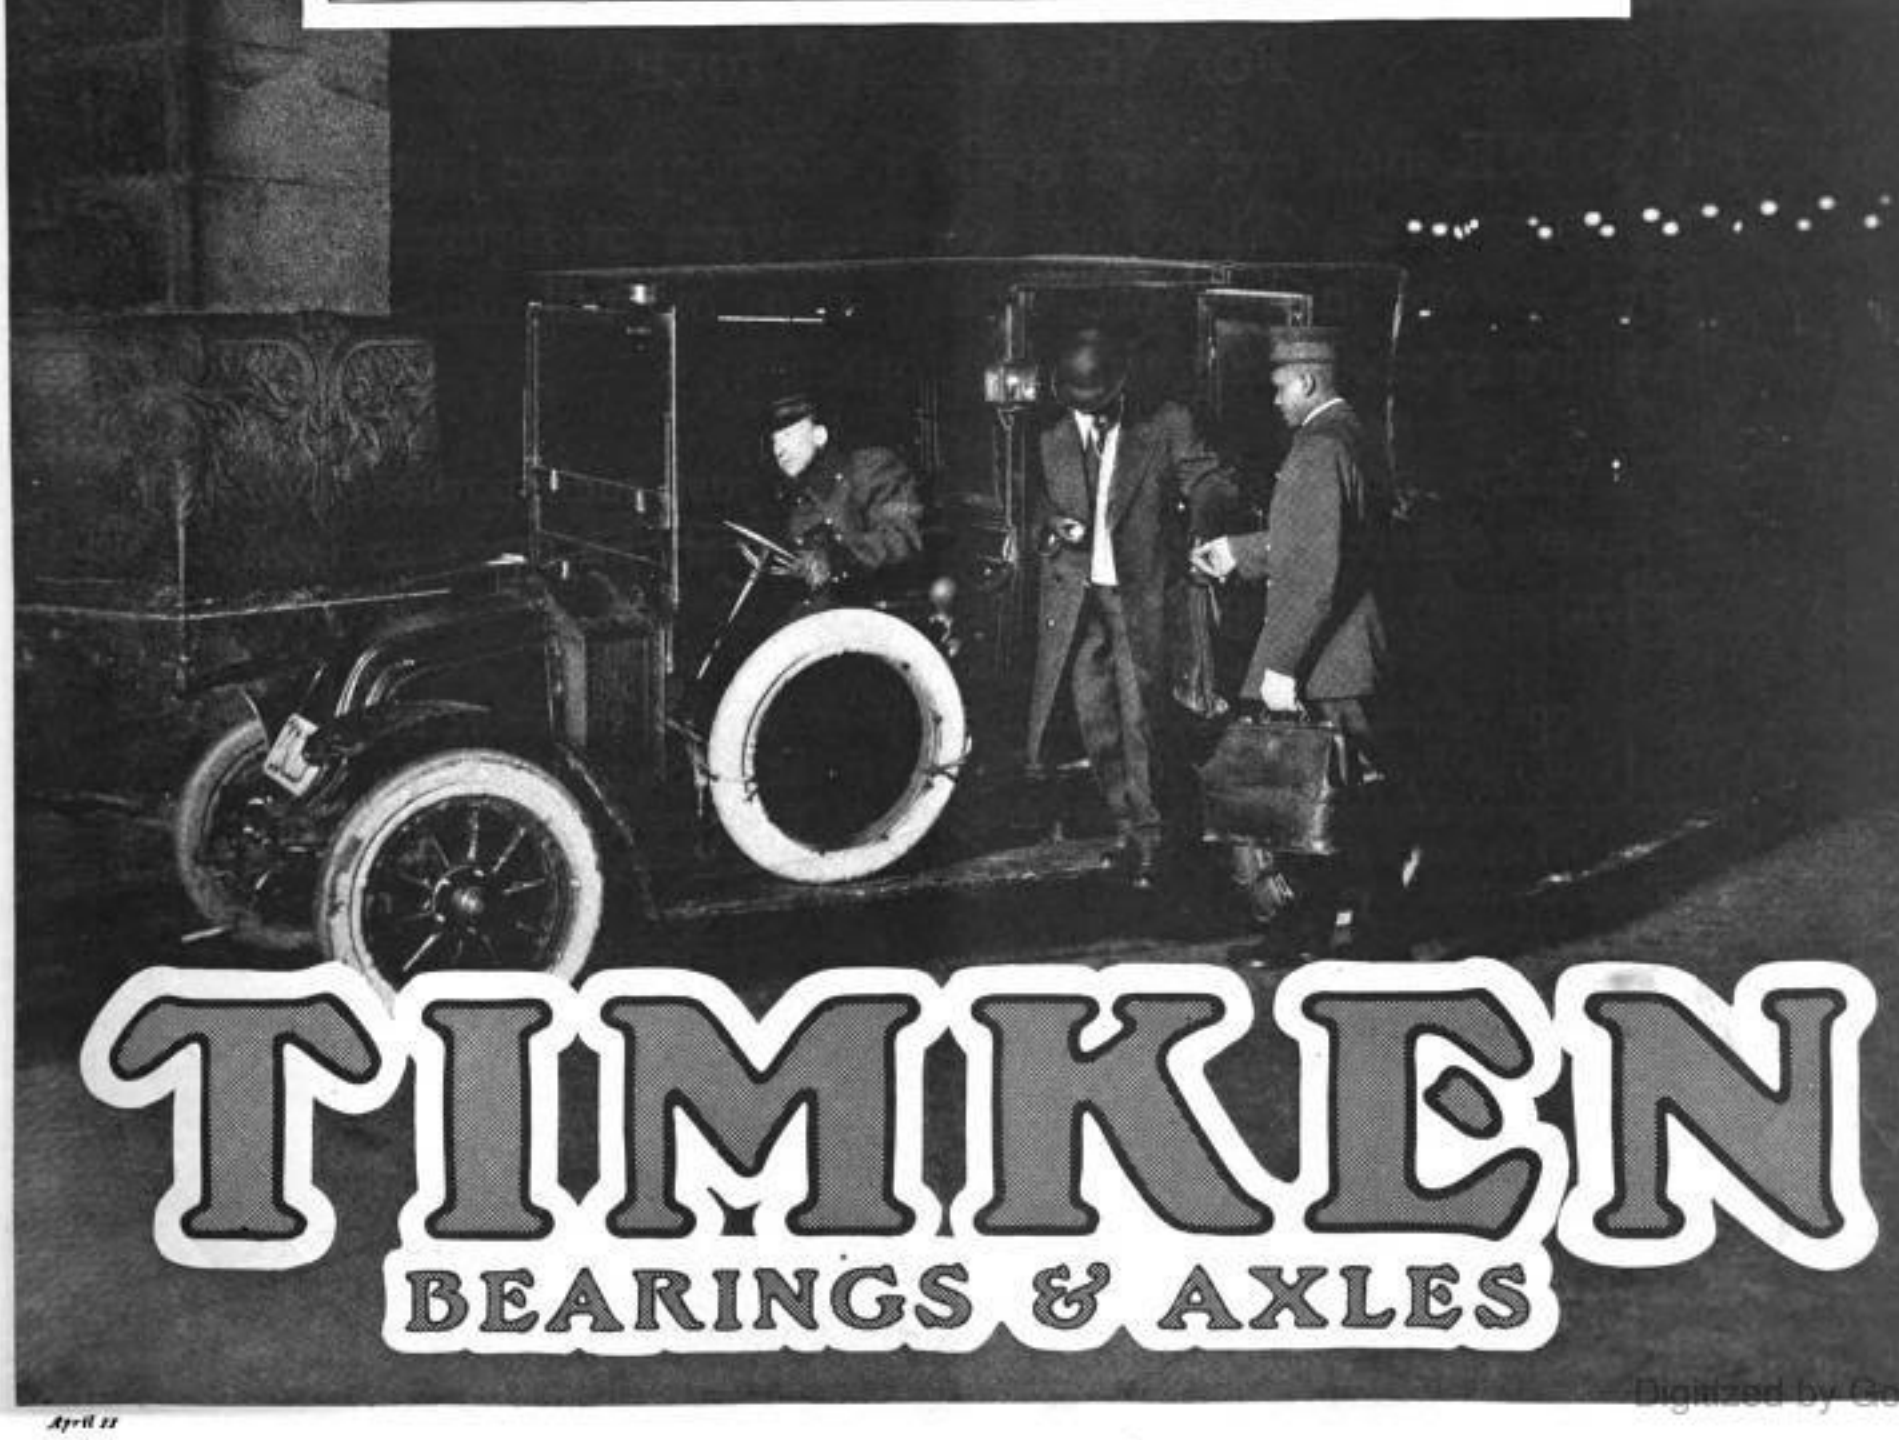
Down below soft cushions and resilient springs—down in the axles—the Timken Roller Bearings stood this rough riding for five and a half years in a Shaw taxicab.

Not only took the 157,000 miles of shock and vibration but carried the entire weight of taxi and passengers. Not a roller was worn out or broken—not a penny was paid for bearing repair or replacement.

What's more, this taxi is only one of the Shaw Company's original thirty-one taxicabs. Their average mileage record over Chicago streets is 135,118 miles. One of them is shown in the photograph below.

Here's the "*Why*" of That 157,000 Miles

Timken Tapered Roller Bearings support greater weight in proportion to their size than other bearings because they carry it along the whole length of rollers instead of on mere points—as balls do.



They are equally superior in meeting end-thrust (side-pressure) because the rollers are tapered and revolve at an angle to the shaft.

This greater capacity means that they show almost no effect of wear—even after thousands of miles.

There are very real and easily understood reasons for the remarkable service-records of Timken Tapered Roller Bearings and of Timken-Detroit Axles.

These are told in a concise, interesting way in the Timken Primers "On Bearings" and "On Axles." Another booklet names the cars that ride on Timkens. Write today for the three Timken booklets. Sent free, postpaid, on request to Department B-7, either Timken Company.

For "hard-to-fit" men

SOME men are hard to fit in clothes; some just think they are. There are certain types of figure, however—stout men, short, stocky men, big tall men—that require special designing in clothes.

We make special sizes and models for just such figures; the lines are different; such a figure could easily be made to look ridiculous by a designer who doesn't know how.

The slope of the shoulders, the turn of the collar over the short neck, the curve of the lapel and the front of the coat; the placing and spacing of the buttons; the size and shape of the sleeve; the shaping of the trousers; these are the things in which our designers are artists. You see from our illustration examples of the way we deal with such matters.

We give every man, of whatever size or shape or age, the kind of style and fit he should have; and we put all-wool fabrics and the most perfect tailoring into the clothes.

The Tyranny of Beauty

Chapter I—The Birth of a Career

By "Jane Bunker"

ILLUSTRATED BY MAY WILSON PRESTON

I HAD thought of calling this story "The Romance of a Poor but Pushing Girl," or else "The Romance of a Recipe," for it is both. But it is more—it is the romance of capitalizing woman's vanity and selling it to her in a pink jar tied with a purple ribbon and making a fortune; a simple process if you know how, by which my aunt created one of the largest commercial enterprises under the control of a woman in America—a business occupying an entire New York building and employing nearly three hundred men and women. Yet it all originated in an act of kindness that cost a dollar, urged equally by pity and vanity, and with poetic irony my aunt furnished neither the pity nor the dollar—she supplied the vanity, I the pity, my grandmother the kindness and the dollar.

This was how it happened: We lived then on the outskirts of Columbus, Ohio, and the three of us were sitting on the front piazza one afternoon when an old negro woman walked in at the gate. She said she was earning her living selling a face cream—the Zulu's secret cream for the complexion that she made herself, the recipe for which had been taught her by her mother, who had it from hers, and so on back to time immemorial in Africa; that she'd made this cream for her mistresses in the South before the war, and it was what had given them their beautiful skins noted throughout Virginia.

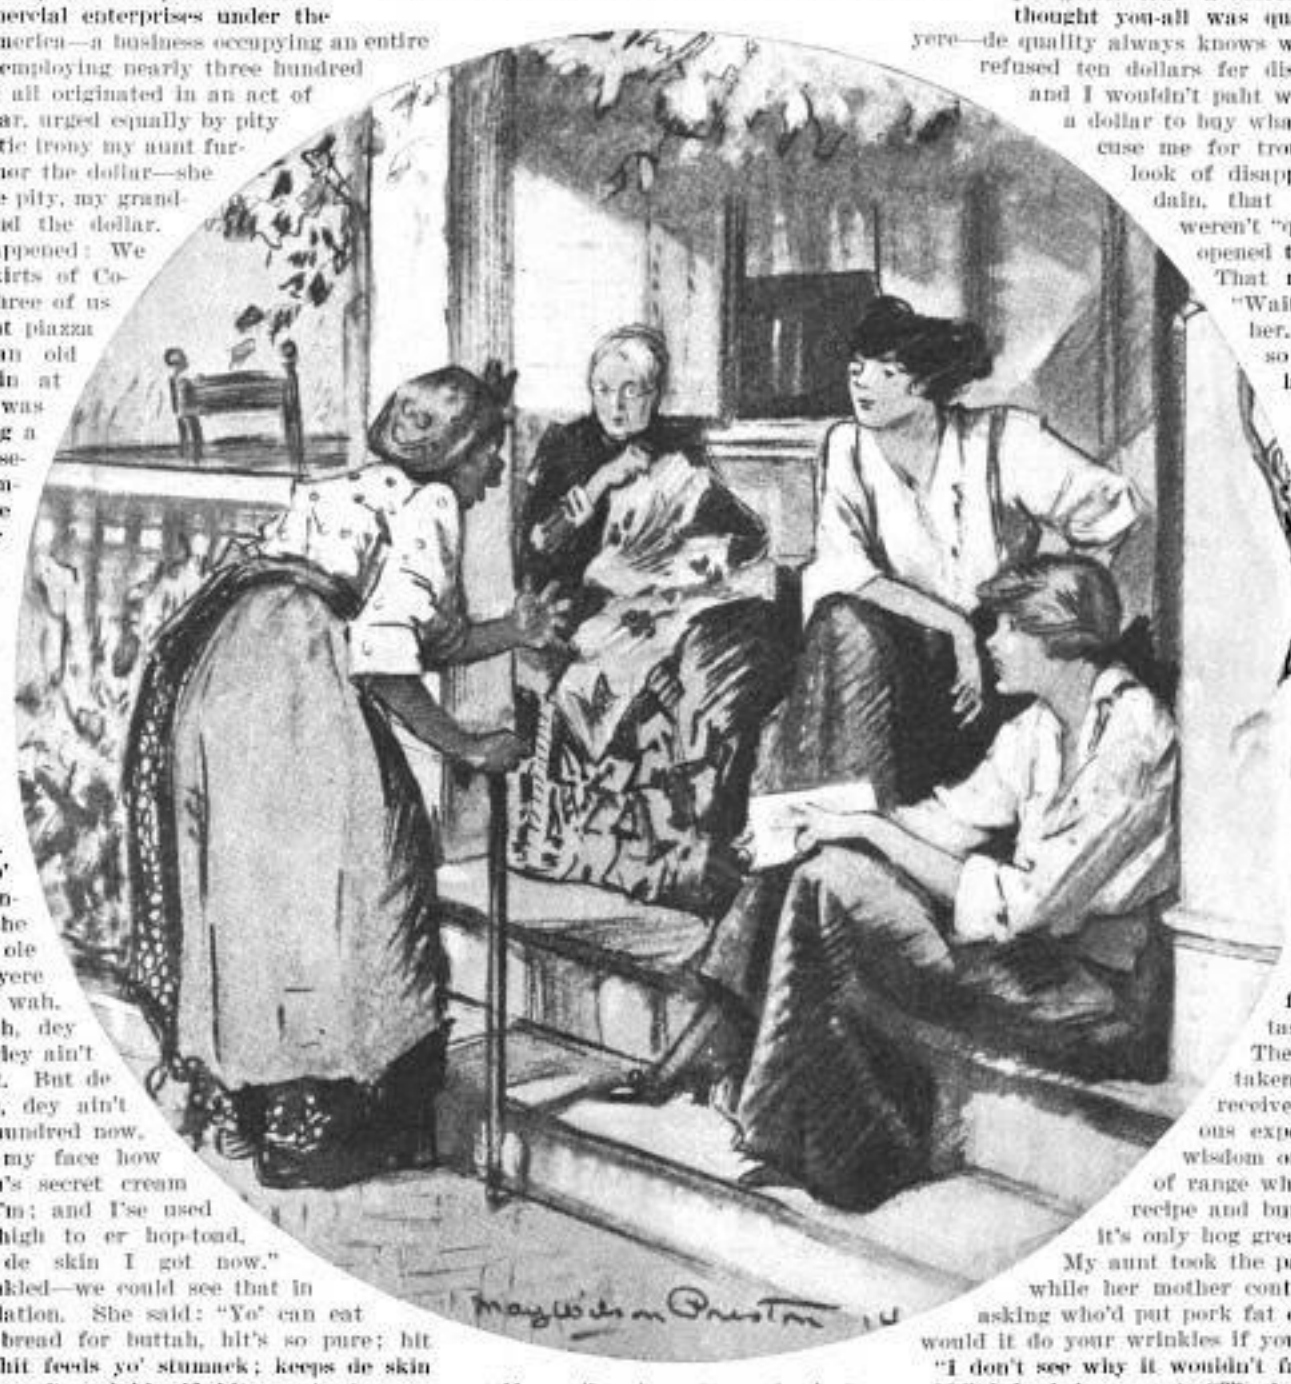
"Why, honey, has yo' evah saw a reelly wrinkled cullud pusson?" she appealed. "All ob us ole ones used to use dishyere cream on us befo' de wah, and de po' yaller trash, dey gits wrinkles now 'ease dey ain't got no money to buy hit. But de ole women of my time, dey ain't wrinkled. I'se mos' a hundred now, I reckon, and yo' see my face how it is! I uses de Zulu's secret cream night and mohnin'—yas'm; and I'se used hit sence I was knee-high to er hop-toad, and you-all can see de skin I got now."

She wasn't much wrinkled—we could see that in proof of her recommendation. She said: "Yo' can eat dishyere cream on yo' bread for buttah, hit's so pure; hit feeds yo' skin same as hit feeds yo' stumack; keeps de skin plump and fat, so hit can't wrinkle if hit wants ter, no more'n a baby's can't wrinkle; hit's too full er fat; hit's how dishyere cream wuks; and if you-all was ter begin using hit now, you-all wouldn't nevah have no wrinkles; so, ladies, ain't it wuf de twenty-five cents a box I charges fer hit?"

My aunt said she was "willing to risk a quarter to try it," and then the old woman came out with the real reason of her visit and all her talk—she had no cream just now because she had no money to buy her materials with, and what she wanted was to sell us the recipe and secret directions for a dollar. "And I needs dat dollar powerful bad to puht wif dishyere secret," said she.

My pity came in here, for she did look so respectable and poor, and I suggested that we buy the secret to help her along. My aunt stood out for a sight of the paper first, to see if it were worth the money. But the old woman was too shrewd for that. "If you-all can't trus' me to do what's right," she affirmed, "you-all won't trus' de Zulu's cream fer ter wuk on yo' skins like I say hit will, and yo' gotter trus' a secret er hit don't wuk right. I thought you-all was quality folks when I come in yere—de quality always knows who dey can trus'. Why, I'se refused ten dollars fer dishyere secret—yas'm, I has; and I wouldn't puht wif hit fer no money if I had a dollar to buy what's in hit to make more. Excuse me for troubling you-all," and with a look of disappointment, mingled with disdain, that we couldn't trust her and weren't "quality folks," she turned and opened the gate to go.

That moved my grandmother. "Wait, auntie!" she called after her. "Come back! Here, I ain't so poor but I can spare a dollar to help you along to earn an honest living," and she handed out the dollar and received the magic recipe for the Zulu's secret.



This is what it was—evidently copied for the old woman by a lady, for the writing was beautiful and the paper a half sheet of fine note: One pound of lard or tried-out pork fat; four ounces of olive oil; four ounces of water; one-half teaspoonful powdered borax; five cents' worth essence of rose geranium. Melt the fat with the oil. Dissolve the borax in the water and add to the hot fat drop by drop, slowly stirring. Stir till cold and perfectly creamed. Scent to taste while hot.

The old colored woman had betaken herself off the instant she received her dollar—perhaps previous experiences had taught her the wisdom of so doing—and she was out of range when my grandmother read the recipe and burst forth indignantly: "Why, it's only hog grease! What a swindle!"

My aunt took the paper and perused it carefully while her mother continued to ridicule the recipe, asking who'd put pork fat on their faces and what good would it do your wrinkles if you did?"

"I don't see why it wouldn't fatten your skin just like she said," defended my aunt. "The hog is the fattest animal in the world, so his fat is the most fattening—everybody knows that—no fat so fattening as pork fat; and if it can fatten your stummick, it stands to reason it can fatten your skin; and if it fattens your skin, then your skin can't wrinkle; and that's the way she said it worked. It will work. It's a perfectly good recipe, because it's got perfectly good things in it—nice clean white lard, olive oil, and pure spring water—who'd want anything better? Of course you can put in any scent you want—you don't have to use what this calls for if you like some other better—violets."

"Perfumed pork fat—the Zulu's cosmetic!" ridiculed my grandmother to me with one of her humorous, sarcastic smiles that made my aunt flare up, contra-

"If you-all can't trus' me to do what's right," she affirmed, "you-all won't trus' de Zulu's cream fer ter wuk on yo' skins like I say hit will, and yo' gotter trus' a secret er hit don't wuk right"

Digitized by Google

dicting: "It ain't a cosmetic—it's a face food," and the trade name, "*Zulu Face Food—Not a Cosmetic*," was born.

"Well, if you want to eat it with your eyelids, you're welcome to," retorted her mother, walking into the house to avoid quarreling. She left the paper in my aunt's hand, who pocketed it and subsequently contended that her mother had given it to her then and there, in those words and by that act!

This spat, which set my grandmother against the cream, set my aunt for it, though not altogether to be contrary, for the old colored woman's talk had impressed my aunt and her own arguments were in support of a conviction already formed.

To her mother it was first a swindle, then a hoodoo to blame for what happened next. That night my grandfather had a stroke from which he never recovered, and a week later he was dead. When his affairs were settled our chief assets appeared to be our little house and the recipe for Zulu Face Food—the same being now held doubly tight by my aunt when my grandmother, declaring she'd burn the recipe, wailed: "Oh, why did I let that old swindler and hoodoo into the house? Why did I give her a dollar when we needed the money so bad ourselves?"

WE DID a good deal of hard looking at the world in the next few days, three women alone against it, our one source of income suddenly cut off, and asking ourselves: "What next?" My solution was to rush back to the business college and try to crowd four months' work into one and get a position. I was spending that winter with my grandparents studying stenography, a nineteen-year-old country girl, shy, retiring, inexperienced, deadly in earnest—a goody-goody little person, always striving to do her duty, and I thought the world a modified Sunday school for the practice of Christian virtues. So back I hastened, leaving my aunt still looking around deciding what she would do.

At what moment her eye turned on the magic cream that was to ward off the signs of approaching age and saw it as a commercial possibility for her own livelihood I do not know—she claims she "saw its possibilities the minute the old darky began to talk." All I know is that she waylaid me about a week later as I came home from school, drew me into the kitchen, thrust a saucepan at me filled with something white, and commanded: "Looka that—and temme whatcha think!" Then dipped her finger in it and rubbed it on my cheek. "It's that old woman's face food—ain't it elegant? I made all that potful for ten cents—five for lard and five for scent: the oil was in the house."

"It's only hog grease," commented my grandmother, coming in.

"Smell it," said my aunt, sniffing and holding the saucepan up to my nose, trying to ignore her mother, who spoke louder: "It's only hog grease—the smell don't change it."

"If that old woman can make money selling this, I can too," exulted my aunt. "Now I found out all you can make for ten cents."

THIS drew from my grandmother a sharp "You must be crazy, Maggie, to think that sensible women's going to put pork fat on their faces—pay you money for common lard with a little scent to it."

My aunt turned on her then: "Much you know *what* women do. They'll put anything on their faces so long as it smells good! That's all they care about it—the scent—and I think I see them bothering their silly heads about what's in a thing. And besides, how are they to know what Zulu Face Food is? This is a secret preparation—that's understood from the start. Lettum find out if they wanta know bad's all that. But they won't—smell and looks is what'll sell it by the pound."

"I can smell the lard," sniffed her mother. "You can't fool me with it and you won't fool them."

My aunt sniffed at it again. "You imagine it. This is a perfectly good preparation—a food and not a cosmetic—and I bet it's better'n a dozen brands on the market this minute. It feeds the skin, and not one of the other preparations says a word about feeding. I tell you those old darkies know a lot the white folks don't—learned in the jungle. You saw her face—not a wrinkle on it, and her 'most a hundred years old, because she used the cream night and morning—"

"You mean she said she did," corrected my grandmother.

"She did!" retorted my aunt—the literature of affirmation was already taking form in her mind. "She wouldn't have said it if she hadn't—she must have used something to be like she was, and her as old as that. Who wouldn't be glad to have a skin like hers if they could buy the food to produce it? Every woman—you watch—*every* woman. You only gotta convince her this is the food and she'll buy it."

My aunt flounced off to her room with her saucepan, and my grandmother observed to me: "I think I see myself putting hog fat on my face to feed my wrinkles! Maggie can't change a thing by scenting it up with violets and calling it another name—Zulu Face Food—nor any other food."

BUT it's what she did! And thus Zulu Face Food, the most famous of all beautifiers, was born in a little back kitchen with a saucepan, a wooden spoon, and ten cents' worth of ingredients.

"If that old woman can make money selling this, I can too," exulted my aunt. "Now I found out all you can make for ten cents"

working out a recipe sold by a colored woman for a dollar and heralded by the scorn of a passing generation.

My aunt was Irish-Canadian and came of good stock, but she had no education to speak of. She could read, of course, though she was never able to write a letter that passed muster, and she despised education for herself and women generally, though admitting it a good thing "if a girl had no natural ability for anything else." She used to ask me in smiling scorn: "Whatcha expect to get outa all your studying?"

But in affecting to despise my attainments she was plenty keen enough to perceive my possibilities as an asset to her—I could work nights for little money, write her letters on my machine, be her "private secretary," make the cream; and so it happened that being there in the house at the start, I was drawn into a partnership in the beauty business, sharing the responsibility, carrying the whole burden of the manufacturing end, doing at first all the clerical work and bookkeeping, packing boxes, then crates, shipping them, buying all the ingredients, and working day and night with never a fixed time for quitting—a partnership that worked out according to the laws of our natures. I felt unbounded gratitude at her generosity when she announced: "You'll be my partner, Lucy. There's millions in this face food—looka what it's done for my complexion already. All you gotta do is make it and sell it. You can make it right here at home, and I'll go out and do the selling."

She knew her woman! I was enchanted at the prospect of work at home, dazzled at the prospect of a partnership with only thousands in it, and thanked her fervently, and, at a salary of two dollars a week, took my first lesson in the alchemy of turning melted pork fat into solid gold.

GOOD facial cream is something like a baby—it must be brought up by hand to get the best results; it needs the human touch. I have seen mechanical mixers for turning out immense quantities of cream at once, but I can always tell their products—something is lacking in the consistency, in the feel on the skin, though I can't say what it is—machine-made creams are different, that's all. Nothing quite takes the place of the long wooden dasher backed by the watchful eye, and stirring, now a bit faster, now a bit slower, now a little more at the sides to drive the outer layer into the center, and then at the exact right minute the cream is done. The hand on the dasher seems to learn by instinct when that moment arrives and the cream is creamed to perfection; a machine never does. No two lots of cream "make" in precisely the same way. Some come faster than others, perhaps because of atmospheric conditions and temperature. The ingredients are not always alike, though bought from the same manufacturer. So a number of small differences that no machine can take account of may make a great difference in the market product.

The fats, whatever they are, must be melted first, then the boraxed water is dripped in very slowly while you continually stir, breaking the drops into myriads of tiny droplets scattered evenly through the fat—that is, the fat is emulsified with the alkalinized water. The borax preserves the cream unless the fats were rancid to start with.

THE real secrets of Zulu Face Food lay in the creaming and the scent, not in the ingredients, and my aunt's first attempt had produced a perfect product. I often wonder what would have been our subsequent history if on that first attempt she had churned the water out instead of in! But she didn't—she was an expert creamer, either by luck or instinct, and she soon taught me the trick, and then I did it all while she went out to sell. Needless to tell the gentle reader, I had much to learn when I accepted a "partnership" on my aunt's terms!

As we presently worked it out, eighty cents' worth of raw material produced filler for one hundred jars of cream, the labor, according to her reckoning, using up the remaining twenty cents of that dollar and making the contents of one jar cost one cent—which it never did. The jars themselves—one-ounce glass with covers—cost two dollars and ninety cents a gross; the gilt embossed labels with her picture in the center, a dollar a thousand, using up the remaining ten cents and bringing the finished article when ready for the trade to an even three cents. It retailed for one dollar.

In the beginning, while she was peddling the cream from house to house, she used common white jars, bought by the dozen at the druggist's; but as soon as she had enough capital she changed the color of the jar to pink, ordered a gross direct from the manufacturer, put the price up to fifty cents, and found the cream sold better. She also tinted the cream with diamond dye to match the jar. A lot of fifty pinks disposed of, she tied the next jars up with purple ribbon and raised the price to a dollar. It sold better than ever. The purple ribbon, costing an infinitesimal fraction of a cent, "carried" the extra half dollar across the footlights, so to speak, as the pink jar had carried the extra quarter.

My grandmother's predictions were refuted, as Zulu Face Food—Not a Cosmetic, in a pink jar with purple ribbon, perfumed pork fat, went with the women: for my aunt had discovered one of the profound truths of the world she'd set out to conquer: it all depends on appearances.

LOOKING back on that day now, I can see that my aunt's career and her success have been one long seeking and finding of pink jars with purple ribbons, and that her genius lay in seeing them where nobody else dreamed of looking for them. But her announcement of her final price—a dollar a jar—precipitated a domestic storm that nearly wrecked her enterprise at the moment it was ceasing to be peddling and becoming a business. My grandmother pronounced it a "clear, sheer robbery."

"Charge a dollar for a cent's worth of perfumed pork fat!" she fairly screamed. "Maggie McNulty, it's clear, sheer robbery, that's what it is, and you brought up to morality and religion in a good home! The face food alone's a wicked swindle, cheating them unsuspecting women, pretending it is what it ain't, and letting them put it on their faces when, if they knew what's in it, they wouldn't touch it with a ten-foot pole. And then to make them pay a dollar—ninety-nine cents more'n it cost you! What would your father have said if he'd lived to see a child of his engaged in such traffickings with the devil when she could have a good, steady place in a store?"

My aunt was too much taken aback to speak. She had just come in from a round, in high feather, with seven dollars in her pocket and proof of a golden discovery—"that it all depends on looks"—and when she caught her breath she growled: "What's the good of talking to me like that?—and what does it matter to you what the women pay me for making it for them when they can't make it themselves? And they can't—so they gotta pay the one that can—that's all there is to it."

"That don't alter the principle that you're charging

Digitized by Google

them a dollar for what cost you a cent, and that's robbery—sheer robbery of trusting women when you might be earning honest, steady money in a store," declared her mother mercilessly. "You can't make wrong into right calling a fake a food and putting it in a pink jar with a purple ribbon—that you can't! It's against morality and religion—it's against the teachings of the Bible that you was brought up in by as good a father as ever lived and was enough for him to pattern his life by and die respected. When you first started this I thought you was going to charge a quarter—that was enough in all conscience; but if I'd had the least idea that you was going to come to this—a dollar—robbery, I'd never have given my consent to it, never."

"What's the cost got to do with the price?" snorted my aunt. "If the women want it at a dollar bad—and got the dollar—it's worth the dollar to them; if they don't, they don't buy at all, so you got no grounds to worry about it one way or the other."

FOR half an hour they had it back and forth, my grandmother proclaiming the moral aspects of the case as she saw them, my aunt defending the business principles. One of her arguments was this: "Take a corkscrew—it cost a cent to make—you pay ten for it—you don't call that robbery; and if you couldn't get another corkscrew you wouldn't sell yours for a dollar—and you wouldn't call it robbery if you did sell it for a dollar. Same way with the broom—you wouldn't sell yours for ten dollars if you couldn't get another, and you'd pay ten sooner'n be without one in the house—or the dishpan—or the coffeepot—you know you would be thankful to get them at any price if they only cost half a cent."

Both of them became more and more heated and ended by my grandmother's declaring it was awful, at her time of life, to think that she'd be dragged into a swindling scheme for selling scented pork fat at sixteen dollars a pound, and she'd not be party to it by allowing her respectable home to be used for any more fake foods; and all at once she began to cry.

My aunt looked at me in despair. It was a crucial moment and everything depended on how her mother came out of her cry, for she was one of those women whom crying either softens or sets, and after the last there was no moving her.

PERHAPS it's a moral deficiency that accounts for many things later; but my aunt's argument drew me over to her side and I was ready to use my influence when she called for it. She suddenly dropped her aggressive tone and struck a fresh trail into the morass of tears: "People don't value what they don't pay for—they don't buy what they don't value—that's about all there's to it; and I gotta sell because we gotta live, mamma dear—we gotta eat same's the rest of the folks—and I want you to have a few comforts in your old age, mamma dear, and this face food looks to me like it would give them to us if it's worked right."

We detected signs of softening and my aunt signaled me to try to bring her mother round, so I put my arm about her shoulder and soothed: "It won't do any harm to let Aunt Maggie try her way a little longer, grandma—if the women think a dollar's more than it's worth they won't buy it and that will end the cream business without a fuss, and Aunt Maggie can't throw it up to you later that you made her give it up and fail just when she might have made it a great success."

I think that little touch about throwing it up later turned the tide, and though she never in so many words consented, her silence put her in a position that made her first permit, then assist in the manufacture of the cream when it was finally on the market.

I noticed then, and saw it many times later in the coming years, how when another nature clashed with my aunt's, sparks of thought flew off that became names, catch phrases, attitudes, policies; so in telling this story I feel I must say a good deal about the beginnings to make it clear that it was, after all, no fairy tale, but the logical development of lucky insights into why women buy, and policies, often suddenly conceived but subsequently adhered to with unshaken faith, bearing their just reward. These episodes, seemingly so small and unimportant at the time, gave direction to the current and saved a great amount of effort and loss of time that might otherwise have been spent in experimenting; for once she proved her theory by her facts—or thought she did—my aunt stuck to the method that had given the results and simply expanded and reapplied it.

THIS last quarrel on cost *vs.* worth to the producer was destined to have far-reaching effects. In bringing clearly before her mind the aspect of worth as a thing apart from original cost, it determined all her subsequent pricing of goods for the trade; and after that it had a still more important influence on her advertising and method of appeal. Little was ever said about the quality of the goods—that was left for granted; the idea presented was always: "What is this worth to *you*?" "Isn't it worth a dollar to remove that frown? Zulu Face Food will do it." "Isn't it worth a dollar to get a new complexion? Zulu Face Food will give it to you." "Isn't it worth a dollar to look young again?" "Isn't it worth a dollar to be beautiful?" and so on. That is, she talked results in terms of cash, not goods in terms of cash: you bought, not a little dab of cream in a pink jar, but youth and beauty! Most women with a dollar were ready to pay it for such returns.

I don't know that I can make the layman appreciate the cleverness of this form of attack on her market—almost superhuman cleverness in an uneducated woman who, without training other than she had from day to day, could evolve it out of native wit. She has been imitated since by a school of "efficiency" advertisement writers, and it all sprang into her mind from the quarrel that nearly wrecked us at the start.

BUT on that memorable day she was defending something vastly more important than a principle of price marking—she was fighting for the very existence of the business: she was about to make her plunge into "store trade" for her homemade preparation. With the secretiveness that was even then beginning to show in her character (under the influence of Zulu and the habit of springing her moves too late for her mother's opposition) she had refrained from mentioning her first *coup*—the move that took us off the peddler's level and made us manufacturers and jobbers; she was about to give her first demonstration in a department store!

She whispered the secret to me upstairs later by way of explaining her despair "when mamma broke loose and undertook to slug me with the Bible to keep me outa legitimate business"; she wanted my help in making cream, which up to this time I'd not been asked for. She had seen her opportunity in an advertisement in the morning paper—a white sale at the largest department store in our part of town—a sorry little place judged by standards we came to know later, but very complete and impressive to us in those days. "Just the time for me—the crowd will be in," she had said to herself, and posted off to the proprietor to demand space for the day.

He had been an old friend of her father's and didn't like to refuse; at the same time he saw trade he was bringing for himself drained off by a distraction he reaped no profit from, and he told her so as delicately as he could and suggested he'd be glad to favor her—in a dull season.

"Then it wouldn't do you half the good," she announced cheerily. "I'm a woman, and I know women. Now you're going to get the crowd here Sat'day and they're all coming to look, but they ain't all coming to buy—there'll be a lot will give a look and then walk out. Whatcha gotta do is keep them right in the store till they do buy—and that's what I propose to do for you—I'll give them a chance to rest their feet with their faces. Then they'll walk back and looka your goods again and see something they forgot. I'll put them in a good humor with my lecture on beauty, and they'll buy last if they didn't buy first."

HER argument impressed him. He considered; then consented.

What a "demonstration" was I hadn't an idea. "Why, looka here, Lucy," she explained, seeing my doubtful expression—I was wondering how she dared talk to more than one woman at a time—"I been figgering it out, and I see it won't cost me any more work and brains and ability to 'dope' a hundred women at once than it costs me now to get in at the front door and out again with a dollar. I can do it, even if I don't know how—I'll find out how soon's I look into their faces."

And she found out how—in about an hour. I have heard business men say *since* that she was one of the finest demonstrators the country ever produced—a genius in her way. Her way was to get the dollars then and there. "I'm there to sell goods, not show them," she used to declare. "Selling goods is how you demonstrate the sales power to the proprietor and make him put other prep'rations outa stock."

THE time was to come when she could show a proprietor the box-office receipts of a three- to six-day demonstration and tell him: "But I won't let you carry Zulu at all unless you put all other *creams* outa stock and carry only mine. It sells."

But that first demonstration—I trembled. In a mad rush we got ready a gross of Zulu—all but four jars we broke washing—with only Thursday night and Friday to do it in; and, let me tell you, it meant not only work but time in those days, for my aunt was so assured by then of some almost occult quality in that recipe she would not depart from it by so much as doubling the quantities, and as one pound of lard with the added oil and water yielded only twenty-four ounces, or twenty-two jars of cream (that was before the days of scanting when twenty-four ounces yielded twenty-five one-ounce jars), we had to manufacture seven times to get enough for the jars and the demonstration. She put some in a celery glass and served it out to the women with a plated butter knife.

But if my aunt trembled, it was with the excitement of the coming fray. She spent her last cent on a pink silk waist to match the jar, and, worn with a freshly starched and ironed white pique skirt, she seemed to my young eyes truly elegant. In repose she was not a pretty girl, but the moment she became animated her eyes flashed—blue eyes with black lashes and black hair setting them off—and her smile showed a row of white teeth flanked each side with a dimple in her cheeks. Nature had given her a priceless endowment and an Irish complexion (*Continued on page 22*)

"Ladies, looka what it's done for me in two months!" She was now exquisitely colored by her excitement. "For one dollar you can have the same—ain't it worth it?—a jar of face food"

Picking the Flag Winners

By Billy Evans

Umpire in the American League

AFTER the most thrilling winter-league campaign ever known there are now three vital questions uppermost in the mind of every baseball fan at large. These three questions might well be summed up as follows:

1. Can the Athletics repeat?

2. Will McGraw and his Giants be able to set a modern record and win their fourth straight pennant?

3. How wide a swath will the Federal League cut by next October?

Whether the new league succeeds or not, there is no denying the fact that it has cut into the two pennant races under big-league control and has made the task that confronts John J. McGraw and Connie Mack much less difficult. In their scramble for players the Feds, evidently by agreement, have left the Giants and Athletics intact. Not a regular was lifted from either club, and so both will go to battle this April fully as strong as they were a year ago. Leaving these two clubs practically alone, their policy was to raid the next strongest clubs in both leagues, make a runaway race inevitable, and so destroy the interest which comes from nip-and-tuck battles for the flag.

So, figuring that Washington and Cleveland in the American and Philadelphia and Pittsburgh in the National had the best chance to make a flag fight of it, the Feds trained their financial batteries upon these four clubs and drove all four well below their 1913 form.

Enough good men were lifted to almost wreck one club and seriously affect the other three, unless baseball luck, of which there is a lot, comes to the rescue.

It is the hope of the new organization that a runaway race will early result, which, of course, will cause enthusiasm to wane quickly. In direct contrast, the Federal League hopes to have a very close and exciting campaign. It was planned to bring about such a condition by a pooling of players, which will tend to equalize the strength of the eight clubs. Time alone will determine the success or failure of this scheme. There must be a pennant winner and a tailender in every league, no matter how evenly matched the clubs may be.

The Call of Coin

THE backers of the Federal League insist they have an unlimited supply of money. I am fain to believe they will burn up quite a little of it before the season is over. There is not the field for a new league at present that was open to the American when it locked horns with the National and came out on top. Few people conceded the American a chance at the time, but it achieved a glorious victory. There are a lot of people who feel just the same way about the Federals. Perhaps the new organization will spring as big a surprise as the American did more than a decade ago. It must always be remembered in doping out the chances of the new league that it has no B. B. Johnson to blaze the way. It required a big man to guide safely the destinies of the American League when it entered the field of baseball. President B. B. Johnson proved to be such a man.

Progressive conditions, more than any other one feature, have conspired to make the task of the Federal League a difficult one. When the American League opened hostilities with the National, ordinary wooden stands were considered quite up to date. Now the fan is thoroughly educated to concrete fire-proof structures. It will take brilliant baseball to get him to view it from the old-style stands. If the Federal League had been successful in signing such stars as Lajoie, Wagner, Cobb, Mathewson, Speaker, Daubert, Johnson, Jackson, Alexander, Milan, Archer, Crawford, or other celebrities of that class, it would be almost safe to prophesy success. Unfortunately for the new organization, it has been able to get few players of such caliber.

There is also another feature that is sure seriously to hamper the Federals in their fight for success and recognition. It is the salary question. When the American League came into the field to buck the National, salaries were small in comparison to amounts now being paid. Stars in those days were receiving about the same salary now paid the ordinary player. An offer of $4,000 then looked to be a big figure. No longer is such an amount tempting to the average player. The new organization has been compelled to talk in even larger figures to players several degrees removed from stardom. This is a feature that is sure to play havoc with the chances of the Feds to battle organized baseball. The Federal League, I am told, is paying a certain pitcher a salary of $7,000 a year to get him away from organized baseball. Two years ago every major-league club waived on this player, believing him to be of no value. He was then sent to a minor-league club, where he received a salary of $2,100. I know that for a positive fact. The Federal League has surely been a profitable uprising for this player. Aroused by the activities of the new organization in its efforts to get star players to jump, a number of club owners granted big increases as an inducement for players to sign.

A Broadside at Cleveland

LOOKING at the American League situation, the Federals decided to cripple Cleveland and Washington as much as possible in order to end all pennant competition in that circuit. Their first attack was a raid on Cleveland, which lifted Falkenberg, Kahler, and Blanding, three of the Naps' star pitchers. This raid seemed to have bumped Cleveland off the map, but Kahler and Blanding finally jumped back, leaving only Falkenberg outside the breastworks. But the blow was still a rugged one, as the tall pitcher was the most successful on the club last year. If it was positively certain that Falkenberg would repeat this season and have another good year, the Cleveland club would be a big loser. But last year was his first big season and he has been an uncertain quantity. In any event, however, his loss isn't going to help the Nap cause.

Having penetrated the Cleveland defense and carried away Falkenberg, the Federals then went after Washington.

They got Bob Groome, the only veteran on the staff aside from Walter Johnson. Just what effect the loss of Groome will have upon Griffith's chances depends largely upon the Old Fox's ability at developing some one for his place. In 1912 Groome had the greatest season of his career. He pitched phenomenal ball, the brand he is capable of showing, although he has a tendency to be erratic. He was the main aid to Johnson in 1912 when Washington startled all fandom by swinging out from seventh place into second. If Groome had only done as well last season, Washington would have had a fine chance of beating the Mackmen out, with Johnson going brilliantly and Joe Boehling pitching wonderful ball. But Groome had a very ordinary year and his slump put his club out of it.

In the National

WHAT the Federals did to the American League was nothing compared to what they handed the National, from which circuit they carried away just twice as many players. They figured that Philadelphia and Pittsburgh were the two clubs in position to give the Giants an even battle, so they wrecked one and crippled the other.

They practically sent the Phillies to the second division from a chance to finish first. From back of the bat they first took Killifer, who jumped back after a short stay in the enemy's camp. From the box they took Tom Seaton, a star, and Ad Brennan, a dependable southpaw. These two men won forty-one games for the Phillies last season, so it can be easily seen what a rough blow was struck here. But the Feds never stopped at this point. They took Otto Knabe from second base, and after the world tourists had landed they persuaded Mike Doolan, the club's shortstop, to jump. So the heart of the infield was torn out.

Having wrecked the Phillies, the new league dashed into the Pirate lair, where they captured Hendrix and Simon, a crack pitcher and a good, steady catcher. The loss of these two will more than offset the presence of the St. Louis stars. For while the Pirates get Konetchy, Mowrey, and Harmon over last year's last line-up, from this same line-up they lose Hendrix and Simon to the Feds and Miller, Wilson, Robinson, and Butler to the Cardinals—six valuable men.

Flag Chances

HAVING outlined in part just what the Feds have done to the pennant contenders in the two big leagues, we now come to a discussion of the teams' flag chances.

Connie Mack is a name to conjure with when speaking of pennants. It is a very unusual year when the Philadelphia club is not in the running for leading honors. No more resourceful leader ever guided the destinies of a ball club.

When the Athletics beat the Cubs in 1910 and the Giants in 1911, Mack's club was regarded as well-nigh invincible, a club that would be dangerous for years, because of the extreme youth of most of the players. In summing up the chances of the American League teams for 1912, the Athletics were made an overwhelming favorite. Critics picked Mack's team to win in a walk. The race of 1912 is now a matter of history. It was a bitter disappointment from the viewpoint of the Athletics. No team ever showed a greater reversal of form.

Long before the close of the season hundreds of reasons were given for the team's failure to win. Manager Mack was about the only person who didn't have an excuse to offer. He kept his silence until near the close of the season, until the time arrived when it was absolutely certain that his club was out of the running. Then he came out of his shell and gave out an interview something after this style:

Too Much Prosperity

"TOO much prosperity is what killed the chance of my team. It is very kind of the critics to say that injuries, illness, and other things too numerous to mention put my club out of the race. All of them, of course, contributed to the poor showing of the Athletics. But, getting down to real facts, the cause of the club's failure to repeat was too much prosperity. The large amount of money received from the two world's series in which the team had taken part was too much of a good thing for some of the boys. There was a desire on the part of some to pay more attention to spending money than to winning ball games. The player who didn't have an automobile was a piker. An automobile

The "Easy" Rich

By Isaac F. Marcosson

ILLUSTRATED BY ERNEST FUHR

One approaches a rich man who likes to be called a "book lover" and says: "I know where you can make some money quick or add to your collection." Naturally both these appeals go straight home

"WHEN I want to sell a gold brick I go down to Wall Street. I do not hunt out an unsuspecting farmer." Such was the remark once made by "Glass-eyed" Charley Henderson, a notorious confidence man of his day.

"Why Wall Street?" asked his companion.

"Because it is the most gullible place in the world," was the reply. "When you bunko a rich man he never says a word about it. Trim a farmer and he makes enough noise to rouse the whole county, and the chances are that he will chase you across the State."

Of course "Glass-eyed" Charley meant the "gold brick" in its largest sense, ranging from a fake mine to a modern antique. He was telling the truth about a little-known phase of Wall Street, strange as it may sound to the average man who regards that gilded domain as the most sophisticated of all places.

As a matter of fact, it is the very cradle of credulity—the pasture where the shears are turned upon the traditional fleecers. The resource that has marshaled many-millioned manipulations; the courage that has led the legions of trade; even the genius of organization that has created whole epochs of industry, have all fallen before the easiest of money-making lures.

This capitalization of the weakness of the rich—it may be vanity, caprice, whim, or hobby—presents a chapter of human experience that is not without its significance for everybody.

By these rich men I do not mean that shining galaxy of multimillionaires that you have been reading about in articles on "Gilded Thrift and Simplicity." Save in curios and pictures, where the best judgment sometimes fails, the canny foresight that reared the Rockefeller, Carnegie, Stillman, Frick, and kindred fortunes does not usually succumb to such wiles.

I refer to the average rich man of Wall Street and its expanding environs, whether he be successful broker or head or power in financial institution. Yet this amazing surrender to the adventurer in business or in art has no geographical section, for it is the same the country over. Cupidity, and the price it pays, are universal, like human nature.

Why the Wall Street Man Falls

LET us take up the so-called Wall Street man first. Clearly to understand why he falls for the buccaneer with an ease that is almost beyond belief you must realize that he is controlled by two strong influences that contribute largely to this fall.

First, he is perhaps the most credulous of intelligent persons; second, a man interested or allied with the shifting hazards of the stock market must keep on playing some sort of game. It is wine to his blood; the very tonic of life.

Take this quality of credulity, queer strain in the make-up of men whose daily work demands keenness of mind and swiftness of action, and find its cause. It is in the air they breathe.

Long experience has shown that anybody can make Wall Street believe anything. It is the home of the silly rumor; favorite stamping ground of the senseless and unfounded report. The wonder all these years has been that men who in a definite financial operation would resort to the most stringent investigation not only accept rumors as gospel truth but rush to act on them without the slightest inquiry.

If a broker, for instance, casually mentioned that he heard that the President of the United States had gone insane or that the Supreme Court had been corrupted or that Mr. Baker and Mr. Schiff had fought on the corner of Broad and Wall Streets, it would be taken up at once as a definite fact by a score of other brokers and before you knew it the news, as an actual happening, would be traveling like wildfire, sizzling up and down the tapes, and the chances are that prices would be affected. No one would stop to make sober investigation as to the truth of the wildest of gossip.

The skillful manipulator of the type of the late James R. Keene, whose business was to make and unmake markets, found the rumor a very useful asset. He enlisted tongue and press to gain his ends. All that he had to do was to set a report in motion; the habit of the Street did the rest. Thus you see why the Wall Street man is credulous.

Craving for Excitement

NOR does he seem to escape the speculative desire. Men who have been playing with Fortune from ten o'clock until three find it difficult to stop short when the gong sounds. Hazard beckons to them with alluring promise. It may be art or cards or anything that looks like a gamble. Hence they keep on. Being credulous and willing to take a chance, they are likely to fall for the first proposition that comes along.

I can illustrate this with an episode that, if it served no other end, would contribute to the whole literature of gullibility a classic epigram. It concerns a young Wall Street broker, now dead, who was a millionaire by inheritance and a spendthrift by instinct. He could never stop playing some kind of game. His craving for excitement was too strong to permit him to be idle on a vacation. This made him an easy victim for the professional card sharp.

Once he was playing pinochle for $500 a game with a well-known New York gambler at the old Grand Union Hotel at Saratoga. The professional had given him 400 points at the start of every game.

During a lull when the broker had been called to the telephone a broker friend of the gambler came up and inquired about the game. When he heard of the tremendous odds that the gambler had given he said:

"Great Scott, you can't win against such odds!"

The old gambler smiled indulgently and replied:

"It makes no difference what odds you give a sucker."

Before the night ended he had stripped the young millionaire of all the cash he had and all he could scrape up on the premises.

In a similar vein is the old story of a well-known Wall Street broker who went West for rest and a change of scene. He stopped over at Denver for a few days. A friend who heard that he was in town started out to find him and finally located him at a faro bank.

"Good Heavens, man!" he said, "come out of here. Don't you know that this game is crooked?"

"Yes," answered the New Yorker, "but it is the only game in town!"

Now you begin to understand why "Glass-eyed" Charley said that Wall Street was the most gullible place in the world. With credulity and a speculative instinct to work on, the vender of the more or less dubious project has easy sailing. Let us now see what the game is and how it is worked. Behind it is a lesson in one kind of merchandising.

The Barometer of the Buccaneer

THE reason for this lesson lies in the fact that the promoters of such enterprises carefully plan their campaigns and choose the psychological moment to descend upon Wall Street. They study the tape, which thus becomes the barometer of the buccaneer. When they see that a big bull market is in progress (of late they have not had much exercise in this direction) they know that the time has come to unload.

Why? Because, like expert salesmen, they know human nature; they know that at such flush times the broker or the financier or the allied business man is feeling opulent; that he is in the mood of ready money and the dealers seize this mood when it is at the high tide of expansion.

So they come with their glittering schemes or with their exquisite vases; their brilliant-hued rugs; their mysterious-looking bronzes, or their wonderfully bound books. They capitalize the plethoric mood and get two or three prices for their stuff. The eye of speculation, blinded for the moment to a true perspective of value, can see nothing but objects to be desired and therefore to be bought. It matters not if the antique has been hammered out in Hoboken; if the rug has been woven in Harlem or the book taken off the shelf of a Fifth Avenue auction room. The dealer has said that it was not only good, but a good gamble as well; and that, in most cases, was ample.

As you may readily imagine, there is more imposition on the rich in the realm of art than in almost any other direction. Much has been written about this phase, but, like some other graft, it is never too familiar to fail to convey a moral.

Naturally there are two kinds of art buyers among the rich. Big collectors like the late B. Altman, H. C. Frick, and P. A. B. Widener are seldom imposed on. The reason is that they practice in picture buying the rules they laid down in their own business. They not only investigate carefully but seek ex-

He turned and saw Mr. Morgan holding it. The great man asked the price, looked at the volume, and then growled: "Too much"

Digitized by Google

pert advice. This is why they are rich and why they remain rich.

In his earlier collecting days the late J. P. Morgan made many mistakes; he bought the spurious and the restored. But he was usually frank about admitting his error, and you may be sure he was never caught twice in the same way. With his marvelous genius for assimilation he soon became something of an expert judge himself. That he did not always take his purchases seriously was once attested by the following cablegram he sent from London to his librarian, a brilliant and clever girl who bought most of his books and manuscripts: "Have bought ——— manuscripts. I like them. Hope you won't put them in the cellar."

The rich who bite most easily at the fake picture game are those who pride themselves on their knowledge of art. Their vanity becomes a very costly thing. Dealers know this weakness and play it for all it is worth. More than once they have taken a rich man to their show room, got him in the little red-walled sanctuary that is supposed to be reserved for the artistically anointed, and shown him a spurious Corot (William M. Chase says there are not less than 20,000 in this country), with this speech:

"Here is a Corot that I have been saving especially for you. Realizing your knowledge of art and your fine discrimination, I am sure you will at once appreciate its full value."

Naturally, the rich man falls. To be credited with art discrimination is a great compliment. If he had been buying an issue of bonds he would have made the most rigid investigation. He would have sent out engineers to inspect the property, and he would have had lawyers comb over the franchises and papers. But instead of seeking expert counsel he blandly takes something he knows nothing about and will not be advised about. For the pure emotion of being able to show off his pictures with the statement, "I selected these myself," he is willing to pay a big price.

The Ruling Passion

MANY Wall Street men buy pictures as part of a speculative game. They want to go into art and yet they cannot get away from the ruling passion. They have an ambition to discover a new artist, hoping that he will develop into another Wyant or Fuller. So they buy a lot of junk and stow it away just as they put away their securities in a safety-vault box.

An incident will illustrate. A wealthy broker, who was also an amateur in art, heard that there was a mysterious young artist working in a shack over on Long Island. He drove over in his motor, found the artist at home, and began to ask him about his work. The walls were hung with finished and half-finished canvases. They were all pretty bad.

Of course the broker knew nothing about art and he did not want to take anyone with him who did know. There was the old vanity again. He began to ask the prices of the pictures. The artist said they ranged from $20 to $75. Making a grand sweep of the hand, the broker said:

"I'll give you $2,000 for the lot."

The young artist, who had not seen a $20 bill in months, nearly dropped dead at the proposition. He gleefully accepted; the broker sent for the pictures and stored them away. That was seven years ago. To-day that artist is painting signs when he can get a job and the broker is out exactly $2,000.

The lure of big prices has been the undoing of many rich men. It is just their vanity working in a new direction. A story is told of one of the richest bankers in Wall Street which shows how this works. A few years ago he was offered a certain old picture for $20,000. With great indignation he said:

"That's too little. No picture of that type would bring such a price."

Yet last year he paid $45,000 for the same picture, and the joke is that he did not know that it was the identical canvas which he had rejected before.

E. H. Harriman Stung

EVEN so astute a speculator as the late E. H. Harriman was once badly stung on a picture deal. He liked the picture and paid an excessive price. Frankly speaking of the matter, he said:

"I'll leave picture buying to some one who knows pictures. I'll stick to railroads."

The rich, however, are not always to blame for being trimmed in the art business, as this very illuminating chapter from actual experience will attest. It was during a certain vogue in reliquaries. Two well-known art dealers entered into a picturesque conspiracy to unload a lot of their stuff on the unsuspecting plutocrats. These men were bitter rivals and were constantly denouncing each other. So they framed up an agreement between themselves by which they were to take turns in submitting objects of art to certain millionaires. If the victim protested about the price they were to refer to each other as judges. Here is an example of the way their scheme was developed. We will call the dealers A and B.

Clever Tricksters

A TOCK a beautiful enamel to the home of Mr. X. He admired the piece, but protested at the price.

"Of course if you don't take my word," said A, "you can ask another expert."

"But whom shall I ask?" queried the banker.

"Of course he is my deadly enemy and hated rival, but the one man in this country, after myself, who could appraise this is B," retorts A.

The banker pricks up his ears. He has heard about the bitter warfare between these dealers, so he asks A to leave the piece. Then he sends for B, who immediately confirms everything that A has said and, more than that, says he is willing to buy

"Here is a Corot that I have been saving especially for you. Realizing your knowledge of art and your fine discrimination, I am sure you will at once appreciate its full value"

it himself. This is all the banker needs, so he pays the price, which, in many cases, is very excessive. In the same way B worked his customers by suggesting that A be called in. By means of this plan these two dealers (who incidentally continued their hostility in public) cleaned out a whole stock of goods and made a tremendous profit. It is interesting to add that one of the best known and most famous of the multimillionaire collectors fell a victim of this clever and highly original piece of team work.

When the average Wall Street man is flimflammed in a picture game he does not lose any sleep. It is just a matter of bookkeeping and he charges it off to profit and loss, a tribute to the excess of flush times. With many of these men—those especially in the speculative game—it is a case of "feast or famine."

Easy Money in Books

FULL twin to the picture, in its easy lure of the average rich man or woman, is the book. Costly experience—much of which has been aired in the courts—shows that there is apparently no end to this kind of graft.

As in pictures, there are two kinds of book buying. Men who are interested in and who love first editions usually know something about the art, and, besides, there is a sort of standard market for the desirable pieces. When collectors like Hoe and Widener were in doubt they got experts to help them. Mr. Morgan had a trained librarian to do his buying. He paid such enormous prices that practically the pick of the whole book world was his before it was put into catalogues.

The golden harvest and the easiest money in books have to do with editions de luxe, the kind usually bought for ornamental purposes. Here the appeal is often made to vanity, and it is almost invariably successful.

The familiar scheme is as ancient as the gold-brick or the "badger" game, yet it still thrives. For its fullest and most artistic exploitation it requires two men. One approaches a rich man who likes to be called a "book lover" and says:

"I know where you can make some money quick or add to your collection."

Naturally both of these appeals go straight home. Then he produces a garish book, ordinary Number One of a "Limited Edition" of a standard set, and continues:

"I can get this set for $1,500—the owner is hard up—and if you don't want to keep it, we can sell it in a short time for $3,000. I know a man out in St. Louis who is just itching to get this edition."

Usually the man falls right away. But if he should use the most elemental precaution he will ask:

"Who is the buyer?" It never occurs to him to inquire about the seller.

The shark is prepared because he replies:

"It's Blank Jones of St. Louis. You certainly know his books. He bought that first Walton at the Hoe sale. I am sure he has heard all about your collection. You can wire him if you like."

Of course the rich man is flattered to be put into the charmed circle of collectors. The chances are that he will send a telegram, but it goes to the agent's confederate, who replies that he will be glad to buy the books in thirty days, and he sends a check for $100 to bind the sale. It looks very plausible, and in nine cases out of ten the rich man buys the set for $1,500, and all he gets is the $100 that the ally has sent to bind the "sale." Both men disappear. The rich man, who has pride as well as vanity, never tells anybody about the way he was bunkoed, and the agents can go on and work some other person.

Zest of Rivalry

QUITE unconsciously the late Mr. Morgan was responsible for much grafting in books. As soon as he went to Europe unscrupulous agents would work off sets of books on single copies to near-collectors with the bait:

"I happen to know that Mr. Morgan is very anxious to get this book and he will make a good offer at a handsome profit when he comes back." Mr. Morgan never heard of the book and wouldn't offer the most nominal price for it.

The element of speculation does not always enter into book buying by Wall Street men, strange as it may seem. They will buy on impulse as well as on vanity. A well-known broker went to a business friend, who was a bibliophile, during the famous Hoe sale and said:

"I'd like to buy some of those books that I have been reading about."

"All right," was the reply; "I am going up to-day to buy and you can come along."

During the sale a very beautiful volume was offered. The younger man told the broker that he ought to have this book and was told to bid. He started at $6,000. An agent of Mr. Morgan sent the price up to $11,000, when the bibliophile broker dropped out, saying that it was all the volume was worth. But the older broker insisted that he should keep on bidding. His friend refused and the lot went to Mr. Morgan. As they were leaving the sale the bidder asked his companion why he wanted to have the book at the excessive price, whereupon he received this illuminating reply: "Simply because I saw that some other person wanted it."

Here you see one reason why some rich people pay big prices for things they do not want.

In this connection it might be worth while repeating the real origin of one of the most famous of all anecdotes of book buying by the rich. It is a matter of record on the books of a large New York publishing house (now located on Fourth Avenue), which is also a dealer in rare editions and fine bindings.

A broker went to a friend, who was also on the Stock Exchange, and said:

"I want you to buy me some books. You know all about them."

"All right," was the reply. "What do you want?"

"Forty-two feet of red and green. My library has red rugs and a green wall and I want the books to be right."

The order was so entered on the books of the aforesaid publishing house and the library was supplied. It is safe to say that the sanctity of its shelves has never been invaded by alien hand or reading eye.

Book Collecting

THAT even the most astute book buyers among the rich may pay abnormally high prices is shown by this incident: A member of the New York Stock Exchange, who is a noted book collector, heard that a certain copy of the first edition of Walton's "Compleat Angler" was *(Continued on page 32)*

The Shepherd Man

A Story for the Eastertide

By Bernice Bicknell

ILLUSTRATED BY ARTHUR E. BECHER

"MARIA, take this while I put up the horse." Father handed me a bundle. The minute I touched its fuzzy wool I knew it was a lamb barely two days old. The candlelight showed its tightly curled head. It nosed at my hand. The dear, sweet thing! I kissed it.

There are four of us children. None of us had a pet. I am fourteen.

Mother is dreaming of angels, for she's so like one herself—pale and golden-haired. (I'll never be an angel. I don't believe. I have black hair—unless God would use hair dye. I don't suppose God would think that was right.)

Father's hair is gray where it isn't black.

Bertha is twelve and has blue eyes. I guess mine have turned dark looking at pots hanging in the fireplace.

Jim is ten. One word he can't say plain is sugar, but he can eat it terrible when Mr. Hodkins pays father that way.

Father gives away his goods—religion.

Sadie is seven. She is going to be the wit of the family.

That's all! (U's I mean.) U. S. means United States. It also means United Smiths.

My father's name is Samuel and my mother's name is Mary—well, it's something to live up to. I wish my name had been Venus or something high. I was named for a saintly aunt. She's living.

Maybe it's selfish, but I'm going to name the lamb myself: Susannah Wesley—how will that do?

Then, as the lamb cuddled and snuggled up, I wasn't as sorry for the creature's mamma as I ought to have been.

Father came in.

"How's mother?"

"Sleeping."

"The lamb?"

I pointed to the fireplace.

"Don't forget to give it some milk in the morning. It can be yours."

"Goody! I'm a really truly matron now."

"What?"

"Matron of an orphan asylum."

How he smiled! If I could make him smile wider! He used to call me the little Apostle of Sunlight. What if I hadn't been working very hard at it lately?

It was past my bedtime. I kissed father good night. I climbed the ladder to the loft where Jim and Bertha and Sadie and I sleep.

Every time I climb this ladder I tell myself: this is the ladder of fame. Funny, isn't it for me to have such thoughts when I haven't but two nice dresses and one good pair of shoes? But thoughts—I can't keep you from coming—can I?

Wouldn't roses look sweet twining around this ladder? I do love roses. Some folks are like roses. Mamma is. Her heart is gold and the white petals are her deeds and thoughts. But she's like a wet rose now out alone in an April shower, too tender and sweet to fight the rain and wind. Her head is too heavy and she tries to hide it and can't.

WHEN I started to say this I didn't think there was so much to it. And mamma is like another rose on this prairie. The sun is too hot and there aren't many folks passing along and not many to see whether you're happy or sad—nothing but the trees, and they don't go all the way.

I don't know why they all laughed next morning when I called the lamb Susannah.

Bertha said she never heard of a lamb named such. I told her I guessed she didn't. Ever. No other lamb was good enough.

Father laughed. I was glad in my mouth. That's when I taste my heart.

Jim hugged Susannah until I thought he'd choke her. When we gave her milk she drank awful slow. And to think she is really mine—mine!

Then father thanked the Lord for Susannah—he didn't call her that. But I believe that if the Lord tells the lamb's mamma that Susannah fell among a preacher's children she'll be glad.

FATHER didn't leave that day. The afternoon went to call on the morning, and when evening came it was raining. Father was coming from mother's room. "Hush, mother is very sick!"

"Oh, my!" I whispered.

Of course the children are too young to understand sickness.

Just then a loud knock came at the door.

"Mr. Smith, come! Pap's a-dyin' and he wants a word of prayer."

Father looked toward mother's room.

"John, wife is ill and there is no one but me. It might be death to leave her. I must go back this minute!"

The young man choked up.

"You can't let pap die without a word—"

"Father," I made brave to speak. "Let me care for mamma. How far is it?"

"Ten mile," the young man said.

"No, child, you can't."

Then father's face changed.

"You can pray—you can go!"

"I never prayed for anyone I didn't know."

"You will forget yourself. Pray, dear, from your heart."

I felt afraid then.

"No, I can't. It's so dark—it's raining. The horse might slip. Oh, why can't folks do their own praying?"

"Forgive, dear Lord, this man all he's done that's wicked and all he did he thought was good. Please, dear Lord, don't be too hard on him"

"I can't leave mamma!" I cried. And Bertha and Jim began to cry.

"'God hath not given us the spirit of fear but of love and power,'" and father's great eyes were turned to me.

He needed me so badly and God did too.

"I'll go!"

THE horse was galloping off before I had a chance to take one look at my mother or father. I couldn't help feeling that maybe I would see mamma alive again. All this hadn't taken any more than two minutes. It seemed years.

The thunder roared and the lightning zigzagged and skipped the rope, and I hid my head.

That verse father had quoted! "Not the spirit of fear but love." Father was just sending me out as the Lord sent father to the frontier.

"Oh, it's grand!" I whispered.

A terrible roar of thunder came. All the fear was gone. I thought how the rains have to come so the jack-in-the-pulpits and the wake-robins, violets, and buttercups can come. Fear had to come so I'd know stronger about love.

A light was shining from a shack. The young man helped me off his horse and his hands were cold as ice. I was pretty wet. He took me to the door. His mother looked at me the strangest. I guess I was the queerest preacher she ever saw.

"Can you pray?" she asked.

"Yes."

"Hurry up! Pap is sinkin'."

I was in a room where an old, wenzened little man lay on a bed. He scarcely breathed.

"The preacher," he gasped.

"No, but hisen darter."

The boy was staring at me. I opened my Bible. But the woman stopped me.

"Pray! He don't want no Bible. Pray!"

My heart was in my mouth. I seemed to be chewing it.

"Let us kneel!"

I didn't ask what his sins were.

"Dear Lord and Saviour! I'm just Your little linsey-woolsey girl. I don't know this man but You do. You are the Good Shepherd and know Your sheep. Even if he isn't in Your fold he wants to be. Dear Lord and Saviour, we're all bad. I didn't want to come here at first, but father wants us to honor our father and mother. In that way we honor You. (Isn't that a sweet idea?) I guess, Lord, by doing the things we don't want to do we will be more able to do the things we like to do.

"Religion and money are a good deal alike. If you've got some you want more. If you haven't any—you wonder what it's good for. Father is the no-money, all-religion kind. I guess that's what you are, dear Lord.

"Forgive, dear Lord, this man all he's done that's wicked and all he did he thought was good. For maybe you two don't think the same about politics, 'Cause some folks say good is evil just like some folks say one party is good and the other is bad.

"I hope he doesn't weigh so bad in Your balances.

"Bless his wife and his son. Let them take warning and not send for a preacher the last minute.

"Bless my mamma that's like a rose.

"Please, dear Lord, don't be too hard on him, for he's old and sick. I guess he's had a hard life. And he's all shriveled up

World's-End

Chapter XX—Peace

By Amélie Rives

(Princess Troubetzkoy)

ILLUSTRATED BY ALONZO KIMBALL

EVERYONE went early to bed that evening at World's-End. It was as if they had seen the hem of Death's sable garment trail from the threshold, and double-locking the steadfast door of the still inviolate home upon him, had said with a deep, unanimous sigh of the spirit: "Ah, now at last we can sleep in safety." Even the faithful Miss Lee was to seek slumber on this beneficent night, lying on the couch which Owen had occupied in Richard's dressing room, with the door open and a night light burning. Under the opiate given early in the evening, her patient would be sure also to sleep tranquilly until morning. Mary took Sally off to bed at nine o'clock. At half past nine Patton, yawning and stretching like a sluggish colossus coming drowsily to life, went off in search of the first unbroken rest that he had enjoyed since his arrival two weeks before. By ten the old clock was the one animated thing in all the slumber-muted house.

But by the side of Owen, now so dearly near her once again and fallen immediately into the deep, stirless sleep of exhaustion, Phœbe lay wide awake, watching the soft shadows from the wood fire play about the lovely room that seemed once more to smile upon her with a friend's countenance. Was it possible—oh! was it possible—that Death and Fear had gone, and only Love was with her? Might she not wake up suddenly to find that she had been dreaming and in her dream had said: "This is a dream"?

SUDDENLY, as if it had been a roselit slide, the present was withdrawn and she gazed back into the steep, dark caverns of the past through which with so much fear and so much trembling she had come to this wide place of refuge. She looked bravely, not shrinking, and saw herself as she had been when first Owen and then that other came into her life—a self-willed, self-centered girl—full of a wild, imperious desire for life and love, not rightly knowing and certainly not caring overmuch in what real life and love consisted. But now she knew, if only in part, something of these benign yet awful mysteries; and the new spirit in her shuddered with a sort of pity for what she had then been—for the blindness and littleness and narrow passion of it all.

And she sent her thought deeper still and drew forth the thing that might have been from those dark shadows of the past. She forced her mind to see herself as Richard's unwanted wife—a creature for all time abased in his sight and in her own—her child cast off—

Recoiling from this dread picture, another as terrible confronted her, and she saw herself again, lying there alone on the mountainside, dead by her own hand—lying there for days perhaps, until—

Vividly there rushed before her the scenes of her old father's grief and despair as they might have been when he was told of what had been found in the mountain. She dropped her head on her arms and trembled with a sick horror of the self that had been hers.

For some moments she stayed thus, then she lifted herself and gazed down at the face of the man sleeping so quietly at her side. Ah, was it strange that she worshiped him? Was she not his creation? Had he not given her a soul? If she had worshiped him before she knew, would not God Himself forgive her for worshiping him now? In her impassioned young gratitude she felt a helpless anger against the shortness of life. How was she to grow worthy of him in such a meager space of time? How fulfill that burning ideal of herself that should be—make herself all glorious within like the King's daughter?

And again the present was withdrawn; but now it was at the future that she gazed—at the image of herself as she longed to be, moving through a clear shining toward the summits of spiritual attainment. Yes, no purity would be stronger than her purity, for it would be the fruit of choice and not of chance; no compassion would be deeper than hers, because it would be born of understanding; no unselfishness greater, for her true, her real self had been given her by the selfless love of another and must be cherished only to spend itself in things apart from self—thus growing in greatness by what it gave away in accordance with Divine Paradox.

Ah, the little children that she would succor! Ah, the young girls mistaken as she had been mistaken, caught blind and willful and reckless in the bright snare of romance and springtime passion—how tender and loving she would be to them, how comprehending, even as he had been to her! And ever she would climb up and up toward those clear peaks that rose so gentle and full of a mysterious promise above the mists and shadows of the world in which till now she had been used to move. What did the great words say? That evil might exercise a stirring power—point out the path to goodness—to the inner advance of life—to the formation of a new nature. Yes, a new nature, a new life, a new world—all these she would win, because of him and of the new spirit that he had given her.

A great emotion lifted her spirit as on a rushing wind. For one immortal moment more than love possessed it, the wild gratitude of love for love, the outgush of all the spirit toward some vast, benevolent source, as it were a winging home to the heart of the universe, to give unspeakable thanks. For that moment of wild, purified ecstasy, the pagan slipped from Phœbe's soul like a frail husk, she was rapt into unimaginable heights, and all her being quivered upward like a thin passionate flame toward its source.

THE next morning, shortly after breakfast, Owen and Patton went for a long walk together.

Patton was to leave World's-End by the afternoon train, and there was a very serious and important point that Owen wished to discuss with him.

The day was cold and glittering. From a sky of light, bright blue, a small sun glared intensely as though brought to a focus by the great burning glass of the sky. The gray woods clung like smoke to the mountain sides, and like smoke clustered in the folds of the valley. The little Green-Flower lay like a torpid, silver-backed Python vainly trying to thaw itself in the winter sunlight. Here and there some fields had put on the livery of spring with the emerald plush of winter oats. There was a great antiphonal in progress among the crows—two flights answering each other, one from the hollow near the oat field, one from Logan's Wood.

PATTON was smoking his dear briar as he walked, but Owen, who preferred a tranquil, sedentary pipe after meals, had already finished his before leaving World's-End, and now walked with his hands loosely caught behind him, looking up from under his brows at the mountains they were approaching.

In their stupendous tranquillity, they seemed like a great "Credo" rising toward the suspended abyss of ether, the earth's "will to believe" made manifest. Something in him responded to their silent and immemorial assertion of an All-Seeing Unseen, as with a great shout of the spirit, only spiritually to be heard. With bare majesty the venerable words strode through his mind:

"I will lift up mine eyes unto the hills, from whence cometh my help—"

The theology of the great Hebrew book might be anthropomorphic, but when it spoke with the voice of its poets it spoke as with Divinity's own voice.

Another trumpeting of words, mysteriously great and potent, sounded its inner reveille:

"The heart that abandons itself to the Supreme Mind finds itself in relation to all its works, and will travel a royal road to particular knowledges and powers—"

There came to him a quickening of all his spirit, akin to the ecstatic motion which had drawn Phœbe from her grosser sheath the night before, but with him it was a force of more sobriety—an answering to the vast whole with "I agree and I revere," an abandonment, in full consciousness of all the self to what is selfless yet transcends individuality, to the Supreme Paradox whose core is truth.

PATTON walked in silence beside him, feeling that together they touched the garment of a great moment and that virtue went from it to them both.

As they entered the first field leading to the flank of the mountain Owen turned to him.

"Charles," he said. "I want your advice on a very grave question. Now that Richard is out of danger, there comes the question of—" he hesitated, then went on firmly—"of my attitude to him and to Sally."

"Yes, I've been thinking of that," said Patton.

"He is certainly out of danger?"

"It will be a long time before he gets his strength, but practically he is out of danger."

Owen hesitated again and grew white.

"That arm—?" he said.

Patton looked grim. It was the look that came on his face when he had an operation to perform in a case that could only be locally anesthetized. "I can't tell you yet, old man. It may be stiff—he may pull through."

They walked in silence for some moments.

Then Owen said, with a hoarseness in his voice:

"What I want to ask you is about telling Sally—the truth."

"I see," said Patton. He pulled hard at his pipe without noticing that it had gone out.

There was another silence.

"Will he—remember clearly, Charles?"

"Not clearly, I think. But—"

He too hesitated.

"You see," said Owen in an even tone, "the first blow only dazed him. He—he looked at me—"

"He'll remember essentials," said Patton stolidly.

"I thought that."

SILENCE fell again.

Suddenly Patton said rather gruffly:

"I wouldn't go over it, old man. What's the use?"

"No use, Charles. At first I didn't care one way or the other. Then I went down—there are depths, you know—"

Acute pain twisted Patton's face for a moment, then he said quietly:

"Yes, I know."

It was he who again broke the silence.

"See here, old man. I think I've got the gist of what you want to ask me. Shall I put it for you?"

"Thanks—yes," said Owen.

"I've hammered at it a good bit in my own mind. When Richard is strong enough, the chances are that he'll tell his mother the truth. I say chances, for he *may*—" (Patton's emphasis here was very expressive of his opinion of Richard)—"he *may* out of consideration for her health decide not to speak. You know him better than I do. What do you think?"

"I've gone over that," answered Owen, "and I think that while he will shrink from telling her, the—the circumstances are such that he will feel compelled to."

"Ah, that settles matters then."

Digitized by Google

"How do you mean?"

"I think it will be better for you to tell her yourself. If he blurts it out to her like that—lying there—"

His broken sentences were more expressive than words could have been.

Owen's teeth caught his underlip and held it.

Presently he said in a low voice:

"You don't think this second shock will be too much for her?"

"It won't be good for her, of course. But it will be better than the other way. Sally is much better than she was last winter. I doubt if she could have weathered these past two weeks then."

"Shall I tell her, to-day—while you are here?"

Patton thought hard for a few moments.

"Better wait a while," he said at last. "The boy won't be able to talk coherently for some days. You see she had one violent shock last night. It was a shock of joy, true—but it got in its work just the same. I shall have to keep Richard under opiates for at least a week more. Suppose we wait until I come to-morrow to settle the time?"

"Just as you think, of course," said Owen slowly.

PATTON stole a glance full of shy affection at the dark, preoccupied face. Then he suddenly hooked his arm in the other's.

"I say, Owen," he mumbled, "I'd knock these memories higher than a kite if I were you."

Owen smiled. It was a very sad, sane smile.

"Cockleburs are a better simile for memories than kites, Charles," he said.

"Then I'm dashed if I wouldn't chuck cockleburs, coat and all, into the fire," retorted Patton grimly.

"You forget my mind's the coat in this case."

PATTON was silent. The words "Physician heal thyself" occurred to him. Who knew better than he did that memories are not subject to the will of the man? Who knew better than he— A rigor ran through him. He withdrew his arm and busied himself with refilling his pipe. His hands were shaking.

They had reached a fence, beyond which rose a grove of noble oaks and chestnuts. Through them could be seen an old brick wall, violet-brown with age, and thickly crusted with moss and lichen.

"The old Randolph burial ground—hey?" asked Patton, glad for even this change of subject.

"Yes. Shall we take a look? The key is here under a flat stone—a queer old custom that I've never changed."

"Yes, let's," said Patton. "It's a beautiful spot. See how those wild grapevines have grown from tree to tree, making them look like one huge banyan. And the valley there at its feet. And the mountain keeping guard. They should sleep sound, those old Randolphs."

"Yes. I love the place," said Owen.

He found the big, rusty key and opened the old iron gate between its brick posts surmounted by balls of stone from each of which rose a dexter hand holding a tomahawk.

Owen pointed to them with the key. "The old explorer's crest, invented by himself, before the discovery of the famous nag's head," he said smiling.

"Fine old fellow," said Patton heartily, "is he buried here?"

"Yes. There he is. He was the third Owen Randolph, you know. He built the central part of the house that's now standing."

Patton turned about on the thick carpet of periwinkle that ran from wall to wall of an inclosure about eighty feet square. The tombstones were all very simple, of white marble beautifully toned by age and weather. On this one, which stood slightly apart with one other from the rest, was carved:

MY FATHER

Owen . Randolph

Born January 15 — 1715
Died November 9 — 1795

Ingenium nemo sine corpore exercebat; optimus quisque facere quem dicere, sua ab aliis benefacta laudare, quam ipse aliorum narrare malebat

"A fine old chap—a fine old chap—" murmured Patton again, reading over (*Continued on page 24*)

Capturing the Delegate

By Henry White

ILLUSTRATED BY S. J. WOOLF

"VOT'S der complain' now?" queried the pants contractor with an uneasy look at the chunky, heavy-featured young man who had pushed the door open. The intruder slapped his slouch hat on a worktable and vaulted beside it. The machine help slowed up to hear, the hand sewers shifted seats to get in the line of vision, the banging of the press irons softened to a patter.

"Complain'!" mocked the chunky one after an impressive pause; "vot did I told you? I moost call a strike. Der Executive Board sat all night on it."

"Schami Yisrael!" ejaculated the contractor.

"Yes," went on the delegate, picking up a pair of shears and snipping a waste piece of cloth as a nerve steadier; "vot did I told you? For vy did you pay der green operator dot prize? Now see. Efry operator says: 'If Blumberg can pay so much to a green operator, vy not to me!' und der vorkmen call a meeting und make resolutions to demant der same prize."

"But-whose-pizness-iss-it-vot-I-pay-my-bartner's-landsman-so-long-I-pay-der-union-prize!" the contractor managed to articulate after smothering his surprise and indignation.

"Whose pizness iss it, whose pizness iss it!" echoed the union agent with a rising inflection. "You know very well, Mr. Blumberg, dot in dese times efryting iss der vorkmen's pizness. Vot are dey in der union for—yoost to pay doos, yes? I dell you, Mr. Blumberg, dot der vorkmens ain't slafes like before; no, dey knows who makes der money and dey vants to say someding, too!"

The contractor's eyes flashed, and with a bang on the table with his clenched fist, he fairly shouted: "You strike because I pay too leetle; now you strike because I pay too much! If I vant to pay a leetle extra to my bartner's landsman, for vamily reasons, you take advantage! Dot union will ruint der pizness yet!" His voice became a wail and his tense features relaxed. The delegate, eying him intently, noted this—the strike was fought and won.

"Mr. Blumberg," he remarked, getting off the table and putting on his hat, "you know our princips iss to dreat efrypody der same, joost like brodders. Yes, joost like a vamily. It vouldn't look nice vor your vorkmens to get not so much as your greenhorn landsman. It vould make dem veel bad und make drouble. Efryone should be dreated impartials. You know, too, Mr. Blumberg, dot der pizness ain't going machulla, oser nit so long as peoples vear bants."

A WEEK later the same door was flung open and the same chunky one entered. He boosted himself on the worktable as before and waited. Blumberg, busy at the far end of the shop, dropped the work in hand and haltingly came toward him. He mustered a near smile, and, with a poorly concealed tremor, greeted him. "I see, Mr. Krenkel, you nefer vorget your goot frients. Nice from you to come—very nice from you. If I vould know I vould haf schnaps und sponge cake retty vor you. Next dime—"

"Nefer mind, Mr. Blumberg," the delegate interrupted, "ve don't need sociableness in a bants shop. You know I vouldn't come to dalk vords, only pizness."

"Pizness, pizness!" gurgled the contractor. "Vy, ain't efryding all right yet? I pay der prize, I vork

"Nefer mind, Mr. Blumberg," the delegate interrupted, "ve don't need sociableness in a bants shop. You know I vouldn't come to dalk vords, only pizness"

union dime. I make efrypody pay doos. I vipe my feet ven I comes in der shop, und say 'Goot mornink' to der shop shairman."

"Vell," the delegate returned, looking away with the air of one about to say something he did not relish, "I haf no complain' mit the vorkmens. Efryding iss yoost like I vos boss."

"Ah, ha!" brightened up the contractor, "der union rools to me is yoost like der Torah. I pelieve der union iss goot ven it iss honest. I—"

"I said," interposed the delegate, "dot it iss all right mit der vorkmens, but I didn't say it vos all right mit der foremans."

"Der foremans!" cried Blumberg, bewildered; "vy, vot has der union mit der foremans to do?"

"Didn't I told you dot der vorkmens ain't any more slafes; dey vant to spheak somedink, too, yoost like der cabitalist."

"Noo, vell!" broke in Blumberg, whose tension was at the snapping point, "make hurry up; vot about der foremans, der foremans?"

The delegate pointed to a sign in red on the wall. It read:

NOTICE—*Smoking not allowed, under penalty of fine, imprisonment, or both. By order of*

——— *Fire Commissioner.*

Underneath, in Yiddish, was another sign, which read:

Anyone caught smoking will be discharged. By order of BLUMBERG & GOLDFARB.

"You discharged Josefsky, didn't you?" he said in the tone of a judge excoriating a culprit: "you discharged Gorovitz, too, didn't you? Und vy? Because dey schmoked cigarettes? No! Because dey vas goot union mans? Yes—dot vas your chance, und you dought dot ve vas sleebing! Der union iss batient und vaits. Der Executive Board gets complain' dot Schmuel, der foremans, schmokes a cigarette in der schop; der vorkmens haf a meeting und passed to discharche der foremans."

"Mine Gott!" moaned the contractor, and his collapse seemed imminent. Getting a grip on himself, he burst out: "Next you vill discharche mine vife! Understant me, Mr. Krenkel, der union pizness must got to stop somevere! Ven der union discharche my foremans, petter close up and peddle fish!"

Digitized by Google

At this the visitor leisurely pulled out a bag of tobacco and began to spread a bit of the contents into a small sheet of rice paper held curved in the fingers of the other hand. With a deft roll a cigarette was formed. With his tongue he wetted the edge to bind it and struck a match on his sole. Lighting up, he walked slowly out, puffing.

THE firm of Blumberg & Goldfarb sat disconsolate in their deserted shop on Cannon Street. Though broad day, bundles of cut garments were piled high in a corner, half-made pants encumbered the worktables and benches, the floor was unswept. Downstairs groups of men sauntered back and forth, stopping now and then to accost passers-by. A policeman, long stick in hand, suggestive of a peaceful labor trouble, stood in the doorway. People stopped a moment, looked about, and with significant glances passed on. What was a mere shop strike to the East Side?

"Yoseph," observed the senior member, gazing idly into the street, "vats der use? Der union haf our necks der fingers arount. Principles iss all right—aber it von't make soup."

"Yes," agreed the junior partner, "principles iss fine vor der feller outside—aber it iss no use. Next week maybe der vorkmens demant a plana in der shop und der boss to blay tanz music!"

"Und cabaret, don't vorget," added the senior.

"Yes, der union vould demant dot der boss be discharched, only some von must give out der shobs," finished the junior.

GOLDFARB looked abstractedly at the wall for some time. Blumberg watched him expectant. An idea was in its birth throes. The elder had reason to respect the abstractions of the younger. He often said: "His silence was golt und his dalk prass." The stillness made the ticking of the clock sound like hammer strokes. The partners were as inert as statues.

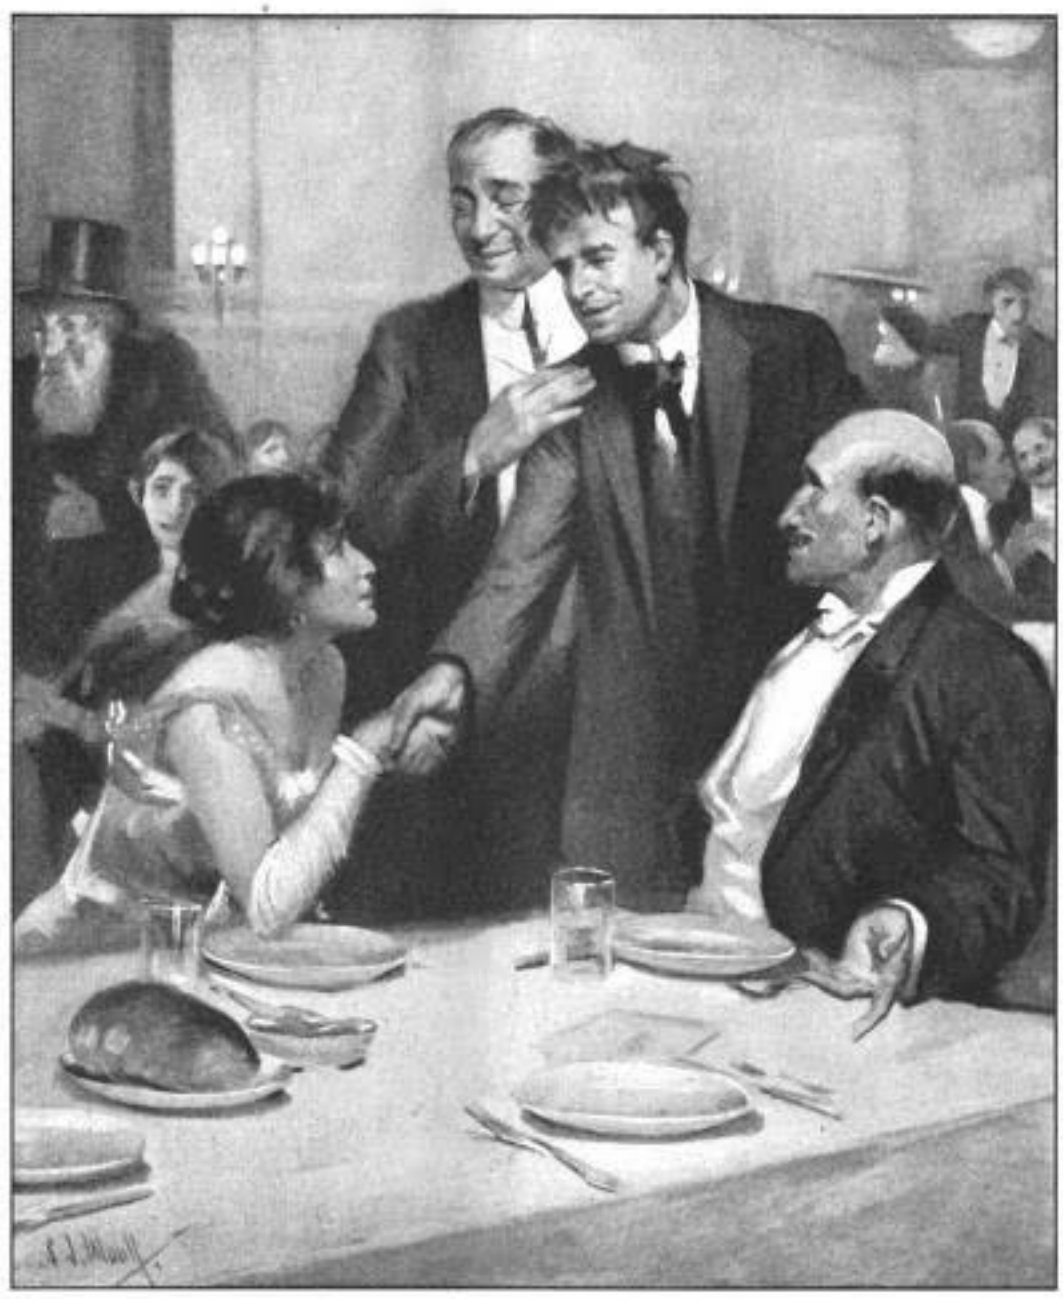
"Mosha!" suddenly called out Goldfarb, "vot you dink! It iss no use to fight der union mit a club, yoost like to fight a black tog in der cellar. Aber you can fight der union diblomatic. Dere is nodding like diblomacy, Mosha. It pushes der moundains avay und makes der enemy ours!"

"Yes, Yoseph, dot iss so, but I don't see der point," interrupted Blumberg.

"Vell," went on the oracle with a searching look at the other as if to gauge the effect of what he was about to say, "vy not make a son-in-law of der enemy?"

Blumberg jumped up and glared at his partner. "Vat!" he also shrieked, "are you blaying crazy house mit me—vot you mean?"

Goldfarb, unperturbed, looked out of the window as if to await the subsidence of Blumberg's brainstorm. "Dink it over, Mosha," was all he said.



The senior partner walked nervously about, stopping now and then to glare out of the window. Several times his lips twitched to speak, but he got no further. Stopping suddenly, he raised both hands, and in an undertone, immensely more impressive than his shouting said: "You mean dot mine daughter, mine only daughter, gets married to dot loafer, Krenkel, vot makes me all dot troubles? Iss dot diblomacy—iss dot de vay to settle der strike und stop der union to squeeze der inside from us out? Iss dot your schmart advice? Shame on you!"

GOLDFARB met this without a blink. Then he smiled benignly and went over to where his partner had sat down and was moaning with his head between his hands. He patted the sufferer softly. "Now, Mosha, my frient," he started, "my goot und honest bartner! I vould not hurt your veeling vor a sign on Broadway. Yoost look der question in der eye. It ain't so awful as you dink. Yes, Rifka iss a lady, a very fine, nice lady. Aber see! You pring ofer dot greenhorn landsman, Yankel, vor a chusen. You gif dot schlemiel vork in der shop und raise der prize. Der vorkmens demant der same prize, und dot settles our brofit. If you pay Rifka a chusen, pay a real pargain—yes, a dopple pargain."

Blumberg raised his head and looked quietly at the speaker. His excitement was spent. "But dot loafer," he remonstrated.

Goldfarb cleared his throat. "Krenkel ain't so bad a yung. Supposen you vas a vorkman und der vorkmens make you delegate because you vas schmart. Dot is a pizness joost like a lawyer—like making bantz. Und don't vorget, Mosha, you vos a agitationer, too, and such a agitationer! Oye! Der vorkmens make demants. You say to der boss, Vill you zettle or vill you haf a strike? Der boss don't like you, aber nit; der vorkmens like you, aber yes—und gif you a golt vatch mit combliments inside. Krenkel iss a schmart boy; more schmart as der contractors! He makes expenses un drouble blenty. He iss more schmart as der vorkmens. He is educationed—he speaks like a rav. Und my, vot a salesman! Oye!" This last was uttered with a rise of the shoulders and a lifting of the hands, palms upward. Blumberg said nothing. All was settled, then, but the plan of procedure.

The Yiddish "Daily Ferment" printed that Blumberg & Goldfarb had settled with the union. And such a settlement! The vanquished were as tickled as the victors. Capital and labor had really embraced. Blumberg praised the gentlemanly deportment of the delegate Krenkel, and the delegate complimented the contractors for their reasonableness and good spirit. The discharged foreman, too, after a closeted time with the firm, came out smiling. Krenkel in his rounds stopped at shorter intervals at Blumberg & Goldfarb's. He was greeted with an almost family warmth and tendered the swivel chair in the office. Invariably a box of cigars, bearing marks in luscious Spanish, was brought out of the hidden recesses of the roll-top desk and handed to the delegate. With apparent reluctance he picked out one, and, when further urged, another. These he shoved into his vest pocket, mindful of the staring fire sign and the recent unpleasantness which forbade their immediate enjoyment. On one of these visits the junior partner gracefully slipped the delegate a ticket for the combined play and dance of the East Side Division of the Revolutionary Daughters, to be held in the Grand Waldorf Palace, the most sumptuous meeting place in all the Jewish quarter.

The delegate extended his hand to meet hers, and, with a grave bow, said: "I haf had der extreme bleasure pefore"

THE long-anticipated affair of the Revolutionary Daughters at last became a reality. Blumberg and his daughter sat in the lower box, a composite picture of dignity and grace. He wore a specially pressed swallowtail and she a "creation." Her charms were various besides the gown. One thing, however, was pretty clear: she was not the kind to be the subject of a matrimonial trade. She was a woman with opinions of her own. Away in front sat Goldfarb, with Krenkel beside him. Perhaps, out of considerate regard for the democratic tastes of his guest, he wore a plain business suit.

THE play, as befitting the gay occasion, was a cheerful representation of underground Russia. The most famous Yiddish artists had volunteered. The intensity of the acting, however, failed to hold the interest of the partners. To their surprise and evident annoyance, they noted their young landsman, Yankel, sitting alone in a rear seat and wearing a nobby dress suit given him for other occasions. Could it be that he was improving the opportunity and pressing his attentions upon Rifka on his own hook? They noticed him making friendly signs to the girl; they appeared to be on the most agreeable terms. The play came to an end, as even such plays do, and an intermission followed to permit the removal of the seats for the ball.

Blumberg and his daughter drifted toward the café downstairs. He led her to a table where four chairs were tipped, and, straightening two, they sat down. Presently Goldfarb sauntered by, arm in arm with his companion, and, stopping as if in surprise, exclaimed: "Ah, Mr. Krenkel, my bartner iss here und his charming daughter, too! An unexpected pleasure, indeed! Miss Blumberg, blease allow me to make you acquainted mit my dear frient, Mr. Krenkel."

The delegate extended his hand to meet hers, and, with a grave bow, said: "I haf had der extreme bleasure pefore."

THE partners could not repress a start and looked inquiringly at each other. Goldfarb vindicated his reputation for tact. "In vree America," he quickly responded, "young peoples gets acquainted mitout vormalities;" and, with a look at the girl: "Der young ladies don't stay home by der kitchen, tied mit der mamma's abron strinks."

The four sat awhile discussing the play and the players. It developed that the young people were well informed on Russian revolutionary matters and radical questions generally. Their ideas, moreover, were noticeably in harmony. This the partners regarded with undisguised satisfaction, though their own views and sympathies ran otherwise. The leaden heel of the union was not calculated to enthuse them with the beauties of radicalism. Discreetly, therefore, they remained noncommittal. A suspicion entered the junior partner's mind that the young people knew each other better than they announced, but it was merely a fleeting notion. After some time at the table the four went up into the hall, where Yankel, apparently in waiting, at once stepped toward the girl and claimed her for the first dance.

THIS was upsetting, but when he got a chance the junior partner remarked reassuringly: "Nefer mind, Mosha, Rifka iss a schmart maidel—Yankel iss a fine tanzer, und a girl vants to tanz. Aber Krenkel iss all in der het und not in der feet."

"Yes, Yoseph," rejoined the father, "dot iss all right, aber you can't argument mit girls—a yung mit fancy glothes und honey vords, mit a shilling to pay ize cream, iss more vorth ais a philosoph."

"Ah, Mosha," reproved the other, "you vorget how Sarah gif you breference over dot spitzboob, der fiddler."

"Vell," went on Blumberg resignedly, "it iss all my fault—I tell Rifka der greenhorn iss eighteen-carat golt, und maype he pe President yet, aber he vas porn in Wilna."

"Nonsense, Mosha, nonsense! Vait! Yankel gif Rifka a goot dime, und Rifka ain't voolish. She can tell a piece of glass von a tiamond."

The girl was a long time getting back. Many dances passed. She returned with her last partner flushed and radiant. All her dancing numbers were bespoken, and mostly by Yankel. The band struck up, and again she was away. Krenkel, too, was kept busy with acquaintances. More, he never inquired as to the girl's absence, and when supper arrived he forfeited the option to take her to dine. Yankel had the

Thoughts That Throb

By George Fitch

ILLUSTRATED BY JOHN T. McCUTCHEON

A Suggestion to Opportunity

When Opportunity, hot-footing by,
Knocks on the door of hovel and of flat,
Sometimes he gives a gentle "rat-tat-tat,"
As soft as air—as noiseless as a sigh.
And far within some boy with bulging eye
Reads on of Presidents unstirred—whereat
Old Opp. with vigor grabs a baseball bat
And bangs the next door once—ere he can fly,
The boy within has seized him with a cry;
"Sign me," he pleads; "I'd give my neck to try
That big-league game. Just watch my spitter hop!
I've got more speed, too, than that Johnson guy.
Think of the pennants I can help you cop!"
Why can't the old chap try a louder noise
Upon the presidential brand of boys?

Beacon Lights of Obscurity

SAMUEL P. BILLINGSGOAT, New York, *Patriot*—Mr. Billingsgoat earns $5,000 a year and is the father of seven young and growing children. On the last day of February he had his wife sew a patch on his 1909 model overcoat, after which he went down to the collector's and paid $10 income tax without one sob or murmur of regret.

PETER WINGLEBORG, St. Louis, *Honest Man*—On the 4th of last March Mr. Wingleborg while reading a newspaper walked in front of an automobile and was knocked down. Upon being brushed off he assured the owner of the automobile that it was his own fault and served him right. Further, Mr. Wingleborg offered to reimburse the auto owner for the damage done to the machine's off lamp.

ANSON F. WOMBAT, Chicago, *Reformer*—Mr. Wombat, having been greatly embarrassed by a lewd joke uttered in vaudeville one night, organized a party of twenty-five and attended the theatre the next evening. Upon the repetition of the joke the entire party arose, left the theatre, and demanded their money back. That joke was cut out thereafter.

Our Highest Explosive

THE airship is the highest explosive thus far invented by man.

This fact is a great grief to inventors and scientists, who have been struggling for years to make the airship something else. Never has man landed farther from his goal than in producing a 500-foot bomb while endeavoring to perfect an aerial omnibus.

Man has fussed with airships for many years. Monkeying with a buzz saw is a "safety first" occupation beside it. Some few inventors have been content to remain on earth, letting other men take the creations of their genius into the clouds. These inventors are still alive and in good health. The rest are reverently remembered.

The airship consists of a thin skin stuffed with gas. Man has solved the problem of making this gas bag as long as an ocean liner and of pushing it through the sky at the rate of forty miles an hour. But he has not yet learned how to prevent it from exploding with a $750,000 bang while too far aloft to make fire escapes of the slightest use.

Airships have remained aloft for days at a time, cruising across whole nations at high speed. Airships have carried happy passengers in luxurious compartments from city to city on schedule time. But airships have also done so many other things of interest only to science and the coroner that they cannot as yet be classed as an amusement or a convenience. An airship is still an adventure and a deadly weapon in the hands of man, who apparently doesn't know it is loaded.

Many nations are experimenting vigorously with the airship in the hope of being able to inflict hideous injury upon a hostile country through it. This is perfectly feasible already. If Germany would lend England all its airships in case of an ill feeling between the two countries, it would strike that country a heartless blow.

Ford's Hovel and His Janitor's Palace

DETROIT has a unique sight which is always shown to visitors. It is the residence of Henry Ford, the man who pays an income tax on $9,000,000 a year.

Thousands of people have been hauled around to view this house from the exterior, and almost without exception they have been more impressed than the tourists who have viewed Senator Clark's tall, warty cliff on Fifth Avenue. The house is a plain, small affair, which would probably rent for $50 a month.

In another year one of the rival sights of Detroit will undoubtedly be the residence—not hovel—of some floor sweeper in the Ford factories who gets $5 a day. Nowhere else are the two ends of the social scale approaching a common center with such rapidity.

Getting Ready for 1992

IN CHICAGO, one of our most hustling little business places, they are still methodically settling up the affairs of the late World's Fair, which many of COLLIER'S younger readers will not recall. Another dividend of one per cent or thereabout is ready for the stockholders, and some official with a good memory has recalled the fact that at the close of the exposition a sum of money—$25,000 or so—was left in charge of the president of the Board of Women Managers. The attention of Mrs. Potter Palmer, the said president, having been called to this, she has recalled the fact herself and has discovered that the fund has now swelled to over $90,000. Preliminary discussions regarding the disposal of this monetary débris are now going on.

As the five hundredth anniversary of the discovery of America is now only seventy-eight years away, it might be a good plan to leave the money right where it is and let it continue drawing interest. Chicago will undoubtedly hold another world's fair in 1992, and this is none too early to begin preparations.

Why the Sparrow Languishes

THE late Republican party overlooked very few bets in the tariff line, but it lost a great opportunity many years ago when it did not plaster a prohibitive tariff upon the English sparrow. If there had been a 7,000 per cent ad valorem tariff on English sparrows a quarter of a century ago, the thoughtless citizen who imported the first batch would have had to pay twenty-five cents apiece duty on them and this might have discouraged him.

The English sparrow is a feather-covered bundle of ill feeling, about as large to listen to as a ward caucus, but only as extensive to look at as one of the new parcel-post stamps.

He is composed almost exclusively of voice and temper. As a song bird he is less melodious than a campus quartette. As an ornament he rivals in beauty a splotch of mud on a limousine car. He is only a little more useful than the Republican National Committee. But as a fighter he holds all world's records. While a human pugilist is giving out the preliminary defiances and quarreling over terms, an English sparrow can pull off a thousand three-round bouts and emerge from them in comparatively good health.

The English sparrow makes his home wherever facilities for quarreling are good. He does not go South with millionaires and other birds in the autumn, but sticks around all winter, fighting. In the summer the sparrows fight all comers, but in the winter, owing to lack of opportunity, they fight among themselves. This is all that has kept the sparrow from crowding humanity off the planet, for, as a multiplication table, he makes the Belgian hare blush for its race suicide.

The sparrow builds his—or in this case her—nest wherever it will be most inconvenient, generally in a drain pipe or porch corner, and becomes a great-grandfather in a very short period. He is very cheerful, when not fighting, and loves to gather in great choral clubs at 6 a. m., making a noise as pleasant as a locomotive exhaust. Because of the sparrow's bravery in sticking out the long, hard winters without ear muffs or overshoes, he would be universally beloved if it were not for his disposition. But when America discovered that it would have to choose between the sparrow and peace, it put a bounty on the sparrow's head, and the small boy with his popgun is doing the rest. This should be a warning to all mankind. If we must fight, let us at least observe an eight-hour day for hostilities and not begin at sunrise.

Spring Fever

ABOUT this time of the year spring fever attacks the unoffending citizen and reduces him to temporary junk.

Spring fever is more terrible than other fevers because it cannot be cured by swallowing a clinical thermometer and running out a few yards of tongue in the presence of a doctor. When a man has spring fever he has to suffer along with the knowledge that nothing is the matter with him and that there isn't sympathy enough in the wide world to spare him one little tear.

Spring fever is so called because it removes the spring from man and leaves him a mass of helpless woe. It begins by attacking the victim's feet. These rapidly increase in weight until they weigh half a ton apiece. It then dissolves the backbone into a thin jelly, removes the muscles from the arms, and hangs lead sinkers on the eyelids.

When the fever has completed this job it sits back and watches its victim trying to work with fiendish glee.

The efforts of said victim to do a day's work look like the efforts of a slim young man to throw an elephant over a trolley wire by the tail.

When he begins to work in this condition he has an ache for every bone. (*Concluded on page 32*)

COLLIER'S

Death the Adventure

YEARS AGO MAETERLINCK wrote a poignant little drama, "The Death of Tintagiles." Yet the play never reached the stage in New York till the other day. Probably the chief reason is that death is therein symbolized as an inexorable and frightful monster. And the world has come to esteem as more precious the poets and philosophers who have passed over the sinister side to dwell on death with resignation and even exultation. For such thoughts no time is better than Easter. It is the true Easter spirit that STEVENSON voices when he says of one who dies young:

> In the hot fit of life, a-tiptoe on the highest point of being, he passes at a bound on to the other side. The noise of the mallet and chisel is scarcely quenched, the trumpets are hardly done blowing, when, trailing with him clouds of glory, this happy-starred, full-blooded spirit shoots into the spiritual land.

Turn back a few centuries and listen to the similar note in JOHN DONNE'S noble words:

> The sun is setting to thee, and that forever; thy houses and furniture, thy garden and orchards, thy titles and offices, thy wife and children, are departing from thee, and that forever; a cloud of faintness is come over thine eyes, and a cloud of sorrow over all theirs; when His hand that loves thee best hangs tremblingly over thee to close thine eyes, *ecce Salvator tuus venit*, behold then a new light. . . . Though in the eyes of men thou lie upon that bed as a statue on a tomb, yet in the eyes of GOD thou standest as a colossus, one foot in one, another in another land.

There is a real bugle call of triumph in those four Latin words: *Lo! thy Saviour cometh!* BROWNING over and over spoke of death as some thrilling hazard against which the brave soul may prevail. From BROWNING to BARRIE seems a long step, but no one can forget how PETER PAN, in the play, summarized his conception of death. The rising tide was creeping up to him; he was told that he had to die. *"To die!"* he cried, and there was the thrill of anticipation in his voice; *"to die! That'll be a pretty big sort of an adventure!"*

Treaties and Tolls and Moral Tests

DID WE GO TOO FAR when we said that the man who can read the English language as used in the Hay-Pauncefote Treaty, and still maintain that we have the right to exempt our coastwise ships from Panama Canal tolls, "thereby proclaims his own moral status"? Several of our readers seem pained by what they regard as an impugnment of their moral status, and have protested that they believe in the free-tolls law, and claim both the ability to read English and honesty of purpose. That acute ethical philosopher, WILLIAM MARION REEDY of the St. Louis "Mirror," agrees with us. "Against the simple moral proposition of the President's canal-tolls message," says the "Mirror," "all the talk about running the canal to please ourselves is mere bluster. You can't beat the Golden Rule." The New York "World" calls our utterance "a concise and correct statement of the case." What COLLIER'S said has been widely approved and not severely criticized by many people. And yet we are not inclined to stand on this record. Maybe we were wrong after all. Minds are such curious things! MARTIN LUTHER honestly believed that the devil appeared to him and he threw his inkstand at the adversary. EDMUND BURKE honestly believed that the rotten borough system of England was essential to the existence of the nation. WILLIAM of Orange believed himself to have a moral right to give away the crown lands of Great Britain and Ireland to his Dutch friends. WILLIAM PITT, under honest conviction, kept himself in power by the most gigantic system of corruption ever known. Honest lawyers argue acutely for the wrong sides of cases. Many honest people believe that we may exempt American coastwise ships from canal tolls without committing any act of bad faith. We don't.

Barnes and Root

THE NEW YORK "MAIL," in noting that WILLIAM BARNES proposes ELIHU ROOT as the Republican candidate for United States Senator next fall, itself proposes WILLIAM BARNES as Republican candidate for delegate at large to revise the Constitution of New York. "Could two men be found," asks the "Mail," "who would typify more completely Republican purposes and policies?" Seriously, where could two better representatives of the Republican party be found? ROOT in a very high and able way, and BARNES in a very low and able way, represent exactly the same things. They are the things which triumphed in the nomination of TAFT and now control the Republican national organization. By sticking to their guns and moving forward to tenable grounds of conservatism, the Republicans may build up a very useful conservative party in the United States. By masquerading as radicals or progressives, evading the issues, and sniping about in the underbrush for votes, they will lose now and forever. The "Mail's" suggestion is "writ sarkastikal"—but it is worth considering with great seriousness.

Polite Language from a Candid Friend

THE FOLLOWING QUESTION comes to us on the letter paper of the Park Street School, Milwaukee, Wis.:

> You are running the most tiresome serial that I ever attempted to read. I have not found a person whose interest has survived the fourth installment, and I have asked between twenty and thirty. It seems incredible that any editor would inflict such a monstrous dose of puerile drool upon his readers.
>
> Is it never going to end? Yours truly, H. F. WASHBURNE, *Principal.*

It ends with this issue, brother.

American Homicides and Mexican Murders

HEARST'S CHICAGO "EXAMINER" contains an amusing study in contrast. On one page of a recent issue is printed a sympathetic account of Senator A. B. FALL'S speech on the Mexican atrocities—with his list of "sixty-four men and women slain and tortured." On another page is published an article by Dr. C. F. AKED on "'Homicide' Trials and Contempt for Law" in the United States. Taken separately, each of these articles is deeply depressing; in combination they are grimly humorous. Senator FALL'S list, one should add, covers the crimes of almost four years, or a considerable part of the Taft as well as one year of the Wilson Administration. Some of the "slain and tortured" are not shown to be Americans, and some of the Americans were hit by bullets flying from battle fields near which they had, necessarily or unnecessarily, exposed themselves. We do not apologize for either VILLA or HUERTA—yet facts are facts, even when one is writing about Mexico. But let us quote the "Examiner":

SENATOR A. B. FALL

Senator FALL fairly staggered the Senate with a mass of distressing details of murder, torture, and outrages upon American women and mistreatment of children.

"We have fiddled while Mexico burned; we have seen our citizens murdered and outraged and hundreds of millions of dollars of their property destroyed," he declared.

As the Senator read from his list of atrocities, which he said were well known to the State Department, he made running comments as he went along, showing that **the State Department under the present Administration had done nothing beyond making protests that were never followed up. . . .**

"HUERTA," Senator FALL said, "was impossible as President.

"He is a murderer, yes, but if he does it he does it on a big scale," he said. "He does not kill like VILLA, merely to see his victim squirm. He at least leaves it to his underlings. . . . VILLA'S character is well known throughout Mexico and along the American border. He is known as a common, ignorant, brutal murderer, for hire."

DR. C. F. AKED

In the year 1913 9,000 persons died by violence in the United States; to be strictly accurate, 8,992. **No country in the civilized world can compete with us. . . .** A judge in the State of Georgia has declared from the bench that there are more homicides in that one State than in the whole of the British Empire with its 400,000,000 of population.

In the year 1913, when there were—as near as makes no matter—9,000 homicides [in America], there were 88 legal executions. London, with 7,000,000 of population, had in a recent year—the last for which reliable statistics are at hand—23 murders ("murders" in London). In New York, with 5,000,000 of population, there were 148 homicides. And for 148 homicides there were 13 convictions. In 1909 there were 19 murders in London.

In Louisville, Ky., with a population of less than 250,000, for the year ended August 1, 1910, there were 47 homicides and not a single conviction. **Chicago goes one better, for in a given year, with 202 homicides, it does manage to sentence one single murderer**—that is to say, a homicider.

It seems to us that both HUERTA and VILLA are pikers when compared with our own common, garden gunmen. No wonder Senator FALL and Editor HEARST are down on them! Dr. ELIOT is quoted by Mr. HEARST'S newspaper as saying: "The defense of society against criminals has broken down. The impunity with which crimes of violence are committed is a disgrace to the country." Puzzle: Does Dr. ELIOT allude to VILLA and HUERTA, and is he criticizing Mr. BRYAN and Mr. WILSON for not interfering—or is he, perhaps, speaking of our own peaceful country, where (as it is trite for us to remark) life is as safe as property itself?

Art Patrons

A PHILADELPHIA MILLIONAIRE who made his money in street railways has spent $700,000 for a Madonna painted several hundred years ago in Italy. The painting, which is a little larger

Digitized by Google

than a newspaper page, has for a good while hung in a British manor house, and is called "The Panshanger Raphael." Seven hundred thousand dollars is a lot of money to be spent on art—one can't help wondering if this particular $700,000 was well spent. Of course the money is Mr. WIDENER's (didn't he make it out of Philadelphia street railways?), and so perhaps it is nobody's business; all the same, one wonders. There is no municipal art gallery in Philadelphia; less than $700,000 would build one. A good many worthy painters not yet fully "arrived" could be subsidized on the income from $700,000—and isn't it as logical to talk about subsidizing painters of real worth as to actually do it in the case of university scholars? The endowment of a great museum, preferably one already in existence, to the end that it should purchase modern works of art in *the lifetime of their creators*, would be an admirable way for some millionaire to disgorge the wealth he is a little ashamed of making at the expense of strap hangers and stock-owning widows. The purchase of art works by living artists would not only stimulate interest in the work of to-day—it would mean a great deal to the painters of this generation. Sometimes one hears loose-spoken persons mention Mr. WIDENER, or Mr. JOHNSON (the Philadelphia lawyer), or the late BENJAMIN ALTMAN, or J. P. MORGAN as an "art patron." Absurdity of absurdities! Such men are not patrons of art—only art dealers' star customers. In so far as they patronize artists at all, they patronize the great names of the sixteenth, seventeenth, and eighteenth centuries. Art is for them something in the shops—whereas the true art patron pays for the freshly painted canvas and makes it possible for the painter to go and paint another. What fun a millionaire "collector" could have with the work of his own time if he only had intelligence enough!

Why the Progressive Party Will Endure

From a letter written by Dr. Rigdon of 291 Gary Street, San Francisco

"I have been voting for a good many years, but when I came of age, and cast my first ballot, I failed to see even at that time any distinct moral principle that the Republican or the Democratic party stood for. It seemed to me then that both parties were dealing in the past and were not looking forward excepting in the matter of securing offices and patronage. . . . When the Progressive party was born it opened up a new possibility of citizenship. It had fairly well-defined ideas as to what was wrong in governmental affairs, and a very well-thought-out program for remedying those difficulties. But, best of all, it seemed willing to make a straightforward attempt to meet the conditions as they are, and to come to all of these questions, governmental, economic, and social, with an open mind, determined to reach a just solution. For almost the first time in my life I felt I could be a member of an effective political party and know just why I was in that party and not in some other, and it did not seem to me that it would make a great deal of difference whether we succeeded in electing our officials at once or were defeated for a time. The principles were there and we could keep working. . . . The fact that the young men and women of the United States to-day have before them a party that stands for something definite, that has principles, that has convictions upon questions of government, and are willing to stand by those convictions, is of inestimable value, I believe, to the moral upbuilding and strengthening of our people. We need just such a socio-moral rallying point to arouse in us convictions that will drive us to do things that may seem difficult and often disagreeable, but which are fundamentally necessary."

Vice Presidential Philosophy

WHILE CELEBRATING his sixtieth birthday last month, Vice President MARSHALL soliloquized to this effect:

> I keep young by not thinking about the years. I have seen a great many babies born and I have seen a great many men die, but I want to live to be in my second childhood. This is a good old world to live in.

We wish Mr. MARSHALL only what is fair and peaceful, but if he makes many more of his characteristic speeches there will be some unkind enough to say that his ambition to live has been fully realized. But it is a good old world, just as he says.

The Essential Thing

ON PAGE 210 of GILBERT K. CHESTERTON's latest book, "The Flying Inn," is a sentence worth thinking about in this day of excuses and evasions: "For she felt God's wind from nowhere, which is called the Will, and is man's only excuse upon this earth."

Wanted: A Miracle

TWO OR THREE YEARS AGO a Frenchman wrote a novel founded on this idea: CHRIST returns to earth and visits Paris. His personality has a tremendous influence upon the population, and various modern miracles are worked, notably in journalism. Newspapers crowded with news and advertisements appear next morning almost blank, for every lie contained in them has miraculously faded into blank paper. What would happen if a miracle of this sort occurred in Tacoma, Wash., and what would be left of the Tacoma "Daily News"? A reader of ours out there sends us a marked copy containing thirty-four patent-medicine advertisements, many of them making ridiculously excessive claims. Incidentally, it is a striking feature of the present day reaction against patent-medicine fakery that it is the *readers* of newspapers who do the protesting against these advertisements. When will enlightened publishers realize that it pays to be good?

Rose-Watered Smut

HOW MANY PEOPLE who go to see (and perhaps advocate) "white-slave" moving pictures realize exactly what they are doing? How many of these same people are aware that in many Latin-American cities—some of them not very far away either—frankly pornographic "movies" are open to those who care to see them? Now, this word "pornography" is derived from the Greek, which means "that which is written about harlots." Doesn't this signification come dangerously close to the "white-slave" pictures? Obscene art appeals *directly* to the animal instincts; veiled nastiness—even though it be windily heralded as reform stuff—does the same thing in a more roundabout manner. Open filth is almost always preceded by the disguised sort. If our public "movies" ever descend to the level of some of those the traveler in South America sees, it will be because the public has acquired the taste by gradually becoming inured to these craftily masked vice films. What some folks need is a strong injection against the morbidity that comes from brooding too long on the manure heap.

Putting It up to Burleson

THE WINDING UP of the United States Express Company brings out in high relief the ambiguities of the parcel-post situation. This particular express company, once the pet and pride of United States Senator THOMAS C. PLATT, typified that umbilical connection between politics and business which was the basic principle of the old Republican party at the height of its power. It is hard to shed tears over its passing. But it did give service on some 3,500 miles of railroad, and its officers (if not the stockholders) did know how things were going. The competition that has forced the United States Express Company to dissolve is tax-paid competition, and the public, which pays the taxes involved, does not know what the facts of it are. This is a very good time to insist that Postmaster General BURLESON publish all the facts about parcel-post expenses and receipts instead of merely some of them.

Certainly Not the White House

IN A WASHINGTON EVENING PAPER we find mention of "The Oldest Rubber Stamp House in D. C." Clearly the Capitol is referred to. But which wing?

Resurrection

MOST OF US ought to be keenly interested in death, for we never have been really alive. We have never reached our height, never measured up to what possibilities are within us. The proof is a matter of common observation. A big company gets into serious business difficulties, and the officials, who had been fussy, vain, and pompous, become men again, call their subordinates in and plan the campaign so that everyone goes out a hero—to win. Like KIPLING's gluttonous old Roman general, they become "young again among the trumpets." In flood time a telephone call may mean safety or destruction to many people, and a naturally careless and flippant girl becomes a heroine, sticking to her switchboard all night to send the messages through while a rising river gnaws at the building's foundations. Caught by a cave-in, a foul-mouthed old miner walks off into the gas to die alone so that his younger comrade may have what air there is and the chance of getting back to his family. Some rough fishermen stranded on a perilous reef haul down their signal of distress because they know that a small boat cannot live in that mad sea. So it goes year after year—these people might easily be thought of as ordinary, dull, and mean, the commonest human animals, but when the hour strikes life flames up within them and they rise to meet their fate with as calm a soul as one who goes to pick flowers in his mother's garden. What will this world be like when we get into the habit of living up to something near the best that is in us?

The Conquest of Cucuracha

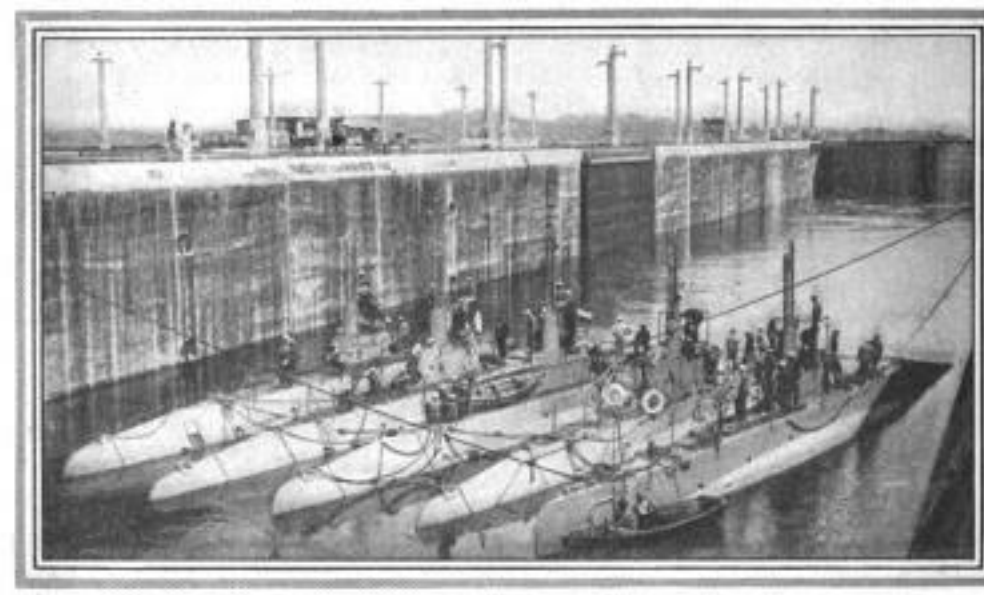
Six months ago the prism of the Panama Canal was blocked by the "toe" of a landslide at Cucuracha

A month later: cutting out a channel with a hose

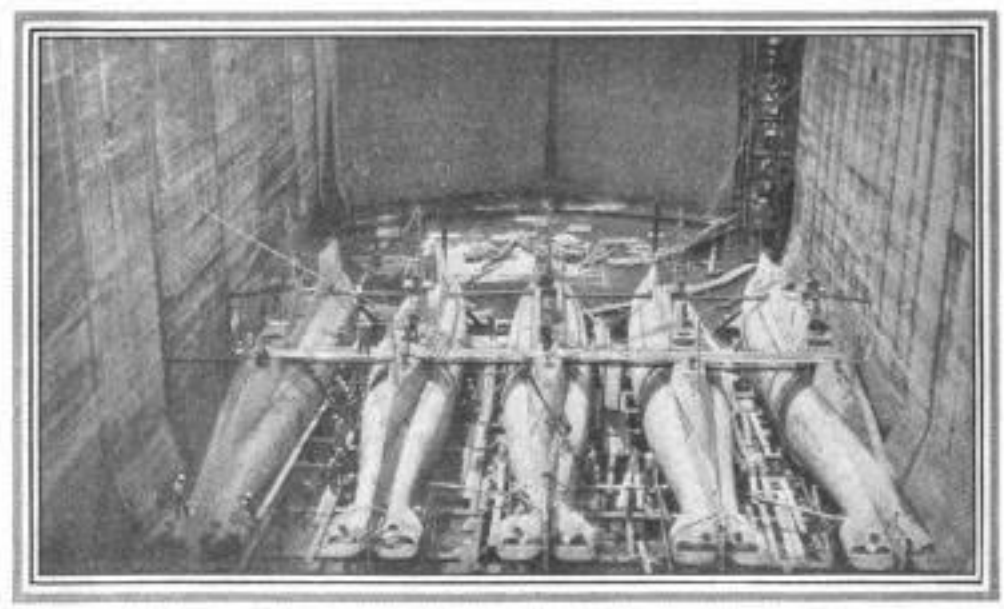
In December dredges excavated 321,193 cubic yards

March 15, 1914: Width at the slide, 256 feet; depth, 20 feet. The final width is to be 300 feet; depth, 45 feet

New Tokens of the Progress at Panama



TWO LONG TRAINS *of locomotives — retired canal builders all! — stand on sidings north of Gamboa, Panama, with boilers cold and caps on their stacks. They are not doomed, however, to rust in a "boneyard." Their next public services probably will be on government railway construction in Alaska*



IN ANTICIPATION *of an early arrival of these locomotives, Alaska already is celebrating. The insert in the circle is a float which led a parade in Fairbanks, Alaska, February 23, when the metropolis of the Tanana Valley celebrated the passage of the Alaskan railroad bill through the House of Representatives*

A Lock Chamber Serves as a Dry Dock

FIVE submarines of the United States navy have found dry dock in one of the Panama Canal's huge lock chambers at Gatun. In the language of the Canal Zone's official newspaper, "they were lashed together in one rank, side by side, and handled in group. The movements of the group were controlled by means of four towing lines, two attached forward and two aft, each line handled by from ten to twelve seamen of the division, walking on the lock walls." The accompanying photographs show the start and the finish of the process. The boats are being overhauled.

Lock chamber after the water was pumped out. The submarines are being scraped and repainted

Rewrecking the Wreck of the Monroe

ACTING under orders from the War Department, the United States revenue cutter *Onondaga* proceeded to the wreck of the steamer *Monroe*, and with 1,000 pounds of guncotton destroyed all of the sunken ship but her hull. Our photograph above shows a diver descending to place the mines. In the circle at the right is a snapshot of one of the explosions. The *Monroe* was sunk by a collision with the steamer *Vanhuckel* near Winter Quarter Shoal lightship, off the Virginia coast. The wreck went down in fifty feet of water. Her mast (visible in our upper photograph) and her pilot house, deck house, hatches, and ventilators obstructed navigation. The hull lies deep enough to be no menace. The divers were unable to recover any of the bodies of the forty-one who were drowned.

A mine exploding

The steamer Berlin battling with an Atlantic hurricane

A Seawoman's Snapshot

THE tradition that a woman on board a freighter is good for nothing but to make trouble does not apply in the case of the wife of Captain Krogh of the Danish steamer *Berlin*. Mrs. Krogh proved her usefulness when, in a hurricane during a voyage between a Venezuelan port and Perth Amboy, N. J., she risked her life to take a picture—the one at the left—further to emphasize the necessity of better safety precautions on ocean-going ships. When the storm was at its worst she braced herself against the hand steering wheel on the after deck and snapped a huge wave as it passed over the side of the vessel. The water struck Mrs. Krogh with terrific force, but she protected the camera. Her husband kept her from being swept overboard.

MONSTER CANOES OF THE TYPE SHOWN ABOVE *probably will be used by Colonel Roosevelt's party in making the final stages of the journey through southwestern Brazil. In our photograph a canoe described as a "batalon" is being portaged past one of the upper rapids of the River Madeira*

Again—The Warner

AS in all other circles, the most prominent members of the theatrical profession—the most notable men and women of stageland—the stars who constitute the membership of such famous and exclusive actors' clubs as The Lambs, and The Players, all use the Warner Auto-Meter on their private motor cars.

The Warner Auto-Meter is the predominating speedometer, everywhere that people of wealth and distinction congregate.

At the grand opera in all the large cities only the Warner Auto-Meter was found on all the high-priced cars.

It was the same thing at the Horse Shows. Here again the Warner Auto-Meter was practically the only speedometer being used.

The cars that continually arrive and depart from such fashionable New York places as the Waldorf-Astoria, the Plaza, the Ritz-Carlton, the Biltmore, Sherry's and Delmonico's, are practically in every case equipped with a Warner Auto-Meter.

It is the same at all the fashionable hotels, theatres, clubs, churches, banks, weddings and all great social functions, in all the prominent cities. It is the same at all the country clubs, gol
aero clubs. It is the sam

7 carried the Mag- r.

At the Chicago Automobile Show held at the Coliseum—

205 cars out of 245 carried the Magnetic Type Speedometer.

So you can see yourself how first-class automobile manufacturers have come to completely ignore the unreliable centrifugal speedometer and universally adopt the accurate-for-all-time Magnetic Speedometer.

Right here is an interesting fact: the few car manufacturers who equip their cars with centrifugal instruments do so purely for money-saving reasons. They skimp on the equipment at the expense of the car buyers. They know the centrifugal is an out-of-date instrument, but they put it on for the sake of saving some money. The Magnetic Speedometer costs them considerably more than any other speedometer.

It is a fact that today no automobile manufacturer, who has the interests of his dealers and prospective car buyers at heart, will try to sell his cars with any other but a Magnetic Speedometer. The list below shows that the best cars all use the Warner Auto-Meter—the world's finest and most accurate speed and mileage indicator.

If the car you intend to buy has a Warner Auto-Meter, you may be sure it is a Quality Car.

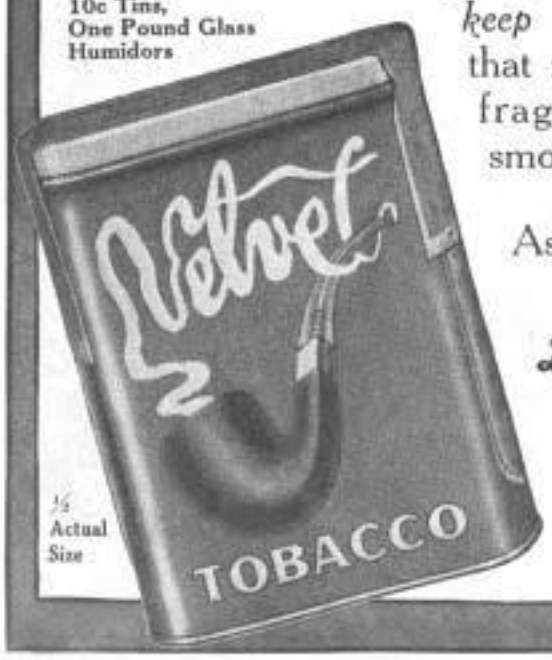
When a fellow's got his pipe in his mouth he don't have to say a lot o' fool things. It gives him a chanst t' think up suthin' wuth sayin'.



Velvet Joe

RIGHT, Joe: that's what the college president was driving at when he said that the thinkers of this country were the tobacco users. If every man considered his words for half a pipe full of good, old, slow burning VELVET, there'd be fewer words spoken, but they'd be kinder, wiser words.

VELVET, the Smoothest Smoking Tobacco, is mellowed by more than 2 years' ageing. All the richness, the flavor, and the satisfaction that has won for it the title of "Nature's Pipe Tobacco," is brought to perfection by Nature's own method—patient ageing. It's what we *keep in* VELVET, that makes it a cool, fragrant, friendly smoke.

The Tyranny of Beauty

(Continued from page 7)

of peaches and cream. This complexion was now her chief asset in advertising Zulu Face Food—Zulu made it! And when she got through with her women, ninety-nine in a hundred believed that Zulu made it, and, in proof, handed her a dollar for another just like it—in a jar with a purple ribbon.

SO there she stood and talked one blue streak for hours. Heavens!—what a yarn she told about the discovery and origin of her face food—not a cosmetic, but a solid cream diet for the most delicate skin! The old darky woman was now a Zulu princess, a hereditary priestess to a cult of cream that she made in secret for the tribe. The warriors came in for a share—they won their battles on Zulu cream, for they smeared themselves with it from head to foot to make their bodies supple. This wonderful secret food dated back at least to the time of the Queen of Sheba, and, according to a legend of the Zulu tribe, Cleopatra owed the charms with which she captured Antony to its use. And then came the tale of the ancient Zulu princess and my aunt herself—in gratitude for a slight favor the princess on her deathbed had bestowed her precious secret on my aunt, who, after trying it—proving it by the creation of her own wonderful complexion—had decided it was her duty to bestow the cream upon the world.

"Ladies, looka what it's done for me in two months!" She was now exquisitely colored by her excitement. "For one dollar you can have the same—ain't it worth it?—a jar of face food, not a cosmetic, that should last you, used night and morning, three months. (It lasted that way two weeks.) No, madam, this is *not* a cosmetic—it contains no chemicals or other injurious ingredients, and no preservatives. Its purity and the special process by which it's manufactured in our labbatories preserves it without change." She took a dab on her butter knife, held it under the inquirer's nose: "Smella that! You see how pure it is! Yes, one dollar. Thank you.

"Madam, if you will just push up your sleeve—" She took another dab with the knife, buttered the lady's wrist, massaged the spot a few seconds, and wiped the surplus cream off with a bit of Japanese napkin, commanding triumphantly: "There! Smella that! You see now what it will do for you if applied to the face—the only skin food, not a cosmetic, on the market! Why does your skin ever wrinkle, ladies? Because it is *starved!* Doesn't your stummick wrinkle when it has no food in it? You know it does. Your skin is just the same, only it doesn't show quite so quick—it needs to be fed same as your stummick needs to be fed, and, ladies, whadda you give your poor cheeks to eat? Soap and water! *Soap—and—water!* Think of it—SOAPY WATER!—that's what you give your faces to eat! Why, ladies, how long could you live on soapy water if you had to feed it to your stummicks? Not one day! You'd be sick in your beds if you gave it a single meal of soapy water, and yet you expect your facial skin—most delicate and sensitive part of your anatomy—most easily injured—to live on food you wouldn't dare to offer to your stummicks—or your husband's stummicks! [This always brought a laugh.] Is there any lady here who would set a plate of soapy water in front of her husband and tell him: 'There, John, is your supper—soapy water'? Of course not, and yet you'll say to your faces what you wouldn't say to your husbands, and you gotta carry those faces round with you and see them growing wrinkles, and you asking: 'Why?'

"Here's why: You don't feed those wrinkles and give them the chance to fatten out same as a baby's, and I say it serves you right. You can't expect your skin to work for you and keep you beautiful—most beautiful part of a woman is her complexion—if you're too mean to spend money for its natural food. Here, madam, just push up your sleeve—it costs you nothing to see for yourself how your skin will lap up its natural food if you give it the chance.

"What is that, madam? Has this got lanolin or vaseline in it to grow hair on the face? It has not. Grow hair on the face? Why, madam, did you ever see a negro man or woman with hair on the face? They all use this preparation—at least, all the old ones before the war. This is a facial hair discourager—it prevents the growth of hair, as you can see if you'll looka my face—do you see any hair on me?

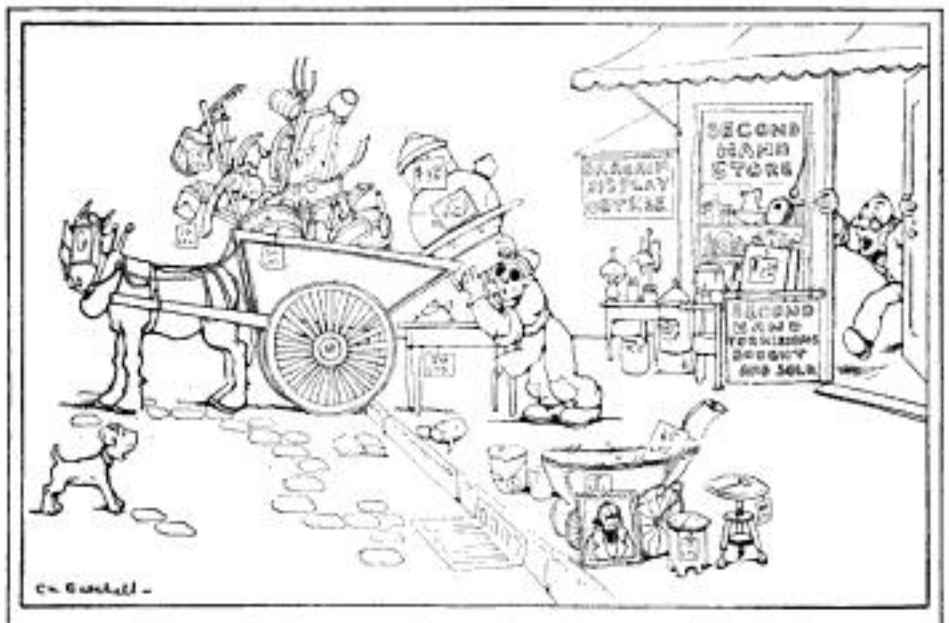
"Madam—I mean that lady with the roses in her hat—if you don't take care of your complexion now, you'll have none to take care of by the time you're twenty-five. [The woman was forty if a day! Up she stepped and bought a jar of cream.] Madam—I mean the lady with the brown waist—what an *ex-quis*itely delicate skin you must have had when you was a young girl that it can look that way now—peaches and cream—and how you must have neglected it. [She was an ancient dame of leathern visage.] I don't say that Zulu Face Food will bring back the roses of youth, but it will work wonders for you even yet—it will cure those wrinkles and make you feel like a girl again."

I NOTICED that if ever she called attention to a woman and made a horrible example of her for the rest to see, my aunt always managed to turn a compliment and hold out a hope at the same time and never hurt anybody's feelings. That was the Irish in her. But, having made her point personally, she at once turned attention away from the victim by a general appeal: "Ladies, don't you think it's worth a dollar to be young again? To see yourselves beautiful when you look in the glass? A woman's only as old as she looks—then why look old? If your skin is young, you *are* young—any scientist will tell you that—any medical book, if you look under 'Skin' and read what it says. All you need to do is to *feed those wrinkles.* Madam, take care of that delicate skin before it is too late and feed those wrinkles!"

The fellow who used to bully the little boys returns and sees one of his former victims

I believe that a delicate skin is woman's chief vanity on earth. If she has the hide of a walrus, she still wants to be told she has a delicate skin—or had when she was a girl, which is why it is leather now—too delicate for this wicked world! Thus the talk flowed on and on, interspersed with the command, "Feed those wrinkles," shot off every five minutes. But I was more bewildered than elated. Zulu princess and "our labbatories" indeed! The back kitchen, a saucepan, a wooden spoon, and pink jars to hold

Digitized by Google



the glorified lard after we'd converted it into a heathen face food with stirring and a few drops of scent!

Never shall I forget the picture that my grandmother made off at one side in her black, respectable shawl and widow's weeds, her round, kind old face in open-mouthed astonishment and a sort of awe at the spectacle of her daughter pedestaled on a box behind a barricade of pink jars holding up that crowd of women for their dollars!—women that jostled and dug elbows to get nearer, thrusting out scrawny wrists or dilapidated cheeks to "try it" because it cost nothing to try, then reaching bony hands over heads to wave dollar bills and snatch pink jars in which they thought to find—an Irish girl's complexion!

The face food gave out before the buyers. It was a record-breaking demonstration, partly because it was a novelty to the big crowd there, though mostly, I think, because it was do or die with my aunt—she had to prove her contention—"My goods sell big!"—to make the proprietor stock them; and she did. She came home that night with a hundred and forty dollars in her pocket and an established reputation and a paying business on her hands. Barrels of money, it seemed to me in those days; and if in the background of my mind there floated misgivings as to the moral aspect of the Zulu princess and "our laboratory," in the foreground I was choked with admiration. Wonderful Aunt Maggie!

My grandmother, who had watched the show an hour, uttered no comment until after supper; then, regarding her daughter with an aged, enigmatic smile, she brought forth: "And they let you put that hog fat on their skins! Only perfumed pork grease!—and all those women tumbling over themselves to pay a dollar for what cost you a cent!" and slowly shook her head as at a world beyond her comprehension.

(To be continued next week)

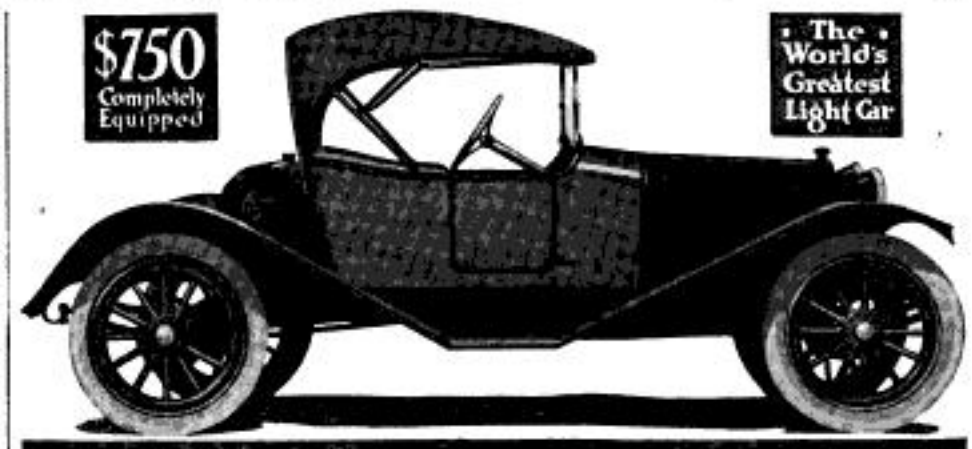
The perfectly natural mistake of a near-sighted ash man on "clean-up" day

Capturing the Delegate

(Concluded from page 11)

honor. The night, for the partners, wore drearily into the morning. Krenkel rejoined them, and the trio retired to the stag room, where they quietly ate, drank, and smoked until the welcome strains of "Home, Sweet Home" filtered through from above. Yankel turned up with the girl, dressed for the street and clinging to his arm. The partners gloomily followed after. For some weeks Blumberg was troubled. He went about his routine in the shop absent-mindedly, and at times stopped meditatively before Yankel's machine. That gay young man never noticed. The contractor observed that his townsman was quickly getting Americanized. He noted his broad collar, flashy tie, heavy striped shirt, and patent-leather pumps, with gauze silk socks to match the tie. Yes, he was a ladies' man, every square inch of him; worse luck, he was just a vain, frivolous fellow given to imitating American conceits, while the other was serious and substantial. As he got to know Krenkel he liked him better, and found that, when approached in a frank, personal way, his fanaticism vanished and he would discuss matters, even the union, in a broad, tolerant spirit. His rough battling with the world, his treating with employers for masses of untutored workers, had ripened his views. The contractor had begun to value the delegate as a man. But how was he to undo his own match-making? To talk to his daughter about Krenkel after all he had said about Yankel certainly would not help.

SO matters were drifting when one morning the telephone in Blumberg's office rang loudly. Blumberg, answering, heard his wife sobbing. "Vat iss, vat iss, Sarah?" he cried. The sobs continued. All manner of possible catastrophes ran through his mind. He managed eventually to make out: "Rifka is gone!" He rushed into the shop and looked in the direction of Yankel's machine. Yankel was not there. He went back and threw himself on the sofa. "Joost as I dought—I haf mineself only to blame—only mineself," he kept repeating in anguished tones. "Dot good-for-noddings! He guessed I vanted Rifka for somebody else, und he runs avay mit her." The partner here walked in. Seeing the distress of Blumberg, he summoned the boy to run for a doctor. "No, no, Yoseph!" the stricken one moaned; "it ain't a doctor I vant—doctors can't ment a fadder's broking heart—a fadder's broking heart, Yoseph!"



"Vat, Rifka, you mean? Rifka got married—who, vat?" ejaculated the other.

BLUMBERG got up and pointed dramatically to the spot where the landsman should have been. Goldfarb understood. He snatched his hat and made for the door. "Nefer you mind, Mosha," came back, "Rifka iss a schmart maidel." He ran to the delegate's lodgings. He had gone with a suit case and left word that he would be back in a few days. From there he rushed to the union office. Krenkel had not been seen, but had telephoned that he was going away for an urgent vacation. The partner chuckled. Back to the office he flew.

"Come down and haf a schmaps!" he cried, "I haf someding to dell you!" He led the limp partner into the private room of a corner café and ordered the best cognac to be had. He filled the glasses to the brim and ordered the other to drink with him. Mechanically Blumberg obeyed and his spirits rose. There was something in his partner's manner that was cheering. Goldfarb stood up. "Now, Mosha," he said solemnly, "didn't I dell you Rifka was a schmart maidel. She 'lopsd, yes, and nit who do you sobbose?" There was a strained pause as the speaker looked into the face of the other. "Krenkel!" Blumberg slowly got up and extended his hand. Tears freely coursed down his face. The two clasped warmly and long. "She was a schmart maidel," Goldfarb took it up again, "but she gof fooled all right. She dinks you was all for Yankel."

"Ah," cried the father, "it iss fine, aber for vy I vasted all my cigars ven he do all I vont anyhow!"

"Dot iss no reasoning, no." Goldfarb put immense emphasis into a kind of thunderous whisper. "It was, Mosha, not a double but a dripple bargain. You safes der wedding expense und der present too."

VULCAN

A Better Car for Less Money

PERHAPS you are one of the thousands who visited and admired the Vulcan display at the automobile shows this season. Possibly you said to us: "This is a splendid car—at a very attractive price. It has classy lines, and all the up-to-date equipment, including electric lights—with a real unit power plant—powerful and speedy. Your price of $750 for the "Speedster" is right! It is the lowest price at which a man's size car can be built and built right. The car appeals to me—but can you make deliveries? If you can, it is the car I want!"

Not an Assembled Car:

The building of the chassis complete (including axles, transmission, steering gear, clutch, etc.) and every part that enters into these various units is done in our own shops. We even build our own bodies. Our castings are made in our own foundry. The sheet-metal work (for bodies hoods and fenders) is done in our own shops by machinery designed for economical production.

Quantity Production:

The most modern methods and up-to-the-minute equipment, plus quantity output, are necessary to produce this car at the minimum of labor cost and at the same time to maintain the highest degree of perfection. This is the only way that the cost of production can be reduced to a point where it is possible to furnish this high-grade car at a popular price.

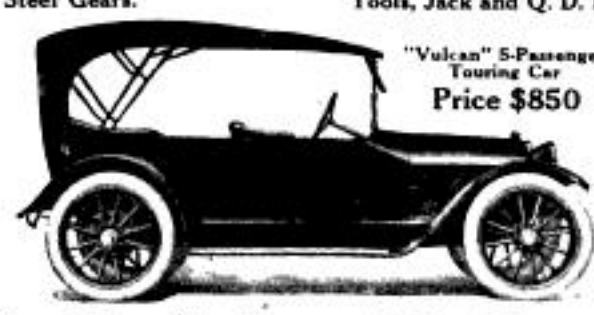
Immediate Deliveries:

Now let us set your mind at rest on the delivery point. We are making shipments daily. We can and will fill any reasonable demands you make on us for this car.

The Car for Physicians:

This is the ideal car for physicians and professional men who demand a car with classy lines. The speedy and powerful Vulcan fills a long-felt want for the busy man who needs a sturdy car that will stand hard, continuous service—with small tire and gasoline bills. Over-size bearings in Vulcan Cars insure longer life and smooth operation.

Vulcan Sales Policy:



Our policy is to market all cars through responsible dealers. If your local dealer is tied up with another line of cars that prevents him from handling the Vulcan, *it will pay you to get in touch with us.* We have a plan whereby you can become our representative provided you are qualified to demonstrate and sell Vulcan cars, and do us justice in your district.

Dealer's Opportunity:

We want a few more live-wire dealers to *sell*—not merely handle—the "Vulcan." Don't lose any time in getting our proposition. *Write or Wire Today.*

THE VULCAN PLATFORM

27 Horse Power
3⅛" Bore, 5" Stroke
Unit Power Plant, 3-point suspension
105" Wheelbase "Speedster"
115" Wheelbase "Touring Car"
32x3½" Tires all-round
Transmission, Selective Sliding Gear, 3 Speeds forward and reverse. Nickel Steel Gears.
5-Pinion Bevel Gear Differential, Chrome Nickel Steel Gears.

Safety First

TEST IT

Note the easy action of the Corbin front door lock, requiring only a slight pressure on the key to retract the latch bolt. Note the ease with which the key is inserted and withdrawn, without sticking or binding. Note the general strength and solidity; also the fact that when in use the face of the cylinder is the only part visible from the outside when the door is closed, and that the narrow, sinuous key way affords no chance for the use of picking tools. Then you will understand some of the reasons why Corbin locks are favorites with architects and house owners.

Any dealer in Corbin Hardware will show you our locks, or we will send you circulars on request.

P. & F. CORBIN

The American Hardware Corporation Successor

NEW BRITAIN, CONNECTICUT

Chicago New York Philadelphia

Two Plugs In One

Look at the smaller illustration.

This shows the mica-wound sleeve slid partly out of the porcelain shell which protects the mica from oil.

Porcelain is oil-proof, but at best is fragile. Mica is unbreakable, but readily absorbs oil.

Thus, the Blitz is doubly insulated, combining the virtues of the mica plug and the porcelain plug without the weakness of either.

Then to make assurance doubly sure, over all is placed an outer jacket of the toughest and strongest porcelain obtainable.

Even should both porcelains be broken, the sleeve of mica would still keep the spark jumping at full strength.

That is why it is known as

Blitz

"The Spark That Never Fails"

The larger illustration shows how handsomely the Blitz Spark Plug is finished.

The outer porcelain jacket—finished in rich bronze blue - gives additional strength and sturdiness—protecting the inner plug from moisture and breakage. The shell is of cold rolled steel, carefully polished and case hardened. The top nuts heavily nickeled.

For service, appearance and faithfulness, the Blitz Spark Plug is not equalled — our guarantee tag is attached to every plug — a guarantee against deterioration, against failure through defective material or workmanship.

A very good reason why you should equip your car with the Blitz now and end your spark plug troubles

Made in all sizes for domestic and foreign cars. Special type for Ford Cars. Special type for motorcycles.

Ask your hardware or accessory dealer. All styles $1.00 everywhere. If your dealer does not have them send his name and $4.00 for a set of four plugs.

THE RANDALL-FAICHNEY CO. JAMAICA PLAIN STA. **BOSTON, MASS.**

Makers of Jericho, "The Horn That Says Please" for automobiles and motorcycles

World's-End

[Continued from page 15]

the stately Latin words. "Did he choose that reticent epitaph himself, do you know? It would be like what I've read of him."

"Yes, it would be like him, but it was more like him not to choose any, I think. He even stated in his will that he didn't wish any laudatory words put on his gravestone, and so his son got round it rather well, I think, by quoting that bit from Sallust. It agrees so exactly with the father's views on the subject—'each best man preferred to do rather than to say.'"

"It's the old statesman in a nutshell," said Patton musingly. "Fine stock you come from, old man."

OWEN also stood musing on the simple headstone.

"They say I hark back to that Owen," he said at last. "He was a man of enormous strength and violent passions."

"Yes, so I've heard—so I've heard," said Patton hastily. "Could tear a double 'deck' of cards in two, I believe, and tie a poker round his neck like a cravat."

"So tradition says."

"Member of the House of Burgesses, Councillor of State, Commissioner for boundary lines, treaties with Indians, explorer, patriot, what didn't the old fellow do? You'll have to look lively to keep up with him, Owen."

Owen shook his head.

"I'm afraid he'd disinherit me if he had the power," he said. "Whatever he was, I'm sure he wasn't socialistic in tendency."

As they turned to go, Patton said:

"I hope you'll have a son some day to carry on the old name."

"I hope so," said Owen quietly.

They struck through a field to the left and, entering the woods, began to climb the mountain.

"That's a lovely child you've married, Owen," said Patton presently. "She's going to make a splendid woman. You must cosset her up a bit now, though. We neglected her rather badly during all this turmoil. I've an idea she doesn't feel quite as strong as she pretends to."

He gave one of his shrewd, sidelong glances at Owen, but the dark face was quite unconscious. "Doesn't know yet," thought Patton. "Just as well, too. Might get to worrying badly over what all this might mean to her."

So Mary had been right after all.

THE chief memory that Richard brought out of the dark undertow of death was that of a gigantic Face that reached from the heavens to the uttermost depths of that sea in which he seemed alternately to drown and with agony to float upward. And whether he sank smothering, or floated racked by the tossing of angry waves which seemed to be jerking his bones asunder, always that vast Face, turgid with annihilating wrath, glared at him.

It was against this Face that he struggled and shrieked, in such moments as the opiates relaxed their hold on him, and when the strong tentacles of Morphia wrapped him again, holding him numb and heavy in those black depths, it was at this Face, glaring down at him as through miles of sullen water, that he moaned and muttered feebly.

Even after he regained his senses and began slowly, so slowly, to mend, this Face, remembered, was a torture. And lying there, transfixed by weakness and the heavy plaster in which his right arm was still set, he would strive pitifully, by the hour, to recall exactly what had happened, to put into some sequence the events which had preceded his illness.

What had he said? He could not recall the words. They had been in the rose garden, the snow was very smooth and deep, she had stared at him with helpless rage as one impaled might stare at the executioner. Yes, that was the way it had begun. But afterward? Only the memory of that kind Face made hideous by fury would come to him, of that Face and the lifted stick.

And how much did his mother know? Did they all know? Had *she* told everything by now? How long ago had it all happened? What was to come next?

One day when he could bear it no longer he lay gathering his scattered forces for a long time, then just managed to articulate: "Mother—"

She was on her knees by him in a second, her face close to his.

"My precious boy—don't exert yourself. I'm here—I'm always here—"

He looked down at his bandaged arm in the cast, heavy as stone.

"How?—" he whispered.

"It was that cursed horse—Ironmonger, the vicious colt. Don't, don't think about it, my darling! Charles Patton says you will be quite, quite well again—as well and strong as ever, my darling—my own precious boy."

Richard smiled weakly at her and let his eyes close.

So that was what they had said!

He was too weak to follow it out. He fell shortly into a deep sleep.

A WEEK later Hannah brought a little note to Sally from Owen as during one of Richard's heavy, still drugged sleeps she was taking a few moments to comb out her hair, now almost entirely gray. This startled her a little. Things startled her very easily nowadays. The color settled on her cheek bones as she read:

DEAR SALLY: *I write because I want to make sure that you will come at once, and not think this only an ordinary message. Patton is with me and I wish very much to consult you about something.* OWEN.

"Where is he?" she said to Hannah, scrutinizing the little dark face to find whether it were in the secret. But Hannah knew nothing, and her face was serene and unconscious, though it looked grave, as all faces did during that time at World's-End.

"He and the doctor's in the steddy, Miss Sally," she said. "Mr. Owen said he'd like to see you right away, please, while Mr. Richard's asleep."

Sally went slowly downstairs to Owen's study, cogitating deeply all the way. Her heart had begun to beat quickly. Could it, might it be—something about that dark secret that hung over her always?

She entered and still holding the knob of the study door in her hand looked steadily at the two men who were standing before the fire.

OWEN came forward and taking her hand gently led her to a chair.

"Well?" said Sally dryly, looking from one to the other of them. "This is rather like being brought before the Holy Yehme—" Patton came to the rescue.

"The fact is, Sally," he said, "Owen has something that he feels he must tell you. There's nothing whatever in it to alarm you, but it will probably upset you a good deal. I want you to take this if your heart begins thumping." He pushed a little glass toward her. "I shall go into the library until you and Owen have finished."

He got up without more ado and left the room.

Sally had grown very pale. Her thin hands were locked hard together upon her knee. Suddenly the grayness of her thick hair framing her dark, sallow face struck Owen as terribly pathetic. It was as if she were crowned with the ashes of her burnt-out life.

He came and stood near her looking down at her. His lip quivered.

"Sally," he said at last, "we've been awfully fond of each other—"

"Why do you say 'we have been'?" she broke in sharply, her figure rigid, her heart taking still quicker rhythm. "What is it, Owen? For God's sake let me have it quick—"

He grew so white that she got up and stood close to him, putting her hand on his shoulder.

"Is it about Richard?"

"Yes."

She took her hand from his shoulder and put it to her heart.

"And—and—you?"

"Yes, Sally."

"And—"

After 10,000 Miles

We Require Reo the Fifth to Stay New

This is why Reo the Fifth has so long held a unique and envied place.

It is built for extremes of service. Built by a man who for 27 years has been learning what cars must stand.

Test cars with this chassis have been subjected to hard usage. They are run at high speed, night and day, on rough roads. After 10,000 miles of this use and abuse we take them apart and inspect them. And we require that vital parts show little evidence of wear.

Must Stay New

Every steel formula, every specification is based on these radical tests. The question is not what will serve for one season. Not what is safe under normal conditions.

We require every gear and bearing, after 10,000 miles of reckless driving, to show up in good condition. Then we know that you won't have troubles. We know that your car will stay new.

Then, to insure this super-strength, we have steel made to formula. And each lot is analyzed twice. We have a four-story laboratory for testing every part and material. Each must meet the standards that we fix, based on 10,000-mile tests.

Our Radical Tests

Gears are tested in a 50-ton crushing machine. Springs are tested for 100,000 vibrations. Engines get five tests, lasting 48 hours.

All driving parts must stand a test for 50 per cent over-capacity. That is our margin of safety.

We use 15 roller bearings to avoid the risk of ball bearings. We use 190 drop forgings to avoid risk of flaws. In close-fitting parts we require utter exactness.

Our clutch is of a very costly kind. It avoids the clashing of gears which so ruins transmissions. The gears are shifted by a light center rod—by a three-inch movement of the hand. This easy method of gear shifting is exclusive with us.

By slowness and care and costly extremes we add 25 per cent to the necessary cost of each car. But it comes back to users, over and over, in longer service and lessened cost of upkeep.

Now We Save $220

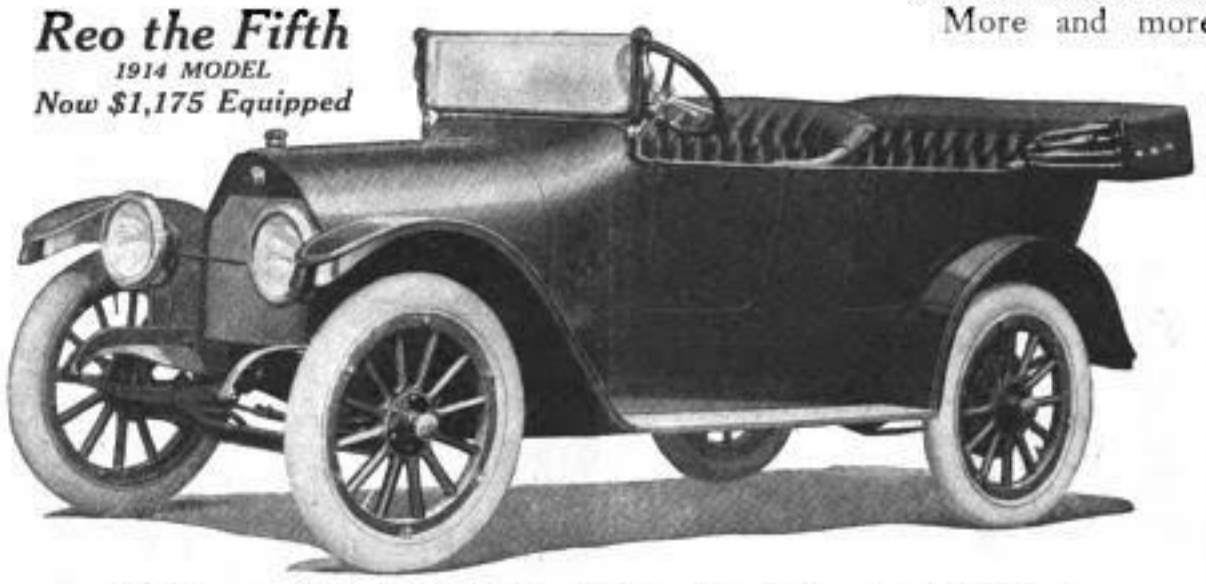
Now all the costly machinery we built for this chassis has been charged against previous output. We enter this year with that item wiped out. This saving, with others, we deduct from our price—$220 in all.

Reo the Fifth, with electric starter, last year sold for $1,395 equipped. This year's model, better equipped, sells for $1,175. Mainly as a result of clinging for years to one perfected chassis. That a car like this can be built at this price is the marvel of the times in Motordom.

This Year's Newness

This year we adopt the beautiful streamline body, now European vogue. We adopt the best type of electric starter and lights. We give you dimming searchlights, a flush-set instrument board, and all you can wish in equipment.

We give you luxurious upholstery, perfect finish, big tires. We have made the beauty of this car match our engineering.



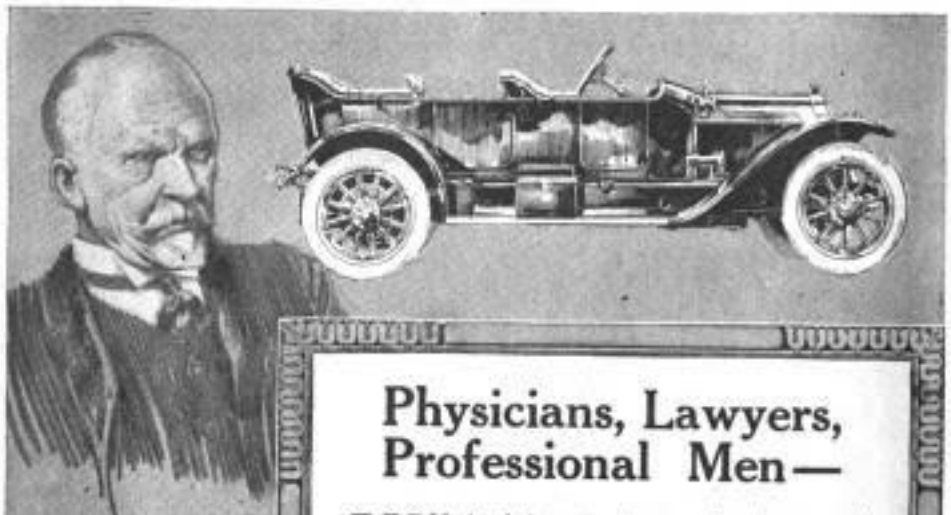
The Car to Keep

Reo the Fifth appeals to men who buy their cars to keep. Men who want cars to stay new. The demand has grown and grown. Last year's sale exceeded all records by 30 per cent. And the evidence is that this year's demand will far exceed our output.

More and more, experienced motorists have come to demand a car like this—the utmost in an honest car—the best that R. E. Olds can do.

Reo the Fifth is sold by a thousand dealers. Name of nearest will be sent with our catalog on request. Go measure up this car.

Reo the Fifth
1914 MODEL
Now $1,175 Equipped



With Streamline Body—Electric Lights and Starter—Electric Horn—One-Rod Control—35 Horsepower—Demountable Rims—Tires 34x4. Also with Roadster Body.

Physicians, Lawyers, Professional Men—

YOU don't have to be a mechanic, natural born or otherwise, to drive a Stutz—it's the worry-free car.

That's why professional men prefer the Stutz—they know from experience that they can go when and where they please, at any speed they desire, without annoying adjustments and "fussing" with their cars.

Each Stutz car is built under the personal supervision of Harry C. Stutz, designer and engineer, who tests his theories of construction in the heat of automobile speed competition.

In the concentrated wear and tear of the race, our engineering experts and mechanics are on the alert for opportunities to improve the car you buy.

The mechanical perfection of the Stutz adapts itself to all kinds of conditions—its continuous efficiency means *more returns* for your investment and lower cost of up-keep.

To-day is Better Than Too Late

The Ætna Life Insurance Company, of Hartford, Conn., is nationally well regarded because of its Financial Soundness, its Liberal Policy Contracts and its Fairness in Adjusting Claims.

Its Agency organization is extensive and its policy holders receive excellent service and prompt settlements.

We will tell you more about it if you will send us the coupon to-day.

Ætna Life Insurance Co. (Drawer 1341), Hartford, Conn. Collier's

I have marked the kinds of Insurance I wish to know about, Accident ☐ Health ☐ Disability ☐ $250 Life Certificate ☐ I am under 55 years of age. My name, business address and occupation are written below.

He spoke in a firmer tone, forcing himself to meet her eyes:

"It's about us all, Sally. You, me, Richard—" He paused. "—Phœbe," he ended almost inaudibly.

Sally dropped back into her chair as if from a blow, and covered her face with her thin, twitching hands.

She heard Owen's voice saying:

"Take this—there's worse to come," and felt the touch of the wine glass against her hand. Still keeping one hand against her cheek, she drank the medicine mechanically.

"'Worse?'" she then whispered with that little croak that intense emotion brought to her voice.

"Much worse, my poor girl—I want to tell you—I must tell you—Sally, 'Ironmonger' didn't savage Richard. He wasn't hurt by a horse— He—"

He turned with his back to her staring into the fire. He did not choose to see her face, not that she should see his in that moment.

"It was I—who did it," he said very low, but distinctly. She did not stir or utter a sound. He went on without looking round. "I've always known," he said. "I mean about Richard and—" he paused again — "and — Phœbe."

Still she did not stir or speak. He went on. "He said some vile words to her. I went mad—I had father's ash in my hand—"

HE stopped and the silence seemed muffled and roaring as when one's hands are over one's ears.

Then at last she spoke.

"I knew it," she said in a deathly voice. "I knew — it — would — come. Oh, God!" She screamed on the word suddenly as when Patton had told her that Richard would live. "My brother — my son!" Patton wrenched open the door and dashed to her. He took her bodily in his arms and laid her upon the great leather lounge.

"Go—" he said under his breath to Owen. "Go away—quick!"

Owen went out and straight to his own bedroom. He locked the door and sinking into a chair by the bed, hid his face in his arms against the pillow.

IT was not until the middle of February that Richard was strong enough to be moved. He passionately desired to get away from World's-End and Patton thought it the best thing for him.

They had decided to take him to a piney seacoast in Georgia, and Patton and Mary were to accompany them on the journey, Mary staying on to be with Sally. Miss Lee was also to be kept on until Richard was quite strong again.

Two days before they left, Owen came to the door of Sally's room.

"Come in, Owen," she said, recognizing his knock.

He entered and went toward her hesitatingly, but she came to meet him. She had been very ill after that second terrible blow and her face had that grayish look that seems like a fine dust fallen from Death's wings in passing. She came right up to him and put her hands on his shoulders. Her great eyes were inscrutable and unfathomably sad.

"After all — " she said, " — my brother—"

OWEN'S face began to twitch. He hid it on her thin shoulder. She put her hand up to it. He could feel her rings cold through his hair.

"The bitterness of death—" he heard her whisper. "Is past."

They sat silent for a long time, close together and gazing into the fire hand in hand, as when they had been children.

Then Owen stirred and taking a legal paper from his breast, laid it upon her knee.

"What is it?" she asked recoiling.

"For Richard," he said gently.

"For—?"

She took up the paper and turned it curiously in her hands.

"What is it?" she asked again.

"My will, Sally."

"You—you?"

"I have left him the estate in Florida, and some property on Broadway."

"You have— You—?"

SHE could not articulate. Suddenly she, who never wept, leaned down across his knees and cried as if her poor, sick heart would break.

Perhaps the most insupportable moment of Richard's life was that in which his mother put the copy of his uncle's will upon the counterpane and told him of its contents. One harsh exclamation broke from him, a dark flush bathed his face — then he turned it away, and even her tender coaxing could not win a word from him for hours.

Discussing the Prowess of Fathers
Sketches from Away Back

ON the eve of their departure from World's-End, about midnight, Giles, who was a very light sleeper, was roused by the gleam of a shaded candle in the nursery. Thinking that it was Phœbe come to ask her help about something, she raised herself on her elbow behind the bed curtains preparatory to getting up. Then, rather indignant and perhaps a little alarmed, she kept quite still, watchful, ready to pounce at the least sign of anything unusual. For it was not Phœbe who stood there by the baby's crib with that shaded candle, but the grim, dark lady with the bony hands and hard black eyes that Giles 'couldn't abide.' Her long dressing gown of violet velvet hung on her emaciated body and trailed out behind her like a pall. She looked, "as I'm a Christian, for all the world like a dismal coffin stood on its end," Giles told Hannah the next day. "It was like some grisly visitation to see her a-standin' there in the bowels o' the night, creep-mousin' them graveyardish eyes o' hern over the blessed lamb, and her that innocent a-slumberin' on as though a angel o' the Lord was come to kiss her."

Giles could not tell how long that solemn, ominous figure stood there; she had no watch by her, but when it finally withdrew her arm was all "pins and needles" she told Hannah.

Deep, deep in her heart, as on a sensitive film, Sally was fixing the face of her sleeping grandchild. She knew that she might never see it again, though they had assured her that with care she might live for many years. Still—

SHADING the flame with her thin fingers in which the bones showed painfully through the flesh, thus made gold and transparent, she bent over and kissed the little face. The baby screwed all her wee features into a bunch of protest, and vigorously with the back of one hand she scrubbed her mouth and budlike nose, as though a cobweb had suddenly blown across them. Then with a smiling sigh and stretch that arched her whole little body from head to feet, sucking comfortably her own lower lip, she sank again into her fragrant sleep.

Giles, on whom in her uncovered state

a draft had been playing, here sneezed so violently that her head bobbed downward. When she looked up, the tall, violet-shrouded figure was gone.

When Sally reached her own room again she in her turn was startled by a figure that stood near the fire, and turned to meet her—a figure with half-scared, yet very brave, dilated eyes, and a long rope of sorrel gold hanging across one shoulder.

"Cousin Sally," said Phœbe in that muted voice of hers, "I—I—couldn't bear to say 'good-by' before the others. I—I—want to thank you—"

"To thank me, child?" broke in Sally, with a fierce sound that was half mirth, half misery. "You have little to thank me for, I must say."

"You—you—were kind to me—once—" murmured Phœbe, her voice shaken by the beating of her heart.

SUDDENLY Sally's face relaxed.

"We have all suffered," she said.

A silence fell.

"Would you—would you like to see the baby—alone?" ventured Phœbe, almost whispering.

"Thank you, I have just seen her."

"Then—good-by, Cousin Sally. I—I am sorry for all that—that's come on you—through me."

"There was blame on both sides," said Sally firmly.

"Could you—" Phœbe began trembling all over. "Could you—forgive us—me and—my baby?" she said, her teeth chattering.

Sally shrugged the heavy violet garment from her gaunt shoulders with a quick, dexterous movement. With her deft, nervous hands, almost in the same movement, she threw it about Phœbe.

"There—you were catching cold," she said. "Good night. There is a great deal that we can all forgive one another. Good night. Good-by."

The next morning, when the time drew near for Richard and Sally to leave World's-End, Owen took Phœbe in his arms, and told her to walk toward Logan's Wood, and that as soon as the carriage had driven off he would catch her up. She obeyed him silently.

When she reached the high field at the wood's edge, she sat down on a log to wait for him.

TO her left lay World's-End in its smoke of winter trees, and below, straight away on every side, the broad valley heaved softly to the sea. As on that terrible day, just before the New Year, snow wrapped the quiet earth. White and blue, as though dedicated to the Virgin, was the lovely day. Then Phœbe's heart checked. She put up her hands to it and her eyes grew black.

A carriage had emerged from the gateway of the southern lawn. It went at a slow, steady trot along the road toward Crewe. Strange and out of place it looked in the spotless landscape, slowly moving like some great beetle numbed with cold crawling along the soft ermine of the snow.

And yet, in that small, black, glistening box, so quaintly mounted on its orange wheels, Nemesis herself was being borne away, her dark wings crumpled, her bow broken, her shafts unfeathered.

As in a strange, white dream, on which this one blot had fallen from some ink well of the recording gods, Phœbe, hand on heart, watched the black, shining patch slowly, steadily receding over the snowy fields.

And now Owen's voice spoke close beside her. She started at her name, and sprang up. He took her hand in his, and thus, hand in hand, they both stood watching that beetlelike shape that grew smaller and smaller as it went from them across the valley.

SUDDENLY, high overhead, a buzzard came slanting down the upper strata of the air. Below him his dark shadow glided over the dazzling snow. He tacked, flying in the direction of the carriage. And these three dark objects, one high in air, one tracking the pure snow, one stealing over it, yet leaving no stain behind—all went from them toward the far horizon line.

Then the carriage disappeared into the "flat woods"—the buzzard wheeled and dropped, his shadow vanishing with him. All was white and immaculate again.

She turned and faced Owen with a tremulous, wondering smile. He held out his arms to her.

THE END

First Choice for Over Fifty Years

BERRY BROTHERS' VARNISHES

This spring when you decide to build, to varnish your living room floor or refinish your bedrooms in white enamel, remember that Berry Brothers' products have been the first choice of home owners, architects, builders, painters and decorators for over fifty years. They have stood the test of time in every land and continue to give lasting satisfaction.

Liquid Granite is a floor varnish of unusual beauty, toughness, and elasticity. Washing with soap and water has no harmful effect. It stands the hardest wear.

Luxeberry White Enamel is a white enamel that stays white and does not check or crack. For the white finishing of bedrooms, bathrooms, staircases, furniture, etc., there is nothing so fully satisfactory—your choice of a brilliant porcelain-like finish or rich dull effects.

See your dealer about these finishes or write us direct.

The shock of your daily steps

The jolt of your entire weight coming down on your heels in a two-mile walk gives you a total shock as great as if you stepped off a 16-story building.

If you wear heels of hard leather, this tremendous shock, amounting to hundreds of tons, is carried directly through your spine and nervous system every day.

Protect yourself with *O'Sullivan's Heels of new, live rubber.* Have them put on the shoes you work in, walk in, play in or dance in. They will take up the shock and save you from the resulting fatigue, nerve fag and exhaustion.

They will increase your comfort and pleasure; make you more active and energetic, and give you a brisk, youthful stride.

O'Sullivan's Heels cost but 50 cents a pair, attached. All shoemakers and shoe dealers will attach them to your shoes when you buy them, or at any other time. If you prefer, send us 35 cents and a tracing of your heel, and we will mail you a pair. O'Sullivan Rubber Company, 131 Hudson St., New York.

The General Says:—

This label is better than any *test* of roofing. It means that our roofing has been *tested* in the *making* and it's

Certain-teed

Quality *Cert-ified* **Roofing** Durability *Guaran-teed*

—guaranteed for 15 years, with the responsibility of the world's three biggest mills behind it.

Certain-teed is made with a soft, properly blended, mineral asphalt center and harder asphalt protecting surface. These are the slowest-drying materials. That's why we can guarantee ***Certain-teed*** for 15 years. Roofs do not *wear* out—they *dry* out.

Certain-teed is sold by dealers everywhere, at a reasonable price.

General Roofing Manufacturing Co.

World's largest manufacturers of roofing and building papers

E. St. Louis, Ill. York, Pa. Marseilles, Ill. New York City
Kansas City Minneapolis San Francisco Seattle
Boston London, England Hamburg, Germany

Putting the Modern Roofing Industry on the Map.

By George M. Brown, President of the General Roofing Manufacturing Co.

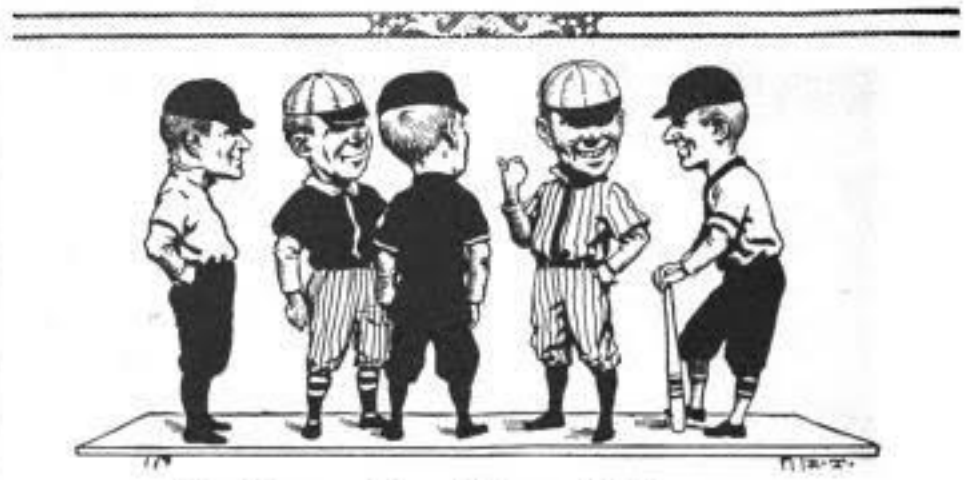
Prepared roofing—the modern roofing—has come to stay. It is the natural result of the *needs* of modern business and modern *building* methods.

It represents one of the big factors in the "scientific management" of building.

Like every innovation—the first telephone, the first typewriter, the first automobile, the first airship—it bumped smash, up against the solid wall of prejudice at the very start.

It was a real struggle—the same real struggle that every new industry undergoes before it gets under way. But this new industry had a real champion.

Certain-teed, the guaranteed-for-fifteen-years roofing.



The *quality* capable of making good on a fifteen-year guarantee established the faith of the public in the modern roofing industry and set it on its feet

And *Certain-teed* roofing—with the tremendous momentum of its broadcast advertising, its aggressive sales policy, its enormous volume of production, and with the three biggest mills in the roofing industry behind its guarantee—is chiefly responsible for this great and rapid success with which the prepared roll and shingle roofing industry has met.

Every manufacturer of modern roofing—every dealer who sells roofing and every user of roofing, has profited by the gigantic success of *Certain-teed.*

Thousands upon tens of thousands of dollars have been saved by users of roofing by the success of *Certain-teed* roofing—not *only* the users of *Certain-teed* roofing, but the users of all good roll or shingle roofings. For, while we consend *Certain-teed*, the guaranteed-for-fifteen-years roofing, to be the best roofing made, we concede that any good ready roofing has many advantages over the old style roof.

Picking the Flag Winners

(*Continued from page 8*)

is a very nice thing if properly used. Ball players, however, can't drive fifty and sixty miles every day without paying the penalty. It uses up a lot of much-needed energy to sit at the wheel for that distance daily. All players need every bit of energy possible to be at their best. Some of my players for that very reason didn't show their real worth. Failure of these players to deliver eliminated the club as a factor. Critics are now counting my club out of the running for next year. They are making a mistake. The Athletics are still a great ball club. The 'Too Much Prosperity' sign will have vanished, and the players will show old-time form. You must figure the Athletics in considering the 1913 pennant winner."

Connie Mack handed out a lot of wisdom when he cut loose with that interview. The next year the Athletics came back determined to play baseball and treat all other forms of amusement as side issues. Boston, picked to win, was never in the running, three clubs nosing out the champions. With the exception of a bad slump late in the season, the Athletics played marvelous ball last year, and topped it off with a splendid performance in the big series. It was a great ball club asserting its class.

For the last three or four years, in considering the Athletics, much stress has always been laid on the pitching staff, Chief Bender and Eddie Plank, the two great veterans, are annually discussed at much length when anyone dopes out the chances of Mack's team.

This year there is another doubtful quantity, the clever Jack Coombs. It is not a question of age or service with Coombs, but a matter of illness.

The Old Guard Again

I LOOK for Eddie Plank and Chief Bender to be of great service to Manager Mack this year. Bender took fine care of himself last year, and never did the big Indian look better to me. He should continue to win with his consistent regularity, for no pitcher in the game understands the art of pitching more thoroughly than the "Big Chief." Eddie Plank is a young man at 39, but old in the game of baseball. Few pitchers are able to stand the big-league pace at Plank's age. Most of them have gone into retirement, or are back in the bushes at a much earlier period. Plank is compelled to conserve his strength carefully. He works slowly. No longer can he step along as he did years ago, but he is still a wonderful pitcher, a hard man to beat.

Digging Up Youngsters

CONNIE MACK, however, realizes that Bender, Plank, and Coombs cannot go on pitching forever, and is carefully strengthening his fences for that very happening. That he has a promising youngster in Joe Bush there can be no question. "Bullet Joe," as the players call him, surely demonstrated the fact to a crowd of about 30,000 people at the third game of the big series. In Carl Brown, Mack has another clever twirler. Like the other youngsters on Mack's pitching staff, control is the only thing Brown lacks: of curves and speed he has plenty. Pitcher Houck is the deep, dark mystery of the Athletics' pitching staff. Few pitchers in the majors have more stuff than this youngster, yet he has failed to develop as he should, considering his wonderful natural ability.

There is one member of Mack's pitching staff of whom the public knows very little, yet this young-ter has unusual promise. The pitcher in question is Wyckoff, who received most of his early baseball education at Bucknell University. That Wyckoff has plenty of natural ability is a certainty. He has one of the best curves I have ever seen, also a corking good fast ball. Last summer I was sitting on the bench with Chief Bender, discussing the young pitchers on the Athletics. Wyckoff was warming up with Ira Thomas. Every ball he pitched cracked loudly as it struck the big mitt of the veteran backstop.

"That fellow looks like a mighty fine prospect," I remarked to Bender, who was watching the youngster closely.

"He is going to be a great pitcher, or I don't know a thing about the game," he replied. "Notice that curve of his—it certainly is a beauty. When he gets control there are a lot of batters who will suffer a shrinkage in their batting averages. Wyckoff wants to learn and can be taught. Once you point out a mistake to him, he doesn't very often make the same error again. Some youngsters believe they know more about pitching when they come to the big league than the fellows who have been in the organization for years. You can't tell such fellows anything. They are liable to be criticising your work. Most of them soon drift back to the minors. Wyckoff isn't that kind of a fellow. He listens to everything you tell him, and then tries to profit by what he hears. I'm pulling for that fellow." If anyone should know a pitcher when he sees one, that person is Chief Bender. What he has to say about Wyckoff would lead one to believe Mack has a diamond in the rough.

Any way you figure the American League race, the Athletics keep staring you in the face. The famous infield should be as good as, if not better, than in former years. The outfield should show to better advantage, as both Strunk and Murphy are bound to show improvement after a year of service as regulars.

Schang, the wonderful young catcher, will be of more value to his club than last year, when he was an important cog in the Athletics' machinery.

How Washington Looks

MANAGER Griffith of the Washington club has his work cut out for him. His wonderful showing the past two years in landing his club in second place has set the fans of the National Capital wild. For many years Washingtonians had been so accustomed to having the home team finish last that it would have been regarded as a miracle to have had the club finish at the head of the second division. Two years of high-class baseball has entirely changed the sentiment of the fans. Now all that Washington craves and talks about is a pennant winner. It is a rather ticklish position for the manager. Griffith, however, has a good ball club. Its fine work in the last two campaigns has been no fluke.

Walter Johnson is of course Griffith's one best bet. Last year Griffith developed a mighty nifty left-hander in Joe Boehling. In Jim Shaw, a big right-hander who joined the club late last fall, Washington appears to have picked up a star. Built on the lines of Walter Johnson, possessing terrific speed, and a very good curve, Shaw looms up as a great possibility. I worked the first two or three games Shaw pitched and marveled at his ability. Washington will bear watching.

Over in Cleveland Manager Joe Birmingham has one of the toughest jobs on record—an assignment almost as hard as the one that confronts Manager Dooin of the Phillies. His club was well up in the running all last year. He had a great chance to overhaul the Athletics until Washington, using the old hoodoo, beat the Naps five times in a row and threw them out of the race.

Type your bill. Stop! It is footed—total proved

This latest Remington time-saver ends a needless waste of clerical time

From now on bills and statements will be written-out and footed-up simultaneously.

One operation does it.

The typist inserts a bill head in the Remington Adding and Subtracting Typewriter.

She copies the items.

But look!

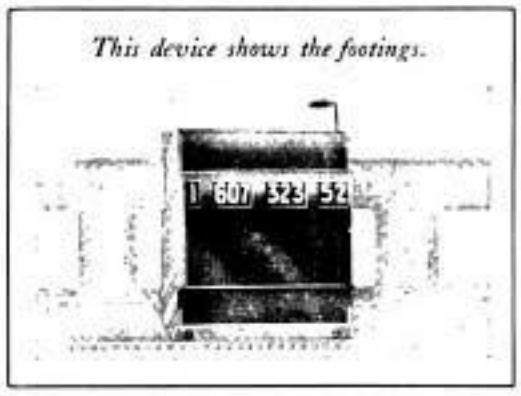
Every time the numeral keys are pressed, the figures are both typed and *added*. The bill *automatically* foots—with cold steel accuracy.

If the typist prints a wrong total, an error-signal at once calls a halt.

The footings will be as correct as though proved by a certified accountant.

The bill—neatly typed and complete—is mailed without a moment's time spent on addition, subtraction or total-proving.

* * * *



This marks a tremendous advance in billing and accounting.

Hereafter, every moment spent in footing bills will be a sheer waste of clerical time.

This machine does *your* work *your* way.

You can start using it tomorrow—without altering your accounting system in the slightest.

The only change it forces is a change from human inaccuracy to mechanical

This device shows the footings.

precision—from time-waste to time-saving.

* * * *

The Remington Adding and Subtracting Typewriter is

(1)—always ready as a complete easy-running typewriter, for letter writing.

(2)—always ready as a quick adder and subtracter, for listing.

(3)—always ready for both writing words and adding figures at one operation.

This latest and most remarkable Remington time-saver is now used constantly in thousands of retail stores, banks and business offices—large and small.

The United States Sub-Treasury and the New York City Finance Department use it continuously.

Machines installed five years ago have paid for themselves over and over again, in time saved—*to say nothing of errors caught before they were made.*

* * * *

The Remington Adding and Subtracting Typewriter puts the old methods of footing bills and statements into a past business age.

A booklet, "The New Remington Idea," gives more details. Write for it today. It is much easier to *keep up* with the times than to *catch up*.

* * * *

The Remington Adding and Subtracting Typewriter can be had in any of the Remington Models shown below.

Each is a member of the famous Remington family.

Each is a complete easy-running typewriter, plus the adding and subtracting feature.

Each is designed and built so as to insure maximum durability.

Each has distinctive features designed to meet individual requirements.

A Patrician Among Fine Watches

Emerson once said, "Every man passes his life in the search of a perfect friend."

You can consider *your* search ended, once you become possessed of a South Bend Chesterfield Watch. For no friend will mean more to you, no friend have a firmer hold on your affections than this handsome trustworthy watch.

South Bend Chesterfield a gentleman's watch

The Chesterfield is a true aristocrat in appearance; a slim, thin-model watch, the very *feel* of which gives you joy.

And as its reliability demonstrates itself through the passing years, your pride in it develops into real affection. For in the Chesterfield you obtain not only princely appearance but what is rarely found in thin-model watches, utter time-exactness. The production of Chesterfield Watches is limited. We do not make them hastily, but we make them well. We recommend the Chesterfield to you who desire the pride and pleasure of knowing that the watch you carry is the best of its kind. The prices range from $100 down.

Write for name of nearest South Bend jeweler and our little complimentary brochure, "Character in Watches." Mailed free on request.

The South Bend Watch Company, 4 Colfax St., South Bend, Ind.

P. F. Collier & Son, Inc.

H. S. Hammesfahr.

Advertising Manager

Now with Falkenberg, the club's most consistent winner, missing from the box, another blow was delivered at the Cleveland infield in spring training.

Sliding to second one afternoon shortstop Ray Chapman broke his ankle, putting him out of it for a good part of the year. Chapman like Falkenberg was a star and no club can afford to lose two stars.

Cleveland is up against a hard proposition unless baseball luck comes her way. It is about time, for luck has gone the other way from Cleveland for the last thirty years.

Will Ed Walsh, wizard of the spitball come back? The pennant hopes of the Chicago team largely depend on the form shown by the "Iron Man." Last year Walsh was of little service to his ball club. The strain of overwork and the excessive use of the spitball put the big fellow out of the running, temporarily at least. Reports from the training camp of the White Sox state that Walsh is confident he will be as good as ever. If Walsh is able to render old-time service, the White Sox are bound to be troublesome. "Reb" Russell, the 1913 sensation, will win many

Feminine Voice from Above—*"If you find anyone, John, be severe with him"*

a game through the cunning of his strong left arm. Jim Scott is conceded to be one of the greatest pitchers in the game and Joe Benz is always a hard man to beat.

Can the Red Sox Come Back?

MANAGER BILL CARRIGAN hopes to get the Boston Red Sox back into their stride after a disappointing season in 1913. Bill is of the opinion that his club was a victim of the same ailment that overtook the Athletics in 1912—too much prosperity. Injuries robbed Boston last summer of a number of its stars, prominent among whom being "Smoky Joe" Wood. He was of little use during the entire season. Taking Wood from Boston is like depriving Washington of Walter Johnson. It is needless to figure how that would affect the Nationals. If Wood is back in form this year, naturally this team will be greatly benefited. He recently was operated upon for appendicitis, however.

In Scott, secured from St. Paul, Boston has a shortstop sure to stick in the big show. Boston is bound to be stronger than last year.

Detroit, New York, and St. Louis are in the developing stages. Managers Chance, Jennings, and Rickey are making every effort possible to build up their teams through the addition of young blood. All three managers have been decidedly busy looking over a bunch of highly touted youngsters. A show of increased strength by any one of these three clubs must be brought about largely by the developing of players worth while from the recruits.

Manager Rickey of St. Louis, a former collegian, is going in strong for the college athlete. He had something like fifteen college ball players working out at the training camp of the Browns.

Watch the Giants Again

LIKE the Athletics, the New York Giants are constantly bobbing before your eyes when doping out the National League winner. In considering the chances of the Giants, one has always to reckon with the crafty McGraw. Depending on methods almost directly opposite to those employed by Connie Mack,

FOR EASTER

Huyler's as a gift carries a message more clearly than words and as delicately as flowers. Preferences in flowers differ; a box of Huyler's is universally appreciated. Its gift is a subtle tribute to good taste.

Huyler's

Bonbons Chocolates

Each piece of Huyler's is made as if our reputation depended on it alone. Chocolate-covered nuts and fruits, dainty bonbons and creams, little nuggets of flavor—Huyler's is the candy word that means deliciousness.

Huyler's Bonbons and Chocolates and many other sweet things from Huyler's are sold by Huyler's sales agents (leading druggists everywhere) in United States and Canada. If there should be no sales agent near you, please write us.

he has been scarcely less successful. McGraw seems to be able to get every ounce of worth out of his ball club. Several times he has been able to win pennants when in my very humble opinion he had nything but the best ball club—which is some compliment to McGraw.

Much of McGraw's success has been due to the daring policy he insists on when men get on the bases. He makes his players continually take long chances. On top of this his pitching staff compares favorably with any other corps in the National League. You must always give the Giants a look-in with McGraw in charge.

Manager Clarke of Pittsburgh has a big task before him, made all the harder by the desertion of a couple of his stars. In the deal with St. Louis he lost a good southpaw in Robinson and captured a good right-hander in Bob Harmon. Konetchy with his batting ability should prove of much aid to the Pirates.

I have already shown how the Phillies were wrecked by the loss of Seaton, Brennan, Doolan, and Knabe. Dooin has a desperate fight ahead to finish fourth.

In Chicago I can see no great uplift. The Cubs lost in Johnny Evers the last of their great old-time infield quartet, and a brainy player of Evers's caliber is a big help to any club. He will be greatly missed, and his absence will leave Hank O'Day a hard assignment to carry through successfully. Yet, despite the fact that the old Cub machine has been wrecked, O'Day has some good material left in people like Archer, Saier, Sweeney, Zimmerman, Phelan, Schulte, and Cheney. These are all grand ball players and will be somewhere around the crest.

The Big Surprise

THE big surprise of the year, in my opinion, will be the Boston Braves. Two years ago this club was a wretched tailender—a tailender apparently beyond repair. Then Stallings took charge. In his first season he lifted the Braves to fifth place. Now it would not surprise me to see him finish third or better. The addition of Johnny Evers to the Braves' infield, coupled with the brilliant Maranville around second, means a hustling club. Evers and Maranville working together should set the National League on fire. Stallings has several youngsters who were under cover last year, but who are now about due. He has a fair pitching staff and a good outfield. And his club will fight to a finish. So keep your eyes on the Braves—the dark horse of the race. Wilbert Robinson should improve Brooklyn's standing and he may even get the Dodgers up around the first division. The best that St. Louis and Cincinnati can do is to battle for last place, as things look now.

But baseball is a game of "ifs." And one or two shifts in luck or a few injuries can overturn everything. Not being able to look into the future, I can only tell you how I think things will happen, not how they will actually take place.

Why He Heads the List

WE have received the following letter from a man with a real grievance, the editor of the Providence (R. I.) "Journal":

EDITOR COLLIER'S:

We greatly regret to find in a recent issue of COLLIER'S, under the heading, "Note on the Tariff," a paragraph which gives the impression that ex-Senator Aldrich has some influence or connection with the news or editorial columns of the Providence "Journal."

We feel that COLLIER'S ought to know, what all of New England knows very well, that the Providence "Journal" has not only fought, for the past eight years, all the policies represented by the ex-Senator from Rhode Island, but has been, and still is, a leader in that fight. Mr. Aldrich was in all that time, as now, a stockholder in this company.

You say that in our list of stockholders "his name leads all the rest." This statement does not seem to be quite fair in its suggestiveness when you know that the only reason for this "prominence" is that Mr. Aldrich's name begins with the first letter of the alphabet.

I am sure that COLLIER'S does not want to do us an injustice.

Very truly yours, JOHN R. RATHOM,
Editor Providence "Journal."

"Well That's Fine!!"

These are the plugs

HERE are the original four Bosch Plugs used in the famous Moline-Knight Test held under the supervision of the Automobile Club of America Testing Laboratories, New York City, from Dec. 19, 1913, to Jan. 2, 1914. Official investigation proved them practically perfect after their two weeks, day and night siege.

More than 11,088,000 high tension Bosch sparks passed over the electrodes of each plug without a miss and not an adjustment was made during the entire 336-hour run—that **IS** plug service. These Bosch Plugs worked in a compression 33% higher than found in the average engine. Harder service than would be endured in a continuous tour of 14,700 miles at a speed of over 45 m. p. h. Few motorists would subject a plug to a test like this in three years of hard driving, but those who did, would find Bosch Plugs equal to the trial. Don't buy any old plug—buy Bosch Plugs.

Write for "Locating the Spark Plug," an educational booklet sent free on request.

Thoughts That Throb

(Concluded from page 15)

A little later he has only one ache, but he has not improved in health. His one ache is merely all of his former aches run together.

We laugh at spring fever because it is only a temporary, though an acute, affliction. We also laugh at certain moist and fervent portions of this and other countries because of the general disposition of the inhabitants to start on yesterday's work to-morrow. But in these climates spring fever is often chronic and the starch in the human system remains permanently melted, causing a pathetic flabbiness of muscle and will. There are in addition many people who are "born tired." With them it is always spring and their desire to work cannot be detected by the most delicate reaction.

The Government is kind to these afflicted folk, giving vast numbers of them life positions in the bureaus at Washington. But this is at best a makeshift, and is besides too hard on the bureaus. Medical science should focus its attention on chronic spring fever and devise some means of relieving its victims and their victims.

Noses Manicured Here

THE doctors continue to do wonderful things with humanity. Not very long ago some Philadelphia doctors built a new nose for a man who had lost his through some carelessness or other. It was necessary to supply a new nasal bone, so the experts in the human repair shop grafted a finger nail into the nose.

The operation was a complete success until recently, when the patient discovered with pain that the transplanted nail was growing vigorously and cutting off the blood vessels in its course.

This illustrates vividly the perils of modern improvements. The overambitious nose may be properly restrained and then again it may not. Think of having to take your nose around to the manicurist once a week!

The Great National Guessers

THE women voted in Illinois elections this month because the Supreme Court has not yet gotten around to the ratification of the suffrage law as passed by the Legislature. There is a chance that it may later be declared unconstitutional because a nonexistent county office was mentioned in the bill.

The best lawyers in the State drew this law with the utmost care in the effort to make it constitutional, and the Legislature passed the bill in its constitutional capacity as a law-making body. But of course it was only a guessing contest and no one knows whether the Legislature guessed right or not. Passing laws for a State Supreme Court to review afterward is a good deal like the popular game in which one man says: "Guess a number between one and four." "Three," says the other man promptly, upon which the first man says sadly: "No, you are wrong. I was thinking of two."

Legislatures all over the country are trying to guess the Supreme Court's attitude before they pass their laws. It has become about as hard to pass a really constitutional law in some States as it is to draw up an indictment with the commas in their proper places.

The "Easy" Rich

(Continued from page 10)

to be had in London. He immediately went abroad; found the volume at Quaritch's with a price of 500 guineas (a little over $2,500) on it. As he stood caressing it with loving hands he felt a bulky presence and the book was wrenched from his grasp. He turned and saw Mr. Morgan holding it. The great man asked the price, looked at the volume, and then growled: "Too much." Then he bounced out.

The broker bargained all afternoon, and the net result was that he got the Walton, a first edition of Spenser's "Faerie Queene," and five other good items for a total of $12,000.

Several years passed; along came the panic of 1907; the book-buying broker needed $100,000 in a hurry. So he lifted 250 books out of his collection, packed them off to London, where they realized $107,000. Now the interesting feature is that at this sale Mr. Morgan bought for exactly $6,000 the Walton that he had turned down, as heretofore described.

This episode not only shows the vagaries of book buying, but it proves that good books, when well selected, may prove an asset in an emergency. In the same way a discriminating broker, interested in art, sold his collection of American paintings for $300,000 and saved his firm from disaster after the panic.

The Loss in Security Derelicts

AT his own game the Wall Street man has been an easy mark. You discover this fact when you look at the inventories of estates filed in the Surrogate's office. The strong boxes of some of the most famous captains of capital contain many "cats and dogs," the name given in the Street to worthless securities.

These "cats and dogs" include stocks and bonds in mines, railroads, public service corporations, and companies formed to exploit "epoch-making" devices. Not even the Morgans, the Vanderbilts, the Harrimans, or the Goulds have been exempt from this toll.

In many instances the worthless stuff was foisted on big men by old-time associates. Mr. Morgan, despite his gruffness, was a very generous person. Often a schoolmate would come to him with a subscription list saying: "To oblige an old friend won't you take some of this stock?"

In this way he and many of his colleagues became owners of good-for-nothing stocks.

Most of them forget all about it; but one had a sense of humor. He had "obliged" many old friends and around each envelope that contained the evidence of this costly kindness he had written the full history of the case. On one, for example, he wrote: "I know this is rotten, but I bought it to oblige a college chum." He was simply anticipating the amazement of posterity in general and his executors in particular.

The question arises: What becomes of all this worthless stuff? It is not always permitted to sleep the sleep that has no resurrection. With a sort of post-mortem commercialism some effort is made to redeem it. Certain men in Wall Street make a business of buying and selling the "cats and dogs." They are in a way the kindlers of defunct financial desires—the most picturesque of all dealers in securities.

The most extensive and perhaps the best known of these brokers has an office on the top floor of a building that stands within the shadow of the Stock Exchange. Here, where the sunlight streams through a dingy skylight, is a mausoleum of dead investment hopes. Housed in battered cardboard boxes, on dusty shelves and in safes are securities that represent the useless outlay of millions of dollars? If they could speak, they would tell a tragic story of broken faith, shattered ambitions, the wreck and ruin of glittering projects. Behind their gorgeous engraving lie the tears and fears and agonies of that long line of men and women all over the country who put their money into the wrong thing.

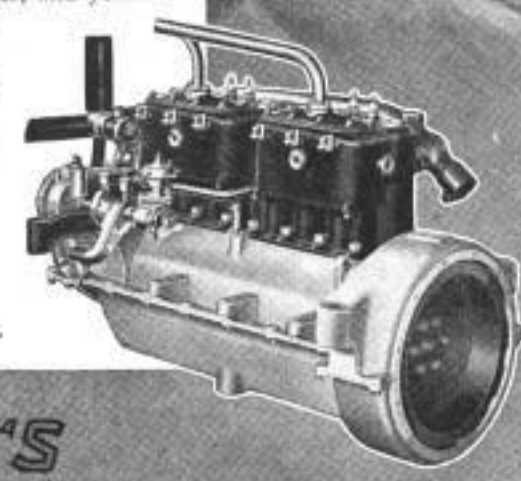
Speed!

CONTINENTAL MOTORS · Powerful as the Nation · AMERICA'S STANDARD

Faster!—Open the throttle—advance the spark—tramp on her tail—one minute to make it!—Easy enough, with a Continental, when you want to get there and get there quick.

Yet the flash of swiftness, or the mad onrush that crashes through the smoke welter of the speedway, is really not the speed that counts; for it is a fever, not an excess of vitality. Continental speed (and this is true of every one of 1914's tens of thousands of Continentals) is that healthy speed which endures; which, as the work calls for it, be it 40 or 50 or 60 or 70 miles an hour, can be depended on for minutes, hours, days, weeks, and years.

For Speed is the daughter of Power. And unbounded power "is the dominant characteristic of the Continental Motor",—power within bounds, never creeping near the danger mark, bringing no risk.



Continental speed and power are attained by superior theory, put into better practice. Continental crankshaft bearings are ground to 95% of bearing surface, smoother than a mirror; pistons are balanced to a pennyweight; connecting rods are lightened to a mathematical niceness; valves are seated-in with a faultless exactness; cylinders are polished to a flawless luster.

The foremost technical experts of America and Europe, men of the Continental and allied firms, working for ten years, have made Continental speed possible.

Let Continental speed guarantee satisfaction in the car you plan to own.

FOR THE MAN WHO CARES

Prest-O-Lite
for Motorcycles

The *only* reliable lighting system

Prest-O-Lite spells safety—it is absolutely reliable.

It is simple and sturdy. It stands the rough and tumble work, the jolts and the vibration. Has no delicate connections or frail parts.

Your light may snap out suddenly at a critical time, if it depends on a toy storage battery or any other complicated system.

Prest-O-Lite is *the most convenient* system. Needs practically no attention, has no mysteries, and breeds no troubles.

The first cost is small. The operating expense is no greater than that of a carbide generator, and only one-third to one-fifth that of electric light.

30-Day Free Trial

You can prove all our claims for Prest-O-Lite by our 30-day trial plan. Before buying any other system, insist upon the same kind of a test.

Don't pay for poor light

Any dealer who offers you a combination of equipment, including a poor lighting system, will give you Prest-O-Lite instead, if you insist. And if you know the facts, you *will insist*. Tear off on the dotted line, write your name and address below and mail it for complete information about motorcycle lighting.

If you wished to depart from prosaic actuality, you could find in this office a bit of Maeterlinckian symbolism. For the broker in junk securities is also an entomologist. When he cannot sell his useless stocks he mounts butterflies and bugs. Thus the insects whose gorgeous-hued wings are spread out before him represent the rosy hopes that once lay in the wares he handles; the bugs incarnate the pests that destroyed those hopes.

At one time this broker had securities in his place whose par value represented $42,000,000. Yet they represented an outlay to him of less than $5,000. You can buy them from him at the rate of 50 cents a pound. Much of this kind of junk comes from estates that must be closed up. Once, when I happened to be in the office, I saw a large pasteboard box tied with a rough cord. Upon inquiry I found that it contained stocks whose par value was $12,000,000 and they represented fully half that much in actual investment. Yet a Southern lawyer had offered $250 for the lot and was coming to get his goods.

Sometimes these junk securities have a Cinderella among their ashes. A mine long abandoned may be reworked with profit or a corporation long dormant may be revived with unexpected capital. Then the stock, sold by the pound, suddenly becomes infused with value. But it seldom happens.

These derelict securities have other uses than merely providing a grab bag for the adventurer in finance. Whenever Wall Street men want to play jokes with stocks or bonds they buy a few pounds of this junk. Here is a story that shows how a batch of it was once used:

A Gold Bond as a Souvenir

A CERTAIN member of the Stock Exchange decided to celebrate the close of a particularly successful fiscal year by giving a dinner at the St. Regis. He invited about fifty people, including all his closest friends and their wives. The date of the party was April 1, a fact which apparently escaped the notice of the guests. After a charming dinner interspersed with vaudeville the host arose and expressed his pleasure over the presence of so many of his friends. Then he added with great solemnity:

"In view of the fact that the gods have been peculiarly good to me these past twelve months, I have decided to give you a more substantial souvenir of this dinner than any recollection that you may be good enough to take away with you."

The head waiter then handed to each guest a beautifully engraved first mortgage 6 per cent gold bond of the Winona and Southwestern Railroad. The coupons had been cut up to April 1 of that year, the next interest date.

Such overwhelming generosity created a profound sensation. "We can't accept," came in a breathless chorus all up and down the table.

"But you must," insisted the host. "Put it away for the children."

The Way the Money Went

THE next morning the telephone tinkled on a dozen bond brokers' desks. A familiar question for a few hours was: "Please quote the market on Winona and Southwestern." The brokers were somewhat dazed, for they had never heard of the road. After much inquiry it developed that it had been sold at sheriff's sale some years before; the bonds were worthless and had been bought by the host from the dealer in junk for 50 cents apiece. His joke was a great success.

A still more practical market for this stuff was from men in bankruptcy. In order to show so-called "bankrupt assets" they bought up a few pounds of worthless securities and then swore that "this is the way the money went."

But whatever its ultimate use, the real meaning of all this mass of worthless securities is that it rears a sad monument to haste, heedlessness and general lack of investigation in the employment of money.

They Watch His Hobbies

THE Wall Street man, however, has no monopoly on being a mark for the unscrupulous or the designing. His rich brother everywhere falls for the same thing and in very much the same way. He may succumb at home, but he is more likely to tumble when he makes his regular visits to New York. He seems to leave his power of discrimination and his sense of value behind.

NABISCO

This leads us to a favorite but little-heralded game which consists of tapping the out-of-town rich when they are in the big metropolis. By some curious subterranean process of telegraphy the presence of these men becomes instantly known to the horde of business and other sharpers. Before the visitor has had time to hang up his hat his telephone begins to ring, inviting him to meetings or projects to separate him from his cash.

Now the amazing thing about this performance is that the habits and hobbies of many of these millionaires are known to the men who work them. They get the information by reading newspaper and magazine articles, from discharged employees, and by personal investigation.

Access to the rich is gained by various subterfuges. One of the quickest and easiest ways is to impersonate a newspaper man or a member of some fake

The **Post-Impressionist's Uncle** — ***"Well, George, that big pitcher yer paintin' is beginnin' to look like sumpthin', but, gosh! that little un' down thar is gettin' wuss and wuss all th' time"***

committee. Once in the presence of wealth, the grafter's work is over, for, as I have already intimated, the foresight of the shrewdest seems to forsake them when they get to New York. The strongest appeal is to their vanity. It pleases them to be regarded as rich or as patrons of some movement.

A Card Catalogue of Suckers

A GROUP of sharpers had this game down to such a fine point that they had a card catalogue of many of the rich men who came to New York regularly. These visitors were known as "taps," and could always be counted on for some kind of tribute.

On each card was written the man's name, his home address, where he stayed in New York. But most diverting of all was the brief explanation of the particular weakness for which he would fall.

One card had this explanation: "*Interested in welfare schemes. Will contribute to any kind of fund for social betterment.*"

A second one read: "*Prides himself on his knowledge of art. Will buy any kind of picture if you flatter him into believing he knows all about it.*"

A third had this designation: "*Strong on uplift. Will contribute to sociological schemes of all kinds.*"

A fourth: "*Immensely vain and easy to land for flattering stuff. Likes to have histories of his family written. Easiest lead is to talk genealogy.*"

And so it went all up and down the list. It was the biography of a chain of human frailty and weakness that netted the promoters a fortune in a few years. They were able to retire.

Their method of procedure was easy. Knowing just the weakness or hobby or enthusiasm of a man, they approached him on that subject. They easily invented welfare funds and created sociological movements. The easiest was the biography project, for many of the victims did not shy at being "written up." When the card catalogue indicated an "art lover," the sharpers immediately got into league with an unscrupulous dealer who worked off spurious stuff and they divided the profits.

I have in mind the concrete example

Resinol Soap

does more than cleanse the skin

Almost any soap will *cleanse* the skin and hair and many toilet soaps are pure enough to do it without injuring these delicate textures. But those who want a soap which not only cleanses but actually *helps* the complexion and hair naturally turn to Resinol Soap.

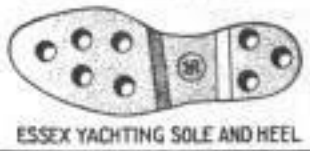
In every way an exceptionally pleasing toilet soap, the soothing, antiseptic properties which it derives from Resinol Ointment enable it to *protect* the skin and scalp from annoying affections, keep the complexion clear, and the hair rich and lustrous, as soaps which are merely pure and cleansing cannot do. Men especially appreciate Resinol Soap.

All druggists and dealers in toilet goods sell Resinol Soap, twenty-five cents. For a guest-room-size trial cake and a miniature box of Resinol Ointment, write to Dept. 18-C, Resinol, Baltimore, Md.

Resinol Shaving Stick also contains Resinol, *making it most agreeable to men with tender faces. Trial on request.*

Best to Wear *Anywhere*

Essex Rubber Soles and Heels give the greatest satisfaction, no matter what your needs may be. When you buy shoes with soles displaying the Essex Trademark, you *know* that you are getting the *very best* grade material combined with the *highest* standard of workmanship, which is supplemented by *expert* attaching, all of which permits us to say that



Essex Soles Finish Strongest—

last longest—whether used for golfing, yachting, tennis or any other purpose. They are made in hundreds of different styles and are used on shoes of nearly every price.

The confidence of shoe manufacturers in the quality of Essex Rubber Soles and Heels is indicated by the fact that 75% of all the rubber soles and heels worn in the United States bear the Essex Trademark.

You will find them at all progressive shoe stores, department stores, and repair shops. Specify them the next time you buy.

ESSEX RUBBER COMPANY, TRENTON, N. J.
Mfrs. of Essex Rubber Heels and Soft Spot Heel and Arch Cushions

ESSEX YACHTING SOLE AND HEEL

An Everyday Home Helper

When a bit of domestic machinery, like a food chopper or an ice cream freezer, needs oiling, use 3-in-One. When the sewing machine runs hard because its bearings are dry and gummy with inferior oil and dirt, use 3-in-One.

When furniture is dim and smoky because of long use in close rooms, clean and polish with 3-in-One.

When time comes for sweeping and dusting, use a clean sanitary "dustless duster" made with a cheese cloth and a few drops of 3-in-One.

3-in-One oil

is an "everyday home help." From cellar to garret, from front door to back, there is hardly a spot where it isn't useful. It lubricates. It cleans and polishes. It prevents rust. A consistent and persistent use of 3-in-One makes housekeeping easier.

Sold in drug stores, groceries, hardware and house furnishing stores; in bottles, 1 oz. 10c; 3 oz. 25c; 8 oz. (½ pint) 50c. Also in Handy Oil Cans 3½ oz. 25c.

If your dealer hasn't Handy Oil Cans we will send one by parcel post for 30c. A Library Slip with every bottle.

FREE. Send for a generous free sample and the 3-in-One Dictionary of uses.

THREE-IN-ONE OIL CO.

National
SIX—$2375

This small picture shows you all you need have on your mind when you drive your *National*. It's right under your eyes—everything you run your car with. Center control, left side drive, convenient dash equipment, both front doors *usable*.

In your *National* you do not have to worry about what is happening under the hood or beneath the seat. You see here all you need to think of—the steering wheel, levers and instrument board. The rest of the car operates as we build and guarantee it to do.

Convenience, comfort, confidence

UNLESS you have ridden in or driven this new *National* Six you simply can't realize that our claims for ease of riding, graceful performance and simpleness of operation are not over-enthusiastic. If we told you all that owners say of this beautiful car you would think we exaggerated—but *the car is its own proof.*

"You don't have to raise the hood."

With your *National* car you buy confidence in its mechanism. Our fourteen years of manufacturing success warrant your putting your faith in our engineering achievements. We put the right thing in the right place; we give you *performance*, which is *better* than specifications; we give you *results.*

Our reputation and responsibility are built into *every National.* The *National* eliminates worry for *you.*

Buy a *whole* car. Don't buy parts. All the parts in the *National* work harmoniously as a *unit* of service. We sell you demonstrated results and back them up. That's why "you don't have to raise the hood." If you don't know where your nearest *National* dealer is, please write us. Write us anyway for our new booklet before you invest in any car.

National 40

This is our staple car—our highest achievement. Proved superior in tests, including International 500-mile race. Five models, $2750 to $3400, with still further improvements and refinements. Motor 4⅞x6; electric starter and lights; a most luxurious and dependable car, The World's Champion.

National Six

The new Six is beautiful, graceful in design, the most comfortable car you ever rode in—roomy, convenient, noiseless. Motor 3¾x5½; 132-inch wheelbase, electric starter and lights; left side drive, center control; complete in every detail, full equipment, **$2375.**

Write for illustrated catalog.

Plant the TAPE

It's the Scientific Way
Make Vegetable Gardening Easy

Just unwind American Seedtape from spool and plant as directed. Selected seeds, properly spaced inside paper tape and fastened with glue fertilizer, insures a quick, sturdy growth, because the paper attracts moisture to the already fertilized seed. Sprouts much earlier than seeds planted in soil. Proper spacing means no seed wasted—no thinning out. You save time and back-breaking labor.

Send ONE DOLLAR for 50 ft. each of White and Red Radish, Boston and Curly Lettuce, Onion, Spinach, Beet, Turnip, Carrot and Cabbage Seeds. 500 ft. in all. Correct planting instructions in each package. Send the dollar now. NO AGENTS.

Mother Wasn't Worried

"Not at all anxious. Just pinned my faith to that little wire rope and it got us home just lovely."

Nothing like Basline Autowline to get you home when your motor won't. Nothing like it to pull a ditched car into the road or a stalled car to the top of a hill.

Basline Autowline
"The Little Steel Rope With The Big Pull"

makes motoring more certain. About 25 feet of pencil size, tough, flexible Yellow Strand wire rope—a flat coil that goes under a cushion. Ask your supply dealer about it now—before you need it. Sold everywhere. Price, east of Rocky Mountains, $3.95.

FREE—Fine illustrated Autowline circular. Write for it.

Broderick & Bascom Rope Co.
819 N. Second St., St. Louis, Mo. New York Office, 764 Warren St.
Manufacturers of famous Yellow Strand Wire Rope.

BASLINE PATENTED

of a well-known Western industrial magnate who built up a great fortune in manufacture.

Ordinarily one of the shrewdest of men, he fell for the flimsiest schemes when in New York. He became known as the real "mark" for all projects that led in any way to welfare or social uplift. He could be approached by anyone who had a scheme for the "betterment of humanity," and they usually cashed in on it.

This curious difference in judgment and caution among certain rich men at home and abroad is very much like the difference in the attitude of merchants in and out of Wall Street. The moment they step out of familiar environment the perspective seems to become blurred, the vision distorted.

Caution to the Winds in Wall Street

TAKE the case of a prosperous merchant either uptown in New York or on the main street of any other place. He lays in a stock of goods according to a definite program based on a careful diagnosis of crops, climate, and the general trade outlook.

He is satisfied, in the main, with a profit of 10 per cent.

But what happens when that merchant goes south of Vesey Street in New York, across the frontier into the domain of Wall Street? He has stepped from the legitimate channels of merchandising into what appears to him to be the magic realm of speculation. He goes into an atmosphere highly credulous—into what he thinks is the home of quick and easy money. He looks for a 200 per cent profit and he wants it overnight. This is why he loses at the speculative game, or at any of the kindred propositions "to get *richer*" quick.

If he went into Wall Street and practiced the same investigation, caution, and discrimination that he used in his business, he might get his usual 10 per cent profit. But he takes on a different point of view, and it is his undoing.

For that matter the rich can stay at home and fall for the most gullible of games. Cassie Chadwick proved this when, on the strength of a bundle of old papers labeled "securities" and a note bearing the forged signature of Andrew Carnegie, she was able to borrow immense sums of money and flourish as a social personage until her fraud was discovered.

The people who loaned her hundreds of thousands of dollars did not take the trouble to open the spurious package or get in touch with Mr. Carnegie. Yet these were precautions that the simplest and poorest mind would have ordinarily taken.

It Pays to Investigate

THE rich are often fleeced because the very qualities that are supposed to have made them independent also make them marks for the adventurer.

They are either avaricious or ignorant of the fundamentals of human nature. What seems to be rare judgment in some of them has simply been master luck. Yet they become obsessed with the idea that it is native, and as a result they fall before a superior intelligence.

The whole lesson conveyed by this revelation of the "easy" rich may well go home to every man and woman who invests money or who expects to invest some day.

It means that with the slightest caution and common sense there would be much less trimming.

It pays to investigate.

Conserve the "Ol' Swimmin' Hole"

By C. J. MANNING

IN the minds of men who take their poetry seriously there is a growing conviction that poets of America soon will be forced to form an association for the conservation of poetic topics.

Need for such an association is pressing just now. The "Ol' Swimmin' Hole" is threatened with loss of franchise as a subject of modern verse. In the "home-folks" districts there has been a very short crop of "ol' swimmin' holes" in recent seasons.

Campaigns to bring about the exchange of Christmas gifts the next day after the feast have developed the fact that books carrying standard "swimmin' hole" lyrics no longer are considered desirable gifts for the small town lad.

At one time the "ol' swimmin' hole" was a pet industry of the "home folks," fostered, it is now charged, to lure purling stanzas from the literary people and a consequent increase in patronage of city boarders. But there has come to the small town the Y. M. C. A. pool and to the country districts the natatorium of the consolidated school, so it was natural that the muddy-bottomed creek and its secretive willows should be abandoned.

There is little in the cement floored Y. M. C. A. pool or the consolidated school natatorium that lends itself to poetry with a heart interest. Lads clad in bathing trunks lack the heroic element that went with the lithe, unclad forms one found in the sunlit verses of a Riley. Locker rooms provide a burglar-proof place for clothing of the swimmer.

Hence, muscles of the jaw are not developed in the solution of knots found in the swimmer's unmentionables. Also, the custom of proceeding homeward in the hiding recesses of a barrel naturally finds a place in folklore of the early Americans.

Store towels assume the swabbing duty performed by the homemade shirt in the "ol' swimmin' hole" days.

YET no poet's voice has been raised in protest!

It is recorded that a prosaic governor of Lebanon built a big wall about the cedars, long famous in verse, to preserve them for unborn ages, possibly for unborn rimesters.

The precedent is a worthy one—one that might even attract the attention of the literary man who lives at the White House, if a campaign to conserve the "ol' swimmin' hole" were to take form under the direction of the Rileys of America.

This Is The Spark Plug With Which All Overland Cars Are Equipped At The Factory

The "Champion O" was designed especially for this season's Overlands. For Overlands of 1910, '11, '12 and '13, ask for the "Champion Long".

In designing these spark plugs, we were required to take into account every feature of the Overland motor.

Then the factory experts tested, tested and tested, until absolutely sure that **"Champions"** gave the highest possible efficiency to their motors.

75% of American made cars, including the Ford, Overland, Studebaker, Maxwell and Metz, are being equipped at their factories with specially designed **Champion Spark Plugs.**

The high quality of these plugs comes not only from the use of superior materials, but from our own special manufacturing processes.

"Champions" are oversize. They are built to stand the grief.

Ask for the special ½ inch Champion X for your Ford car. It's 75c. The Overland plug sells at $1.

Consult with your dealer on this important subject. He will advise you as to the **"Champion"** you should use for your Motor Car, Motor Truck, Motorcycle, Motor Boat, Aeroplane or Stationary Motor.

(Licensed under the Canfield Patent No. 612,701, October 18, 1898)

The Shepherd Man

(*Concluded from page 11*)

and I don't believe he'll be much of a load for Your angels to carry if it isn't too far to heaven. Won't he be surprised to get in? Amen."

THERE was a long silence. The woman and the young man were crying softly. Then we all got up from our knees. The little old man was asleep with a smile on his lips—the nicest smile, just as if the angels had whispered something in his ears and he wanted to leave us some of it.

The Good Shepherd had one more sheep in His fold.

Praying isn't half as terrifying if you talk natural.

But as the boy put me on his horse he said:

"Much obliged. I know pap was easier. I never heard no preacher pray better. If I could find the little lamb we lost, I'd give it to you."

"Why, father found a lamb yesterday."

"I'm glad," he said, and that's all.

It had stopped raining by the time we reached our cabin. The door flew open. Father came out and helped me off the horse.

"The angels brought us a little boy baby while you were gone."

"Goody, goody! Oh, I'm glad—glad! My, but the angels have been busy! They carried the lamb's mamma and this boy's father to heaven and came back with the baby. I wonder how, many-sized baskets God has got? Can't I see them? Mamma I mean."

"Not to-night. It's too late. Dear, you're wringing wet."

"I'll see Susannah before I take off my dress."

SOME one had tenderly covered her by the fireplace. She was sleeping too sound to awaken. Her little curly head and soft wool and helpless look gave me the queerest kind of sad, glad feeling and I just couldn't help saying—I guess 'cause my own mamma was spared:

"Poor little Susannah Wesley! The roses will bloom again. The little brook in the wood back of the mill will dance again; the birds will come again—but your mamma won't!"

Barrett Specification Roofs

St. James Building, Jacksonville, Fla. A. J. Klutho, Architect. Roofers, Logan Concrete & Eng. Co., Jacksonville

For Large Business Buildings

THE St. James Building, Jacksonville, Fla., is built on modern lines. And like almost all first class modern buildings, its 60,000 square feet of roof are covered with a Barrett Specification Roof.

The general acceptance of The Barrett Specification among first class engineers and architects is a highly significant development in the roofing trade. It is a movement which began with the leaders of the profession, who recognized its technical soundness. Accordingly, the inclusion of The Barrett Specification in full in building specifications is rapidly becoming a universal custom.

The Barrett Specification has the advantage of furnishing a uniform and fair basis for competitive bids, together with satisfactory methods for determining the quality of the workmanship and materials on the job. Our own experts are usually available to inspect the contractor's work and certify whether or not the Specification has been strictly complied with.

A Barrett Specification Roof will usually last twenty or more years without a cent's worth of repairs. It takes the base rate of insurance. It gives the most service per dollar, its unit cost being less than a quarter of a cent per foot per year of service.

Booklets on request.

Special Note We advise incorporating in plans the full wording of The Barrett Specification, in order to avoid any misunderstanding. If any abbreviated form is desired, however, the following is suggested:

ROOFING—Shall be a Barrett Specification Roof laid as directed in printed Specification, revised August 15, 1911, using the materials specified and subject to the inspection requirement.

At some time in every business that has or desires to have a national appeal, there is a place for *straight-to-the-point* advertising; in other words, for *classified* advertising.

Classified advertising may be used to distribute your catalogs, to secure salesmen or representatives, to build up a trade by mail, or to sell second-hand or shopworn articles.

Classified advertising becomes most effective when only reliable advertisers are represented. Therefore, Collier's investigates carefully and in so far as possible determines an advertiser's status before accepting him.

Classified advertising in Collier's is especially productive. The net circulation of 712,000 for only $3.00 a line, can be equaled in few magazines. The Classified Page is superbly displayed and usually opposite reading matter.

A proof of this page and complete information on rates, circulation, etc., gladly furnished on request.

Let us suggest a way in which classified advertising can "put its shoulder" to your wheel.

STANWELD RIMS

A Rim to Remember

STANWELD Demountable Rim Number Sixty is a rim to remember.

If you've ever used it, you can't forget the ease with which you changed casings, and repaired tubes.

The Number Sixty removes the hardest labor of tire-changing and tube-repairing. It eliminates the exasperating exertion of separating the casing from the sides of the rim.

The side-rings of the Number Sixty are endless, smooth, and clean. They prevent rim-cutting of straight-side tires as well as of clincher tires.

The Number Sixty comes off the wheel quick and easy. Two turns of six clamps do the work. Rust and dirt don't hinder the operation.

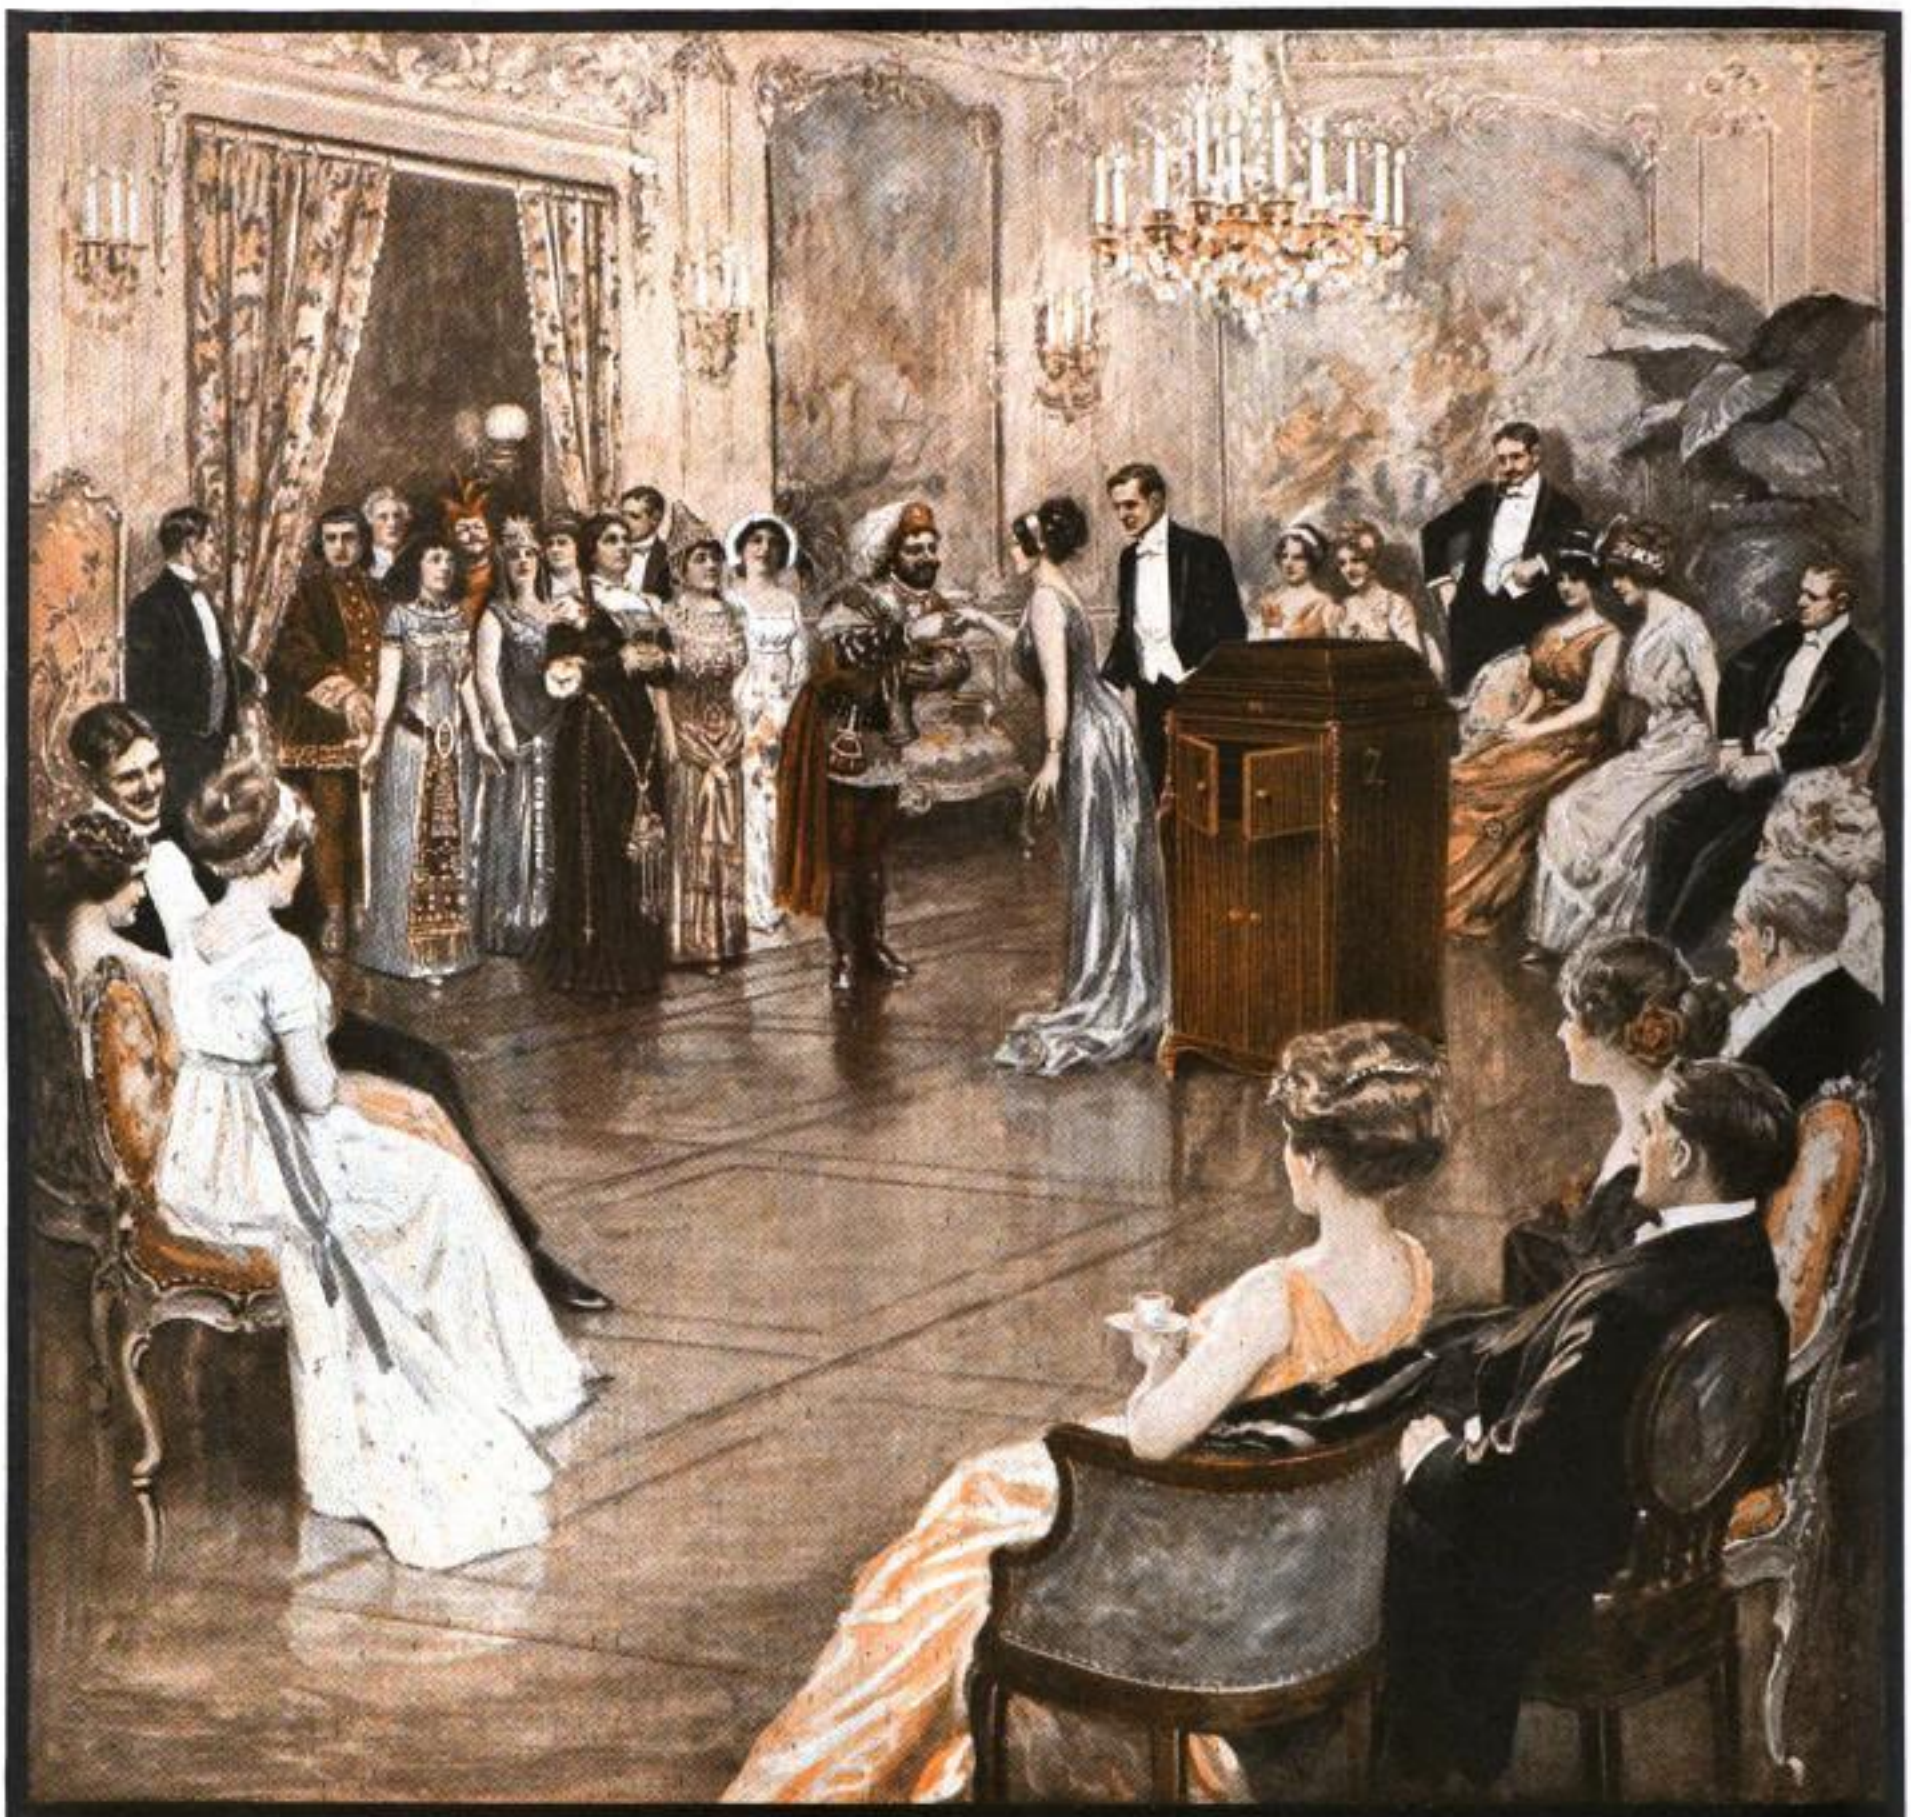
And when the rim is off the wheel, you can repair the inner tube without ripping, tearing, or pulling the casing off the rim. Just unlock a little toggle-joint with a screw-driver, and pull out the inner band. The side-rings remain on the casing.

Driving to a muddy roadside for an hour, or a half-hour to make tire-changes, is unnecessary—no swearing or sweating with Stanweld Rims.

If you buy a new car, you should get Stanweld Number Sixty Rim-Equipment without extra cost. Or, you can have your old car equipped with Stanweld Number Sixty Rims for a very reasonable sum. Ask for them, and take no chances of not getting what you ask for. The shrewd buyer always investigates first, and sees that he gets what he asks for. Begin your investigation today by writing for our booklet.

The Standard Welding Company

Pioneers and World's Largest Producers of Rims for Motor-Driven Vehicles



Main Office and Factory CLEVELAND

Distributors in principal Cities

The leading makes of pneumatic tires are guaranteed only when applied to rims bearing one of the accompanying inspection marks. You'll find these marks on Stanweld Rims.

Punctures 90% Less

Investigations prove that with "Nobby Tread" Tires punctures are 90% less than with the average tire.

The big, thick "nobs" on "Nobby Tread" Tires stand out so far from the shoe that nails, glass, sharp stones, etc., hardly ever reach the shoe.

Study the "nobs," their size, their thickness, and the way they are placed, and you will understand why.

And remember this—you have got to wear out these big, thick, tough "nobs" before you even start to wear out the extra strong tire underneath—that is one reason why experts call "Nobby Treads"

Two Tires in One

The original wear-resisting quality, the quantity of rubber, the methods of construction—all have been rigidly maintained in "Nobby Tread" Tires, and maintained regardless of cost and regardless of price competition.

"Nobby Tread" Tires are the largest selling high-grade anti-skid tires in the world, and they are REAL anti-skid Tires.

Based upon their remarkable mileage records

"Nobby Tread" Tires

are now sold under our regular warranty—perfect workmanship and material—BUT any adjustments are on a basis of

5,000 Miles

Thousands upon thousands of veteran motorists now use "Nobby Tread" Tires on their front and rear wheels through all seasons, because they are such phenomenal mileage tires and real anti-skid tires.

The President in Practice

By Peter Clark Macfarlane

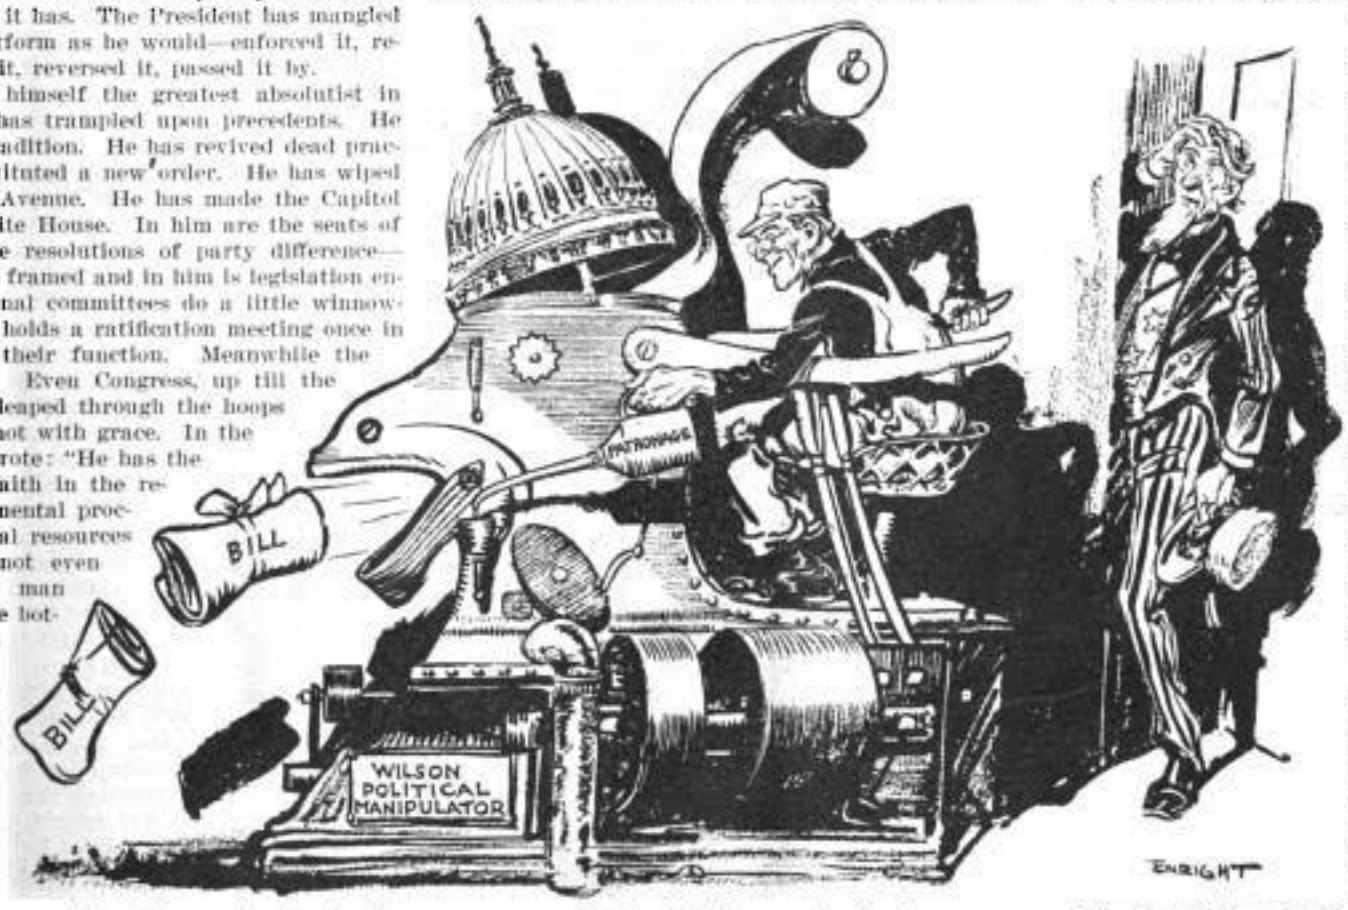
ILLUSTRATED BY WALTER J. ENRIGHT

ON THE day these lines are written, Woodrow Wilson has been President of the United States for one year and fourteen days. The remarkable results are known. The question is, How did he do it?

In the "Metropolitan Magazine" for October, 1912, the writer drew toward conclusion an article entitled "Understanding Woodrow Wilson," written eight months before his inauguration, with these words:

". . . his personal platform becomes of vast importance, because, if elected, that is the platform which he will seek to build into the statutes of the United States."

His personal platform! Has the year justified that sentence? I think it has. The President has mangled the Baltimore platform as he would—enforced it, rejected it, ignored it, reversed it, passed it by.



He has proved himself the greatest absolutist in our history. He has trampled upon precedents. He has broken with tradition. He has revived dead practices. He has instituted a new order. He has wiped out Pennsylvania Avenue. He has made the Capitol a wing of the White House. In him are the seats of power—in him the resolutions of party difference—in him are policies framed and in him is legislation enacted. Congressional committees do a little winnowing, and Congress holds a ratification meeting once in a while—that is their function. Meanwhile the country applauds. Even Congress, up till the tolls trouble, has leaped through the hoops with precision if not with grace. In the earlier article I wrote: "He has the most undaunted faith in the results of his own mental processes. His personal resources have apparently not even been taxed — no man knows whether the bottom of them lies just under his present keel, or fathoms deeper"; and in this connection spoke of "the spell of the cocksureness of Woodrow Wilson."

For a year the spell of that cocksureness has been upon the nation, and yet, when he was reading his tolls message, it appeared to depart. At first he seemed to have all his old accomplished ease of bearing. He stepped lightly to the reading desk, affable smiles wrinkling his features as he reached up and shook hands with the Speaker and the Vice President, then turned to face the front and paused. His hair had grayed perceptibly since the first time he had stood there, and deeper shadows were chiseled in his cheeks; but his voice as he began to read, one would have said, was entirely unchanged; there was not a break nor a hesitant word, yet toward the end a strange note entered—a note of pleading that was almost pathos, noticeable particularly as he said: "I ask this of you in support of the foreign policy of the Administration."

"*The foreign policy of the Administration!*" What a sad thing at this moment to many appears the foreign policy of the Administration!—trembling before Japan—obsequious before England—helpless in front of Mexico! I say *appears*, for so far it is only appearance—a single ray of sunlight may lift the shadow of doubt and vindicate that policy triumphantly—but for the moment it lies under grave suspicion in many minds.

Yes, I am sure that the cocksureness was wanting at that moment when the man stood just beneath the Speaker and the Vice President and talked out over the heads of Senators and Representatives to their masters and his, the people.

But why should the spell break? Was it because of fear—because of something awesome to his soul in those secrets of the State Department which are guarded so jealously from the ken of Congress? Or was it rather because Woodrow Wilson is peculiarly a people's President, who, as he frankly says, derives all his power from a correct interpretation of the popular wish, and was he not now, for the first time, going into action without his commons at his back?

Despite all differences, the President remains the absolute master of his party. The country has never seen the equal of his political-legislative machine — fashioned marvelously and efficiently from the ancient, negative, and generally ineffective Democratic party

The Mystery of His Personality

THE mind of the people on the tolls repeal is in part favorable, in part confused, and in part a respectful withholding of judgment. Did the President know it, and was his self-confidence therefore gone? I cannot pretend to know, but it seemed that the humility of his language was the humility of his heart, a correspondence, by the way, not always to be observed in his utterances. But even if the spell did go away and a mere contest of strength result, it will return again with the added prestige of fresh victory. The sky will clear. The President will get his—and the recalcitrants will get *theirs*, for at the moment there can be no denying that our Government is personally conducted.

But still the question recurs, How does he do it? If we seek the answer in the man we find him complex and elusive. He changes—he moves—he shows another side—or turns completely about.

Washington has the nearest look at the President and the best set of standards by which to judge him. Now and then Washington thinks it knows him, and now and then concludes that it does not. To quote my former article for the last time: "It is highly important that the American people should not deceive themselves regarding Woodrow Wilson. The man is less transparent than he seems."

This seeming transparency is the beginning of the difficulty. The President in his first impression is a cordial, unaffected, high-bred gentleman, true to the traditions of the very finest American type. We observe that he bears himself simply, and that his family does the same, setting Washington and the nation an example in sensible and sober living that it is exceeding well for both to learn. We observe with satisfaction that he has taught the idle rich of the capital city the lesson of their unimportance so succinctly that all succeeding Administrations must be grateful. But to assume that the man's personality is as simple as his manner is to deceive ourselves. He is not so easily computed.

One Washington correspondent, who has had many years in the national capital and a long perspective of acquaintance with the President, and who believes in him devotedly, confessed to me the other day: "I am completely baffled. I do not fathom him at all."

The intimate friends of President Wilson laugh at the idea that he is baffling, but they may spare their cachinnations.

This mystery of his personality grows—grows until it has greatly embarrassed the President himself. Only recently he was trying to help out with an attempt at self-disclosure. The result was interesting but unimportant. He either did not try very hard or did not succeed very well.

He told the Press Club that he had veins, and with blood in them; a breast and with fire in it; and that in other respects he was quite human—all of which would have been quite unnecessary had it not been necessary. Because it was necessary you may set it down that there is some foundation for the popular impression which no confession to a press club can undo.

The simple fact is that the President is not only a many-sided man but a man of contradictory qualities. The Democratic party before has had its Hills and Gormans, its Jacksons, Jeffersons, Tildens, and Clevelands; its machine builders, its spoilsmen, its dictators, and its lofty patriots; but never before has it seen all these characteristics combined to such superlative degree in a single man. When these talents are rolled into one individual we may look out for differences not easy to be reconciled, and we shall find them aplenty.

Digitized by Google

The Pieman—some of whose wares rather unaccountably have gone sailing over the shoulders of Wilson men to non-Wilson men behind

But we shall be better prepared for the complexities of the Presidential personality if we turn aside for a while and watch the man in action. Performance has been the virtue claimed for this Administration. The country generally is greatly pleased with that performance—both in Congress and in the departments—and more than pleased with the chief performer. But when we study the method by which performance has resulted we come upon several things which give the forward-looking mind a sudden stop.

On and Off the Party Platform

WE ARE struck first by the President's rapidly developing faculty for self-contradiction. He had revealed himself to the country as a man who thinks logically and not by haphazard. The progress of his thought from his first public utterance as a very young man in college to his inaugural address had been singularly consistent. Yet in the first year of his Presidency he has reversed himself so frequently and with such simple naïveté that we might almost call him our *reversible President*.

In his campaign he was for free tolls for our coastwise ships; in office he urges their repeal. He tells certain ladies that he cannot further even slightly the cause of equal suffrage because the platform is silent upon it! yet within a few weeks backward or forward of that possibly disingenuous utterance he recommends Presidential primaries upon which the platform is silent, an Alaskan railroad upon which the document is also silent, and an administrative trade commission upon which the platform is not only silent, but against which as an article of the Progressive program he inveighed as a candidate with what seem the most bitter and unfair sentences he has ever uttered.

But the President has reversed himself in matters of personal policy as well. He said that the door of the executive office should be always open. It is habitually closed, and the hardest to get open of any President's door in the memory of Washington. He said that pitiless publicity should be the rule. There never was a President who so shrouded his plans in mystery, never an administration which so carefully guarded its workings from the public view. How much he tells his Cabinet members is not of record. How little he tells the Senators of, for instance, the Committee on Foreign Relations, is sometimes conspicuously evident.

The other day Senator Fall attacked the President's Mexican policy. The Senator is not a man whose own utterances carry any great weight upon this subject, but his array of facts was astounding. The defense of the Administration fell to Shively of Indiana, chairman of the Senate Committee on Foreign Relations, and a man who, while having no great length of perspective in the field of his committee, is generally respected. But his defense was lamentably and obviously weak. The reason, whispered about in cloakrooms and corridors, was that he had no information; the Democratic chairman of the Senate Committee on Foreign Relations was not in the confidence of his own administration.

His Foreign Policy!

FOR a year the country has been disturbed by the vague menace of threats or demands from Japan. There are men in the Senate and on the Committee on Foreign Relations who have either supported or carefully avoided embarrassing the President in his foreign policy, whose long years of service have proven both their patriotism and their wisdom in such matters, but who have never been accorded the slightest hint as to what it is that Japan asks with such embarrassing insistency.

Such furtive secrecy from an administration which continually proclaims that it has nothing to conceal is in itself a ground for wonder and confusion.

Of course, most of these reversals, big and little, are perfectly explainable on natural if not always on high grounds, but so many changes of front are nevertheless a bit disillusioning. They seem to indicate that, as a campaigner, our President had a certain capacity to woozle, to talk bravely of that whereof he had thought but little nor thought that little long.

But perhaps the most striking characteristic of the President in action, and to some the most surprising, is his vigorous partisanship, which is as deliberate and intense as any of which American history speaks.

Time had been when to be regular was to be right. Within short memory the act of a Republican in voting for a Democratic measure, or of a Democrat in voting for a Republican measure, had been regarded as treason; but for twenty years in the country and for ten years in Congress had been growing a nonpartisan spirit. Men forgot to ask what party fathered what bill. They voted on their judgment and the folks at home approved. But Woodrow Wilson has checked and douched that spirit of nonpartisanship. He has lifted *party* regularity to a place that is sublime. He has taught his party, and they have all but learned the lesson, that to be irregular is to be unpatriotic. He has put the party caucus upon a plane of dignity it never had before. *Vox cauci vox Dei*, says Wilson.

Sacking the Progressives

NOR, in this connection, is there anything more laughable than the disillusionment which has overtaken the Progressive contingent in Congress. The Progressives came up to this Congress greatly admiring the President, and quite a number of them believing in him rather sympathetically as a prophet of their own order. They have been bewildered, saddened, shocked—if you can shock a Member of Congress—by the intensity of the President's partisanship, by his resolute determination that nobody shall have credit of his works but the Democratic party, and very least of all the Progressive party.

When the money bill was passed, the Executive, in a moment of almost exuberant happiness, expressed gratification that Republican votes had been cast for it, but said nothing of the fact that Progressive votes had also been recorded in its behalf, although it was but a minority vote of the Republicans and a majority vote of the Progressives which had supported his bill. At times the attitude of the President and his Administration toward the Republican party seems to be tolerant, a sort of sympathy for the sick; but there is no sympathy for the Progressives. They are distrusted and perhaps feared. They find themselves avoided, shunted, blanked—not personally, you understand, but politically.

The sole function which the Progressive party is permitted to serve in the present Congress is that of a spur to prick the side of Democratic intent, and as a feeder of good ideas—Alaskan railroads, Presidential primaries, interstate trade commissions, and the like.

However, let me hasten to forestall the first bad impression by giving assurance that the President is not narrowly and pettily partisan, but patriotically and sublimely partisan. His partisanship springs not from blind prejudice, but from carefully reasoned statesmanship.

The President has long admired the English system of cabinet government with its rigid party responsibility.

Woodrow Wilson believes party irresponsibility to be one great weakness of our method. He cannot reconstruct our Constitution and give his Cabinet seats in Congress, but he can draw the lines of party program very sharply and distinctly, and that is what he has done. Instead of shirking or avoiding responsibility, either for himself or for his party, he courts it for both.

Nor is it the President's mistake if people have misunderstood his intentions in this regard. He has been telling them all his life what he would do. The same may be said of those surprised and pained Progressives. Surely no one of them has other than himself to blame for supposing Woodrow Wilson to have been a prophet of his order. That gentleman's speeches, his writings, his legislative proposals, the reaction of his mind upon every novel political idea, had all made evident that he was a true Jeffersonian. His apparent progressivism lay first, in the fact that as a Jeffersonian he was so sincere in his faith, so unmuddled in his idealism, that in these days of, until him, a visionless Democracy his position appealed as something new instead of the sublimation of something old which it was; and second, in that a few times in his career he had adopted a progressive remedy where the Jeffersonian principle failed to work. But this was all.

He sits in the White House to-day an obviously conservative mind.

His whole practice demonstrates that until very recently he has held loyally to the heritage of political ideas that came down to him from his Jeffersonian fathers. The first frame in which he sets an idea for inspection is inevitably a conservative one, and the first remedy for a defect which occurs to him will be an old-time remedy. His progressivism consists in that, when the old-time remedy fails, he will sometimes dare the new.

An "Adopter" of Reforms

THIS will explain why for years he rejected the initiative and the referendum, why he slapped the minimum wage and assaulted the Federal administrative commission idea, both as embodied in the Progressive platform. To him they were either non-Jeffersonian or non-Republican; therefore they must fight hard to gain a place in his political scheme.

But at last they won that place because the President is a practical man, able under stress to put aside his preconceptions and sit down as a little child before his facts. He saw the initiative and the referendum do things he could not get done otherwise, and he took them in; then turned about and proved them Jeffersonian or perhaps pre-Jeffersonian, basing them on the Virginia Bill of Rights with as beautiful an argument for their right to a place in the governmental system as anyone has made.

That was why he adopted the trade-commission idea which he had scorned so bitterly. He saw it at work in the Interstate Commerce Commission. And he had before him the glaring failures of court-administered law to deal with the Trust Question as in the Standard Oil and Tobacco cases. Therefore again the hesitating but ultimate adoption of the idea; and therefore, once more, the proof that the President is first a Jeffersonian and second, and only grudgingly, a progressive.

This is further illustrated by the unique fact that the President has never yet taken the recall into his program. To the logical progressive the initiative and referendum are twinned at birth and the recall is a child of the same mother. But Woodrow Wilson has never seen the need for the recall. It has not yet battled its way into his system. Let some day a powerful group of Senators set themselves to block the Wilson will because their six-year term will outlast his own four-year service, and you can look for the President to be suddenly converted to the idea of still another "gun behind the door," and the name of that gun will be the recall.

Letters of Marque and Reprisal

HOWEVER, you are not to suppose that the President could even to this extent turn his back upon the principles of Jefferson without at least adjusting the matter in his own mind and making his personal peace with the spirit of the great Democrat. Hear him on pages 283 and 284 of "The New Freedom" write himself letters of marque and reprisal for the capture and conversion of these and other such progressive planks as to a newly Jeffersonian may seem desirable timber. He refers to the principles of the sage of Monticello with the remark that he had held that "the best government consisted in as little governing as possible," and adds: "But I feel confident that if Jefferson were living in our day, he would see what we see . . . and that, therefore, *law in our day must come to the assistance of the individual*. . . . Without watchful interference, the resolute interference of the Government, there can be no fair play between individuals and such

Digitized by Google

powerful institutions as the trusts. Freedom to-day is something more than being let alone."

There is the first, so far as I have come upon, clear utterance of the new principle by President Wilson. He traveled far to come to that, and perhaps did not see at the time all that it would permit him to do. Its sustaining power is great, however. It is *magna charta* enough for the adoption of the whole progressive point of view by any Jeffersonian who will accept the new principle of law for the individual as a legitimate posthumous child of Jefferson. In consequence, some of the President's reversals may be regarded as advances instead.

Under Which Flag?

HOWEVER, there are some Democrats, and some progressive Democrats, in the present Congress who deny the legitimacy of this posthumous child. They hold that this is a complete controversion of the Jeffersonian principle. They see in the Presidential plan for a trade commission the entry of an entirely new and ultimately formidable instrument of government, capable of exerting vast and oppressive power—a thing not only un-Jeffersonian but anti-Jeffersonian—and they begin to cry "Under which flag, Rezonian?" and for themselves unhesitatingly lift the virgin standard of the great apostle of the free hand and the open field.

But—and here enters another anomalous element of the situation—at the very time when some of the young Democrats and a maturer one or two are rehearsing speeches and marshaling arguments for assault upon the President because he is progressive with too large a P, these very same progressive Democrats are also critical because of what they regard as the extreme conservatism of the President in other directions. They feel that his trust program, aside from such, to them, dangerous possibilities as lurk in the trade-commission idea, is almost innocuous. Some of them think the currency bill did not go far enough, and regard the general acclaim with which the bankers now greet the law as highly suspicious. Besides, they think that there should have been a banking bill also.

True, this feeling waxes and wanes with alternating weeks, but it is always present and keeps alive the suspicion that there is something irreconcilable between the reactionary and the progressive members of the Democratic party. A further evidence of this conservative environment of the President's mind is revealed in the ease with which he establishes working relations with the conservative and standpat members of his party. That is still another one of the anomalous features of the present situation. The happy crowd on the Democratic side of the House, until the tolls fight arose, was the conservative crowd. The restless, dissatisfied, suspicious group was to be found in the list of original Wilson men, the so-called progressive Democrats.

Wheels and a Man to Turn Them

THERE is, however, another reason for a kind of respect that grows in the President's mind for the reactionary. To an Executive engaged as he is in easing legislation through Congress, it is highly important to know what a legislator's position is and that he will stay in that position—stand hitched, as it were. The President has found that, though a standpat member of either House may be in opposition to the Administration's program, yet, when his word is given that he will do a thing, he is pretty sure to do it, because he is a man of fewer ideas and of more fixed habits of thought.

On the other hand, the President has been annoyed at times to discover that when a progressive Democrat assumed a position, he might happen to get a new idea or a new view overnight and turn up disconcertingly in quite another category from that in which he had placed himself. As a result of *this* the President has sometimes found himself liking the progressives with his head and loving the conservatives with his heart.

But not only is President Wilson a strong party man; he is a thorough organization man. This brings us to his most remarkable achievement thus far. It is not the tariff bill, nor the currency bill, nor any other piece of legislation, but that thing by means of which he enacts legislation—his political machine. The country has never seen the equal of this machine. Fashioned marvelously from the ancient, negative, irresponsible, and generally ineffective Democratic party, it performs with such efficiency that the Cannons and the Aldrichs are gasping with surprise and beaming frank admiration. It coordinates like the parts of a watch; it moves with the precision of a German army: it wheels, charges—yes, and faces about—all at the word of command.

And the President daily, as he builds his administration, is building this organization. He has some very able men in his cabinet, and he is a good administrator. He dabbles little in the affairs of the departments. He expects his department heads to bring to his attention only what requires it—the innovations, the interdepartmental issues, the matters of policy and—above all, the questions of politics and of patronage!—for out of these the President constructs the machine. Does it too—bless our innocent hearts and his!—with the very highest intent. For you see our cloister-bred Executive is, after all, of a very, very practical sort. He cons the situation thus upon his fingers: Of what use is a party out of power? And of what use in power if it cannot perform? Wheels, wheels, wheels are, therefore, necessary and a man to turn them.

Democratic servitors shall be those wheels and President Wilson shall be that man.

Pie and Party

INDEED, he believes in political organization as much as Murphy or Croker ever did—but with a difference: hear him in an extract from a renomination speech:

I believe that party success is impossible without organization; but I make this distinction between organization and the machine—organization is a systematic cooperation of men for a common purpose, while the machine is a systematic cooperation of men for a private purpose.

Now remember, as you watch this machine a-building, that it is by the sincere intent of the builder a systematic cooperation of men for a *common* purpose.

But, however high the purpose, the sordid fact remains that two of the chief elements in machine building are the hope of power and the hope of pie. In this administration neither is being neglected.

Pie? The patronage? Our President deal out post offices and land offices and marshalships to make strong a political organization? Exactly!

But do I really mean that the President concerns himself personally about the sordid details of patronage? I do. He does. It *may* irk him. It may depress him to feel that according to his theory the defects of our Constitution leave him no other way; but he takes up the burden. Deliberately, conscientiously and with exceeding skill he devotes an important part of his energies to the extension of his political organization until it reaches the last township in the last county.

Now, of course, the Executive's friends will assure you that he always makes his appeal upon the highest possible ground. That I am sure is true. But, alas, the highest appeal you can make to some men is that same hope of power. To others, it is that same hope of pie.

But, granted his party and his theories, and—what would you?

His leadership must lead—according to his theory—his party must be controlled. It is human, very human. It is hungry—very hungry. He cannot make it over. He cannot undo the tradition of Andrew Jackson, the second great Democrat and the first great spoilsman.

He cannot redeem his party from its inherited predilections. He has merely a choice between tilting at windmills and holding the party to this accepted program of achievement.

It would be ridiculous to say that the President does not also aim at efficiency in office. Sufficient conspicuous examples and results come to mind to prove this amply.

But it would be equally ridiculous to say that in many other notable instances efficiency has not been greatly discounted.

The Open Door

The Machine a-Building

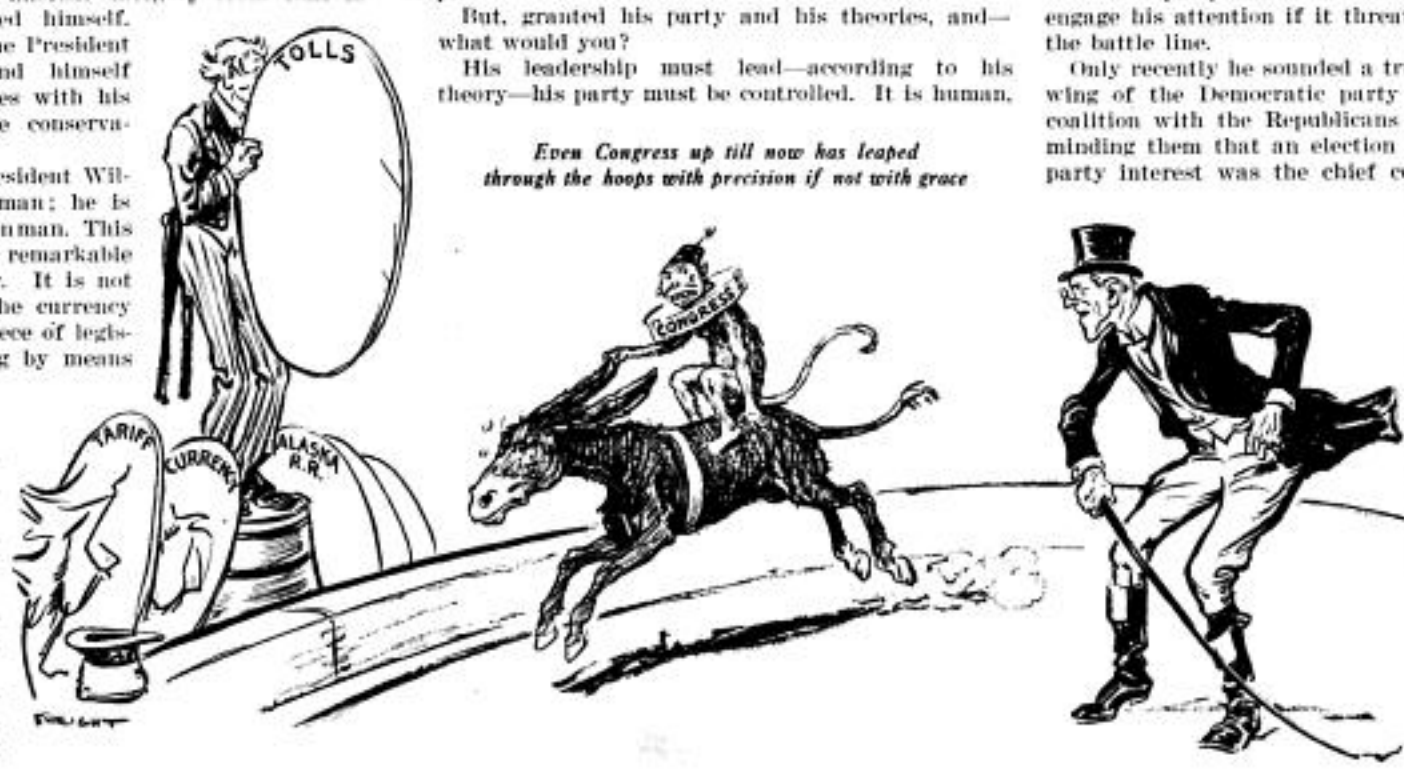
DO YOU suppose that a high-minded man like our President was not shocked in the soul of him at turning out of the diplomatic service men who had patiently earned promotion and developed fitness through twenty years of varying foreign service, and turning in a lot of men whose sole experience in diplomacy had been as the ambassadors from their precincts to a few Democratic conventions?

Or do you give Mr. Bryan credit for these malappointments? The proposals may have been Mr. Bryan's. The concurrence must have been the President's. I think he would cheerfully assume the responsibility and perhaps say that by his theory of party rule and a party machine he saw himself compelled to choose between a greater and a lesser good: between the building up of a party machine to serve the nation at home and the muddling of our diplomatic relations with a lot of second-class powers—and, hesitatingly or unhesitatingly, he had chosen the, to him, greater good.

Nor have the offices been dealt out solely as rewards to the Wilson wing of the party. The Administration is far more practical than that. Original Wilson men—loyal Wilson men to this very moment—tell of seeing the patronage gradually taken away from them and turned over to the practical politicians of the organization, the men who fought Wilson, the men who are regarded as not progressive and not sound, and in some instances not even in good odor.

These loyal men are greatly dismayed at such a state of affairs, but still they do not blame the President greatly. They feel that he is as true as ever. But they suspect that he is being deceived.

Yet the explanation is simple.



The machine is building. The Administration knows it can count on the loyalty of a bred-in-the-bone Wilson man as a matter of principle. It does not have to woo him with patronage.

A Trumpet Blast for Wanderers

THE President as a party leader scans with careful eye the smallest units of his organization. No party rift is too far away or too small to engage his attention if it threatens the solid front of the battle line.

Only recently he sounded a trumpet blast to recall a wing of the Democratic party in Tennessee from a coalition with the Republicans on a liquor issue, reminding them that an election was coming when the party interest was the chief consideration. But the great man also understands the advantage of driving at times with a very loose rein. There is little doubt that the President has been tolerably careful that no boss should gain assistance from the Administration for the accomplishment of his private and selfish ends; but neither is there much evidence that he will risk injuring the efficiency of his machine by turning aside to pull the nose of any boss. (Continued on page 19)

Even Congress up till now has leaped through the hoops with precision if not with grace

By Frank Leon Smith

ILLUSTRATED BY ARTHUR WILLIAM BROWN

THE old clock in the belfry was striking an eight of the p. m. variety. The hour is worthy of consideration.

About this time countless love stories are set to conquer the long winter evening. About this time the bottom of the curtain is illuminated by the incandescent groove, and the musicians tease "Hearts and Flowers" out of their instruments. About this time the vigil behind the blinds is ended, and the young maid in the wonderful gown of soft blue stuff and the hair done in a new way rushes to the head of the hall stairs, waits tremulously until the nervous young man with the pound of chocolates in his side pocket rings the doorbell, then whispers hoarsely: "Ma, you go to the door." It is the hour of pleased expectancy.

Conrad Durgin transferred his weight, via a strong forefinger, to the fifth button from the right in the vestibule, whistling gayly as he listened to the faint sound of a bell stung into action far above. No response.

"She's out," he said to himself. "Confound it, nobody is ever in when I call," and again he pushed the button, this time with the righteous anger of one foiled in his attempt to pay a visit.

With a staccato clicking the door sprang open, and Con bounded in. The first staircase he ascended on the run, the second somewhat slower, and on the third he adopted a pace better suited to the stern requirements of the task.

A BIT about Con as he climbs. He was an ordinary young man in appearance, like a cousin, an innocent bystander, or a cigar salesman. He was good-looking—from a man's point of view; those of the opposite sex said that he grinned too much and that his chin was too prominent. Con was a comic artist. His work appeared daily in the "Evening Chronicle," and its popularity was evidenced by the fact that the average reader of the paper turned to the feature page and laughed with him before examining the news headlines. The strain of being funny—professionally—once every day had not told on him. Although his brother humorists were likely to be sad-faced, irritable, and pessimistic, he was—almost always—as jolly and care free as a teamster. Observe a teamster some time. Sartorially, Con was a minute or two ahead of fashion. As soon as a garment attained vogue he was ready to discard it.

Panting loudly, lifting his feet with exaggerated effort, planting them with unnecessary energy, and heaving himself along with both hands on the banister rail, Con reached the fifth floor. A door opened and a young lady stepped out on the landing. It was his little jest to ignore her and to continue on up the stairs to the roof, as though he had lost count of the floors. The young lady laughed softly, withdrew from the landing, and closed and locked the door. Con clattered down in a hurry and tried the knob.

"Wot, oh, Kate!" he called. "Hawl up the port cully and lemme in."

"I think not," came the calm voice from within; "I'm rather busy to-night. Run away and sell your papers, Cornelius."

"Don't call me Cornelius—my name is Con. Lemme in or I'll borry a pick from your neighbor and carve my initials in your door."

"Oh, well," she said with a tremendous sigh, and turned the key in the lock.

Con entered.

"Where's the chains?" he demanded, peering around in the semidarkness of the little hall.

"What chains?" asked Kate, silhouetted against the light from the sitting room.

"You ought to have some chains to lift up and clink when you're opening the door—you know—like they have in the jails in 'Michael Strogoff' and 'The Count of Monte Cristo.' Good evening. Is Miss Kathleen M. Garrison within?"

"I don't know—I'll see," said Kate as Con advanced. "What name, please?"

"Mr. C. Murillo Durgin, champion lightweight comic artist of the Atlantic Coast," returned Con, and paused to kiss her as he passed.

Kate followed him into the sitting room and watched. First he switched off the lights, then turned them on again. Drawing a silk muffler from an overcoat pocket, he capered about the room, humming loudly as he pretended to dust the furniture.

"Scene one—Sir Mortimer's library," he said from the corner of his mouth; then in a raspy falsetto:

"Old marster don't seem the same since young marster was killed riding to houn's. Some say it's wine, some say it's song, but I think it's both. Dingle—dingle—I wonder who's that?"

HE SNATCHED up the desk telephone and held the receiver to his ear, pressing down the hook to avoid signaling the operator.

"Hello—hello—yes, this is Sir Mortimer's dump. No, he isn't in—yes—yes— Oh, no, not at all—What? Oh—huh-huh, don't mention it. Good-by—" he concluded as he dropped the telephone. Then: "S-s-h, here he is now. Ta-da-a-a."

He walked with heavy tread across the room, stripping off his gloves.

"Any letters, Hatty?" he inquired ponderously.

Kate broke into a laugh.

"No letters, your lordship, and don't call me Hatty, or I'll resign."

"Hm-mm-mm," Con frowned savagely, removed his overcoat and hat, tossed them to Kate, and seated himself at her desk. Then he grinned broadly.

"How was that, Lady Queen? How about it? The draymer got an awful wallop when I went in for the ink stick and parchment. Gee, but you're looking fine to-night!"

Kate made no reply, but folded his overcoat and placed it with his hat on a divan.

Almost as tall as Con, she was erect, square shouldered, and firmly built. Her ruddy, boyish face told an attractive story of outdoor life, health, and vigor. Sincerity, sympathy, understanding, self-reliance, faith in her fellow beings, found expression in her personality. A business woman, she asked in her work only the doubtful courtesy accorded by one business man to another. But, because she could sit firmly in a chair, look a prospective client straight in the eye, and solicit his advertising patronage for the "Evening Chronicle" on a basis of pure reason, she received not only his respect, but his admiration. For all her brave sortie into commercial affairs, she had sacrificed none of the charm of her feminine qualities. And while she wore a hunting stock or a flannel collar and four-in-hand tie more frequently than a ruff or jabot, she did not deserve to be called "mannish," and never was.

"I repeat," said Con, raising his voice as she turned from the divan, "you're looking fine."

"Now—now," she smilingly reproved as she seated herself on the desk, "are you thinking of having the Blarney Stone mounted for a watch fob?"

CON leaned back in his chair and frowned.

"It isn't polite to interrupt—and, confound it, you never let me pay you a compliment. Anyhow, as I was saying, you're look—"

"All right, Con, it is nice of you to say it, whether you think—but what is on your mind?"

"Eh? Not a thing in the world," he declared, waving his arms. "I'm filled with tranquils—I'm as free and easy as a quart of cigar smoke. Unconcern is the best thing I do right now. Why do you ask?"

"I thought you might be worried about something. Is the work going all right?"

"So you thought I had joined the procession and came here to-night to unload my troubles and steal some sympathy?" He leaped to his feet and began to stride up and down the room. "No, nuh-no, not your ole pal Con. I came here to-night—" he declaimed sonorously, "I came here to-night because I felt too grand to keep it to myself, so buoyant I could be arrested for violation of the city aviation laws, so care free that every breath is an emancipation proclamation. A bachelor sea gull leaning against a fog with a fat codfish in his claws is a masterpiece of worry 'side of me. I pause to kick a cloud out of my way. No, Mavourneen, there ain't nothing on my mind. I'm immune to trouble, and I dropped in to show you my mood. Look!" he exclaimed, "Sans-Souci, the famous Joy Peddler—" and he crossed one foot over the other, inserted his thumbs in the armholes of his waistcoat, and creased his face into an immense smile.

"Whence all this gladness?" she laughed. "Did you find a dollar you didn't know you had?"

"My child," Con orated, "a

mood comes like the mosquito in the night. How do I know whence? It's here, that's enough. And I will add further—"

The telephone bell jangled. While Kate was answering the call he strolled about the cozy sitting room, gazing at the pictures and trying not to listen to the conversation.

"Can't you plug that phone for this evening?" he asked as she hung up the receiver.

"Sorry, Con, that was a business call. One of the men in the advertising department—"

"Why don't you leave the job at the office? You're not paid for bringing it home with you. I shall touch upon this subject later on."

He seized her by the hand and led her to a chair in the corner.

"Now," he continued, "with your kind permission I shall endeavor to entertain you with a few clever impersonations. My first—Simon Legree."

He bowed very low, then ran to the desk, seated himself with his back to her, and pretended to be busy with make-up.

"Simon Legree—overcome by remorse," he called as he turned, and covered his face completely with his hands.

Kate applauded softly.

"Incredible, Con," she laughed.

Con raised his hand deprecatingly.

"It is nothing—regard!"

HE GRIPPED a magazine under his left elbow and held a lighted match aloft in his right hand.

"The Statue of Liberty," he announced.

"Fine—wonderful," she said, and rose from her chair. "But now I must get back to work."

Con led her to the corner again.

"The audience will please remain seated while the performance is going on."

"Please, Con," she entreated.

"Ar-rh," said he. "Watch! Socrates at play."

Clearing the chairs from the center of the room, he essayed a handspring, but came down flat on his back with a tremendous crash.

"Oh!" she cried, and ran to help him up. "Are you hurt, Con? You'll break your silly neck—and I do believe you've knocked down all the plastering in the apartment below."

"It is nothing," he panted as he dusted his clothes perfunctorily. "I shall now give an exhibition of chain breaking and weight lifting."

"You will do nothing of the kind," she declared, and, seizing his shoulders, shook him vigorously.

"Aw, why not?" he asked as he passed his arm about her waist.

"Con, you know that I have work to do, yet you—there's the telephone."

She slipped away to attend to the call. Con produced and lighted

The Tyranny of Beauty

Chapter II—Marching on New York

By "Jane Bunker"

ILLUSTRATED BY MAY WILSON PRESTON

THERE are in every life, it seems to me, a few pattern episodes repeated over and over; changing color and trimmings; increasing in size with enlarged opportunities and success, or decreasing with failures, but never altering their general plan. If you knew the pattern episodes early, you might predict the curve of anyone's career, for it will only be the consequences writ large or small.

This victory by which my aunt crossed the commercial footlights and within a few hours found herself with capital and a going concern all at a stroke was—as I see now—one of those pattern episodes, and her later history was a continual repetition of it on an ever enlarging scale—it was typical in the way she'd seen and seized her chance; in her decision without consulting her associates; in its staging, its appeal, its success; and in her disposition of the proceeds: I received two dollars as my share, her mother the money for household expenses; twenty-five dollars was set aside for jars, material and a small printed circular; my aunt "blew" the rest on her clothes.

I admit I was aghast at a thirty-seven-dollar dress and a nine-dollar hat to match; but when it came to a twenty-four-fifty coat, and two pairs of shoes along with a set of fancy underclothes, I thought her mind had been a little unsettled by too sudden affluence and in my goody-goody "waste-not-want-not" way I tried to bring her to reason and show her the necessity of laying by something for a rainy day.

She downed me with a scornful: "Huh! You think I got all the dollar bills in the woman's world with one afternoon's fishing? There's millions more where they come from—all you gotta do is keep fishing with the same hook and bait." And then she went on to explain, a trifle patronizingly: "I gotta have good clo'es as my part of the business—you don't—any old thing's good enough to wear while you're making cream, but not while you're selling it. You think I mean to spend my life telling a lot of leather-faced dames to feed their wrinkles? Not much! The man behind the counter's gotta work for *me!* But the way I make him do it is to get my goods put in stock; the way I gettum put in stock is to prove that they will sell—so I show him they do sell. But that ain't enough—I gotta show him they *did* sell—that they been selling right along—and prove they'll keep on selling. That's why I gotta wear good clo'es—I couldn't, if the cream didn't sell."

THAT was *her* pink jar and purple ribbon—if I'd had the sense to see it—and I needn't have been astonished when she treated herself a few months later to a five-hundred-dollar diamond ring. But I'd had my say, and I was even then overawed by her superiority into a silence that, while it did not always approve, did not openly condemn. I felt I could not precisely judge her—she had soared beyond my range and her mother's, too, who felt she could now lend her help without loss of dignity, and her stern disapproval of earlier days gradually mellowed to a gentle sarcasm for the purchaser and pride in the business ability of the producer.

I opened the books and we were a "firm with laboratories."

It was soon hard work for us in the home to keep up with my aunt's activities, for she disposed of the cream, selling it, filling orders in stores for stock, and giving away samples almost faster than we could get the goods ready, and "our laboratory" clinked and clacked with the sound of washing containers till all hours of the night. Endless, endless picking up and setting down before a jar reached the tray on which it was promoted to the dining-room table—done! Endless jars to be promoted before we reached a gross, finished and ready for the trade. Then endless clearing up of packing straw that infested the house like a plague, traveling from garret to cellar on our skirts—I've found pieces in my bed; then endless repacking in half and quarter gross lots, even dozen and half dozen lots, where breakage now meant a sixty-six cent loss on every jar. My aunt was too excited all the time to feel weary, but at home grandmother and I kept on often through the sheer force of an indomitable spirit driving us and we stopped only when eyes would not stay open and fingers refused to hold the jars.

Those first three months—while I was still keeping on at the business college—stand out in my mind as a nightmare of grease and pink jars—swarms of pink jars coming in by the crateful, roosting everywhere, hardly out of the house, filled, in time to make room for a new swarm of empties that were worth less than two cents when they arrived and a dollar when we'd filled them with a cent's worth of perfumed pork fat and tied them with a hundredth of a cent's worth of purple ribbon. "Hours"—we knew not the word; pink—I was satiated with it.

BUT—"The making's nothing," declared my aunt blandly. "Anybody can make it once they know how—it's the selling that counts. Selling's the business—that's where the money comes from. That's where the real responsibility is—that's where the risk is—do you no good to make a million jars if you couldn't sell them. All you gotta do—you and mamma—is to keep on quietly at home and make enough to keep me going—you got no further responsibility. I'm the one that puts up the cash and takes all the risk."

She never happened to add—in my hearing—"And pockets the proceeds." So after a day at school I found myself with another day beginning as soon as I got home. Sometimes my grandmother made the cream—she had the true creamer's touch and turned out a beautiful preparation when she wasn't too weary or too nervous to undertake it; but generally I did the manufacturing and she the mechanical labor of washing and pasting labels. Also, I purchased all the raw materials, ordered the jars, wrote the letters, supervised everything from packing case to packing case and kept the accounts to the last cent.

OH, the agonizing small beginnings of big business! The letters alone that I pegged out when I had a minute—or more likely stole it from my sleep—would have been worth six a week if I'd had the gumption to demand it then without waiting till I was a graduate from the business college.

Except for an insignificant sheet setting forth the merits of the preparation my aunt did no other printed advertising—she had not waked up to its need for general trade purposes, or to the possibilities of a mail-order business—and her work was wholly personal, demonstrating the cream in stores as fast as she could secure assignments; seeing proprietors and druggists and urging them to introduce her goods. So firmly, indeed, did she believe in the efficacy of the appeal: "Madam, *you* can be beautiful," spoken face to face, that she began during the first year gathering about her a staff of canvassers to work from house to house as she had done; young girls at school were glad to make even so little as thirty-three cents commission in one

Digitized by Google

afternoon, and impecunious gentlewomen selling among their friends, privately, thought they did well disposing of four or five jars a week.

These little sales counted up in the course of a month to a considerable showing, for which, having secured the canvasser and taught her the "dope," my aunt never lifted a finger. The agents came to me for their stock and handed me the cash. My aunt put the cash in her pocket.

"When we leave this little old burg, we leave Maggie McNulty behind—I intend to be Mme. Del Mar when we play New York"

But the city was small and the stores suitable for demonstrations soon exhausted, and she went farther and farther afield in search of a market. But with her first night away from home she came face to face with "the law of diminishing returns"—hotel and traveling expenses began to eat her profits. I did not know in those days the law had a name, but I soon perceived—and she did too—that railroad fares and hotels swallowed dozens of jars—introduction expenses took a considerable portion of her earnings during demonstrations, and on long trips often all she made.

I think I first appreciated the situation. Keeping the books and watching the expenses race down the pages while the income crawled, I couldn't help seeing that there was less and less net profit to show for the work. Meanwhile my aunt spent extravagantly on her clothes and presently electrified us with the five-hundred-dollar diamond ring.

NOW every new territory represents only just so much opportunity for any given class of goods. It will absorb so much on the novelty rush and so much later through repeaters and through new trade until it comes to balance and the territory is "saturated." After that you simply give it the goods you try to pump in—your introduction costs swallow everything. Trade genius in the beauty business consists in knowing when the saturation point is reached and stopping the pump.

Before the end of two years Zulu had struck its balance with the home territory as far as I could see, and I was cogitating how we could increase our trade without this awful expense for demonstrations that in the smaller cities brought in only thirty or forty dollars, when my aunt came home from a three weeks' trip, threw a pile of bills on my desk and herself into a chair beside me.

"Lookka that, Lucy—lookka them bills. My good Lord!" she cried in agonized accents. "Spent every cent I made—simply give them dames their new faces in Grand Rapids—didn't even make my demonstration outa the bunch I greased there! Ugly—you never see the beat—got no pride in their skins—not one dollar's worth. Whatcha going to do against a prop'sition like that? I thought first some other prep'ration had them and all I hadda do was slug it off the market with mine. But no—it's something to feed their stummicks they're thinking of—not their faces. My lecture went over their heads like they couldn't speak English. Same all along the route, this trip—from home to home I barely broke even—near come short on a tip to the Pullman porter. It'll take a year for my plants to sell five gross—lucky if they do that.

"Well, I been figgering it out all the way back and I see we gotta get into a territory where there's more vanity—more women on the streets looking at each other and sizing each other up—more life—more beauty competition among them. I see we gotta go to New York."

I WAS dismayed. Columbus was only a few miles from my home and I ran out there when I had eaten, drunk, and slept, breathed, lived, and dreamed all the pink jars I could stand. But New York! I started to put a word in and was drowned in a flow of talk.

"You'll go of course—you and mamma—you being my partner you'll hafta—I couldn't leave you back here manufacturing—the freight and express charges'd eat up all the profits—and besides, there'll be other things to make soon's this is going the way it ought—a whole line of goods. Get in somebody else, she might rob me for a rival firm—you won't. I'll double your salary—give you twelve a week—I could getta reg'lar secretary for six in New York, but I'd rather have you for twelve—stick to your own flesh and blood, I say. When I get to New York I'll take a reg'lar store and strike out for the big money. It's there, in New York—money—and this little retail business we're working here—there ain't nothing in it for us—work night and day like a horse and then—looka them bills! Lemme once get into one of them big department stores on a three-day demonstration before a lot of them flat-house women who've got nothing to do but trail the streets and amuse themselves, and I'll amuse them and sell them cream at the same time." I can sell that cream in New York by the barrelful—you bet I can!—two-hundred-jar demonstration won't be anything to them there. No more railroad fares—no more hotel bills; ff cent carfare to and from. A million women with nothing to do but think how beautiful they can be—why, if I can't sell a million jars of skin food in New York, I'll eat what's left!"

The upshot of it all was that we rented our little home in Columbus and to New York we went to conquer the city in the (new) name of Zulu Skin Food, not a cosmetic, warranted not to grow hair on the face.

"And you folks just remember this," announced and commanded my aunt to her faithful partners, "when we leave this little old burg, we leave Maggie McNulty behind—I intend to be Mme. Del Mar when we play New York for the million."

DID ever stranger trio invade New York to make a fortune!—an old lady of seventy, a young country girl, innocent but very dutiful, and Mme. Del Mar, *then twenty-six* and filled with the pride of youth and the intoxication of success. Looking back, I am at a loss to say whether it was a case of fools rushing in, or of the Napoleonism that profits by obstacles; for the joke—and the genius—of it all was that in consequence of the way my aunt carried on the business and put the proceeds on her back, we had just enough ready money when we finally arrived to play the game one month. With us we had brought a splendid wardrobe—my aunt's—and a crate of one thousand jars of Zulu Skin Food. So daring—and so modest—was the start of the New York business that was one day to grow to the proportions of the Del Mar Beauty Parlors, and later to the Del Mar Facial Syndicate.

By all rights we should have failed—the wheels of the world should have rolled over us and left us mangled in the dust; and in private, my grandmother and I prepared for the worst while hoping for the best.

But the very magnitude of the forces that intimidated us stimulated my aunt to efforts beyond anything we'd seen. At last she had a field worthy her powers—huge department stores to conquer with her demonstrations to a throng of critical idlers; and along with that she had the purchasable life of a metropolis with all its theatres and restaurants.

"Yes, madam, we can cure that double chin—but not in one treatment"

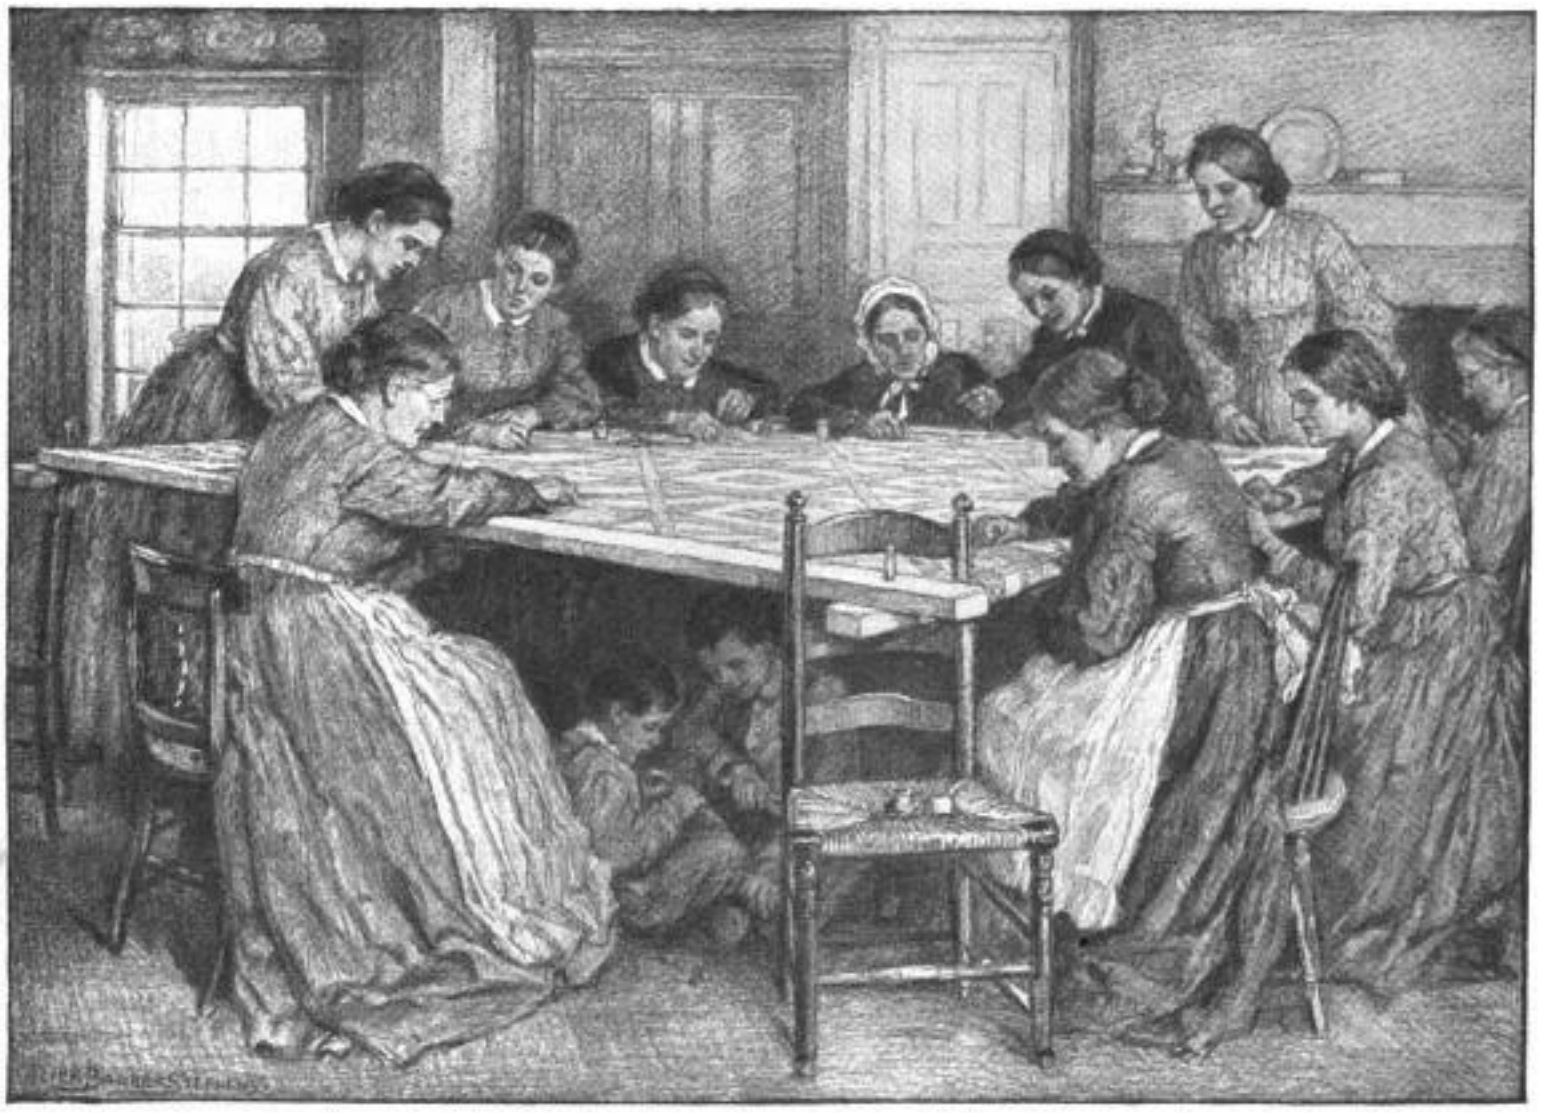
But if for her two years' work in establishing herself in Columbus she had little to show but a wardrobe fit for a society woman and a diamond ring, still all this racing about over the country demonstrating and placing goods had brought her something vastly more valuable than capital: she had found herself—had learned her power over both men and women; had learned how to mass her forces and fling herself like an avalanche of will on the people she desired to move her way. Scruples she had none, except in the prompt payment of her bills—which was only business policy—and she would stop at nothing to oust a rival's goods from a store and get her own put in; wheedling, flattering, cajoling, threatening, and thinly disguised bribes in the form of dinners and lunches to buyers; even out-and-out bribes in the form of stick pins and on more than one occasion, cash—she said: "That's business—all's fair in trade and war."

Nor was she above tricks for increasing the volume of sales—"mistakes" in the shipping orders. "Lucy, dear—Brown's Emporium has ordered only half a gross this lot—make a mistake and ship a gross. I treated their Mr. Smith to a swell lunch and he'll fall for the extra. If there's any comeback, you remember—it's a secretary's mistake—you got the right order from me on your book. Offer him fifty off to keep the goods three months and tell him he can reship the balance at my expense."

She always called me "Lucy, dear," as a preliminary to these mistakes and left me to straighten them out afterward; but I must say this for her—so accurately did she gauge her man and what he'd take from her, there were seldom complaints in the first instance, and, at the end of ninety days, too little left of her doubled order to pay for reshipment. I put in a few feeble remonstrances and was severely reminded: "It's business. My business—you got no responsibility in the matter—I'm paying you a salary and all you gotta do is—do as I say!"

BUT her temper, never under much control, had kept pace with her success. Opposition drove her to frenzy and her language, always ungrammatical and ill pronounced, was plentifully sprinkled with profanity now when she had occasion to pour out her wrath. For the smallest lapse of duty—for a mistake—a delay—an accident due to carelessness—she would fall upon the offender in a whirlwind of vituperation and abuse, call names, threaten lawsuits, and I don't know what, and woe be to him who offended a second time. In those years I fear I saw her only as a tyrant, a slave driver bent on getting the last ounce of work out of everybody and keeping the profits for herself, but I had thrown in my lot with her and it wasn't in me to go off and leave her in the lurch.

As I say, we had come to New York practically without capital. The market already established, but now left to the mercy of the man behind the counter, was netting her only about a hundred and fifty dollars a month and falling off—likely to fall flat if she didn't keep it up by advertising (a thing that happens all the time with toilet preparations, as she'd been long enough in the business to perceive); so she swore she wouldn't depend on a dollar of that money for the New York venture—"play the game with what we have—get across—or go broke—if the business can't keep itself alive from the first month, it won't keep alive at all. See me throwing my hard-earned Columbus money into New York if these women don't appreciate me enough to support me!"



Perhaps she was right in principle. She was right in practice. There was no time for a long campaign—no time to court her audience and win it gradually to her preparations; she simply repeated her pattern episode of

(*Continued on page 25*)

Following the Sunset

Chapter II of "A Son of the Middle Border"

A Personal History — By Hamlin Garland

ILLUSTRATED BY ALICE BARBER STEPHENS

A NEW generation has arisen, to whom the years succeeding the Civil War are already dim with the haze of history. In a previous installment Hamlin Garland has drawn in vivid tints the picture of a soldier's home-coming. In this he shows, with all the poignant charm of an old ballad, how the American pioneering spirit, revived by the war, drove the soldier ever westward in the romantic trail of the sunset

THE village of Onalaska situated at the mouth of the Black River (which came down out of the forest land of the north) was a real "boom town" in those days, for the reason that booms (pens for holding pine logs) laced the quiet water and supplied several large sawmills with timber. It was only a rude, rough little town, filled with raftsmen, loggers, mill hands, and their families, but to Lincoln Stewart it was a very dramatic and splendid place. "Its very name was a poem," he says, "and the view down the valley was glorious. Pointed towers rose in the dim background, and ships hoarsely giving voice suggested illimitable reaches of romance. Some day I hoped my father would take me to La Crosse, that is to say—to Samarcand!"

Life was primitive, even in the county town, at this time, for the war had made money very hard to get, and, though the Stewarts had plenty to eat, they enjoyed little in the way of luxuries. "We had few toys and our clothing and furniture were of the plainest sort. I heard my father say—in praise of mother's skill—'Belle could go to town of a forenoon, buy the cloth for a dress, and be wearing it for supper.' But this argues to me now that her gowns must have been only a sort of uniform of calico."

YEAR by year the universe in which Lincoln lived lightened and widened, and, as his parents believed in service, he was brought to feel his responsibilities as a farmer's son. At seven years of age he had regular duties. He carried firewood to the kitchen and broke nubbins for the calves and shelled corn for the chickens. In summer Hester and he drove the cows to pasture, and carried "switchel" to the harvest hands by means of a big jug hung in the middle of a long stick. "I have a dim memory also of helping my father and grandfather split rafting pins from white oak one winter. How far away all that seems!

"Winter succeeds summer abruptly in my memory, with only a brief hazel-nutting season to mark the transition. Behind our house ran a low ridge down which we used to coast. Over this hill fierce winds blew the snow, forming deep, diamond-crusted drifts, so that we were often forced to dig narrow paths in order to get from the house to the well and from the well to the barn. Sometimes father shelled corn of an evening (by means of a spade and a washtub), while mother sewed carpet rags or stitched deftly on our shirts or blouses—she made everything we wore. Quilting bees were still recognized functions of social feminine life, and the spread quilt made a gorgeous tent, beneath which Owen and I pitched frequent camp on our way to Colorado gold fields.

"My favorite place in winter time was directly under the kitchen stove, which was one of the old-fashioned high-stepping breed, with long hind legs and an arching belly. The bake oven was on top, and the space beneath the arch offered a delightful space for a cat, a dog, or a small boy. I was usually in possession, lying on my stomach, spelling out the stories which came in the county paper—for I was born with a love of reading. These stories were often advertisements and stopped at the most exciting moments, saying: 'For further chapters see the "New York Story Teller,"' and I carry in my mind yet the sense of cruel wrong I suffered at the time.

"One of the first real books to enter my life and win my love was a thick black volume filled with portraits of ideally fat and prosperous sheep, pigs, and cows. It must have been some sort of farmer's annual or agricultural report, but it providentially contained a few household poems like 'I Remember, I Remember,' 'The Old Armchair,' and other pieces of a domestic or rural nature. I was especially moved by 'The Old Armchair,' and although some of the words and expressions were beyond my comprehension, I fully understood the significance of the line—'A mother sat there!'—and responded to the defiant pathos of the writer's declaration:

"'I love it, I love it, and who shall dare
To chide me for loving the old armchair!'

"I fear the horticultural side of this book did not impress me deeply, but that sweetly sad poem (which always made me think of Grandmother Stewart) tinged even the gaudy pictures of prodigious plums and rainbow-tinted apples with alien grace and literary significance. The preposterously architectural cattle probably affected me merely as another form of romantic fiction.

"Hester's devotion to literature, like my own, was a nuisance. If my mother wanted a pan of chips, she had to wrench her daughter from a book or paper. If she pasted up a section of 'Harper's Weekly' behind the washstand in the kitchen, I discovered a peculiar charm in something which that particular number contained, and, likely enough, forgot to wash myself. My mother, upon detecting this (as, of course, she very soon did), turned the paper upside down, and thereafter accused me, with some justice, of standing on my head in order to continue my study of the 'Yankee Trapper.'"

THE first school which the children attended was held in a little workshop belonging to Duncan Stewart, and the second "took up" in a neighbor's (Rooch's) farmhouse, but Lincoln has very little to tell concerning either of these terms. However, when at the age of seven he began to go with Hester to Onalaska, information becomes more definite, although he admits that his memory of the town is much more vivid than any recollection of the school.

"The clamor of saws rang in my ears even as I sat at my desk," he notes, "and filled me with thoughts of the river and the men treading the rolling logs with pike poles in their hands.

"At every opportunity I hurried to the bank to look and listen. The narrow wooden bridges above the deep and silently sweeping waters, the towering piles of slabs, the mounds of sawdust, the intermittent, ferocious snarling of the saws, the slap of falling lumber, the shouts of the men, the never-ending fires eating up the refuse—all these sights and sounds fascinated me, and for the most part decided me to 'go on the river' when I grew up."

In the midst of all this tumult, surrounded by coarse, unthinking men and women, his grandmother Stewart's home stood, a serene sanctuary of lofty womanhood, a temple of New England tradition; and from her and from a great-aunt in St. Louis Lincoln derived much that counteracted the effect of the border and linked him up with the dim world of Boston.

"The road which led from Green's coulée to Onalaska crossed a sandy ridge, and in June this path often became so hot that it was almost impossible to walk it with bare feet; and yet if we went out of the road there were sand burrs, and we were forced to stop and pick needles from our toes. How we hated sand burrs!—especially in berry time, for on these wild lands the most luscious strawberries grew. They were not very large, but they gave off a delicious odor and almost compensated us for the discomfort of the burrs."

THERE was a recognized element of danger also in this road. Rattlesnakes were plentiful around the limestone cliffs, and bears had been seen under the oak trees. In fact, there was one place which the boys often pointed out with awe (especially as night came on) as "the place where Al Randall killed the bear." Their way led past the village cemetery also, and there was always something vaguely awesome in that lone bivouac of the dead.

Altogether Green's coulée, with its forests and cloud-piercing mountain ranges, was a delightful place for boys, but Duncan, it appears, became, year by year, increasingly dissatisfied with it as a place for farming. More and more he resented the hills, stumps, and roots which interrupted his plow. Half his acreage remained unbroken, and as there were ditches to be dug in the marsh and young timber to be grubbed from the hillside, he was obliged to toil with almost unremitting severity, often sixteen hours each day. There were seasons, of course, when the work was less pressing than at harvest, but never a day dawned without its demand for severest labor.

Furthermore, as he drudged at clearing a hill he recalled the glorious prairies he had seen on his exploring trip into Minnesota before the war, and the more he pondered them the more he resented his own horse-killing fields. Lincoln remarks: "My father's complaining words sank so deep into my childish mind that for twenty years thereafter I was unable to look upon a height of land as an object to be admired."

IT IRKED the soldier beyond measure to force his share or sickle along a side hill, and he loathed the small irregular plots which lay among the timbered ridges. And so, dreaming of the level lands, like many others of his neighbors, he began to plan another march toward the fairer fields of Iowa. He no more thought of going back to Maine than a liberated eagle dreams of returning to its narrow cage. He loved to talk of Boston, to recount its glories, but to live there, to earn his bread there, was unthinkable. The East was a field abandoned, a village in decay. Beneath the sunset lay the enchanted land of opportunity. The prairies of Iowa, the savannahs of Minnesota, these formed the irresistible lure of his advance.

"Some time in the spring of 1868 a merchant from La Crosse, a plump man who brought us candy and was very cordial and condescending, began negotiations for the farm, and in the discussion of plans which followed I discovered that Minnesota was not a range of hills, but a land of promise, a golden region beyond the bannered horizon.

"I have a clear recollection of hearing my father read aloud a paragraph from the county paper which ran thus: 'It is reported that Duncan Stewart has sold his farm to our popular grocer, Mr. Speer. Mr. Speer intends to make of it a model dairy farm.' This intention seemed somehow to reflect compensating glory upon us, though I fear it did not affect my mother in that way. She was not by nature an explorer. On the contrary, she was content with the pleasant slopes, the kindly neighbors of Green's coulée. Furthermore, most of her brothers and sisters still lived in the valley of the Neshonoc, just across the ridge, and the thought of leaving them for a wild and unknown country undoubtedly filled her with dismay.

"To my father, however, the wild lands of the West were lit by the rainbow with a pot of gold at each end of it, and he was so eager to push on toward it, so confident of the outcome, that he could talk of nothing else.

"One of mother's songs which we particularly enjoyed consisted of a debate between a husband and wife on this very subject of emigration, and the quaint words of it still stir me absurdly, for they lay hold of something deep in my subconscious memory, and type forth admirably the controversy which was going on in thousands of other American homes.

"He had the gift of putting into even the simplest song an emotion which thrilled us all"

"It begins with the announcement on the part of a husbandman that he is 'about to give up his plow and his cart—

"'And away to Colorado a journey I'll go,
For to double my fortune as other men do.'

"To this the wife in dismay replies:

"'Dear husband, I've noticed with sorrowful heart
That you long have neglected your plow and your cart.
Your horses, sheep, cattle at random doth run,
And your new Sunday jacket goes every day on.
Oh, stay on your farm and you'll suffer no loss,
For the stone that keeps rolling will gather no moss.'

"But the discontented husband insists:

"'Oh, wife, let us go; oh, don't let us wait;
I long to be there and I long to be great;
While you, some fair lady, and who knows but I
May be some rich Governor a-long 'fore I die.
Whilst here I must labor each day in the field
And the winter consumes all the summer doth yield.'

"The wife shrewdly retorts:

"'Oh, husband, remember those lands are so dear,
They will cost you the labor of many a year;
Your horses, sheep, cattle will all be to buy;
You will hardly get settled before you must die.
Oh, stay on the farm,' etc.

"The husband then argues that as in that country the virgin soil is all cleared to the plow, and horses and cattle not very dear, they would soon be rich; indeed, they would at once be able to 'feast on fat venison one-half of the year.'

"Thereupon the wife brings in her final argument:

"'Oh, husband, remember those lands of delight
Are surrounded by Indians who murder by night.
Your house will be plundered and burned to the ground,
And your wife and your children lie mangled around.'

"This fetches the husband up with a round turn:

"'Oh, wife, you've convinced me, I'll argue no more,
I never once thought of your dying before.
I love my dear children, although they are small;
And you, my dear wife, I love greatest of all.'

REFRAIN (*both together*)

"'We'll stay on the farm and we'll suffer no loss,
For the stone that keeps rolling will gather no moss.'

"The music of this dialogue held a wailing, mourning, minor cadence which so deeply affected me that not even the cheerful words of the final refrain could entirely counteract the wistfulness of the melody. I always felt that the poor fellow gave up with a hidden sense of loss. I can see, as I write, the face of my mother as she poured forth, effortlessly, her rich and powerful voice, and there is a somber, remote look in her eyes. She knew that no such argument would stay *her* husband. His interest in the ballad was purely literary. He never took its lesson to himself.

"THE song which meant most to him at this time (and which undoubtedly dates back to the original conquest of the Alleghenies) expressed, and still expresses to me, something epic and glorious. It was at once a bugle call and a vision. Whether my mother knew all the words of it or not I cannot say, but as I recall the piece it opens abruptly with the exhortation of one adventurer to his fellows:

"'Cheer up, brothers, as we go
O'er the mountains, Westward ho!
Where herds of deer and buffalo
Furnish the fare.'

"And then leaps into a stirring chorus:

"'Then o'er the hills in legions, boys,
Fair Freedom's star
Points to the sunset regions, boys—
Ha, ha, haha!'

"Only a few of the lines linger in my mind, but these are deeply significant:

"'When we've wood and prairie land
Won by our toil,
We'll reign like kings in fairyland,
Lords of the soil.

"'Then o'er the hills in legions, boys,
Fair Freedom's star.
We'll have our rifles ready, boys—
Ha, ha, haha!'

"I have never been able to find the words or music of this song, and yet it was of great significance in the life of my ancestors. I call it the 'Song of Emigration,' for it was the marching chorus of the Stewarts as it had been for the McTurgs and the pioneers who preceded them. There was in its throb such buoyant urge, such joyous, reckless appeal, that when my mother's clear voice rose high on that exultant refrain, *'Then o'er the hills in legions, boys,'* our hearts leaped with the same desire which had sent Daniel Boone trailing across the Alleghenies and filled the valleys of Kentucky and Tennessee with long lines of Conestoga wagons.

"We loved 'Lorena' and 'Nellie Wildwood' and 'Minnie Minton,' but this Song of the Sunset appealed to our sense of romance, our inherited love of exploration. *'We'll have our rifles ready, boys,'* made our blood leap. It created green valleys between shining mountains—valleys swarming with elk and deer. It lured to fruitful savannahs and suggested endless flowery glades leading to rippling lakes. It expressed, as only music could, the passionate love of pioneering which was in my father's heart. That the lines seem poor and barren to-day takes nothing from the power they once possessed. Without doubt this chorus was a directing force in the lives of at least three generations of pioneers."

The Stewart home seems to have been a place of song, notwithstanding the severe toil which was demanded of man

Tampering With Truth

By George Fitch

ILLUSTRATED BY JOHN T. McCUTCHEON

The Taxpayer

BESIDE his motor car a wailer stands,
Chanting his grievance with a menace dire;
Smoking and glooring with unfettered ire;
Beating the guiltless air with high-flung hands.
Has he been stripped of moneys and of lands?
Has he fled homeless from the midnight fire?
Or has he bought an automobile tire [sands?
Which burst on its first journey through the
See him detain the shrinking passer-by.
Quick! Let us join the victims whom he collars.
Thus we may learn the deep and tragic why
Of those wild groans and heaven-piercing hollers.
Ah, here's the cause. His taxes are too high.
This year they soaked him twenty-seven dollars.

The Expansion of England

IT IS indeed pleasing to note the admission of a few more American writers to that scant list whose existence English critics, when in a particularly English mood, feel compelled to admit. The English "Saturday Review" in an article written apparently for the purpose of persuading Americans to give up the hopeless quest of letters, declares that only Emerson, Whitman, Hawthorne, and possibly Bret Harte and Bryant, can be considered as great or thereabouts.

Pedestals for the new immortals! A few years ago the list began and ended with Poe. In a few years more it will include Lowell, who has been dead almost long enough to become great, and Mark Twain whose earliest jokes are now being quite generally understood at the other end of the Atlantic ferry.

Englishmen like their writers as they do their game. Both must be dead a long time to be fully appreciated. Time has made old Ike Walton so great in England that they are raising money to put him in a stained-glass window among the saints in Winchester Cathedral, and time has made marvels of Bacon's Essays, the dullest and hollowest collection of reverberating pomposities ever produced with good ink. Indeed, after reading some not very obscure efforts of some very famous English poets, we are inclined to believe that if the Sweet Singer of Michigan had lived about one hundred years ago in the Lake region of England, we might now be studying her works in our public schools. Time works more wonders abroad than money does in this country.

Efficiency!—Sufficiency!

EFFICIENCY, that demon which scraps $20,000 locomotives at the end of five years and condemns all hens that fall below the normal egg average to a receiving vault in the cold-storage warehouse, is now in full command in many of our colleges and universities. At the University of Wisconsin almost 1,000 students have been suspended, put on probation, or sent home for good, as the result of their poor standing in the mid-year examinations.

Nothing more vividly illustrates the relentless march toward perfection in which this country is breathlessly indulging. Among these 1,000 students were wizards with the banjo, the piano and the whist deck, human pile drivers on the football team, airy-footed track record breakers, and politicians who could cord up the freshman and coed vote and deliver it intact on short notice. There were men whose clothes chased gloom from the campus, and young women whose features made all expenditures for art unnecessary in the vicinity of Madison. There are chasms in the football team. Tango classes have been blown into ruins and a few sad souls are winding up the affairs of a dozen social clubs.

If college faculties adhere to this determination to force college students to learn things out of books as well as out of each other, literature and science will receive a great boost in this country, but what of a thousand arts and wisdoms now in their fullest flower? Will blocking, tackling, rooting, fussing, sign ragging, rushing, and the manufacture of college yells become lost arts like the tempering of copper? Will the completed product of our greatest university with seven languages and the science of to-day and to-morrow at his disposal have to take his old father to the baseball game to act as an interpreter of the remarks from the bleachers? We trust not.

How to Get Rich and How to Stay So

THE dizzy changes in clothes fashions are always commented upon with humorous consternation. As a matter of fact, they don't change any more violently than fashions in business. The woman who should build for herself a dress with four-bushel sleeves to-day and should edge it through the crowds on Fifth Avenue would be no more out of date than the financier who wished to promote a stock company and used the methods of twenty years ago. The Wallingford system, which is to-day a joke and a rare bit of stage humor, was a solemn and awful fact twenty-five years ago when the land was full of feverish investors whose money was burning out their pants pockets and producing large blistered areas on their legs. Ten years ago financial agents surrounded the office of the citizen who had accumulated a few idle dollars, and besought him with tears in their eyes to invest. They offered him common stock, gold watches, trips to Europe, discounts, and undying friendship and loyalty, to say nothing of 100 per cent dividends. But they don't do this to-day. At least the up-to-date promoters do not. To-day's mail is full of large, splendidly embossed envelopes bearing something like the following on expensive paper:

Dear Sir—(Name of addressee written in high-grade handwriting.)

It gives great pleasure to us to announce that you have been selected by the finance committee of the American Heated Atmosphere Company as one of a strictly limited number who will be allowed to subscribe for the new 7 per cent cumulative nonparticipating shares of the company to be issued in June.

We congratulate you upon this honor. Throughout the entire United States only 1,000 names have been chosen from the thousands available. Each State has been given its quota of shares which under no circumstances will be exceeded. The names of those residents of your State permitted to subscribe are enclosed.

The price of the shares will be 105, and you will be permitted to subscribe for not more than 100 shares. Kindly telegraph your acceptance of this trust.

Yours truly, KIDDEM, WRIGHT & CO., *Fiscal Agents.*

Three times in the last month we have received one of these tributes to prominence and exclusiveness, and three times we have watered the ink with our gushing tears as we have indicted the following heartbroken answer:

MESSRS. KIDDEM, WRIGHT & CO.

GENTLEMEN: *Little did I think this morning when I carelessly tore open your letter, thinking it only an invitation to the Astor Ball, what honor was in store for me. Little did I think when I left my happy boyhood home, only twenty years ago, my sole possessions being $5 in cash and 78 college sofa pillows, that I would in this short time rise to such a height as to attract the notice of the Heated Atmosphere Company. From the bottom of my heart I thank them for this opportunity. And yet it is from a broken and dismantled heart that I draw these thanks. It almost kills me to say it, but I must remain outside of the glorious list which you have selected.*

All night I dreamed of owning a share certificate in your company, and of meeting casually the men who will own them from this State. I have read often of these men. They are the pride of our commonwealth. To think that but for one thing I could associate with them as equals and sit with them in their homes talking Heated Atmosphere Preferred is as bitter as death.

The one fact which has snatched this bright dream from me is this: Counting the excess of money receivable over bills payable, I am not able at this time to buy even one of your shares. Even should I be able to buy the shares, I could not maintain them in the style to which they are doubtless accustomed and in which they would be maintained by other people named in your invitation.

I must decline. You cannot know with what anguish I do this. The peri who stuck around outside Paradise for several million years, looking in through a crack in the fence, is not more mournful than I. But I presume, upon my position as one who has been honored by your finance committee, to make a request. If it is presumptuous, forget it. I do it merely through my sense of gratitude toward one who has been extraordinarily kind to me. Colonel Smith of our town is wealthy and respected. His character is magnificent. He would ornament any stock company. Yet strange to say, he has not been included in your invitation.

Now, dear Messrs. Kiddem, Wright & Co., I yearn to do something nice for Colonel Smith. I can never repay him in money for his favors to me, but if I could be the means of having him taken in by your company, I mean taken into your company—I would be the happiest man alive. Yours most gratefully.

I AM glad to say that in each of the three cases the company promptly wrote to Colonel Smith, extending him the invitation, and they kindly made it at my request.

COLLIER'S

The Crisis in Wisconsin

A CAMPAIGN of national importance is waging in Wisconsin. The forces which have carried this most progressive of American commonwealths forward to achievements which are envied her by intelligent people everywhere are fighting for political existence again. The standpat forces are now calling attention to the fact that taxes have risen. The progressive forces admit this, but, after showing that most of the increases are to be found in those local taxes which the people in the counties and towns have levied upon themselves, retort that if the State has spent more money it has bought something with the funds. It has the greatest of American universities, they say; the best laws in all the States; the most wonderful body of experts administering these laws. "Where," they ask the people, "do you wish us to retrench? Shall we cripple the university? Shall we cripple the Railway Commission? Shall we cripple the Industrial Commission? Shall we cripple any of these great commissions?" While economy is always to be considered, the answer of the voters will be looked upon everywhere as a test of their intelligence.

Wisconsin's Prosperity

WISCONSIN is in the heart of that portion of the map which the business experts show as enjoying good times. Much of the State's solid prosperity may be accounted for on the ground of her people's intelligence, and that intelligence has been gained through a generation of struggle for political reform. One is reminded, when he looks at Wisconsin, of Deuteronomy xxxii, 13, 14, which runneth:

> He made him ride on the high places of the earth, that he might eat the increase of the fields; and he made him to suck honey out of the rock, and oil out of the flinty rock; butter of kine, and milk of sheep, with fat of lambs, and rams of the breed of Bashan, and goats, with the fat of kidneys of wheat; and thou didst drink the pure blood of the grape.

But the revulsion against paying for good government may sweep the standpatters in. WILLIAM III found it easy to be popular in England while he was king of a poverty-stricken land; when he had established the Bank of England, restored the currency, and beaten LOUIS XIV, he lost his popularity. MOSES tells that, when Israel was in the prosperous state described above, her King fell away from his standards, as the "invisible" government hopes the people of Wisconsin have done; for "Jeshurun waxed fat, and kicked." But so far the Wisconsin folks have never seriously kicked against the forces of light and leading.

Panama Tolls and Freight Rates

MR. SHELBY SWETT of Washington thinks repealing of the free-tolls law will "burden the people of this country with unjustifiable freight rates in the interest of the Pacific railways." This seems so true on the surface that it is rather laughable to find how absurd it is beneath the skin—almost as absurd as CHAMP CLARK's champings about the railways' alliance with Great Britain and President WILSON. Of course the canal tolls of $1.25 a ton will make no difference whatever in railway rates. Water rates are sometimes as low as one mill per ton-mile. Railway rates average about three-quarters of a cent per ton-mile. At this rate the average on cross-continent freight by rail cannot be cut to less than something like $22.50 per ton. By the canal the ships could carry the traffic for a third of that sum and make money. It is perfectly obvious that the toll of $1.25 on the ships' tonnage cannot enable the railways to compete at all. As a matter of fact, the railways will not try to compete by cutting rates. All the freight which is adapted to water transportation will go by water if there are free wharves and independent ships to accommodate it. The tolls discussion is a red herring across the railway trail, and tends to darken counsel. When the railways make the attempt to beat the canal traffic, if they ever do, rest assured they will not do it in any such insane manner as by the cutting of railway rates down to within $1.25 of the competitive water rate. They will have a trick worth two of that.

Collier's in Paris

WHAT FOLLOWS is from a cable despatch to the New York "Sun":

> A pen and ink drawing by CHARLES DANA GIBSON has been acquired for the Musée de Luxembourg. The picture is "The Champion" and shows a pugilist of the type that flourished in the palmy days of CORBETT and JEFFRIES, followed by a mob of urchins. Acceptance at the Luxembourg is one of the most coveted honors of the modern artist. When the French Government purchased WHISTLER'S portrait of his mother for this museum it practically silenced all those who cavilled at that artist's impressionistic style and solidly established his vogue.

"The Champion"—he is JEFFRIES, and we reproduce him on this page—is one of a series drawn by Mr. GIBSON for COLLIER'S. We are proud to think that the drawing is now the property of the French Republic, and we felicitate Mr. GIBSON on this quite unnecessary but welcome recognition. The list of contemporary Americans represented in the Paris gallery is not a long one; the names of W. T. DANNAT, BEN FOSTER, SAINT GAUDENS, PAUL W. BARTLETT, FREDERICK MACMONNIES, JOHN FLANAGAN, JANET SCUDDER, JOHN S. SARGENT, and ROBERT HENRI occur to us—but several of these are sculptors, and the rest have achieved fame as painters. All the more honor to Mr. GIBSON, one of the kings of black and white.

The Champion—By Charles Dana Gibson

Trial by Hysteria

THE SENSATIONAL Frank case in Atlanta is an impressive object lesson in how criminal trials ought not to be conducted. We do not wish to add to the enormous mass of current newspaper opinion our own views upon FRANK's guilt or innocence. He has, to be sure, been found guilty. His conviction has been affirmed by the Supreme Court of Georgia. This ought to be sufficient to satisfy law-abiding and fair-minded citizens that he is a criminal and deserves the punishment which the law imposes. It does not satisfy them. Why not? The appeal court which affirmed his conviction by the jury had no power under the laws of Georgia to determine that his conviction was against the weight of evidence—that is to say that the evidence did not justify his conviction. Under such a system of law, it is, of course, enormously important that the atmosphere in which the jury considers the case, before it makes its final and unappealable judgment on the facts, should be a fair one. Now, the atmosphere surrounding FRANK on his trial was one in which it was practically impossible for any verdict to be rendered which would satisfy a fair-minded person that the actual merits of the case had been passed upon and that justice had been done. It was an atmosphere of hysteria produced in large part by sensational newspaper stories and fanciful rumors. Large rewards were offered for "exclusive information leading to the arrest and conviction of the murderer of MARY PHAGAN." Before the trial the Mayor of Atlanta became apprehensive of a riot and requested the Chief of Police, who was giving out "news," to use great caution, declaring: "The town has been stirred up over the Phagan tragedy, and I fear that sensational and misleading 'extras' may cause mischief." When the day of trial arrived, the pumped-up atmosphere of passion was almost continuously in evidence. When the jury brought in its verdict, FRANK was not in the court room. All parties feared that if a verdict of "not guilty" were rendered the crowd might lynch him. The verdict being one of conviction, the prosecuting attorney was carried from the court door by a hurrahing and gratified mob. A verdict so rendered carries no great weight with sober-minded people interested in justice. But now there is a new hysteria. Mass meetings have been held and resolutions adopted in the hope, apparently, of creating an atmosphere favorable to FRANK's application for a new trial. The printer's ink, which demanded his blood and poisoned the atmosphere on his first trial, has more recently demanded that an "innocent" man be set free. Now we "demand" no such thing. The judge who tried FRANK declared he was not thoroughly convinced whether he was guilty or innocent. Neither are we. If, upon the application for a new trial, the further evidence justifies the court in granting it, good citizens will be genuinely relieved. If the facts show that Georgia has been very near murdering an innocent man, we hope the lesson will not be entirely lost. Trial by hysteria is not trial by jury.

The Great Heart of Ireland

FATHER MAURICE DORNEY is dead. He was the beloved priest who kept the saloons out of his parish of St. Gabriel's in the Chicago stockyards district, and gave unstinted love and help to thousands during his reign of thirty-five years. He cared about people. No hour was too late, no weather too bad, nor was there any thought of race or sect if he could help those in need. This man had famous friends and qualities of a high order; he might have risen in the world, but year by year he gave his life for others. It is this passion for human service that is the greatest strength of the Irish heart, even in the corruption of politics, and learning and art are poor in comparison. They buried Father DORNEY with all the pomp and glory of a mighty church, but his soul was greater than any ritual our world has known.

Will the "Post" Sue for Damages?

IN THE BOSTON "TRANSCRIPT" a dramatic critic (signing himself H. K. M.) writes as follows:

MAX FIGMAN played expertly his part as friend of the family and reporter on the "Evening Post" (which, as most people know, is the "Transcript" of New York.)

Aw, have a heart! The New York "Evening Post" has its faults all right, and it deserves some of the hard things that have been said about it. But to call any paper a second Boston "Transcript" seems to pass the bounds of justifiable Billingsgate.

Parnell on Asquith

IT IS IN THE "EVENING POST," and nowhere else, that we read an uncommonly pointed anecdote of the British Premier. HERBERT ASQUITH, as a young barrister in his thirties, was associated with Sir CHARLES RUSSELL in defense of Mr PARNELL. Later, in 1891, Mr. PARNELL and BARRY O'BRIEN were discussing various English statesmen as possible successors to GLADSTONE. Said O'BRIEN:

Well, there is ASQUITH. He is a coming man. Some people say he may be the Liberal leader of the future.

To which PARNELL:

Yes, Mr. ASQUITH is a coming man: but [looking O'BRIEN straight in the face] do you think Mr. ASQUITH is very keen about Home Rule? Do you think that he will risk anything for Home Rule? Mr. ASQUITH won't trouble about Home Rule, take my word for that.

In 1914 one may say, quite without fear of correction, that Mr. ASQUITH *has* "troubled about Home Rule."

The Critic's Function

SOME ONE says that the critic has the same relation to literature that a flea has to a dog—he infests it and lives off it without either advancing or adorning it. But in our opinion it should be added that every once in a while he makes the animal scratch lively.

In Quest of a Ballad

EXCEPT BY INHERITANCE we have no fair Rosamonds nor any Patrick Spenses. Sherwood Forest is distant from us the whole Atlantic, and Robin Hood has trodden only our boards, not our soil. Yet we, too, have a balladry, a romantic background. The prairies of Iowa and the forests of Wisconsin and Minnesota have their songs and their legends if only some Percy could collect those scattered reliques. One such ballad HAMLIN GARLAND cites in his pioneering chronicle, "A Son of the Middle Border," in this issue. It is a fragment captivating as any, and incomplete as most of our old American songs. It runs:

Cheer up, brothers, as we go
O'er the mountains, Westward ho!
Where herds of deer and buffalo
Furnish the fare.

When we've wood and prairie land
Won by our toil,
We'll reign like kings in fairyland,
Lords of the soil.

Then o'er the hills in legions, boys,
Fair Freedom's star
Points to the sunset regions, boys—
Ha, ha, haha! . . .

Then o'er the hills in legions, boys,
Fair Freedom's star.
We'll have our rifles ready, boys—
Ha, ha, haha!

No kings nor paramours, no serfs nor outlaws, figure in this song, but the fearless, ever-questing, free-born pioneers, looking always to the beckoning West. Mr. GARLAND deplores the treachery of his memory that has put lacunæ among the verses. But the readers of COLLIER'S have almost always been able to help us in such cases. Could they not now, if they would, supply us with the complete version of this stirring marching song, including, if possible, the music?

The Man Who Made Money Out of It

A RATHER STRIKING PIECE OF NEWS appears in the New York "Evening Sun":

HIS BUSINESS NOT GOOD ENOUGH FOR HIS HEIRS

WEALTHY LIQUOR DEALER LEAVES REMARKABLE WILL

PITTSBURGH, March 10—JACOB FRIDAY, who died early in 1913, leaving over a half million dollars amassed in the liquor business, had inserted in his will, which is being contested here, a provision expressly stipulating that any beneficiary who directly or indirectly engages in the liquor business shall forfeit all rights and claims in the estate.

So far as we can see, there is only one explanation of this curious will. Mr. FRIDAY regretted the fact that he had made his pile by the exploitation of other men's weaknesses and vices. Perhaps he felt that a curse attached to the seller of booze—yes, even to the wholesale seller and the smug manufacturer—as well as to the buyer. It is a dirty business—and JACOB FRIDAY, in transmitting its profits to his heirs, seems to have wanted to guard against their taking it up where he left off.

Confused Talk

WINSTON CHURCHILL is a very helpful writer, but he ought not to get off this sort of thing (as in a recent address):

Abolish religion and we go back to the Stone Age. Do away completely with the sustaining and restraining sense of a higher power, and the logical result is the gunman and the white slaver and the ruthless capitalist.

Or, if he means it, he must get after the person who abolished religion and so brought in the gunman, etc. As a matter of fact, religion has not been abolished. It has never been tried.

A Statesman's Grasp

ANYONE WHO WISHES TO UNDERSTAND ROOSEVELT'S leadership should read his revealing articles, "A Hunter-Naturalist in the Brazilian Wilderness," now appearing in "Scribner's Magazine." The author describes everything: the stars overhead, the general lay of the land, the endless detail of animal and plant life, the races, languages, creeds, settlements, habits, and occupations of men. But it is not a mere aimless sweeping up of facts as such. The writer sees all these things because he is interested in the human life which can be developed from and upon these local and historic factors. The going forward from this point, the development which can reasonably be expected, all that which we call progress, is what really interests him. For this betterment there must be certain basic moral qualities. The true statesman's grasp of the problems and possibilities of community life is most apparent. Personal qualities come out in the texture and style of the writing. A man who can say "We walked up the streets of Concepcion and interestedly looked at everything of interest" will never go down in literature as a rival of HENRY JAMES, but you feel certain that very little will escape his attention. There is a rough, vivid strength, a thorough earnestness, and broad power about these writings. They tell a story that is worth while—also, they show us a man.

"Breaking In"

ONE HEARS A GREAT DEAL about successful people "breaking into" a certain town or line of business. Wise articles are written on the difficulties attending the process, and it is given the aspect of an achievement of individual heroism; something, as if a modern AMADIS DE GAUL had stormed a city single-handed. Yet when we look at the facts of business life, one of the most pressing problems is that of finding and keeping people who can be promoted; one of the severest tests of an executive is whether he has anyone fit to succeed him. And the reason is as clear as the fact. The only hope of permanent success for even the most gigantic of our modern corporations is to get into their own ranks the leaders of to-morrow, those who can think most rapidly and see most clearly. The hunt for talent never ceases—where is the person who can and will put aside all distractions and study these problems through to a solution? Who will do this work, make this thing go? The modern world will pay almost any price for those who will do the worrying successfully. All our tremendous apparatus of companies, machinery, etc., makes the need for such people but the more imperative—they are drawn in by a current as strong as Niagara. The "breaking in" really consists in their forcing their abilities into fuller being, into dominance over their own carelessness and inertia. The self-absorption of commercial life makes it seem terribly aloof and impenetrable, but it is still true that a man diligent in his business shall stand before kings—in fact, a long way before them.

Blowing Up a Mountain with One Charge of Dynamite

WHEN the Grand Trunk Pacific Railway wanted more elbow room at Prince Rupert, B. C., contractors were ordered to remove a small mountain of solid rock on the right of way. The contractors were not satisfied with the old method of cutting away hills by piecemeal, so they made deep borings into the heart of the big rock and planted an immense charge of dynamite. The snapshot above shows what happened when the dynamite was set off. About one-third of the hill rose in the air and as much was shattered so thoroughly that its removal was easy.

Staging the "Movie" Making Process

A MOVING-PICTURE show with a brand-new twist was presented a few days ago at a New York theatre by the Universal Film Manufacturing Company. Part of the picture was run off on the screen, the curtain raised, and the rest of the play was enacted before the audience, with the camera man operating his machine, as shown in our photograph just above. The screen was then lowered and a picture of the developing process shown, after which a film of the last scene of the play, as enacted on the stage, was thrown on the screen. The actual confines of the picture taken with the motion-picture camera are marked off by the white tape lines.

Utah's Whale of a Granite Block

WHAT is claimed to be the largest piece of flawless granite ever quarried is shown in the photograph at the right. It is 98 feet long, 40 feet wide, and 54 feet high, and was found in Cottonwood Cañon, fourteen miles from Salt Lake City, Utah. From it will be hewn fifty-two monoliths 31 feet 6 inches long and 3 feet 11 inches in diameter, to be used in a new State capitol building that is being erected in the Utah metropolis. The block is not only sufficient for the monoliths, but is also large enough to supply all the wall blocks needed for the building. The new capitol will lead the world in monolithic columns, its closest rival having sixteen columns 30 feet long.

The Fan Reveille

(Just a trifle with the British accent)

YES, we know that it's all just a trifle bit slow
And it isn't like cricket at all;
And we know we are wasting our time when we go
Where there's never a thrill in the stall;
And they're serving no tea, though a fellow may sit
For a whole afternoon in their den;
But we'll go out and watch them attempt for a bit
Some Glorified Rounders again.

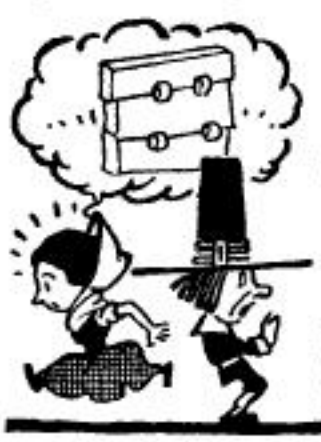
Yes, we know that it's somewhat a bit to the splosh
And it isn't like cricket at all;
And most of it's soggy and all of it's bosh
And the rest of it's under a pall;
And, faraway, of tea who there isn't a whit
To be had in their bally old pen;
But we'll take a trip out and we'll yawn for a bit
At some Glorified Rounders again.

The Game's Age Limit

THE prime of life, if there is such an institution, might well be placed at that experienced yet still eager period between thirty-five and forty years of age.

But on the ball field this period becomes the Fossils' Retreat, as a few highly eminent statistics will quite shortly prove.

In the two Big Leagues—and the Feds—or the three Big Leagues, just as you esteem it, there are now enlisted 700 ball players in the service of the game. From this number exactly five, or less than one per cent, are over thirty-five years of age.



These five are: Hans Wagner, forty; Nap Lajoie and Eddie Plank, thirty-nine; Miner Brown, thirty-eight, and Tommy Leach, thirty-seven. The list shows two pitchers, two infielders, and one outfielder, the remarkable part being that only one outfielder has survived.

We thought the list would be much larger until we toyed a trifle with the dope. But we found that Jimmy Sheckard wasn't yet thirty-five, that Mathewson wouldn't be thirty-four until August, and that others, listed as doddering old war horses, were fading out while only a step beyond thirty. Bender, for example, is only thirty-three—but two years older than Tris Speaker, who is three years older than Ty Cobb, despite the fact that Cobb has been longer in the game.

As these conditions are normal, it is reasonable to assume that only 1 per cent from the Main Corral stick under fire after they have passed the age limit of thirty-five years. Another remarkable feature connected with the above list is that all five in the Veterans' Nook had fine seasons last year. Wagner batted .300; Lajoie, .335; Plank did good work through the year in over forty games and was the pitching star of the World Series; Leach tied with Carey as the main run getter in the National at ninety-nine precious tallies through one of his greatest years; and Brown, working with Cincinnati, was as effective in curbing earned runs as Rucker, Seaton, Sallee, and other such stars. It is also interesting to observe that while 5 out of 700 have passed thirty-five years, only 1 out of 700 has attained the sedate age of forty—the name being John Henry Wagner of Pittsburgh.

In Warning

LEADING English sport writers, after watching a ball game that resulted 5 to 4, with a couple of home runs attached, state that baseball is quite dull through the lack of runs scored in each encounter. If they ever visit this country we advise them to lay off Walter Johnson, or they will more than likely choke to death with ennui the first week out.

Short Cuts

THE man who looks before he leaps too frequently loses the impetus required to carry him across.

If you get tired of too much company in the crowd, start in making good.

"Use your head," advises Connie Mack, "if you want to make good in any game." Mr. Mack—Mr. Brickley; Mr. Brickley—Mr. Mack.

The Saving Upset

IN THIS fragrant sweep of April blossoms and two-base hits, heralding the first onslaughts of another pennant campaign, only the saving Upset of the ever elastic Dope prevents us from gazing forward without even the semblance of a thrill.

As the first rude blows of our impassioned Glorified Rounders are being struck, the dope, minus any upset, forecasts rather easy victories for the New York Giants in the National League and the Philadelphia Athletics in the American.

On form, or what is otherwise known as copy paper, these two clubs should romp home in a canter. Both were good enough to win handily last year, and while their strength has been maintained, most of their intimate rivals have been somewhat devastated, not to say dismantled and shorn, by the encroaching Federals.

But before the flag is definitely awarded to these two clubs, it might be just as well to observe that the dope is full of upsets and that the carelessness and overconfidence born of continued success are harder to beat than any ball club that ever played.

McGraw, after two pennant campaigns in 1904 and 1905, believed in the spring of 1906 that he had the best club of his career with an easy spin ahead. His club unexpectedly crumpled up and he finished over 100 points back of the Cubs.

In 1909 Chance, after three pennant years, thought his machine invincible.

By July the Pittsburgh Pirates had the race sewed up beyond recall.

In 1912, after two wonderful seasons, the Athletics looked to be twenty games beyond all competition. Yet Boston flushing from fourth place and Washington from seventh place the year before beat this great club to the wire.

In the forty-year history of pennant baseball none of the great machines has been able to control the situation for over four years at a stretch. Time takes its toll and too much glory does the rest. And when the dismantling starts the wreckage is generally complete.

On copy paper, as we have announced exclusively above, McGraw and Mack should win, with Pittsburgh and Washington as runners-up in their respective leagues.

But the toughest job that confronts these two leaders will be, not in fighting back fierce competition, but in keeping their clubs keyed up to a thrill that has become old stuff—to keep on hustling when both ball clubs figure they ought to win in an easy jaunt.

Lines to a Bard

("Trip the light fantastic toe."—J. Milton)

O POET of a calmer day,
Of gentler prose and softer rime,
When you unleashed that roundelay
Upon the topic of your time—

When you read Pep and Zip within
Your stately measured dance,
That in this age of whirl and spin
We'd hold as mummies in a trance—

O Bard, if they looked somewhat bold,
"Fantastic," as you did avow,
Those dancers in the days of old—
Gee—but you orter see 'em now!

"The Lure of Little Voices"

"There's a cry from out the loneliness—oh, listen, honey, listen—
Do you hear it? Do you fear it? You're a-holding of me so!
You're a-sobbing in your sleep, dear, and your lashes, how they glisten—
Do you hear the Little Voices all a-begging me to go?"
—Robert W. Service

YES, they're whispering and pleading all across the April heather—
The brassie and the niblick and each highly bunkered spot;
And though we've spent a winter very pleasantly together,
What is a wife, O Dearie, to a well-played mashie shot?

There's a cry from out the fair way—and my bally soul is lurching
To the white pill flying swiftly on a dead line to the green;
And my heart is in a flutter as my April dreams are perching
On the neck of Colonel Bogie, where I play like a machine.

"You're a-sobbing in your sleep, dear"—but remember, please remember
That though I've got to leave you now to seek a "string of fours,"
I'll try and make a point of it to drop in by November,
Regaling you, O Dearie, with my alibis and scores.

The Federal Status

WE ARE now taking our first observations of a new development—the start of a third league which has come along to add to the complexities of an already highly complex era, and incidentally to wage war with the two majors for a share of the fan patronage from Brooklyn to Kansas City.

A few hardy souls have braved the rigors of the dope by attempting to forecast a winner. But since there is no past performance chart to work on and the usual basic elements of the forecast are so badly scrambled, as well as unknown, any shot in this direction is merely an unbulwarked guess.

The main point at hand involves the summer's reception the Feds will receive from the fans. Their average class is distinctly below the average class of the two major leagues. But this won't prevent them from playing interesting baseball. And if they do play interesting baseball and have a well-matched race, any runaway race in the two majors is fairly sure to give the new league a good first year. It will take exciting races in the two big leagues to crowd the Feds back. For while the average fanatic likes to look upon the highest class of baseball available, the average fanatic would also rather go out to see a home club up in the race than a still better home club that was having the life stamped out of it by stars from a rival citadel.

And this loyalty of the home fan to any home ball club up in the race is the asset the Federals have, provided their race is a well-balanced one. They have better than an even chance to at least obtain a good foothold in baseball sod before next October.

The Duffer Interjects

"I STRAY in haunts of coot and hern"—
A bitter pill, but not quite all—
For, what is still a sadder turn,
I very seldom find the ball.

The President in Practice

(Continued from page 7)

Occasionally something transpires which shows that the President can drive at times with a very loose rein. A case in point is the situation in Illinois where Roger Sullivan aspires to a seat in the United States Senate. The President is believed to look at least with equanimity upon his candidature, and it is reported that the voice of the Chicago boss is hearkened to in the dispensing of the administration patronage in Illinois. But all this while the President's Secretary of State, Mr. Bryan, through his "Commoner," is assailing the senatorial aspirations and the political activities of Mr. Sullivan in language of which the following is a sample:

Roger Sullivan may be expected to marshal under his banner every element interested in misuse of government.

One might think that to be consistent the President would feel that he should either suppress the criticisms of Mr. Secretary of State or withhold the cornucopias of Mr. Postmaster General; but it appears that he does not so construe his duties.

The Resurrectionist of a Party

THOUGH the President may not rebuke Mr. Bryan for feeding fat an ancient grudge against Sullivan, neither will he rebuke his own veteran supporters for an exceeding tender spot in their hearts for the Illinois boss, because memory gallops them back to a time when affairs at Baltimore hung in the balance and Roger Sullivan agreed with the friends of Wilson to swing the vote of the Sucker Delegation to the New Jersey candidate for four consecutive ballots. When the four proved insufficient, stout Roger earned a double gratitude by magnanimously holding on a little longer until the Cucuracha slide to Wilson was finally got under way.

And so there you are again with a simple but very human explanation of why the Administration, so lofty in its ideals, descends in its practice to biff a boss on one cheek and buss him upon the other. Besides, may not a man see the error of his way? May not a bad boss be encouraged to become a good boss? So Roosevelt encouraged Flinn. So Wilson may encourage Sullivan.

This little survey is enough to reveal the President as a master politician, the resurrectionist of a party, and the builder of a powerful political machine; but we must also recognize that he has shown himself a master strategist as well.

The long agitation of Roosevelt had greatly ripened and clarified opinion while the storms that lowered about his fighting head flashed vivid lightnings, revealing where enemies crouched and sinister power lay concealed. Moreover, the recent failures of Taft had dotted red lanterns about conspicuously. The way to danger and to success were both plain. The long night of the Democratic party had made it singularly amenable to the leadership of any Moses who had the courage to stretch forth his hand, while a divided opposition allowed the President to rule his own party with an iron hand because there was small danger of a coalition against him. Furthermore, the adoption of the amendment for the election of United States Senators by direct vote had brought that once haughty body into a singularly responsive mood.

This situation made possible the things that President Wilson has done, but only because he had the courage and ability to take advantage of it.

Not a Man but a Means

AND now we may turn to see the man using himself just as frankly as he uses his party and uses the patronage—the money of the people—to build a machine to do the people's will. The true picture of the President is undoubtedly that of the cordial, simple, kindly gentleman hinted at in the first pages of this article, but beneath whose mild exterior lie capabilities that are enormous and highly organized. Half the mystery is made by failing to realize that the President consecrates the resources of his personality just as deliberately to his political ends as he does the resources of his party. There is in him something of the fanatic and the stuff of martyrs.

Once he sees himself as a party leader and a President, he is no longer a man. He is a means. Everything resolves itself into that. His resources are multifarious and carefully card-indexed. He is what he wishes to be at the moment. He may be warm or cold, pliant or stubborn. He is an excellent judge of values in personal intercourse, and of what the prize ring calls "distance." It is useless to say he is warm to one who has never seen anything but the incandescent beam of his mind in action, or the stubborn thrust of a chin when his pugnacity is aroused; and it is equally useless to talk of his coldness to one his soul has ever sunned upon for a single minute. True, that one summing may go a long ways, because effusion and the President are antipodal, yet the experience will remain unforgetable.

But the President can be a great deal more and a great deal less than cordial. His manner is a choice collection of the most delicate gradations imaginable, and these gradations may express either attraction or repulsion. Some men go from his presence feeling that they have been invited and permitted to lie upon his bosom—others have gone away feeling sure that deliberately and to the face they had been consigned to perdition in the shortest and ugliest words possible, although, as a matter of fact, the President had done neither the one nor the other, but through his manner had denoted the exact measure of his inclination or aversion. Then, too, each President according to his genius! Woodrow Wilson has not the stomach of a Taft nor the abounding vitality of a Roosevelt. He runs to few excesses.

Roosevelt Intuitive; Wilson Analytical

HE wastes few motions, few words, few moments. He picks and chooses friends, counselors, confidants, and go-betweens, as any man has a right to pick—most of all the President. It is his Administration. He gets the credit and he gets the blame. May he not slice up his time and parcel out smiles and handclasps and pulse beats according to his own best judgment?

May he not also be forgiven if he dares to proceed along the lines which are natural to his own constitution?

The President, for instance, is not an intuitional thinker. He reasons out every step. He must touch each lamp-post on the way to his conclusions. This is one prime difference between himself and that other great tribune of the people, Roosevelt. Roosevelt is an intuitional thinker. To contrast them for a moment: Wilson thinks; Roosevelt feels. This is not to say that Wilson does not feel, nor that Roosevelt does not think; but they arrive at their results by different routes. When each has done, Wilson has a conclusion, Roosevelt has a conviction. Wilson has courageous confidence in his conclusion, just as Roosevelt has a pugnacious faith in his conviction.

The President has, as he wrote Colonel Harvey, a single-track mind. He sees the main point. He has taught himself to concentrate on that. All else is swept off the board.

One reason for his supposed secretiveness is that he is a good listener. He must get information. He must get it from those who talk to him. There are but so many hours and so many callers in a day. Consequently he listens. Why waste the moments in speaking upon a subject on which he has not yet reached a conclusion? His intellect is trained. He knows what he knows and what he does not know—most of the time. A mass of undigested facts is not knowledge to the President. He keeps such unfinished structures in the basement of his mind—when they are not forced out by political exigencies. Another reason why people think him secretive lies in what may be called the cash-register quality of his mind. It records the specific amount of your purchase and it gives you exact change—no more. He talks to the point. The conversation must not ramble. There are few confidences. The President's mental organization is a complex of sealed compartments; he lets one man into one, another into another, but no one has the key to all.

Secretive?—Yes

HOWEVER, it must be confessed finally that the prime reason for supposing the President is secretive lies in the fact that he is secretive. He can not only talk very little and say much, but he can talk a great deal and say little. The theory that language was given for the concealment of thought can find some very pat illustrations in his utterances. One even hears talk of people who have mis-

"Sure - I'll be home"

"That is, I will if it won't make too much bother for *you*. Isn't this the maid's day out?"

"Yes. But that doesn't matter. No trouble at all. I'll give you

Campbell's Tomato Soup."

"Fine!"

"I'll make it as a bisque; or with noodles in it if you'd rather. I have them handy."

"Great! Do I get two plates-full?"

"All you want. I've a dozen cans on the shelf. Then some cold sliced—"

"Never mind the rest of it. The starter catches *me*."

"Yes. It's so perfectly easy. And we'll be so cozy. Doesn't that beat dining down town?"

"Has it skinned a mile! The very thought of that soup makes me hungry *now*."

"I knew it would fetch you. Ready at six, sharp. Goodbye!"

"Goodbye!"

led themselves concerning his meanings, and who murmur of Jesuitism, hinting that the end appears to justify the means and indulging sarcastic intimations that Machiavelli ought not to have written his book because he was after all an inexperienced sort of person whose finest Italian hand was crude and horny. But, of course, those are not the President's friends who say these things, although some of them started out to be.

However, the chief reason for the Presidential secretiveness is undoubtedly the conservation of power. The President is by nature, despite all other manifestations, an absolutist. When he makes up his mind what he wants, no man in our public life has ever wanted it so hard or known better how to get it. Power—power—power—is his desire—*to be exerted, it must be admitted, solely in behalf of the common good as he sees that good.* It is for this he seeks the proxies of the people. He wants power. The party is power; the machine is power; the patronage is power; therefore he will have them. But knowledge also is power. Ignorance is helplessness.

They Must Follow Him!

BY the President's habit of withholding information he cripples his opponents and ties his allies with the shortest of leading strings. By this means a Congress may be held in check. The men "on the hill" are patriotic; some of them within limits, of course—they wish to do nothing to embarrass the nation; a majority are further careful to do nothing to embarrass the Administration. The President, by holding important facts under the cover of his hand, or by concealing his purpose, can compel all such men to wait upon him—and does. In the same way he extends his power in party organization matters. He imparts to no man fully. He does not disclose the whole of his plan. This robs men of the capacity for independent thought. They must follow, sometimes grudgingly, but they must follow—or rebel, and there is something in the cold gleam of the Presidential eye and the hard thrust of the Presidential chin that makes men think long before they take that step.

The same method appears in his attitude toward publicity concerning the affairs of his Administration.

The sources of information are carefully centered in the President. Facts are imparted most sparingly. The news, important and unimportant, trickles out in insignificant dribbles.

By this he teaches the country that he is the potential figure in the Administration. When an utterance is to be made he will make it. When important information is to be disclosed, he will disclose it; when legislation is to be enacted, he will propose it, shape it, push it, at once the author and the finisher, the keeper of the conscience of the Congress and the seals of public favor.

The Direct Message—and Why

IT was to give still greater force to such of his expressions as are to be made to Congress that he hit upon the expedient of delivering them to Congress in person. Not even the printed page nor the voice of the reading clerk could be permitted to screen the force of his own personality from the utterance; and besides, the novelty of the situation served to center the public eye as nothing else could.

The same idea is applied in the little carefully staged pronouncements when an important bill is receiving the Presidential signature.

Summing up, I find the President in practice a man of composite type, very human, very patriotic, with a soul of honor and a heart of sympathy, a statesman whose ideals are as lofty as the stars and a politician whose methods are practical as earth.

But the question which recurs is this: Will the ascendancy of Woodrow Wilson over the imagination of the nation pass? The answer to this is that already it begins to pass. The President is causing his own shadow to recede.

The Country's Complimentary Patience

EACH fresh reversal of himself, each over-or-under emphasis of language or tone, each indication that his utterances have been less well considered than they seemed, his thought less ripened than the aptness of the phrasing suggested, will go a little way to undermine the popular faith in his judgment, and lead inevitably to a discounting of values. His voice will sound less and less like the oracles of God. But by the same token it will sound all the more like the oracles of man. In this loss of prestige of one sort there may be gains of another. As the President demonstrates his fallibility he will demonstrate his humanity. As people surrender a little of their awe they may give him more of their affection.

Faith in the honesty of his intent will not pass. The people will give this man a chance. His theories have not worked out quite as expected. He believed the tariff was a drag upon prosperity; he appeared to think that if he cut the guy ropes the balloon would soar. The thing was done; but prosperity did not soar. Suspicion grows that the knife that cut the ropes may have punctured the balloon. Business waits. Armies of the unemployed, forgotten since the last Democratic Administration, get again into the dispatches. But the country does not become excited. The people wait with much patience and some faith. Wait! Wait! Give this well-meaning man a chance, is the attitude of the nation as a whole. Such an attitude is highly complimentary to the spirit of the country. It is also highly complimentary to the President. No doubt he takes it as such.

But will the President's mastery of his party pass?—no, unhesitatingly, no. As a party leader he will not fail. He has shown too much "stuff." He has stood the test already. He is strong enough for his job—too strong for it almost. The Democratic party is loyal to its idols. He has saved it from the pit. His leadership will hold. He has won it by the divine right of superior endowment.

Ideas May Fail—but Not the Man

AND the man himself!

It is true that his health might break down and his life go out of him, and by that calamity would fall upon the country, as it is forcibly reminded of the most sententious line Woodrow Wilson ever penned—and that thirty years ago—that the importance of the Vice President "consists in the fact that he might cease to be Vice President."

But barring this—and I think we may bar it safely—Woodrow Wilson himself will not fail—his genius is too practical, his patriotism too lofty, his mastery of his party too complete, and his passionate devotion to the popular cause too obvious.

It is his ideas, principles, policies, and party which may fail.

Let Them Get the Same Beans at Home

Men who lunch down-town, in cities, find in countless places a remarkable dish of Baked Beans.

The Beans are whole and mellow. A piquant Sauce is baked into them. A slice of tender pork lies on top.

Men like those Beans. Legions daily go to places which serve them. And many a lunch room owes its fame to this perfect dish of Beans.

Those places by the thousands buy Van Camp's. Even Broadway hotels serve Van Camp's. For they cannot match this dish. They know it, and they long ago ceased to try.

VAN CAMP'S
PORK & BEANS BAKED WITH TOMATO SAUCE
Also Baked Without the Sauce

The only way to serve such Beans is to do as they do—buy Van Camp's. The Beans must be selected by laboratory analysis. They must be tested by sample bakings.

The Sauce must be made from tomatoes specially grown; from certain seed, on certain soil, and ripened on the vines. Then it requires rare skill to compose it. We employ for the purpose a famous Parisian chef.

Costly ovens are needed to bake in this way, so the Beans come out mellow, uncrisped and whole.

These facilities are unique, such materials are rare, and this skill is inimitable. Find out what a dish they combine to produce and you will always want Van Camp's in your home.

That will lead you, we hope, to try other Van Camp Delicacies. We have spent years and fortunes to give to them the qualities you like.

10, 15 and 20 Cents Per Can

Some Other Van Camp Delicacies

Van Camp's Evaporated Milk
Van Camp's Soups—18 Kinds
Van Camp's Tomato Catsup
Van Camp's Chili Con Carne

Following the Sunset

(Continued from page 12)

and mouse. Duncan was able to give his children very little attention during the day, but sometimes of a winter evening, as he took his seat beside the fire, they climbed upon his knees, and these hours were very sweet to them all, perhaps because they were so infrequent. "At such times," says Lincoln, "we always insisted upon his singing for us. True, he hardly knew one tune from another, but he had a hearty resounding chant which interested us, and one of the songs which we especially liked to hear was called 'Down the Ohio.' Only one verse survives the wearing years:

"'*The river is up, the channel is deep,*
The winds blow high and strong.
The flash of the oar, the stroke we keep,
As we roar the old boat along,
Down the O-h-i-o.'"

Belle, on the contrary, was gifted with a soprano voice of great range, and from her the children always demanded "The Pirate's Serenade," "Erin's Green Shores," or some other ballad. "We loved her singing, and yet we also enjoyed our father's tuneless roar. There was always something deeply dramatic in his performance."

IT is a curious fact that nearly all of the songs which these powerful young bordermen loved to sing were sad. "Nellie Wildwood," "Minnie Minton," "Belle Mahone," "Lilly Dale," were all concerned with dead or dying maidens or with sweet birds singing o'er a grave. Weeping willows and funeral urns invariably ornamented the covers of these mournful ditties. Not one smiling face peered forth from the pages of "The Home Diadem."

"*Lonely like a withered tree,*
What is all the world to me?
Light and life were all in thee,
Sweet Belle Mahone,"

wailed stalwart David and buxom Delia, and ready tears moistened Lincoln's tanned, plump cheeks.

Apparently the only humorous songs they possessed were negro "patters" like "Camptown Race Track" and "Jordan Am a Hard Road to Trabbel." "But in addition to the dolorous lyrics I have quoted, mother also sang 'Three Grains of Corn,' 'Maggie, Are Ye Sleepin'?' 'Bird of the Wilderness,' and other pieces of Irish or English or Scottish origin, and the memory of her voice creates a golden dusk between the man I am to-day and that far-off cottage in the coulée."

ALL through seeding Duncan's mind was busy with plans for another land-looking excursion, and no sooner was the corn sprouting than he set out across the river into the West.

"I have no recollection of his departure," Lincoln admits, "and yet he must have made an exploration of this kind, for he discovered and purchased a farm in Winneshiek County, Iowa, and began active preparations for the migration which was set for the following February. Each event of that last autumn in the coulée took on special significance, for mother, at least, recognized that she was about to leave behind her familiar things and beloved faces.

"I am able to relive with great distinctness the threshing day of that year, for my father had said in my hearing: 'This will be the last time that David and Frank will ever set a machine in my yard.'

"For a week Owen and I had looked forward to the coming of the machine, and on the afternoon of the day appointed we sat on the fence gazing down the road, watching, waiting for the crew, and even at the falling of the dusk we still hoped to hear the slow rattle of the separator's heavy wheels; but as threshers usually worked all day in the field and moved to the next setting after dark, we were just starting (reluctantly) to 'climb the wooden hill' when we heard a far-off musical halloo.

"'There they are!' exclaimed father, getting out his old square tin lantern and lighting the candle within it.

"THE autumn air was sharp, and as we had taken off our boots we could only stand at the window and watch father as he piloted the teams into the yard. The light threw fantastic shadows here and there, now lighting up a face, now bringing out the thresher, which seemed a weary and sullen monster awaiting its den. The men's voices sounded loud in the still night, and the roused turkeys in the oaks peered about on their perches, uneasy, longnecked, and querulous.

"We would gladly have stayed awake to greet our uncles, whom we deeply loved and admired, but mother got us off to bed by saying: 'You must go to sleep now in order to be up early in the morning.'

"As we lay in our cots under the sloping, rafftered roof we could hear the surprised cackle of the hens as father wrung their innocent necks, and the crash of the 'sweeps' being unloaded rang loud and clear in the night. It was all deeply exciting, but at last the dance of the lights and shadows on the plastered wall vanished and we fell asleep.

"We were awakened at dawn by the ringing beat of the iron sledge as the men drove the stakes to hold the 'power' to the ground. The rattle of chains, the clash of rods, the clang of iron bars, intermixed with laughter and snatches of song, came sharply through the frosty air, while the smell of fried sausages from the kitchen gave evidence that our busy mother was hurrying the breakfast forward. Warned that it was time to get up, although it was not yet light, we had a sense of being awakened into a strange, new world.

"When we got down to breakfast the men had finished their coffee and were out in the stack yard hitching the horses to the 'power.' Though shivering with cold and awed by the dawn, we followed eagerly. The rime lay white on every surface. The frozen ground rang like iron under the steel-shod feet of the horses, and the breath of their nostrils rose up in little white puffs of steam—they seemed to us like sturdy engines hot with power.

"Father and Uncle David were anxiously awaiting the coming of the help. The pitchers were clinging to the stacks like blackbirds, and finally, just as the east began to bloom and long streamers of red began to unroll along the vast gray dome of sky, Uncle Frank lifted his voice in a 'Chippewa war whoop.'

"On a still morning like this his voice could be heard for miles. Long drawn and musical, it sped away over the fields and reechoed from the hills announcing to all the world that the McTurgs were ready for the race. Answers came back faintly from the frosty fields, where dim figures of laggard hands could be seen hurrying over the plowed land; then David called: 'All right. Go ahead!' and the cylinder began to hum.

"THE machine (a 'J. I. Case') was moved by five pairs of horses attached to a 'power' staked to the ground, round which they traveled to the left, pulling at the ends of long levers or sweeps. The force was carried to the machine by means of 'tumbling rods,' with 'knuckle joints,' and Uncle Frank stood upon a platform above the huge, greasy cog-wheels round which the horses moved. He was a great figure in our eyes.

Genius of Generations Through the Needle's Eye

Doubtless you have heard of the famous glass-blowers of Germany—men possessed of a peculiar skill that none save their sons or grandsons can imitate.

In Rochester, N. Y., is a similar community of men whose genius, transmitted from father to son, has baffled all attempts at imitation.

These artisans do not blow glass. They fashion and make Stein-Bloch Smart Clothes for men. They have been doing so for almost sixty years, and the third generation of their genius has passed through the needle's eye.

It goes without saying that they are happy workers, that their shops are scientifically right and that the methods back of the men are essentially modern.

The result is a product into which is put much more than workmanship and style. The clothes these men make are imbued with pride of parentage—with the nobility of zealously guarded lineage—with *character*.

From this has sprung a name that flashes to mind when good clothes are mentioned, just as does another name when good jewels are mentioned, or good automobiles, or good railroads.

The Stein-Bloch Co.
Rochester, N. Y.

New York Chicago
Boston

This label marks the smartest ready-to-wear clothes

Wilson Bro's

Athletic Union Suit

Licensed Under Klosed-Krotch Patents

THE crotch is permanently closed as in a pair of well-fitting drawers. It does not depend upon buttons to keep it closed. Never gaps, though strained to the limit. Never rolls. Never bunches. No edges to chafe you. Convenient and comfortable. The only garment of this style. Light, cool, easy fitting. A perfect product of this 50-year-old house. $1.00 and up *for men;* 50 cents and up *for boys.*

Other furnishings bearing the *Wilson Bro's* mark of quality include Shirts, Gloves, Hosiery, Suspenders, Neckwear, Handkerchiefs, etc.

Combinette Shirt

Wilson Bro's

Licensed Under Klosed-Krotch Patents

A sensible, convenient combination for the man on the links or the tennis court. Has same patented closed crotch as described above. $1.50 and up, in outdoor fabrics.

Combinette Pajama

Wilson Bro's

Licensed Under Klosed-Krotch Patents

By using this patented closed crotch a satisfactory one-piece pajama has been perfected. Looks dignified and is comfortable and convenient. Soft materials—perfectly made. $1.50 and more.

Wilson Bro's Chicago

"Driving looked like a pleasant job, but it was not all fun. It was very tiresome to stand on that small platform all through the long hours of early fall; and on cold November mornings when the cutting wind roared down the valley sweeping the dust and leaves along the road it was far pleasanter to sit on the south side of the stack, as we did, and watch the horses go round. It was necessary also that the driver should be a man of judgment, for the speed must be kept at just the right point. A good driver was able to gauge the motion of the cylinder by the pitch of its deep bass hum.

"THERE were always three men who went with the machine and were properly 'the threshers.' My uncles William and David alternately fed the grain into the rolling cylinder or, oil can in hand, 'tended separator.' The feeder's position was the high place to which we all aspired. We stood in silent admiration of the easy, powerful swing of David's body, as he caught the bundles in the crook of his arm and spread them out in a broad, smooth hand upon which the cylinder caught and tore like some insatiate monster. David was the ideal man in my eyes, grander than my father, and to be able to feed a threshing machine like that seemed the highest honor in my world.

"It was all poetry to us. We wished every day were threshing day. The wind blew cold, the clouds went flying across the bright blue sky, the straw glistened in the sun, the machine howled, the dust flew, the whip cracked, and the men worked like mad to get the sheaves to the feeder and with still greater haste to take the straw away from the tail end of the machine. The stackers wallowing to their waists in the straw seemed acting for our amusement and for no other reason. Slowly the stacks of sheaves sank and the straw pile rose. Hour by hour the men plied their flashing weapons.

"At last the call for dinner sounded, and Frank began to call, 'Whoa, there, boys!' holding his long whip before the eyes of the teams in order to convince them that he really meant them to stop. The pitchers stuck their forks down in the stack and leaped to the ground. Nick Green, the band cutter, drew from his wrist the string of his big knife, the men slid down from the straw pile, and a race began among the teamsters to see who should first be unhitched and at the watering trough.

"THE men took their places with prodigious clatter, and their attack on the chicken and potatoes was Homeric. To us, standing in the corner waiting, it seemed that 'every snitch' of the chicken was in danger of being eaten up, and, as for the pie, we resented every second helping which mother gladly responded to as a compliment to her cooking.

"At last even the 'ga'ntest' of them filled up and left the room and we were free to slip into their places. David and William returned to the machine to sew a belt, or take a bent tooth out of the 'concave' while the other men sat about at ease.

"Nooning was brief. As soon as the horses had finished their oats, the roar and hum of the cylinder began again, and continued steadily all the afternoon (its persistence was appalling), till by and by the sun sank, big and red, the night began to fall, and the wind to die out. Then through the rising gloom the separator boomed with hollow, weary, solemn roar, and the men working in sullen silence loomed dim and strange. The pitchers high upon the stack of straw, the feeder on his platform, and especially the driver on his 'power,' appeared disheartened, alien and remote. Gray dust covered the handsome face of David, changing it into something aged, absorbed and stern; only the driver voiced a professional cheer as he called encouragingly to the teams: 'Come on, Kate! Come on, Dan! Once again now!'

"At last William raised the welcome cry: '*All done!*' The men, retiring a little way, rested upon their forks. The cylinder began to slow down. The driver now called in a gentle tone: 'Whoa, lads! *Steady,* boys! Whoa, now!' But the faithful beasts had been going so long and so steadily that they could not at once check their course, and William and father seizing the ends of the sweeps held them. But even then the cylinder hummed on, until David, throwing a last sheaf into its open maw, choked it into silence.

"Again the sound of dropping chains and falling iron rods came to our ears, and the thud of hoofs as the horses walked with laggard gait and listless, down-falling heads to the barn. The men, more subdued than at noon, bathed with greater care, taking time to brush the dust from beards and clothes. The air was crisp, the wind at rest, and in the sky—a deep, cloudless blue—a few stars shone.

"SUPPER was more orderly than dinner. The table, lighted with kerosene lamps, the clean white linen, the fragrant dishes, the women flying about with steaming platters, made a very hospitable and cheery scene. The men were nearly all neighbors' boys or hands hired by the month, and my mother treated even the wage earners like visitors.

"How bright and warm and fixed it all seemed with mother smiling and joking, and yet beside the fire my father and Uncle David were talking of 'the woods and prairie lands' of the border, and complaining of the hills and narrow valleys of Neshonoc.

"'Yes, I'm going in February,' father was saying. 'I've got the boss farm out there. I guess this is the last time you'll thresh for me.'

"'Don't be too sure of that,' answered David. 'I'm thinking of going West myself.'

"Oh, those last autumn days in the coulée! How fine they were then—and how mellow and remote they have become, now that more than forty years have dropped a golden mist upon them. From this distance I cannot understand how my father brought himself to leave that good farm, those friendly hills, even for the glorious savannas of the sunset plain.

"NEARLY all of the other events of our last autumn in Neshonoc have slipped into the dim gulf, but I am able to relive vaguely our last visit to the home of Gran'pap McTurg. It was Thanksgiving Day, and follows closely on this threshing scene. Like a canvas by Rembrandt one side only of its figures is defined—the other half melts away in shadow. My world was still very small and dimly lighted. It was bounded on the west by the Minnesota bluffs and on the east by the village of Neshonoc. To the north, less than a mile away, rose a prodigious range of mountains; to the south was a great city. All else was mystery.

"'Well, Duncan,' gran'dad began. 'So ye're plannin' to go West, air ye?'

"'Yes, as soon as I get all my grain and hogs marketed I'm going to pull out for my new farm in Iowa.'

"'Ye'd better stick to the old valley,' said my grandfather with a little touch of sadness in his voice. 'Ye'll find none better.'

"My father was disposed to resent this. 'That's all very well for the few who have the level land in the middle of the valley,' he said sharply, 'but how about us who are crowded into the coulées? You should see the farm I have in Winneshiek. Not a hill on it big enough for a boy to coast on. It's right on the edge of Looking Glass Prairie, and I have a spring of water, and a fine grove of trees just where I want them—not where they have to be grubbed out.'

"'But ye belong here, Duncan,' replied gran'dad. 'Ye were married here, your childer were born here. Ye'll find no such friends in the West as ye have here in Neshonoc. And Belle will miss the family.'

"My father laughed. 'Oh, you'll all come along. Dave has the fever already. Even William is likely to catch it.'

"OLD Hugh sighed deeply. 'I hope ye're wrong,' he answered. 'I'd like to spend me last days here with me sons and daughters around me, sich as are left to me.' Here his voice became sterner. 'It's the curse of our country—this constant moving, moving. I'd have been better off had I stayed in Ohio, though Neshonoc seemed very beautiful to me the first time I saw it.'

"At this point David came in, and everybody shouted, 'Did you stop them?'—referring, of course, to the runaway team.

"'I did,' he replied with a smile. 'But how about the oysters and the turkey? I'm holler as a beech log.'

"The fragrance of the soup thoroughly awakened even Owen, and when we drew around the table in the little lean-to kitchen each face shone with the light of peace and plenty, and no one alluded

"Give me a quart of oil"

This careless request may bring costly penalties

The garage man comes out.

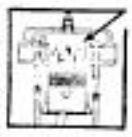
The motorist says, "Give me a quart of oil."

His "quart of oil" is poured into the crank-case, or reservoir. The car goes on.

No doubt the motorist thinks he has amply protected the 1500-odd parts of his motor.

Far from it. *One of the surest ways to invite friction-drag and motor trouble is to say, "Give me a quart of oil."*

"Give me a quart of oil" invites Loss of Power



Escape of explosion past the piston rings, loss of compression and loss of power frequently result from oil of incorrect *body*. The power-loss is felt most on heavy roads and on the hills.

You can get full compression—complete power—only by using oil whose *body* suits *your* motor.

Correct *body* is seldom secured by saying, "Give me a quart of oil."

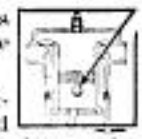
"Give me a quart of oil" invites Scored Cylinder Walls

Scoring frequently results from oil of low lubricating *quality*. Often, also, the oil's *body* is too light. Then the cylinder walls have no protecting film.

Scratching results.

Too often the blame can be traced straight to "Give me a quart of oil."

"Give me a quart of oil" invites Wear of Bearings

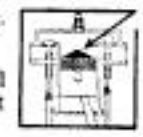


The problem of bearing-lubrication is far from simple. Bearings differ widely in type and size. The oiling systems which supply them also differ. Adjustments vary.

Both the *quality* and *body* of the oil must suit these conditions. For every oil that suits your motor bearings, you will find many which will cause undue friction.

An almost sure start toward bearing-trouble is, "Give me a quart of oil."

"Give me a quart of oil" invites Wear of Wrist-Pins



Wrist-pin lubrication is a difficult problem and little understood.

The location of the wrist-pins within the heated pistons and the slight angular motion of the bushings demand an oil which will spread readily, yet maintain the proper film between the pins and bushings.

Quick damage will come if the oil fails to meet these conditions. To encourage wrist-pin troubles prematurely, it is only necessary to say, "Give me a quart of oil."

"Give me a quart of oil" invites Carbon Deposit

Guesswork won't eliminate this trouble.

Both the *quality* and the *body* of the oil must be considered.

Suppose the *body* is too light for the piston clearance. The oil then works too freely into the combustion chambers. In burning, excess carbon accumulates unless the oil's ash is light and naturally expelled through the exhaust.

An easy road to carbon trouble is, "Give me a quart of oil."

"Give me a quart of oil" invites Noise

Noise is often a sign of worn parts—resulting from friction.

It may be a dull "thump" at every revolution of the main shaft. It may be "knocking" of worn wrist pins. It may be "hissing" within the cylinders. It may be "knocking" caused by excessive carbon deposit.

When a comparatively-new car pounds and racks its way along the roads it is seldom necessary to ask what brought on premature old age. Generally it is undue friction—resulting from incorrect lubricating oil. A way to invite premature noise is an off-hand request, "Give me a quart of oil."

"Give me a quart of oil" increases Maintenance Cost

If the oil's *quality* is low, a larger quantity is necessary to maintain a film.

If its *body* is incorrect, you have incomplete protection for the moving parts.

In either case excessive friction-drag results. Fewer miles are obtained from each gallon of gasoline. Your fuel and repair bills mount up.

This common waste is the frequent result of "Give me a quart of oil."

"Give me a quart of oil" reduces Second-Hand Value

What fixes the selling price of a used car? (1) The condition of the motor. (2) The condition of the chassis. (3) The condition of the body.

The motor is the vital part of the car. The motor condition, therefore, is most important.

At a recent sale in New York City, second-hand cars of uniformly prominent makes were auctioned off. The bodies were in good condition. The prices of the cars originally ranged from about $2000 to $5000. *The selling price in some cases was as low as $100.*

Why? Because the motors and other moving parts were badly worn.

Was the wear due to long service? No. The age of most of these cars disproved that. *Premature* wear was evident.

It is safe to say the owners of these cars had used the common expression—"Give me a quart of oil." They paid a high price for their carelessness.

How to secure the correct oil for your car

DO not say "Give me a quart of oil."

You want an oil whose *body* is correct and whose *quality* is best suited to the requirements of your motor.

Ask for that oil and get it.

Below we print, in part, our Chart of Automobile Recommendations.

This Chart is the result of the most far-reaching and thorough study of automobile lubrication that has ever been made.

It was prepared by a company whose authority on scientific lubrication, for every class of machinery, is recognized throughout the world—The Vacuum Oil Company.

It was prepared after a careful analysis of the motor of each make and model of American and foreign car.

For a number of years this Chart has been the standard guide to correct automobile lubrication.

The superior efficiency of the oils specified has been thoroughly proven by practical tests.

Make a note of the grade of Gargoyle Mobiloil specified in this Chart for your car. Then make sure that you get it.

You will then give your motor oil of *body* and *quality* which will yield you the fullest power, the greatest freedom from friction, and the greatest pleasure in motoring.

If your car is not listed below, send for our *complete* Chart of Recommendations.

In buying Gargoyle Mobiloils, it is safest to purchase in original barrels, half-barrels, and *sealed* five-gallon or one-gallon cans.

Look for the red Gargoyle on the container.

On request we will mail a pamphlet on the Lubrication of Automobile Engines. It describes in detail the common engine troubles—and gives their causes and remedies.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are:

Gargoyle Mobiloil "A"
Gargoyle Mobiloil "B"
Gargoyle Mobiloil "E"
Gargoyle Mobiloil "Arctic"

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants.

For information, kindly address any inquiry to our nearest office.

VACUUM OIL CO., Rochester, U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

A guide to correct Automobile lubrication

Explanation: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example, "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." For all electric vehicles use Gargoyle Mobiloil "A." The recommendations cover both pleasure and commercial vehicles unless otherwise noted.

Want your share of that $60,000,000 fund?

IF you're a policyholder in any old-line life-insurance company (except one), you've contributed to an annual fund for agency-expense which in 1912 **amounted to more than $60,000,000.**

You'll never get your contribution back or any part of it—**now;** but you need never pay it out again—you can save it—if you will steer clear of life-insurance agents and deal **direct** with the **one non-agency institution in America—the Postal Life Insurance Company.**

THE Company's Health Bureau also performs a most important service in **health-conservation** by issuing timely Health Bulletins for the benefit of its policyholders, and by providing, for those who so desire, **one free medical examination each year**—a privilege not accorded by any other company.

It will thus be seen that **the Postal Life Saves You Money and Safeguards Your Health.**

It will be well worth your while to find out just what the Company will do for you on any standard form of policy—whole life, limited-payment life, endowment, joint-life, monthly-income, or child's welfare.

POSTAL LIFE BUILDING

For quick action simply write and say:

"Mail full insurance particulars for my age as per advertisement in Collier's for April 18th, and be sure to give

1. **Your Full Name.**
2. **Your Occupation.**
3. **The exact Date of Birth.**

The Company will promptly send you **(by mail only)** figures for your age with the amount of dividends **guaranteed; also additional** policy dividends **now being paid,** showing the Postal's **low net cost.**

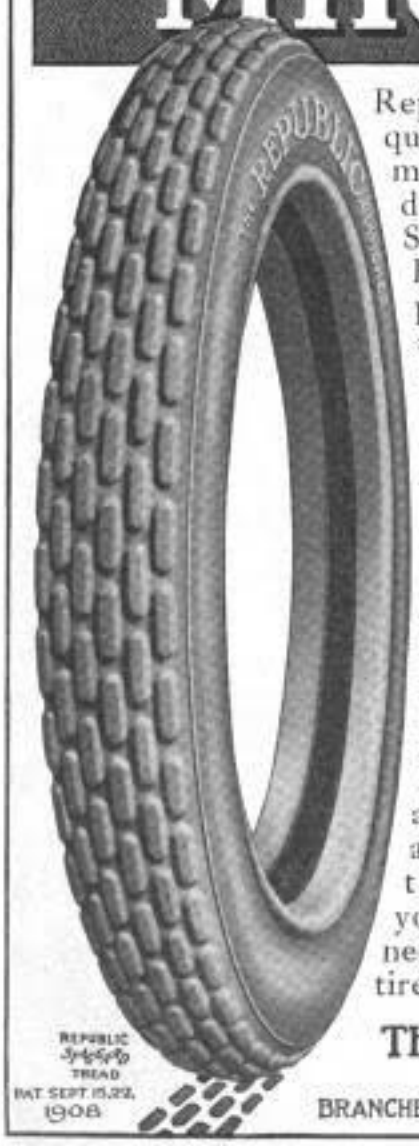
No agent will be sent to visit you; the Company does not employ agents. By dealing **direct,** you get the benefit of the commission other companies pay the agent.

POSTAL LIFE INSURANCE COMPANY
WM. R. MALONE, President
35 Nassau Street, New York

Strong Postal Points

First: *Standard policy-reserves,* now nearly $10,000,000. *Insurance in force nearly $50,000,000.*

Second: *Old-line legal reserve insurance*—not fraternal or assessment.



Third: *Standard policy-provisions,* approved by the State Insurance Department.

Fourth: Operates under *strict State requirements* and subject to the United States postal authorities.

Fifth: *High medical standards* in the selection of risks.

Sixth: *Policyholders' Health Bureau* arranges one free medical examination each year, if desired.

REPUBLIC Mileage

Republic quality tires are made for quality people. They are honestly made to sell at honest prices and they do produce mileage. The Republic Staggard Tread Non-skid and the Republic Plain Tread are undisputed leaders in tiredom. If you are in doubt about your choice just ask the man who uses Republics. Isn't that a fair proposition? Isn't that just good business sense? Start the season right by equipping your car with quality tires.

REPUBLIC "WM" TREAD

is a strictly quality tire built for cars of a lighter type. It is a recent addition to the Republic family but already it has attained a popularity that is truly remarkable. If you have a light car you need this great mileage tire.

to the fact that this was the last Thanksgiving which the McTurgs and Stewarts would be able to hold in the old valley.

"Slowly, one by one, the men drew back and returned to the sitting room, leaving the women to wash up the dishes and put the kitchen to rights. David and Frank seized the opportunity to ask my father to tell them again of the trip he had made, of the lands he had seen, and the farm he had purchased, and their young hearts were fired with desire of the level lands toward the sunset. In their visions the meadows were filled with game and the fat land needed only to be tickled to laugh into harvest.

"SAID David: 'As soon as dad and Frank are settled on his new farm in Lewis's valley I am going West also. There's only room for one of us at home, and I'm tired of climbing these hills. I want a place of my own. And besides, from all you say of that wonderful wheat country in the West a threshing machine would do wonderfully well.'

"As the women came in the men stopped talking of the migration, and my father called out, 'Come, Dave! Get out the fiddle—let's have some music.'

"This was the best part of it all for me. David could make even that humble cabin mystical with the play of his bow. True, his pieces were very simple—mainly old dance tunes, melodies which had passed from fiddler to fiddler until they had become veritable folk songs—pieces like 'Money Musk,' 'Honest John,' 'Haste to the Wedding,' and many others whose names were lost. But he had the gift of putting into even the simplest song an emotion which thrilled us all.

"Later he twanged the strings like a guitar, as an accompaniment to my Aunt Delia and my mother, who sang 'Nellie Wildwood,' 'Belle Mahone,' 'Minnie Minton,' and, at my father's demand, 'Just Before the Battle, Mother,' 'The Battle Cry of Freedom,' and the 'Day of Jubilee.' With these stirring war songs, the walls pulsed with patriotic sound. Even grandfather joined in the stirring refrain:

"'*It must be now the kingdom a-comin'*
In the year of jubilo.'

"'Now let's have "O'er the Hills in Legions, Boys,"' my father called out, and after a little hesitation my mother lifted her sweet voice in the words:

"'*Cheer up, brothers, as we go*
O'er the mountains, Westward ho!'

"And they all joined in the ringing refrain:

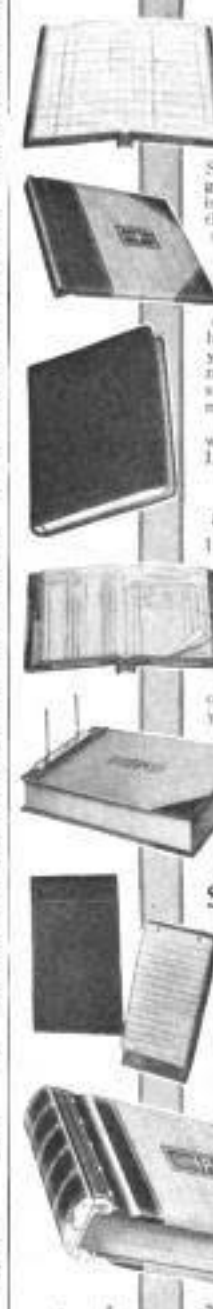
"'*Then o'er the hills in legions, boys,*
Fair Freedom's star
Points to the sunset regions, boys,
Ha, ha, haha!'

"Among all of those who sang or listened only my father beamed with entire satisfaction. He had marched and won. David and Frank, with a longing to go, felt themselves fastened to the little valley in which their grandsire lived, and my mother and Aunt Sophia, and perhaps even Delia herself, acknowledged in this song the spirit of migration which meant deprivation, loneliness, and suffering for them.

Then mother sang:

"'*Oh, the winds howl mad outdoors,*
The snow clouds hurry past,
The giant trees sway to and fro
Beneath the sweeping blast.'

"And all joined in the chorus:



"'*We will gather round the fire*
And we'll pile the wood on higher.
Let the song and jest go round;
What care we for the storm
When the fireside is so warm
And pleasure here is found.'

"And David, his soul mellowed and subdued, again played, choosing tunes for which he had no names—melodies strangely sweet and sad, full of longing cries, voicing something which I dimly felt but could not understand. At the moment he was the somber Scotch Highlander, the true Celt; and as he sat there absorbed, intent, his black eyes glowing, his great head drooping above his instrument, my heart bowed before him. He was my hero, the handsomest, most romantic figure in my life. He played 'Maggie, Air Ye Sleepin'?' and the wind outside went to my soul. Voices cried to me out of the illimitable hill-land forests—voices that pleaded:

"'*Oh, let me in, for loud the linn*
Goes roarin' o'er the moorland craggy.'

"He appeared to forget us, even his young wife. His eyes looked away into

1700 Loose-Leaf Items Fill Every Need

In the I-P line of 1,700 Loose-Leaf Devices and Forms—Ledgers, Invoice Books, Cash Books, Price Books, Stenographic Books, Journals, Memo Books for Business Houses, Salesmen, Doctors, Engineers and almost every imaginable purpose—there is a device or form that will undoubtedly solve your loose-leaf problems.

If you now have a Loose-Leaf Device or Form problem don't bother trying to solve it yourself—don't waste money on high-priced system specialists and made-to-order material. See your dealer or write us at once—see the 1,700 I-P items.

Ready-Made at Stock Prices

If you make the mistake of purchasing special Forms and Devices, you will forever be compelled to have all necessary additional Forms made to order. No matter what kind of an I-P Form or Device you require, your dealer or we can supply you from stock, at stock prices. We can also make special Devices and Forms, at **reasonable** prices, for any firm now having a satisfactory system.

See Your Dealer or Write Us

Don't think your business is "different." There is hardly a conceivable requirement that our experts have not prepared for. Remember that every conceivable Loose-Leaf Device and Form problem can be solved **only** by the I-P line.

Every I-P item designed by our own expert accountants and guaranteed accurate, scientific and durable, or they will be replaced at our expense. This guarantee is backed by the **largest Loose-Leaf manufacturers in the world—we are a $1,300,000 institution.**

See your dealer or write us today—see how we make it easy and inexpensive for any firm, large or small, to possess a Loose-Leaf system.

Chicago

gray storms. Vague longing ached in his throat. Life was a struggle; Love a torment. He stopped abruptly, and put the violin into its box, fumbling with the catch to hide his emotion.

"MY father broke the tense silence with a prosaic word. 'Well, well! Look here, it's time you youngsters were asleep. Sophia, where are you going to put these children?'

"Aunt Sophia, a trim little woman with brown eyes, looked at us reflectively. 'Well, now, I don't know. I guess we'll have to make a bed for them on the floor.'

"This was done, and for the first time in my life I slept before an open fire. As I snuggled into my blankets with my face turned to the blaze I defied the dark presence of the night and pine-land wilderness to the North.

"I was awakened in the early light by Uncle David building the fire, and then came my father's call and the hurly-burly of good cheer and greetings from old and young. The tumult lasted till breakfast was called, and everybody who could find place sat around the table and attacked the venison and potatoes which formed the meal. I do not remember our leave-taking or the ride homeward. I bring to mind only the desolate cold of our kitchen, into which we tramped late in the afternoon, sitting in our wraps until the fire began to roar within its iron cage.

"Oh, winds of the winter night! Oh, firelight and the shine of tender eyes! How far away you seem to-night!

"'*So faint and far,*
Each dear face shineth as a star.'

"Oh, you by the Western sea and you of the South beyond the reach of Christmas snow, do not your hearts hunger like mine to-night for that Thanksgiving Day among the trees? For the glance of eyes undimmed by tears, for the hair untouched with gray?

"IT all lies in the unchanging realm of the past—this land of my childhood. Its charm, its strange dominion cannot return save in the poet's reminiscent dream. No money, no railway train can take us back to it. It did not, in truth, exist; it was a magical world, born of the mystical union of youth and firelight, of music and the voice of moaning winds—a union which can never come again to you or me, father, uncle, brother, till the coulée meadows bloom again, unscarred by spade or plow."

The next installment, "Woods and Prairie Lands," will appear in an early issue

Tyranny of Beauty

(*Continued from page 10*)

her first demonstration: made one tremendous spurt and got across. Within forty-eight hours of our arrival she had selected and rented a tiny place in a "possible" neighborhood—a mere crack between two walls—and we were a New York establishment.

SHE could not take a lease, but paid one month's rent in advance—forty dollars—on the perfectly clear understanding that if she succeeded she'd lease, sent a man to clean and scrub that same night and moved in next day while the paper hanger was clothing it in ten-cents-a-roll pink paper. All the fixtures in the place—a hundred dollars' worth—were put in by an installment company, she paying ten dollars down and the rest monthly, and the towels by the towel supply company. Her only property in the whole place was one thousand jars of Zulu and my typewriter set in a little cubby-hole in the rear with a window on a shaft and a curtain across secluding a five-by-six space which she call an office.

As the deal stood, she had risked one month's rent, my wages, and the installment. If she failed, the installment company would step in and she'd step out—that was all there was to it. She wouldn't even spend money to have a sign put up and the only announcement of the arrival of the Del Mar Parlors was a cardboard sign in the window painted by myself. The one thing she spent money for was pink paper—she had had to refit at her own expense because of not leasing—and five dollars' worth of pink papier roses which she handed to her customers as a souvenir of the visit. She had gambled a month's rent and expenses, a month's brains and energy against the vanity of

"It's an Indian Twin Two-Speeder".

For five years the Indian Two-Speed Gear has been rolling up a great record. *For five years* it has been submitted to the severest test of all—actual use.

THE
Indian Motocycle

Two-Speed Gear is *not* offered as a 1914 improvement but as a thoroughly tried and true mechanical feature whose engineering principles are firmly established as standard practice both at home and abroad. The Indian Two-Speed Model is the supreme type of motorcycle, because not only is it heavily endowed with the qualifications to conquer any road, regardless of surface conditions, but it furthermore possesses the power to make a fast getaway from standstill, midway on tortuous grades, and gain speed every foot of the way to the top.

With the two-speed gear, the flexibility, suppleness and pulling power of the motor are increased to a wonderful degree.

The quick pick-up and instant throttling down to a walking pace likewise are predominant two-speed features especially appreciated in congested traffic.

The Indian Two-Speed Gear is a certainty—and you should not be satisfied with anything less than a *known and proved mechanical achievement.*

The 1914 illustrated Catalog will be sent you, free, upon request

You have to think before firing

The Smith & Wesson Automatic is *fundamentally* different from all others. The automatic safety is *under the trigger guard.* It cannot be operated by the same pressure that pulls the trigger. Neither can it be released by direct pressure of the hand in grasping the butt.

Smith & Wesson Automatic

"The gun that makes you think"

Requires a *double* motion of the *middle* finger to release the automatic safety. This motion can be made *only* with *definite purpose. No one* can discharge the Smith & Wesson *unintentionally.* And the *hand* operated, *non*-automatic safety makes the gun *doubly* safe. With it the mechanism can be locked completely, so that it is *mechanically impossible* to pull the trigger.

Easiest to load

The recoil spring can be instantly disconnected so that the "bolt" may be drawn back and pistol loaded *with little effort,* a feature found in no other automatic. And you can *easily* tell whether or not the gun is loaded.

Easiest to clean

By releasing a simple, but unique catch, the *Smith & Wesson* may be opened up for cleaning *without removing a single part.* No chance to lose some tiny screw and put the whole gun out of commission.

The special caliber

Protects you *automatically* from cheap or unsuitable ammunition. The S. & W. .35 Automatic Cartridge is made especially for this gun.

Add to these features *S. & W. mechanical perfection* and *S. & W. accuracy,* and you have the *superior* Smith & Wesson Automatic, the gun you should own.

Ask your dealer for it to-day. Write for free booklet describing gun in detail

the women of New York. I trembled and she exulted, though she was there to win on her terms, or go back to Columbus, disgraced in her own eyes. So she piled her thousand jars of Zulu in the window and put a sign over them: "Beauty—Only a dollar a jar." Put another sign over that: "You can be beautiful for one dollar." Put another sign over that: "Madam, stop! Come in and let me show you how beautiful you can be!" withholding the price on that for obvious reasons. I painted the signs on black cardboard in pink and purple touched out with gold. And we named our crack between the walls "The Little Pink Shop."

New York responded. Whether it was through astonishment at the paper roses, the price of the pink jars, the novelty of the skin food that, with a change of name, was guaranteed to repair scrawny necks and arms, "Nature's own bust developer," or madame herself behind the jars, or The Little Pink Shop as a whole, I can hardly say; the combination, probably. The main thing was that custom came from the first hour and stayed.

Three months from our starting totally unknown in a crack between two walls we were not only a going but a paying concern, and knew that we had arrived.

MADAME—we were soon calling her that even at home—gave the facials herself at that time, partly because she was obliged to save everywhere at first to make The Little Pink Shop pay its way without assistance from other sources, but mainly because she meant to learn all the tricks of the beauty business and particularly what went with the customer once you had her in your chair—that is the "dope"—and teach it to assistants who should one day constitute the staff of the large establishment she saw in the near future. She had no regular instruction in this, but she picked it up by going to various other beauty parlors and taking a treatment of one sort or another; she also bought their preparations and took them to a chemist to find out what was in them in order to imitate such as she thought had sale in them.

She had fully appreciated two things by this time—that with Zulu as a pilot we ought to be able to carry a whole string of other preparations at a relatively small expense; and that parlors and laboratories not only gave her preparations a better standing on the market, but an establishment offered a great field for the sale of beauty in many other forms besides creams and lotions; that is, she used Zulu to draw customers for treatments, and treatments to make friends for Zulu and spread its fame. Either business alone would have proved lucrative under her management; playing into each other's hands they brought her a fortune. And to the end of learning how to catch the women with the chair and bring them back for beauty and more beauty and all sorts and conditions of beauty she put in three months of the hardest work of her life.

"Certainly, madam, we can remove those wrinkles—but not in one treatment." "Yes, madam, we can cure that double chin—but not in one treatment." "Of course, madam, I can guarantee you a beautiful complexion—but not in one treatment." I must have heard those phrases a thousand times when I was not at home manufacturing—they were as much a part of our stock as Zulu. Nothing could ever be done for a woman in one treatment except a hair dye—that was a one treatment job and cost accordingly. Five dollars for the first dye and one dollar for retouching—that had to be done weekly. To keep dyed hair in good condition it ought to be done every five or six weeks—six times a year at least—and retouched forty or fifty, and there are thousands of women in New York who spend this amount annually on hair alone; it is part of the game, and less than half of what goes for Turkish baths, various forms of massage, manicuring, and toilet preparations.

IT was in the matter of hair dye that madame received a lesson that decided her policy of "cheap and harmless" in all her subsequent preparations. A lady who had been in for several facials thought she'd have her hair dyed. Madame had never dyed a head in her life, so after making an appointment for the next afternoon, she rushed off to another professional to take a lesson and brought back the dye her acquaintance recommended.

The operation was apparently successful and the lady's hair perfect when

How a Hobby Outgrew Itself

It has long been a hobby of mine to select tobaccos out of the commonplace.

Friends who smoked and liked my private Havana have relied on me for years for their supplies. The circle of users has grown until what began as a pastime has now become a serious business undertaking.

So I have decided to commercialize my hobby. And I can now offer to those who love an exceptional smoke a wider choice of cigars than heretofore. There are ten different blends, made up to suit varying tastes—each with the same unusual Havana base—each a cigar of exquisite flavor and aroma.

I have no salesmen's salaries or expenses to pay. So you will find my prices surprisingly low. I ship to you direct at pretty close to my original cost. And if you are a critical smoker you will be delighted to get the very cigar you most enjoy. I make a rather extraordinary offer below. It will pay you to take advantage of it.

Five Cigars Free

If you will send me 10 cents, towards forwarding expenses, I will mail you trial cigars — Panetela shape — my private "J. R. W." monogram brand. Smoke five with me—convince yourself. If they please you I will send future supplies at my low Parcel Post price: $5 per hundred, $2.60 per 50, all charges prepaid. Other shapes and blends at correspondingly low prices. **Use your letter-head, please—stating your position—or your business card, and write now for these cigars.**

Your rooms always at 70°

During April, May and all other less severe weather months the sudden southerly winds or the dead calms affect more frequently the correct burning of your heater-fire and make it harder to control just the exact amount of heat needed. It is then, particularly, that you'll enjoy the comfort and the fuel-economy of the

IDEAL SYLPHON REGITHERM

As in coldest weather the REGITHERM holds your rooms at even temperature, so in less severe weather you have just the warmth needed—no overheating—no underheating—and no fuel waste. Even the slightest outdoor temperature variation is immediately detected and offset by the REGITHERM, which instantly acts on the draft- and check-dampers, supplying the Boiler with more or less draft. Your radiators then throw out the exact amount of heat needed. REGITHERM is all metal; has no diaphragms, no machinery, no batteries to replenish—never needs repairing. You never need run to cellar to fix dampers. REGITHERM soon pays for itself in coal savings. Easily added to an *old* heating outfit.

Ask for free booklet—"New Heating Aids"—also tells about NORWALL Air Valves (keep your radiators free of air without fussing with them); SYLPHON Packless Radiator Valves, (easy-turning, *always* tight); and other valuable improvements.

For paint-rooms, binderies, bakeries, dry-kilns, etc. REGITHERM or SYLPHON Tank Regulators keep air or liquids at any high or low degree wanted.

she left our parlor; but next morning she came tearing back swathed in a dense veil—her hair had turned bright purple over night!

MY aunt came near swooning when she beheld it, but she had the presence of mind to declare that the trouble was "*not* with the dye—couldn't be—for the dye was pure vegetable matter."

"The trouble is your blood, madam," she stoutly asserted. "You have uric acid. Over night the acid worked up into the roots of the hair from the blood and this is the result. You should have told me—and if you had I would have warned you—I always do when a customer has uric acid in the blood—that it isn't safe to dye the hair—the uric acid invariably turns the dye. This would have happened with any dye you'd used, and if my dye hadn't been pure as the driven snow your hair would have been bright green instead of a hardly noticeable shade of purple."

She insisted to me afterward that she got this glib explanation out of a medical work, but I've always believed she got it out of her Irish. At any rate it served her turn—the trouble was with the dye, of course—as it is with all the others that turn on the hair in a few hours, and some of the dyes are far worse than that, containing lead or silver nitrate or other poisonous ingredient, and producing a variety of ailments, among them lead poisoning and dreadful sores on the scalp.

BUT this one lesson was enough for madame and she never risked another with a poor dye. The reputation for a good and safe dye that she subsequently built up was honestly earned—her parlors gave the safe dye she guaranteed. As for the victim, however, she was obliged to retire into the seclusion of the country for three months until the dye wore off. Nothing could be done for it—nothing ever can. Madame worked over it for hours trying everything she could think of, but in the end the purple was if anything brighter than before. Nevertheless she convinced the lady that the trouble was in her own system, advising her so earnestly to seek a sanitarium, that the lady did so when her hair permitted and thanked my aunt for the timely suggestion. That was the last we heard of the disaster; had she been an actress, or an adventuress, she would have probably sued for damages and put us out of business.

(To be continued next week)

As to Capitalization

APROPOS of our editorial on Henry Ford's plan for industrial justice in automobile making, a tried and valued friend writes us as follows:

"But I am grieved that COLLIER'S would reiterate the old cry about overcapitalization. What if there were no Wall Street—i. e., no machinery by which the people's savings could be utilized by the enterprises—what sort of a country does the writer of that paragraph think we would have? And what difference does it make whether the Steel Corporation—the star example—issued a quarter, a half, or a full billion of common stock? Approximately, the issue would have been sold to the same gross figure!"

TO which our answer is that when Wall Street relies on overcapitalization, it is apt to be exploiting the people's savings rather than using them. Investment does not depend on inflated securities. The "difference" for the Steel Corporation is that trying to pay 6 per cent on common stock involves earning fifteen million dollars net for a quarter billion of capitalization, thirty millions for a half billion, or sixty millions for a full billion. Any operating man can tell you what that means, how they must drive and drive in the frantic effort to hoist earnings. While this is being done it is less possible to do the fair thing by the workers. The strength of the enterprise is turned into an effort to falsify the economic relations between income and capital. This means profits only for those who got the stock cheap and sold it dear. In so far as the transaction affects the workers, the investors, and the public, it injures them, and it is apt to affect all three parties. This is bad business. What Ford did is good business. The new Wall Street is going to have more to do with investment and less to do with speculation.

The price of $395 includes Top, Windshield, Lamps and Tools

A high-grade, well-designed, carefully built, light-weight automobile, with four-cylinder motor, 96" wheelbase, roomy body, standard tread, standard features; produced by an experienced, soundly financed organization.

The Saxon is not a cyclecar, but a real automobile—the first car to offer all the essential features of standard motor car practice at a price under $500.

The first cost of a Saxon is less than a good horse and buggy; the upkeep cost far less. Saving in time considered it is cheaper than riding on street cars.

The Saxon is a car of the widest usefulness a source of pleasure and health for the man of moderate means; a great time-saver for salesmen, physicians, contractors and all others to whom time is money; an economical convenience for the man who already owns a big car who can use the Saxon to better advantage than his big car for running about town and in a dozen other ways.

Consider these Saxon Features

4-Cylinder Motor, water cooled
Standard Tread
96" Wheelbase
Left Drive, Center Control, enter from either side
15 Horsepower
Sliding Gear Transmission
More leg room than high priced cars
Streamline Body
Honeycomb Radiator
Dry Plate Clutch
Light Weight
*Wire Wheels
Good Looks
Low Upkeep

Saxons are selling fast everywhere. See your dealer early for a demonstration. Send today for catalog with detailed description of this sturdy car.

SAXON MOTOR COMPANY
Detroit, Mich.

These Tires *Alone*

—are guaranteed not to skid on wet or greasy pavements, else returnable at full purchase price after reasonable trial.

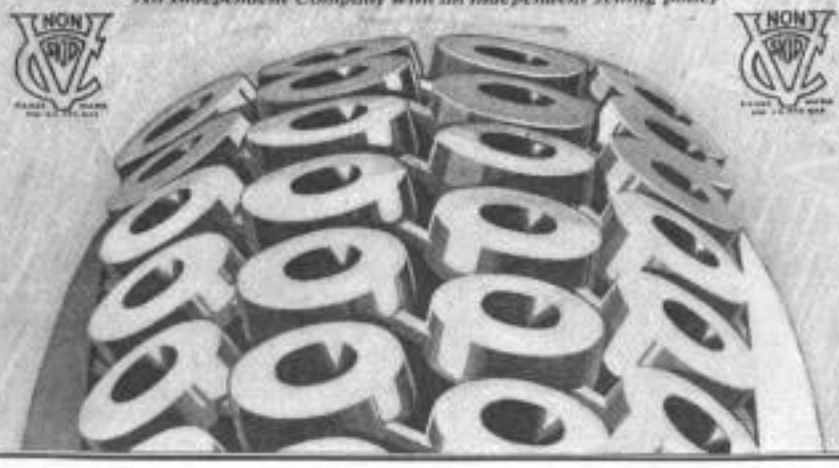
—are guaranteed for 4,500 miles *actual* service for the user's protection only on the basis of years of proof that this figure is a *low minimum*.

—are guaranteed to be absolutely oilproof—immune to the effects of oil on roads, garage floors, or otherwise encountered.

PENNSYLVANIA Oilproof VACUUM CUP TIRES

No user has ever challenged the non-skid guarantee.

Purchasers should always figure on the great excess mileage (above the guarantee) averaged by these tires, many records exceeding 12,000 miles on heavy cars.



The Oilproof feature is invaluable, and eliminates much worry and inconvenience.

a cigarette. It was some moments before she replaced the receiver. Meanwhile he fidgeted and fumed with every circumstance of exaggerated irritation.

"Say," he exclaimed when at last she turned to him, "what is this here, a newspaper office or an information bureau, or what?"

SHE eyed him reproachfully.

"Sorry," he said lustily, "business of humility. Oh, may I smoke, Lady Queen?"

She glanced at the blue haze about his head and laughed.

"No," in mock severity, "you may not."

"All right, then, I won't," he returned easily, and continued to puff at his cigarette. She busied herself with some papers on her desk, and for a time he was content to lounge on the divan and watch her. At length he called: "Hey, Kate, I'm here—entertain me."

"Gladly, but you must help," she replied, and gathering up a sheaf of manuscript, she thrust it into his hands.

"What's this?" he muttered. "Cooking recipes, as I live. Say, is this stuff for that lully domestic-science mag?"

"Yes, Mrs. Gates—the editor, you know—is ill, so I am getting out this number of the magazine for her. I have all this galley proof to revise, and I am going to make you hold copy for me. Read it out, Connie lad, read it out."

"Horrors!" cried Con. "Me, an able-bodied citizen, reading this junk! Oh, well, the sooner we start the sooner we'll be through, I suppose. Here goes: 'Mock Duck: Take one and one-half pounds of good round steak and rub with one teaspoonful of vinegar and one teaspoonful of olive oil mixed. The vinegar softens the fibers and the oil improves the flavor.' Say, Kate, I don't believe I want to be entertained. Lemme entertain you."

"Go on, go on," she ordered, pencil poised, her eyes on the long printer's proof before her. "You're doing fine, Conrad."

"Aw, shoot!" he growled. "This is an outrage." He heaved an anguished sigh and continued to read in a sing-song voice: "'Roll the meat and set away in a cool place. Boil three medium-sized potatoes, mash with pepper—'" and so on.

FOR more than an hour he read from the manuscript, now slumped down to his shoulder blades in his chair, now standing erect, declaiming the recipes and gesturing like a Fourth of July orator. Twice he was interrupted by the telephone bell, and each time he fretted and fumed, making no effort to conceal his impatience. When the last three paragraphs had been corrected he tossed the copy to the desk, threw his head back, doubled and stretched his arms, and yawned prodigiously.

"Well, lady," he said briskly, "now that the work of the day has been completed, we will pass to the curio hall, where I shall give a brief description of each of the relics on exhibition."

He lifted a small volume from the bookcase and announced in showman style: "I hold here the original diary kept by Aristotle's chauffeur. It is especially interesting at this time—at this time—"

A soft hand closed his mouth and the book was removed from his grasp.

"All right," he asserted, "let's sit down and talk—let's talk about me," and then with a gesture: "Gee, I sure am some guy!"

She rumpled his hair fondly, then pushed him into a chair and knelt beside him.

"You are, *you* know," she said tenderly.

"Aw, no, I'm not," he protested, and slipped his arm about her. "Say, lady, when are you going to sign articles with me? When will you be Mrs. Con?"

"Oh, some day—perhaps," she replied with assumed carelessness. "Next year, possibly; the year after, maybe. Who knows?"

"To-morrow—what do you say?" he suggested eagerly.

"To-morrow? Oh, I shall be too busy," she laughed, and rose to her feet.

"Yah—that's it, always too busy," he said aggrievedly. "All right, I'm done. Goo'-by, world—blooey-blooey," and he discharged an imaginary revolver at his head.

"Courage, Conrad, take heart," she counseled as she seated herself at the

desk and fastened her attention on a page of copy.

"Say, drop that for two minutes, will you, Kate?" he burst out when a very inferior grade of patience gave way.

"I mustn't. I've simply got to write this letter," she protested.

"Must be a business letter, or you wouldn't pencil it all out before inking it in, as we guys say about comics."

"It is a business letter," she returned. "I am trying to get an advertising contract for the 'Chronicle' from the Indian Cereal Company. They are putting a new breakfast food on the market, and—"

"Oh, I tell you what," he said eagerly as he rested his elbows on the desk, his chin supported by his hands, "let's not fret about work to-night—let's visit a while."

"Now, Con—" she began.

THEN the telephone bell ripped out its discordant note. He went to the divan, slipped on his overcoat, took up his hat, and walked swiftly to the hall. She watched him, her mouth close to the transmitter, but made no attempt to call him back. Presently the outer door was opened, then closed with a bang. Kate replaced the receiver in the hooks, moved the instrument to one side, and bent again over the mass of copy paper. At length Con returned.

"Hello there," he greeted.

"Why, hello, Con, I thought you had gone," she said with simulated surprise.

"What? Well, now I will go," and he made for the door.

"Oh, Connie," she called.

"What is it?" he demanded, trying to look angry.

"Come back—I want to talk to you."

He removed his overcoat, flung it into a chair, and said with a grin: "That's just what I have been waiting for."

"Con, I thought you understood this game," she began. "Why do you make it so hard for me?"

"Oh, I understand," he said gently, "but just look at my side of the story. I drift in here to-night with one of those moods you read about—a mood a king couldn't buy. I had hoped it would be catching. But no, I fall into a pool of ice water. Business—that's the wheeze—business. I had to hear what most of those telephone conversations were about. Always business—you talk it, eat it, dream it."

"But, laddie, I have to work, you know. I would far rather stop and play, but the wheels must be kept turning."

HER eyes were moist and there was a little quaver in her voice.

"I wouldn't willingly hurt you—you know that," he said quickly, "but don't you think you overdo it? It isn't your own little burden you're carrying—you bear the load for every friend you have. Look at those proofs we read to-night. You are paid a commission, I suppose, for all the advertising you dig up for the domestic-science magazine, but you get nothing for the editorial work you do. When you came to the 'Chronicle,' I thought you would drop all this other junk. I thought, too, that I would see more of you since we work on the same sheet. But no—you are always on the go, and on top of working all day you bring home a bale of trouble with you every night. Why, I'll bet you haven't seen a show this year. We haven't been out anywhere together since the big wind. Why, I even have to ask you to stop trotting on the treadmill long enough to say hello to me."

The moment he stopped he regretted his vehemence. Her cheeks burned dull red. She eyed him steadily, but said nothing, and whether the expression on her face presaged tears or a scorching rebuke, he could not have told.

"I know I am awfully poor company," she said slowly; "I warned you some time ago that I would prove an unsatisfactory playmate."

"Aw, don't say that," he begged; "I'm not complaining. I'm merely offering you a suggestion. Be more temperate about this work thing. Don't let it steal your day or rob you of your friends—er—what I mean is—oh, what's the use? I'm bound to hurt your feelings every time I open my face."

HE began to pace the floor, trying to think of a diplomatic way to phrase his convictions.

"Please sit down, Con, you make me nervous," she said after a time.

Accordingly he hauled a rocker close to her desk and sat down so suddenly that his feet were flung high from the

Motion Picture Star Crosses Continent on Horseback

Cleo Ridgely and her husband, stars of several motion picture companies, undertook to ride from New York to San Francisco without changing horses. Thruout the journey, all who saw Mrs. Ridgely were amazed at her fresh complexion and soft skin under exposure to such weather trial. The letter below gives the secret.

Wind, Weather and *Ingram's* Milkweed Cream

THOSE women who despair of protecting their complexions against the ravages of outdoor life will be interested in the following letter written to the makers of Ingram's Milkweed Cream by the well-known motion picture star.

Dallas, Tex., July 31, 1913.

I am very fair, and having ridden through rain, cold and excessive heat, my skin is in just the same condition as when I started, although my husband is so sunburned and tanned that he would be taken for a Mexican. People think that my husband is riding and I am traveling by train, but such is not the case. Leaving New York, I tried many things to guard against the elements and protect my skin, but not until I started the use of Milkweed Cream did I find real help. I want to thank you for placing such an article of merit upon the market and cannot recommend it too strongly. It is a toilet essential that I will never be without.

Sincerely, CLEO RIDGELY

The foundation of beauty is a fine complexion—and that means a healthy skin. Ingram's Milkweed Cream has the peculiar properties that make for *skin health*. Its use overcomes the more serious complexion faults as well as undue redness, sunburn and freckles. Read the letter from Sarah Bernhardt—today a marvelous example of youth and beauty preserved.

New York, May 22, 1906.
Frederick F. Ingram Co.
Dear Sirs: Ingram's Milkweed Cream is of a most delicious perfume, marvelously good for the skin and complexion; removes all spots from the face. It is a great pleasure for me to testify my sincere satisfaction. I take with me to France a large quantity.
Yours sincerely,
SARAH BERNHARDT

The success of Ingram products has been proved by millions of beauties. Send us a 2c stamp to cover the cost of mailing and receive free a sample of Milkweed Cream, of Velveola Souveraine Face Powder, of Ingram's Rouge, also Zodenta Tooth Powder.

There Is Beauty In Every Jar

Frederick F. Ingram Company
Established 1885

TRADE K-W MARK

MASTER-VIBRATORS for FORD CARS

←This is the *only Trade Mark* under which K-W Master Vibrators are sold—

You are particularly cautioned against imitations apparently resembling the K-W Master Vibrator in many details and being offered by some dealers under private trade names. *Look for the K-W Trade Mark and serial guarantee number.*

A handsomely finished box means nothing. It's the electrical detail that makes a Master Vibrator reliable and efficient and years of service *alone* will prove this. Over 90,000 K-W Master Vibrators giving efficient service is proof that the K-W is electrically right. That is why every K-W Master Vibrator is "Guaranteed for life."

The K-W Master Vibrator is the Standard of Excellence all over the world. It is better and more reliable than a high tension magneto. It's a tried and proven accessory for a Ford car, with 100% efficiency.

Your nearest dealer will gladly show you the merits of the K-W Master Vibrator. *Literature on request.*

Price $15 with Kick Switch—with Yale Lock Switch $16.

How Many Hides Has a Cow?

This may seem a foolish question.

Yet the area of automobile upholstery made from one cow's hide is about three times that of the whole hide.

How?

By splitting the hide into three sheets, and coating and embossing the "splits" in imitation of grain leather.

Coated split leather is therefore artificial leather much inferior to

DU PONT FABRIKOID MOTOR QUALITY

which is scientifically made artificial leather based on a fabric much stronger and more uniform than the fleshy split, but coated and embossed in the same way.

The difference is all in favor of Fabrikoid, which is guaranteed superior to any coated split. Not affected by water, heat or cold. Several leading makers have adopted it. Any maker can furnish on your car if you order it so.

Send 5¢ for sample 18 x 25 inches. Enough to cover a chair seat. Mention this weekly and specify Black Motor Quality Fabrikoid.

The Prophy-lac-tic Tooth Brush

Brush your Teeth this Way

Not This Way

floor, and he well-nigh turned a somersault.

"What kind of a man-killer is this?" he asked gayly as he struggled to right himself. "You should have warned me about it. Most everybody seems to have a rocking chair that folks have to be cautioned about—'don't be afraid, it will go only so far back and then it stops. It won't tip over.' Oh, did I tell you the story—"

Kate burst into laughter.

"There you are!" she exclaimed. "That's you all over. You jump like a rabbit from—"

"Wrong," he corrected. "It's the nimble and festive chamois that jumps from point to point. But, say, have you heard about the two Irishmen?"

"At least a thousand times," she declared.

"Nuh-no, this ain't a Pat and Mike story. It's about Clancy and Phelan," he returned eagerly. "Listen—"

"Con, it seems impossible for you to be serious. Honestly, I never can tell when you are joking and when you are not. You have asked me to marry you. How do I know but that one of these days you will wave your hands and grin and say that it was all a jest—that you were just trying to be entertaining?"

"Aw, that's no way," he said, flushing. "You don't think that really, do you?"

"Why shouldn't I think so? A moment ago you were berating me about my work. Your work is fascinating to you; mine makes just as strong an appeal to me. But while I am tremendously interested in what you do, you apparently consider that I am riding a hobby-horse."

"Oh, lady, you know I haven't got a head for business," Con began.

Kate arose from her chair.

"At a signal from the hostess all arose," he quoted as he leaped to his feet. "What's the idea?"

"I am going to send you home. It is late and I have much to do," she said softly.

"Aw, no, let me stay and help you," he explained. "Tell me about this Indian Cereal Company business. I'll bet I can help you to catch that contract for the paper."

"No, Connie, you have your own work to attend to," she returned.

CON sighed dolefully and worked on his overcoat.

"Sorry I've made such a dismal botch of things to-night," he said gravely as they stood at the door. "Apologies and all that sort of thing."

"No apologies are required," she murmured as she took his hand, pretending not to notice that he was ready to tender the customary salute. "Good night, Con; God bless you."

"So long, Kate—see you to-morrow," he returned gruffly, and hurried away.

As the door closed behind him, an aged timepiece in an apartment below rapped out eleven in quick, tinpanny notes.

Eleven p. m.—lover's hour. In the theatres at this time the affectionate hero who has been wooing the blushing heroine since the show started clasps her in his arms, and hundreds of hands clap madly while the curtain falls. In countless closing paragraphs, attained at this time, *she* has promised to be *his*, and the aged sexton prepares to ring the wedding bells, technically termed "W. B.'s." In innumerable vestibules young folks, torn by the bittersweet desolation of parting, try to summon sufficient courage to render the final "Good Night" with variations.

But Con, clattering down the stairs, was not in accord with the hour. "The scene changes to the North Pole," he mused. "Why did I ramify around so much in my chatter? Well, I've got to make good now. Only one thing to be done—it's business of business for this little man."

THE next day when Con reported for duty, and had chased an office boy from his chair, he sought information.

"Mallory!" he called.

A short, stout man detached himself from the throng standing caucus fashion in the center of the room and came over to Con.

"Morning, Mr. Durgin, what'll you have?" he greeted in a soft, foggy voice born of alcohol, caution, and catarrh.

"Hullo, Mallory. Tell me—what is this Indian Cereal Company business the 'Chronicle' is trying to get?"

Mallory drew a copy of a morning paper from his pocket and, batting out its folds, spread it before Con.

"See this?" he asked.

Con gazed at the large picture of a round black bomb indicated by Mallory.

"Sure," he replied. "What is it?"

"This is the first shot in their new advertising campaign. For one week they will run this cut in three-column space in all the papers on their list. You notice that under the bomb appear the words 'Watch it!' and that there is nothing to indicate who the advertiser is? Well, each day the fuse sticking out of the bomb in the picture will be a little shorter than it was the day before. Naturally, they figure, the reading public will become curious and will watch the ads to find out what it all means and what will happen when the fuse burns down to the bomb. Well, at the end of the week they will run a double-page spread showing the bomb bursting into fragments, and in this ad, they will tell all about a new breakfast food they are putting on the market. You see?"

"I get you," said Con, nodding slowly. "Good scheme—they'll pump up a lot of interest with that bomb stuff—everybody will wonder what is coming off when the shell cracks."

"Yes—and it's a peach of a line of business for the newspapers too. The cereal company will start their campaign with three-column space every day for the bomb scheme, then, after they have run the first double-truck, they will use half-page space for several days, and wind up with quarter pages."

"Do we get a slice of the melon?" asked Con, to sound out Mallory on the subject.

"No, wish we did. But I'm afraid the 'Chronicle' is out of it. We have solicited the account vigorously, Miss Garrison and I, but the Indian people claim their list is complete—they are using all the morning papers and three evening sheets—and they say the 'Chronicle' is the superfluous paper in the evening field—that it is not necessary to them in the campaign."

"They must be a fine collection of skulls," Con growled. "When did this campaign start? I haven't seen this bomb stuff before."

"Started this morning. I've heard a lot of people commenting on it already."

"Mm-mm. All right, Mallory, much obliged," said Con.

HE bent over his drawing board until the advertising solicitor walked away. Then he tilted back his chair and rested his heels on his table.

"That's what I call some juicy, toothsome account," he mused as he rolled a cigarette. "Kate, old pal, I bet it will mean a lot to you if you drag in the

'Chronicle's' share of the fruit. Let us see what we shall see."

WHEN the floor about his chair was dotted with cigarette stubs and the air in his corner was blue with smoke, he removed his tingling feet—long since asleep—from the table, brought his chair down with a crash, and began to whistle furiously.

"Listen to the mocking bird," called the sporting cartoonist sarcastically. "Con has been bit by a cockatoo."

"I've got an idea," explained Con blandly.

"No!" cried the other artists in an incredulous roar.

"G'wan, you skulls," cried Con cheerfully, "sing it out—it'll never happen to you. There isn't one of you that's strong enough to stand the shock."

And while his cronies chanted a stanza of "The Star-Spangled Banner," he arranged a clean sheet of Bristol board on his table and carefully sharpened a pencil.

One by one the other men departed for lunch, but he toiled on, chuckling now and then as though well pleased with himself. Finally he erased the pencil marks and finger prints from his drawing. Quickly slipping on his coat, he hurried down to the advertising department, the result of his morning's work under his arm.

Kate was nowhere in sight and her desk was closed. As he was turning the pages of a telephone directory, in search of the address of the Indian Cereal Company, she came in, rosy from the frosty air.

"Hullo there, small boy!" she called cheerily.

"Hey—just been wondering where you were," he returned as he closed the phone book. "Why ain't you ever at your desk?"

"Sorry, but my job calls for lots of footwork," said Kate, flinging up a roll-top. "How is Conrad, the well-known artist?"

"There ought to be a law against my having so much good looks, health, and youthful spirits," he assured her. "Have you et?"

"Just came from lunch. Are you going out or coming in?"

"Out. Say, it's a wonder you wouldn't ever ask a guy out to eat," he said aggrievedly.

KATE reached for her purse.

"Stow it away," he laughed; "'tis sordid to display so much affluence. I'm really rolling in wealth myself. Come on out with me and have a cup of coffee or smoke a cigar while I am eating."

"Con," she laughed, "you do have the most noble inspirations!"

"You're right I do," he said enthusiastically. "Tell me, did you write your letter to the cereal folks last night?"

"Yes, and mailed it. But it didn't do any good. I called them up this morning, and it was the same old story—nothing for the 'Chronicle.'"

"Be at ease—little Conrad is on the job," he said. "I don't know, but mebbe I'll have a surprise for you to-night."

"Tell me about it," she begged.

"No, nuh-no, not yet," he demurred.

"Please. Oh, what is this? mayn't I see?" and before he could prevent her, she had lifted the tightly rolled drawing from his pocket.

"Hey!" he cried, but it was too late.

SHE was gazing at the sketch which showed a fat little man with a very happy smile surrounded by hurtling fragments of an exploded bomb. Under the little man were printed the words: "Zibbie: The Man with the Appetite. Follow His Amusing Adventures—A Big Laugh for You Every Night in the 'Chronicle.'"

"Why, Conrad Durgin, what does this mean?" she demanded, turning a startled face to him.

Con blushed.

"May as well tell you now that you have seen the idea," he said, somewhat sheepishly. "That little man Zibbie is a character in an imaginary comic series. I am going to take that drawing around to the Indian Cereal Company and tell 'em if they don't give us our share of their advertising patronage that we will run this picture in the 'Chronicle' and all the other papers in town at the end of the week after their blind bomb ads have aroused a lot of curiosity. You see, everybody will be anxious to know in a day or two what those bomb pictures mean, and the first explanation they get will satisfy them. The cereal people will soon see that by running this picture the 'Chronicle' will take advantage of several thousand dollars' worth of free publicity. It would kill the breakfast-food campaign, too. Of course it's all bluff, because I couldn't go ahead with this Zibbie series even if the 'Chronicle' did advertise it. I haven't got any ideas for it. Why, what's the matter?" he concluded with an embarrassed laugh.

KATE was leaning on the back of a chair, and there was no mirth in the eyes that gazed into his.

"Con, I am surprised," she said gravely. "Don't you know that this is blackmail?"

"What?" he exclaimed. "Aw, no, it's just a business bluff. I figured they would give me the contract right away as soon as I had sung my song."

"Do you realize that you were about to threaten to steal over twenty thousand dollars?"

"How is that?" he asked soberly.

"That is the amount the Indian company is to spend in preliminary advertising before they explain about their new product. You were about to offer to steal that—rob them of the results of all the interest they arouse."

"Aw, I don't know anything about that," said Con, waving his arms and snapping his fingers. "I am just trying to help you the only way I know. I wanted to show you that I do take an interest in your work."

"Oh, Con," she said softly, and rested her hand on his arm for a brief moment, "your intentions are all gold, but, really, you need a guardian."

"The job is open," he said eagerly.

"No, I wouldn't like a guardian's job," she returned. "Leave this drawing with me now, like a good boy. Perhaps if you had no other plans for this evening, and cared to, you might ring my door bell, and maybe I'll be at home."

"That's me," he said with a sigh, and walked away.

"I'M mad," Con announced that night as he tore off his overcoat and tossed it on the divan.

"Oh, Con—not really?" Kate questioned.

"Yes, and then some," he returned, trying to look the part.

She slipped her arm through his, and together they paced back and forth in the little sitting room.

"Tell me all about it," she said. "What is wrong?"

"Oh, everything. All my plans go crosswise—and— But look at me spending the afternoon up in Union Hall with a crowd of women walking all over my new shine, punching elbows into my ribs, trailing those Lonesome Pine hat plumes into my eyes, and giving me the 'How dare you?' look for being among those present. I had to make some sketches of those English militants who were speaking, and the women in the audience got so filled up with excitement that I began to think they would mob me just because I was a mere man."

"You poor boy," she laughed. "But I thought you were keen for woman suffrage?"

"Me? I was—I dunno about it now. Well, that wasn't all. I had to hustle down to the shop and finish up my sketches for to-morrow's edition. Just got through work before I came up."

"Why, Con, haven't you had your dinner?" she exclaimed, all concern. "I think we can find something in the ice box if you won't mind the—"

"Be at ease—I suffer no pain. I stopped on the way up here long enough to grab some provender," he explained.

"Con, are you prepared for a shock?" she inquired as they fell into step again.

"Fire away," he said carelessly. "I know you are going to blow me up for that brilliant scheme of mine, and I know I deserve it." He looked up suddenly and saw the happy light in her eyes. "Kate, what is it?" he demanded.

"You are about to make a lot of money," she said.

HE brought up short and compelled her to stop.

"Now, you know I'm a nervous guy. Don't keep me in suspense—speak, nice lady, speak!" he cried.

"It is about that drawing you made. I cut out the figure of the little man you called Zibbie and took it over to the Indian Cereal Company's office. I hope you won't mind. You see, I knew they had been looking for a trade-mark for a prepared flour they put up. Well,

A perfectly finished shirt

"WHY I AM A UNITARIAN"

By James Freeman Clarke and other Unitarian Literature FREE. Address "Associate Department," 25 Beacon St., Boston.

they couldn't use the figure as a trademark, but they are keen to have you draw a series of pictures of Zibbie, to be displayed in grocery-store windows. With each picture they want a little jingle telling how Zibbie loves to eat their breakfast food. They want you to call at their office to-morrow and talk over the proposition and set a price on your work."

HE stared at her in unbelief.

"I am not joking—it's all true. It's a wonderful chance for you. There is no limit to the possibilities of that funny little figure. Why, the Indian people went into ecstasies over it. This won't interfere with your 'Chronicle' contract—you can do the work easily in your spare time."

"Gee, that's great!" he burst out. "It's too fast for me now, though. Honest, it will be an hour or so before I can believe it. But—wait a minute—this isn't getting the Indian Cereal business for you and the 'Chronicle.'"

She smiled happily.

"I forgot to tell you, Cornelius, I had a perfectly splendid session with the Indian people, and they were awfully grateful to me for introducing them to Zibbie. Just before I came away they handed me a big manilla envelope containing—listen carefully—containing complete copy and an order for the insertion of their bomb advertising in the 'Chronicle.' They sent a boy over with the cuts, and to-morrow we start to run their ads—a day late, to be sure, but better late than not at all. All this your little comic man accomplished."

"Zibbie—nothing," he broke in. "You did it all with your little hatchet. Gee, it sure was lucky for both of us that you took that drawing away from me. But there's going to be a hitch in the program. I can't write jingles to go with the pics for the window cards."

"Ah, Conrad, ask me something."

"Can you write 'em? Sure you can—why didn't I think of that before?"

"Well, I never wrote a ten-verse ain't-nature-wonderful poem, but perhaps I can produce some jingles that will help to sell breakfast food," she laughed. "Shall I try?"

"Of course you will handle that end of it if you care to. Don't be silly."

HE capered about the room, snapping his fingers and whistling madly. Suddenly he came over to her and placed his hands on her shoulders.

"Kate, you know I need watching," he said. "Why did you say you wouldn't be my guardian?"

She eyed him wistfully.

"I don't like that word," she said softly. "I believe I would rather be a—partner."

"Lady, you have spoken a parable," he returned soberly. "Together—you and I—we should be able to—how high is the sky? Never mind, but that's our limit. Now I'm going to do some very clever impersonations—beginning with Romeo."

COLLIER'S

Dioxogen

"Yes, madam, you are right. The Dioxogen label does not bear the word acetanilid. The law requires that acetanilid be on the label if there is any acetanilid in the bottle."

Dioxogen does not contain acetanilid and doesn't change color, taste queer, turn rank and spoil, as do acetanilid-preserved peroxides; there is nothing in Dioxogen to interfere with its effectiveness.

A distinguished physician once said: "What medical men most desire in the remedies they use is effectiveness and reliability; in a word, confidence."

The name DIOXOGEN spells confidence in Peroxide of Hydrogen; the uncertainty (a marked characteristic of ordinary peroxide) has been eliminated.

No one wants uncertainty when a throat is gargled, a wound treated or a bad burn dressed; if you have a bottle of Dioxogen handy, doubt and fear are replaced by confidence—confidence in the quality of the product and in the work that it will do.

If you are a user of peroxide and do not know about DIOXOGEN, try it next time; ask for it, with confidence, by name.

No-Rim-Cut Tires Have Four Great, Costly Features Which No One Else Employs.

The Price We Pay

For Leadership in Tiredom

The Figures Are These:

Our sales last year were $33,000,000. Almost $8,000,000 over the year before, despite enormous price reductions. Almost $20,000,000 more than 1911. Almost 16 times our sales in our ninth year of tire making.

We sold last year eleven times as many tires as in the fiscal year of 1909. We are selling now 35 per cent more than last year.

Our rapid growth came when cars in general were equipped to measure tire mileage. It was odometer figures that rushed Goodyears to the top.

How We Earned It

No man can doubt that, in some way, Goodyears earned this verdict. It is based on over three million tires.

In some way we gave men more for their money—more mileage, less trouble, less upkeep. And this is how we did it.

We set scores of experts at research and experiment. We appropriated $100,000 yearly for this work.

We built in our laboratory, every day, experimental tires. We built machines to test them, and we compared them on the road.

Thus, month by month, these tires were bettered until we reached the limit. Until a thousand attempts had failed to show an improvement.

Things We Fought

We found that tires were largely wrecked by rim-cuts. Almost one in three, as per our last statistics on the old-type tires.

We invented No-Rim-Cuts, the hookless tires. The tires with six flat bands of braided wires vulcanized into the tire base. See picture at the top. That feature—which we still control—completely ended rim-cutting.

We found that countless blow-outs were due to wrinkled fabric—wrinkled by curing on an iron core. So we final-cured all tires on air bags, shaped like inner tubes. Cured them under actual road conditions. That stopped this waste, but it adds to our tire cost $1,500 daily.

We found that loose treads ruined many tires. So we paid $50,000 for a method to combat them. That patent method is now employed in every No-Rim-Cut tire.

We found that anti-skid treads too often meant short-lived tires. They centered strains at small points in the fabric. So we invented the All-Weather tread. A flat, double-thick tread, as smooth as a plain tread, but affording resistless grip. And that tread is now fast supplanting the plain tread.

Done by Us Alone

All these costly, mileage-adding features are used by us alone. Nobody else builds tires like No-Rim-Cuts. Nobody else cures on air bags. Nobody else so combats loose treads. Nobody else uses All-Weather treads.

At first, when our output was limited, we had to ask high prices for such tires. But prices came down as our output went up. Now many tires lacking all these features cost far more than Goodyears.

There are very big reasons why No-Rim-Cut tires gained their matchless prestige. They have proved their economy to hundreds of thousands. They will prove it to you when you let them.

Won't you give them a chance when you next buy tires?

Butt right in with your old jimmy pipe!

It's brass-tack talk to say that you'll be a hundred per cent. chummy with Prince Albert before the third load turns to ashes. But it's a fact—*and it goes!*

No matter what you found lacking in every other brand you've *tried* to enjoy, you'll locate it in P. A., for here's tobacco with bells on! Why, you can play it both ways against the middle. It's all there—and a yard wide right down to the bottom of the tidy red tin!

Flavor hits you first crack; then the bully fine aroma. Just keep on puffing away and you'll get next that Prince Albert *won't bite!*

Quicker you realize that P. A. *can't* bite, that the sting and the parch are removed by an exclusive patented process, and that it's cool and delicious from fire-up down to the sweetest heel you ever pulled on before breakfast, *the quicker you're going to be jimmy pipe joy'us!*

Cracking open a fresh tin of P. A. these spanking spring mornings is just turning on an extra a. m. sunshine spigot. Yes, sir, P. A. kicks the grouch out of your system and makes things look gladsome, and mighty cheerful like. And it'll help you hear the little birds sing!

PRINCE ALBERT

the national joy smoke

Men in all corners of the nation buy Prince Albert just like you do—all fresh and go-to-it like—in toppy red bags, 5c; in tidy red tins, 10c, and in handsome pound and half-pound humidors.

R. J. REYNOLDS TOBACCO CO., Winston-Salem, N. C.

Keep Your Car

KEEP YOUR CAR!

The White Company's Solution *of* the Annual Trading Problem

Too many cars sold today are built to be traded; to last but one or two years; of ordinary materials; of extreme design; and, therefore, quickly useless and out of style. The second-hand market is flooded with such cars, and their value is next to nothing.

There Are Practically No White Cars on the Second-Hand Market

The real merit of any make of car is best shown by its absence from the second-hand market.

Look through the classified lists of any newspaper. Note the scarcity of Whites in the column after column of cars advertised for sale. Think what this means.

The chassis of White Cars are built in the same factory, by the same men, of the same identical materials as White Trucks.

And the most essential points of motor truck superiority—the features which have given White the supremacy among all motor trucks, both in quantity and value of production—are durability and continued economy of operation.

The bodies of White Cars are proper in outline, dignified and conservative, and because never extreme, are always in style.

White bodies are built, like White chassis, to last for years, and are not designed to make the owner feel obliged, for mere appearance sake, to purchase a new car every year.

Extreme styles in motor cars are due more to the desire on the part of the manufacturer to force an immediate market rather than to sell cars which will give definite satisfaction for years to come.

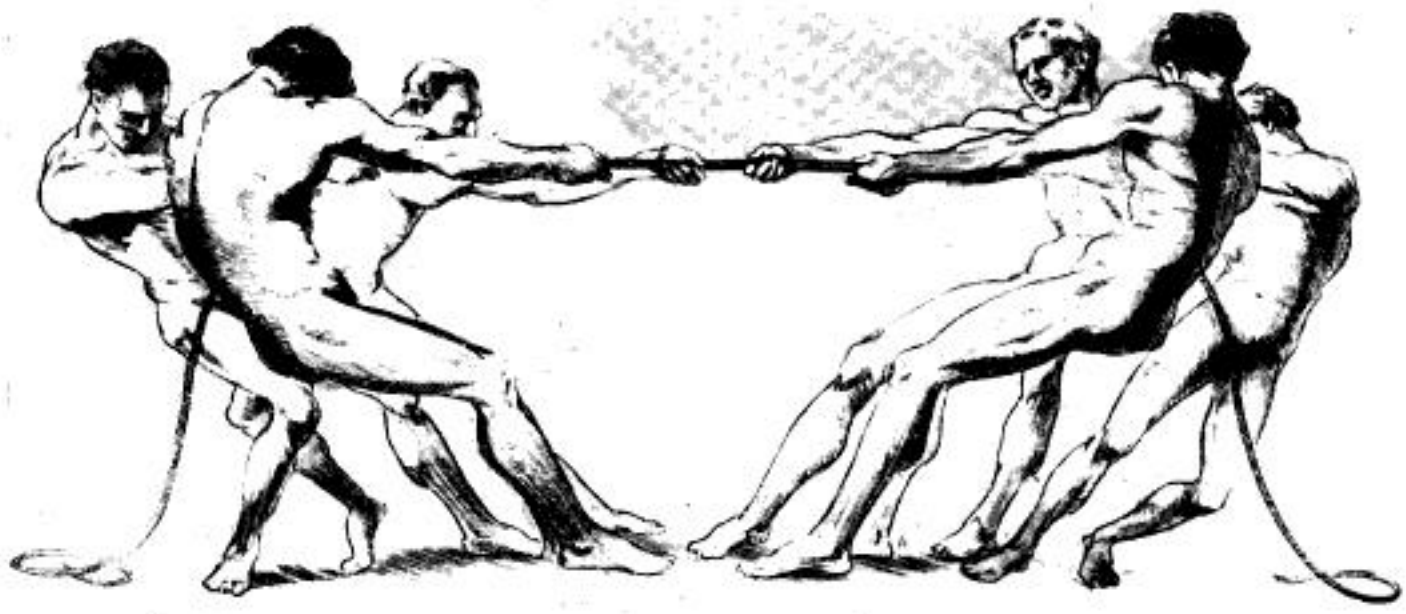
So thoroughly does the public believe in the superior wearing qualities and continued economy of operation of White Cars, that every White Dealer has a waiting list for used White Cars which he cannot supply.

The White Company, as far as White Cars are concerned, has no second-hand problem.

And because the demand for used White Cars so far exceeds the supply, White Owners are continually importuned to trade their cars for other makes, because dealers know that used Whites can be sold immediately for the highest cash price.

But White Owners rarely trade. They know that their old Whites are better today, more economical to operate, and will be worth more next year and in years to come than the new cars offered in exchange.

Buy *your* car from a manufacturer who builds for keeps—not for trades.



THE MANUFACTURING AS WELL AS THE SALES POLICY OF THE WHITE COMPANY HAS ALWAYS OPPOSED FREQUENT TRADES

THE WHITE COMPANY

Manufacturers of Gasoline Motor Cars, Motor Trucks and Taxicabs

MAN GLORIES IN COMBAT AND TESTS OF STRENGTH, KNOTTED MUSCLES RESPOND TO THE CALL OF AN EXTRA STRAIN. BUT MAN IS ONLY CAPABLE OF A TEMPORARY EFFORT.

Automobile bearings must be able to carry the varying driving strains, as well as the sudden stresses resulting from road shocks and vibrations.

The imparting of qualities to materials by which they endure shock, strain and force without breaking is a science constantly used in the making of "Hyatt Quiet Bearings" for automobiles.

Steel for these bearings is tempered to withstand a strain of 230,000 pounds per square inch, giving it toughness and strength that insure maximum service.

HUDSON Six-40
$1750

Now Supplied with a 5-Passenger as well as a 6-Passenger Body

The Triumphant Six

The verdict is in on this LIGHT HUDSON Six-40. The demand is overwhelming—far beyond expectations and beyond our capacity. This lightness, this economy, this beauty and price have won a triumph unmatched in all HUDSON history.

This is written to urge you to see a car which has met the ideals of thousands. See if it also meets yours.

The demand at present is beyond our capacity. But your dealer may have cars. And our increasing output, in any event, won't keep you waiting long.

Winning Features

The HUDSON Six-40 came out this year to find Motordom hungry for Sixes. Legions of men had been waiting for years to see a quality Six brought within reach of the many.

It came into a field filled with men who sought lightness. With men who called for lower operative cost.

It came with the name HUDSON on it, denoting HUDSON standards. And it came from the hands of Howard E. Coffin and his famous corps of engineers.

So the welcome was waiting—a welcome which fairly swamped us, even in the coldest months.

Weighs 2,980 Pounds

The best designing feat accomplished was this lightness combined with strength. We saved from 450 to 1,200 pounds under former cars of similar capacity.

That is, we saved you in the car itself the weight of from three to eight adults. Saved you the cost of carrying that overweight every mile you drive. Yet we have given you as staunch a car as this factory ever built.

That lightness, plus a new-type motor, have immensely lowered operative cost. We use long, narrow cylinders—a European conception for getting greater power from fuel.

We have made many tests under many conditions, but have found no equal-powered car of any type which shows so many miles per gallon.

Our Record Price

Our price—$1,750—is a record price for a quality car of this power and capacity. Not only for Sixes, but for any type of car in this class.

The car embodies the best HUDSON standards. It has a distinguished streamline body with two disappearing extra seats.

It is upholstered in hand-buffed leather. It has the "One-Man" top with quick-adjusting curtains. It has concealed hinges and concealed speedometer gear. It has dimming searchlights, the Delco patented system of electric lighting and starting. The gasoline tank is in the dash. Extra tires are carried, as never before, ahead of the front door.

It offers all the attractions in design, finish and equipment that any car can offer—even to the trunk rack on the back. Yet the price is $1,750.

The Car of Tomorrow

The HUDSON Six-40, beyond any question, marks the future type of car. Men are coming to Sixes, to lightness, to economy. They are coming, as Europe has already come, to these flowing body lines. The demand for this car shows the trend of the times.

That means that cars of this type will not depreciate like types and fashions which are going out.

Consider these things before you buy your next car. If you feel that another car offers equal attractions, compare the two side-by-side. Ride in both cars, compare every detail, and you'll decide on this HUDSON Six-40.

Car like picture, with extra tonneau seats, $1,750 f. o. b. Detroit. Five-passenger body, same price. Standard Roadster, same price. Convertible Roadster, with lined leather top and windows that drop into doors—a luxurious enclosed car for rough weather, but an open roadster in fair weather—$1,950.

Our Larger Six-54

On the same lines we build the new HUDSON Six-54. The design and equipment are almost identical with the car pictured here. But the wheelbase is 135 inches, the engine more powerful, and the price is $2,250.

HUDSON MOTOR CAR COMPANY, 7852 Jefferson Ave., Detroit, Mich.

Mr. Burdock's Insurance

Wherein Johnny Cockleburr Steals a Funeral March

By Peter B. Kyne

ILLUSTRATED BY ERNEST FUHR

THE lights flickered and went out. Mr. William R. Burdock, senior partner in the firm of Burdock & Kewell, real-estate subdivision specialists, sat frowning in the darkness waiting patiently for them to come on. While waiting he closed his eyes to rest them; when he opened them again the lights were on once more. Mr. Burdock decided it was time to do something; so he summoned his stenographer.

When she appeared he dictated, in a tone slightly louder than necessary, one letter to the Mutual Gas Light and Power Company to disconnect their meter and discontinue their service; and another letter to a rival company to install their meter and service instead.

"By Judas," he complained, "we'll have some working light around this office if we have to buy candles and install kerosene lamps."

Now, Mr. Burdock's private sanctum was not so private that when he spoke under stress his voice could not be heard in the general office. In fact, his lair was merely a sort of box stall, fenced off from the rest of Burdock & Kewell's establishment by an eight-foot ground-glass partition without a ceiling. Hence his plaint about the lights was audible in the outer office, where Mr. Biddle, the office manager, was at that moment bending solicitously over the counter to inquire the pleasure of a young man who had entered a few minutes before, and in time to overhear Burdock complaining about the light service.

THE visitor presented to Biddle a visiting card which bore the name Mr. John De Witt Burr.

"I should like," announced Mr. Burr, "to see Bill Burdock. I hear him inside. I believe, however, he is at this moment engaged."

"Not at all, sir," replied Mr. Biddle pleasantly, and swung open the office gate, that Mr. Burr might enter. With true commercial caution, he would have asked Mr. John De Witt Burr a few diplomatic questions touching the nature of his business before admitting him to The Presence, had not that easy, smiling, nonchalant "I should like to see Bill Burdock" disarmed him. Bill! The grand hailing signal of strangers and good fellows throughout the United States of America! It was the open sesame to Mr. Burdock's sanctum, for who, reasoned Biddle, unless he claimed an ancient friendship or close kinship to William R. Burdock, would have the temerity to call him Bill?

"Have a seat," said Biddle. A well-trained clerk, he was above leaving an intimate of the great Burdock to await an audience in the ulterior precincts of that busy office. Smiling, he took the card in to the head of the firm.

To parody the late Sir Walter Scott: "At once within that narrow cell arose a loud, discordant yell!" It emanated from the Czar thereof. "Out!" he shouted. "Out! Biddle, have I labored with you all these years in vain? The man's a life insurance agent! Great Grief, Biddle, don't you know a life insurance agent when you *see* one? Does he have to give you his *business* card before you get next?" Mr. Burdock's fist came down on his desk so hard it jarred a paper weight. "Why, that fellow's been bombarding me with life insurance literature for a month and he's called me up on the phone. I've told him personally I didn't want any life insurance. It's a bully thing, but I don't need it. I don't want anything to do with it—don't care to talk about it—and most positively will not be annoyed by this man another minute. Tell him to get out and stay out! and if he comes in here again kick him out. There're enough of you fellows on the pay roll in this office to protect me from life insurance pests, ain't there? Well, you see to it that I'm not harassed any more to-day, or any other day."

HE GLOWERED at the unhappy Biddle. "Biddle, what's the matter with you lately, anyway? You're letting these fellows in on me every day. What's the matter with you?"

"I'm sorry, sir," mumbled Biddle. "It shan't happen again."

"See that it doesn't. And tell that Burr to take my name off his mailing list. His life insurance literature is only serving to fill up my waste basket. How'd he slip in here, anyhow? When the lights were off?"

"Why, the lights haven't been off, Mr. Burdock," Biddle contradicted him mildly.

"Hah! Not off, eh? Then who's been off? Answer me that. D'ye mean to intimate that I'm off? I tell you the lights have been flickering and going out all morning."

Biddle shook his head. "I hadn't noticed it, sir."

"Leave me, Biddle," commanded Mr. Burdock wearily. "I saw the lights go out—every light in the office—not five minutes ago, and everything was blacker'n crape on a dead nigger."

Burdock's partner, attracted by the altercation, strolled into the office.

"Biddle's right," he declared. "The lights haven't been going out in this office at all. If there's been any trouble I haven't noticed it."

"But I saw them go out! Kewell, upon my word—"

"You'd better consult an oculist, Burdock. If any lights went out, they went out in your head!"

MR. BURDOCK gasped, drew his fat white hand across his eyes, and then looked up at Kewell and Biddle.

"Honest," he queried in a subdued voice, "didn't the lights go out?"

They shook their heads, and over the ground-glass partition drifted the sound of William R. Burdock's horrified "Good Lord! I'm going blind."

John De Witt Burr could restrain himself no longer. He rose and came to the door of Mr. Burdock's office.

"Better let me write you up a little health policy, Mr. Burdock? I solicit health and accident policies for the Industrial Insurance Company of Penobscot, Me.—capital fully paid up, ten million

So Mr. Burdock lay on his own office carpet and Dr. Jorum, kneeling beside him, applied the stethoscope

Digitized by Google

Mr. Burdock reached for the glass paper weight, and Mr. Kewell gave the insurance solicitor a gentle shove out into the general office

dollars. Our combination accident and health policy contains a total disability clause that's a revelation in the insurance world. In the event of total blindness you can claim the full indemnity for total disability, regardless of your income, occupation—"

MR. BIDDLE waved a long admonitory finger at John De Witt Burr.

"Scat!" he said. Mr. Burdock reached for the glass paper weight, and Mr. Kewell gave the insurance solicitor a gentle shove out into the general office, where two salesmen propelled him forth into the common ground outside the counter.

"Good gracious, Kewell," whimpered William R. Burdock, "the lights have gone out again."

"My dear boy! This will never do. We must see an oculist immediately."

"Go to my oculist," pleaded Biddle frantically. In common with the rest of humanity, Mr. Biddle held that *his* oculist and *his* dentist and *his* family doctor were positively and inevitably the only three individuals alive who could be depended upon safely to cure any and all of the ills that flesh is heir to. "Go to Doc Gaffney in the Woolman Building. In an emergency like this he's the only oculist in whom I'd have implicit confidence."

"Anybody—anywhere," cried Mr. Burdock frantically. "Kewell, my boy, give me your arm. Upon my word, I feel dizzy and I've had terrible headaches for a week. You might have noticed how irritable I've been, Biddle."

Biddle had noticed it. In six years no life insurance agent had run the guard on *him* until this morning; yet his boss had accused him of letting one in every day!

Mr. Burdock's automobile, with the chauffeur asleep in the tonneau, stood at the sidewalk in front of the office. Into it tumbled Mr. Burdock, Mr. Kewell, and Biddle.

"Woolman Building," ordered Biddle pompously, and within the minute they were off.

Mr. John De Witt Burr (known to his friends as Johnny Burr and to the insurance world as "Johnny Cocklebur" for the reason that whenever he got on the trail of a prospect he stuck to him until that prospect either took out a policy, failed to pass the physical test, or perished in the interim) came forth from his vain quest and gazed after them.

"Liver," he remarked to himself sententiously. "The old man eats too much. And he doesn't want any insurance! Well, if I had his millions I wouldn't want any either. However, he must have some. I require the commission on a policy for a considerable sum on the life of that old savage, and I'm going to land him if it takes a year and breaks me into the bargain."

"NOTHING serious at all, I assure you, Mr. Burdock," Dr. Gaffney was informing that much-relieved individual. "These dizzy spells—the sudden darkness that descends upon one—are the result of a torpid and disorganized liver nine times out of ten, and in your case I am certain of it. Considering the severe strain your eyes are put to, I should say that they are in rather better fix than the average man of your years. I suspect a slight astigmatism, which may be corrected by the wearing of glasses while engaged in any close work; but that's all. However, in order that we may be absolutely certain, Mr. Burdock, your eyes should receive a thorough examination. It's better to be sure than sorry, you know."

"BY ALL means, sir, by all means. I am ready at any time." Mr. Burdock had a vision of himself, despite his millions, selling lead pencils on a windy street corner should his eyesight ever fail him. He had learned that the battle to possess millions had no sooner been won than the battle to retain them commenced.

"Very well, then," the oculist agreed, and got out his fatal drops. "It will be necessary to have the pupils of the eyes dilated, which will blind you in earnest for a couple of days, but the rest will do your eyes a world of good."

"Shoot," said Mr. Burdock bravely, and the oculist fired. Mr. Biddle and Mr. Kewell, much relieved, returned to the office and left Burdock to his fate.

Along about six o'clock Doc Gaffney steered his patient to the elevator, descended with him, and piloted him out to his waiting automobile. For Mr. Burdock was now blind, but in a most peculiar way. By using smoked-glass spectacles he could see very well at a distance, but the moment any person or object came close to him his dilated pupils refused to print the photograph on his brain. Everything blurred.

It was a week before William R. Burdock took up the burden of his vast affairs. When he did, however, a change was noticeable in his demeanor, Biddle, the office manager, being the first to observe it. Mr. Burdock was, without doubt, less excitable than formerly, and this Biddle attributed to the fact that he had cut in twain his daily ration of fifty-cent cigars. Also, he came to the office one hour later and left for home one hour earlier than formerly, and in his desk the stenographer reported she had found some malted-milk tablets and a carton of gluten biscuits.

During that week away from the office, however, Mr. Burdock had had a slight adventure.

The afternoon following the dilation of the pupils of his eyes and the consequent embarrassment at short-range vision, he had gone for a spin into the country in order to take the air and kill time. Returning to his home in the early twilight, he had dismissed the car at the garage and strolled up to the house across the spacious lawn, and as he approached the darkened veranda he was aware of the mellow plunking of a banjo accompanying a snatch of barber-shop melody.

Now, as any naturalist will inform you, the rattlesnake is most dangerous in August, during which month he is engaged in crawling out of his last year's skin. While the skin is drawn over his eyes he is, as the reader can well imagine, deprived of his sight—hence in a sour and suspicious mood and predisposed to strike blindly at all sounds in his vicinity.

SOMETHING of the characteristics of the rattlesnake in August must have entered into old Bill Burdock's nature this soft summer evening, for at the sound of that banjo he paused abruptly and snorted—"Huh!" just like that.

Instantaneous silence in the vine-screened veranda. Hearing nothing and being unable to see anything, Mr. Burdock grew suspicious. Without doubt some presuming swain had dared to invade the Burdock demesne for the purpose of philandering with the youngest daughter of the house of Burdock, and since the head of that house was of a headstrong spirit, possessed of set, old-fashioned ideas, he now felt it his paternal duty to investigate. He wanted no banjo-playing tenors courting his girls! The man who would essay love's young dream on the Burdock premises must first be investigated morally, socially, and financially, and even after passing this rigid test a still more rigid test remained. In Mr. Burdock's classical language, his future sons-in-law had to be "live ones."

They must be capable of supporting their wives without any subsidy from the Burdock bank account; for Mr. Burdock was a self-made man, with self-made ideals, and the contemplation of a son-in-law who played the banjo and sang "Oh, Genevieve! Sweet Genevieve," was a little more than he could contemplate to-night—in more ways than one.

So he snorted again and advanced majestically up the broad front steps. In the middle of the veranda he paused and said: "That you, Polly?"

"Yes, father."

MR. BURDOCK was conscious of two white, shadowy figures that loomed before him.

"Who's playing that banjo?"

"Oh, daddy, I forgot. You haven't met Mr. ——"

"No, I haven't, Polly, but I'd like to."

"Jack, dear, this is my father. Father, this is—"

"Jack—*dear*, eh?" and for the third time that night old Bill Burdock snorted, and there was in his snort that sinister note which a newspaper reporter would have described as "ominous." "Jack, dear," continued Mr. Burdock frigidly, "what in the devil do *you* do for a living; by what right are you known to Polly as 'Jack, dear,' and why this soulful melody on my front porch?"

He had been raised by the hair of his head and had never gotten over the habit of calling a veranda a porch and of wearing carpet slippers after dinner—which he persisted in calling supper.

Jack, dear, however, did not lose his composure.

"Answering your questions, sir, in the reverse of the order in which they were put, I will confess that I am on your front porch at the invitation of Miss Polly, and we are indulging in soulful melody because we both like it at this season of the year. As for my means of livelihood, I am not ashamed to confess that I am an insurance salesman—life, accident, health, automobile, bonds, and sureties of all kinds," and he thrust into Burdock's hand a card that doubtless proclaimed his multitudinous alliances in the field of his chosen endeavor.

MR. BURDOCK flipped it out into the scented night. "So you sell life insurance, eh?" The ominous note had deepened. "Or do you try to sell it?" he added, witheringly.

"I sell it, sir. I can sell a life insurance policy to any good risk that can afford to pay his annual premium."

"Sell me some," challenged Mr. Burdock.

"My time is too valuable, sir, to waste it on you in a business way. Socially, however, I may add that I am delighted at this opportunity of meeting you."

"You wouldn't waste your time on me?"

"Certainly not. I can tell by your eyes and disposition that your liver is on a strike. Hence you're a poor risk, and I'm out for sure-fire hits."

"So I seem to gather." This latter remark was very dry indeed, and its subtle sting was not lost on Polly's young man.

"That remark was a little nastier than the occasion seems to warrant, Mr. Burdock," he protested mildly. "I earn an honest living selling life insurance, although the profits to the salesman are, I admit, far less than would be the case were he to concentrate the same amount of energy and enthusiasm on—well, popular subdivisions, for instance. Consequently, I

Under the humanizing stimulus of the sight presented by a clown trying to ride a little trick mule, Mr. Burdock's good humor returned

Digitized by Google

cannot afford to waste my time, and in order not to waste it I observe strictly the cardinal principle of the game: 'Never fool with a hazardous risk!'"

"You have a remarkable flow of language at all events; a very good line of gab, indeed. What are you doing around here? Trying to sell Polly a policy?"

The troubadour made the mistake of laughing at this, thinking doubtless Mr. Burdock had meant it for a witticism—which was far from his intention. He wanted merely to get at the root of things. Jack, dear, answered him truthfully.

"No, sir, I'm courting Polly. About fifteen minutes before you came I asked her to be my wedded wife, and she was kind enough to say she would."

"I'll have something to say about that, sir."

"I thought you would and it was my intention to consult you. I trust, now that I have done so, the proposition meets with your entire approval."

"Scarcely. My daughter is young and she does not know her own mind. If she did, she would not dream of an alliance with a life insurance agent. You will oblige me, sir, by leaving these premises immediately and not coming back. Polly, go to your room."

HE POINTED down the walk across the lawn, and with a sigh, Jack, dear, picked up his banjo and departed. Polly commenced to weep, as she preceded her outraged parent into the house.

"Well, that's settled," growled Mr. Burdock to himself, "but if I hear any more of it, I'll lay it out flat. I'll pack that young lady off to Europe with her mother. She'll get over this in six weeks."

He waited three days for his wife to broach the subject of Polly's love affair, and then, not hearing anything, he concluded not to mention it at all. If Polly seemed inclined to keep the matter secret he would respect her implied desire. She seemed cheerful enough, all things considered, and upon the morning of his return to his office she kissed him good-by as usual, and there was no resentment in her manner. She was his youngest, therefore his favorite, and her submission to his will pleased him greatly.

"You're a good little girl, Polly," he told her, "a dutiful daughter, indeed," and he gave her a fat check for pin money.

THE day following his return to the harness, William R. Burdock received a letter from the Atlantic States Life Insurance Company. He was about to cast it into the waste basket after a quick glance at the letterhead, but a name at the very beginning of the letter—a name that had become familiar to him because of the deluge of cards and literature, rubber stamped with the name of the agent, which had been descending upon him of late—moved him to a grudging perusal.

Once started on that letter, however, it was not humanly possible for William R. Burdock to cast it aside unread. Even when he had finished reading, he reread it, and then reverently laid it aside for future contemplation. Presently he asked Biddle to request his partner, Kewell, to step into the office.

"Kewell," began Mr. Burdock, "Here's a boy who's wasting himself selling life insurance. We need him in our office to sell lots in our new subdivision at Lakeview Park. Read that letter and tell me what you think about it."

Thus adjured, Mr. Kewell read:

MR. WILLIAM R. BURDOCK, 741 Market Street, City.

MY DEAR MR. BURDOCK: *Mr. John De Witt Burr, late special agent of the Fiduciary Life Insurance Company, in severing his connection with that company, has handed me a list of persons he has reason to believe will be interested in the new policy which is now being offered by the Atlantic States Life Insurance Company, whose interests I have the honor to represent in this territory.*

Among the names submitted I find yours, with a notation to the effect that while you are doubtless a splendid risk, physically, it is worth a special agent's life to attempt to sell you life insurance. Possibly Mr. Burr made the mistake of trying to interest you during office hours. I shall not make that mistake. My scheme for interesting a prospect is, I flatter myself, an improvement on the old-fashioned methods of salesmanship, for one of the first principles of that lost art is: "Never annoy or disturb a busy man—when he is busy!"

This is the first and last letter *you will ever receive from me on this subject. I do not enclose you any literature. You know whether you do or do not desire life insurance, and this letterhead will inform you that in point of age, volume of business, cash reserve, capitalization, etc., this company stands second on the list of life-insurance companies doing business in the United States.*

I must confess, however, my surprise at the frivolity

"Who the devil are you?" he yelled.
And the man promptly replied: "I am Death,
the Black Camel that kneels at Every Man's door"

—nay, contempt—with which Mr. Burr informs me you treat this most important subject of life insurance. It is indicative of a certain recklessness, not to say, a callous disregard for the happiness and well being of your loved ones. Your unsympathetic attitude toward this most monumental scheme of philanthropy ever evolved in the brain of man, this philanthropy—life insurance—so sweet, so tender, so far-reaching that its gentle hand dares to reach even beyond the portals of the grave to sustain and comfort those you leave behind you—is not, I sincerely trust, the outward expression of a naturally cold and parsimonious nature. Did I believe otherwise I should not have written you this letter.

But, my dear sir, you say you are worth millions. True, even if you didn't say it. You are worth millions—in real estate. But suppose a panic should come! They have come before; they may come again. The bottom drops out of the real estate market for one year and you are land poor. And then you die! And the banks refuse to loan your estate any money on its doubtful realty holdings! I want to know what the missus and the kids are going to do, then!

Make hay while the sun shines. Be prepared for any emergency. Remember that the company I represent always has millions in cash on hand to pay its policy holders. You will not be in the real-estate business always, for there is an end to all things mortal. The day will come—and you know not the day nor the hour—when you will take to your bed, turn your white face to the wall and give up the ghost!

That very day your partnership with Mr. Kewell will be terminated, and he, in a final spirit of love, will consummate for you your last real-estate transaction—the purchase of a damp, malarial tract, piece, or parcel of land, lying, being, and situate, etc., and bounded and particularly described as follows, to wit:

"Beginning at a point and running six feet east, thence south four feet; hence west six feet; hence north four feet; six feet perpendicular."

The following day, you will, without doubt, be all in!

And when your desolated wife has dismissed the hack, in there anything—I ask you, is there anything *—more calculated to assuage your widow's grief than to have* me, *on behalf of the Atlantic States Life Insurance Company, present her with a draft on the home office for a sum that will leave her independent until she joins you in that shadowy vale from whose bourn no traveler e'er returns?*

THERE IS NOT! AND YOU KNOW IT!

THINK THIS OVER! LET THIS WORD OF WARNING SOAK IN! INSURE YOUR LIFE BEFORE YOU DIE, FOR AFTER THAT IT WILL BE TOO LATE!

You will hear from me again from time to time, but briefly. I shall endeavor to refrain from making myself or my proposition obnoxious to you. Rather shall it be my aim to amuse and instruct and entertain you, until that final happy day when the parting with the first annual premium shall have been accomplished without detracting from that spirit of admiration which you cannot help entertaining for me when you read this letter. Very truly yours,

HENRY V. MOODY,
Special Agent.

MR. KEWELL laid down the remarkable communication from Henry V. Moody, special agent, and sighed.

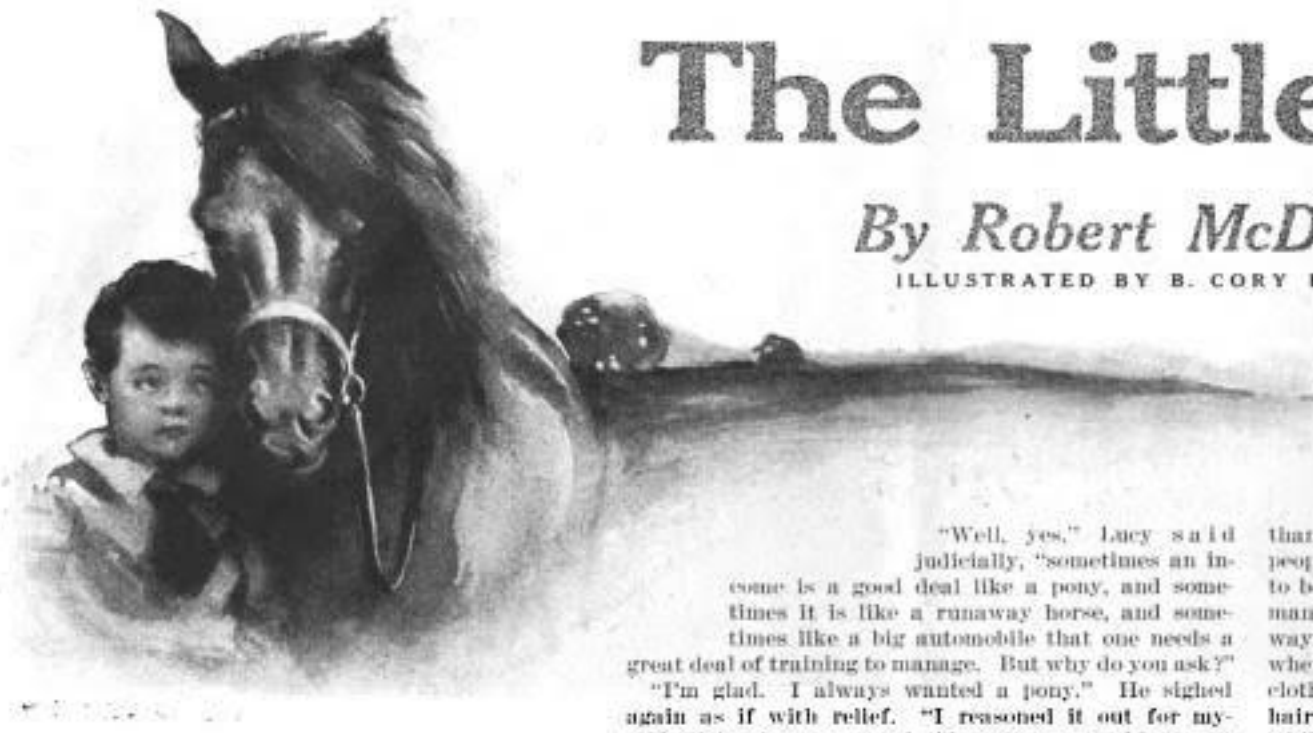
"He get's a fellow, doesn't he?"

"I should say he does. By George, Kewell, a letter like that blowing into a humdrum business office is like a breath of spring. He interests me. I'll bet that fellow could sell lots on a rainy day and the wind blowing a gale."

"He's self-conceited."

"Not at all, Kewell, that's self-esteem. If a man feels sure of himself and has the right kind of enthusiasm for the goods he's selling, I fail to see why he cannot sell life insurance to anybody that needs it and can afford it. You might show that letter to our salesmen, Kewell. Have some copies struck off and let them get an idea of what constitutes bright, new, snappy lines of argument. This chap doesn't bore his prospect—just jollies him along, and the first thing he knows the victim has a fountain pen in his hand and Henry V. Moody is telling him to sign on the dotted line. The fellow interests me, although I can see his plan of campaign. He's working along psychological lines and I'm anxious to see what he'll do next."

"Let me know how you come out with him," suggested Kewell. "If he's a live one we might steal him for our business."



THAT night, while William R. Burdock sat on the veranda of his magnificent suburban home smoking his postprandial cigar, the strains of distant music smote upon his ear. It was melody manufactured by a brass band, and as it came closer Mr. Burdock, being a human being, left his wife and family in the veranda and walked majestically down to the entrance to his estate to see the parade go by. It was a suggestion from Polly that helped him on his way. She insisted that he investigate and report.

But it was not a parade. It was a funeral. A dozen stolid citizens of undoubted Teutonic antecedents preceded a black coffin, which reposed in a black hearse with old-fashioned black plumes; the hearse being drawn by six black horses, in black silken trappings, driven by the blackest negro Mr. Burdock had ever seen. This individual rolled his eyes and gnashed his tremendous set of ivories at Mr. Burdock in such a manner as to give the latter a slight attack of the creeps.

In all his life Burdock had never heard Chopin's funeral march played so funereally. The shrill tones of the clarinets and piccolos and the sobby um-pahs of the big bass tuba were enough to have induced a serious state of mind in a chimpanzee, and aside from the fact that they were burying the deceased at night there was still another singular feature about this funeral. But one carriage followed the hearse, which seemed an inadequate number for a funeral staged with such regal disregard for expense. So Mr. Burdock craned his body across his front gate for a peep at its inmates as the carriage should pass him; and to his horror the rear of the carriage hood slid down exposing the interior and the mourners!

Seated vis-à-vis Mr. Burdock beheld four human skeletons. The interiors of the skulls had been ingeniously equipped with (Continued on page 25)

The Little Son

By Robert McDonald

ILLUSTRATED BY B. CORY KILVERT

THE elevator man who took her up to the law offices of Thawl, Beard & Thawl showed a deference to Mrs. Marshall that would have surprised himself had he been conscious of it. There was a serenity about Mrs. Marshall preclusive of any idea of lawsuits. She looked like a woman who had always walked the heights of life undisturbed, and it was a distinct shock to hear that Marshall was her maiden name and that the "Mrs." was all that was left of a ten months' marriage. It was equally difficult to think of her as deceiving or deceived.

She lifted her skirts daintily, walked down the corridor to Mr. Henry Thawl's private office and knocked. There was a fumbling at the lock, but the door did not open, and after a moment she went back to the room where a boy waited for cards. Almost immediately a young man, airing his manners with the importance of a new degree from the law school, came to meet her, the card in his hand.

"Mrs. Marshall, Mr. Thawl received your message and will return from a directors' meeting almost at once. Will you wait in his private office?" The young man walked down the hall and opened the door, leaving her with a patronizing smile.

It was a comfortable room, showing how profitable the care of estates could be, hung with copper-plate prints of wigged and gowned jurists of the last century and a half.

It was a gray day and the fire in the deep grate put the rest of the room in shadow. Lucy sat down in one of the big leather chairs and did not move. She was not the sort of woman who needs the constant stimulus of outside impressions, and she made no movement toward the piles of fresh literature on the corner of the table.

PRESENTLY she heard a movement near her, and then a deprecating little purring sound as though a soft voice had started to speak and then thought better of it. Lucy turned with her usual calm face and saw a small boy standing by the companion to her chair. He was a remarkably pretty boy even in silhouette against the window, but she had never known any children, and she looked at him exactly as she looked at the prints on the wall. Suddenly the child let one of those portentous sighs that express infantile repression escape from his lungs. It was almost a groan, and Lucy put out her hand with a cool sympathy. "Are you ill?"

The child came forward immediately. She saw that he was grotesquely dressed in a cheap velveteen suit of the obsolete "Fauntleroy" type. Long thick stockings covered his slender legs and cheap patent-leather slippers his feet. His hair, almost black, was in hastily cared-for curls on his shoulders, but all the bad taste of his guardians could not eliminate a charm that Lucy felt in his first movement toward her.

"How do you do?" he said, holding out his hand. "I was so afraid that you were not going to speak, and, of course, one cannot speak until one is spoken to. The gentleman said I must stay here until he returned, and I think that something serious must have happened to him. There is one question that I should like to ask if you do not mind: Is an income anything like a pony?"

Every word had the careful pronunciation of drilled speech, but in the question there was a flutter of daring as well as of hope.

Lucy took the hand held out, and there was a moment's uncertainty on his part when she did not drop it. It must have been as surprising to her as to the child that she did not. It was a nervous little hand that took a tight hold on her first finger and held on when the chance was given it.

"Well, yes," Lucy said judicially, "sometimes an income is a good deal like a pony, and sometimes it is like a runaway horse, and sometimes like a big automobile that one needs a great deal of training to manage. But why do you ask?"

"I'm glad. I always wanted a pony." He sighed again as if with relief. "I reasoned it out for myself. It's always a good thing to reason things out for yourself. I heard the lady who said she was Cousin Louise say that if they sent me to Mr. Thawl he would find me an income fast enough, so they sent me. There are a lot of fast things, you know, but a pony is the nicest, and while I was guessing I thought I might as well guess the nicest. Wouldn't you?"

"Where did they send you from?" she asked idly. She was not at all curious, but her mind was busily assimilating the idea of "guessing the nicest," and she paid no attention to her speech. She was sure that for some years she had done anything else but "guess the nicest." She had guessed the worst and smilingly reconciled herself to it.

"FROM Staten Island. I've never been off Staten Island since I was a little baby until to-day. I have always lived with Miss Baker. She was a very estimable lady, who has gone to Heaven to be an angel now."

"You heartless little thing," Lucy thought, and then she remembered that she had heard that all children were naturally heartless. The clinging little hand, the feel of the warm little body against her shoulder, belied the thought.

"Miss Baker had a large school once, and I heard her tell it to the minister that she had had twenty boys and girls there often. It was a great comedown in these past years"—Lucy could hear the very echo of the tones of the translated Miss Baker—"there's been only me." There was no self-pity, merely a statement of fact, but there was something wistful in the tone, and with an impulse that was pure instinct she drew the little chap close with an encircling arm, and he snuggled to her like a kitten.

"Of course it was tiresome to a lady to have one child when she had had so many and they amused each other. I used to feel it myself. I tried not to be any tiresomer than I just had to, and then Miss Baker was ill and people came, and then the minister said she had gone to be an angel; and then Cousin Louise and a gentleman came, and Cousin Louise said she wasn't in any way responsible *whatsoever*, and that it was funny where the money had all gone; and she said these clothes showed that I was an old maid's boy and that hair wasn't stylish this way, but it wasn't worth while to bother, and Mr. Thawl would find me an income fast enough. I wouldn't care about its being *fast*. I suppose you have to learn to stay on."

"Suppose you tell me your name."

The child hesitated. "Patsy," he said finally.

"What is the rest?"

"I suppose it is Patrick. Miss Baker always called me that, but Cousin Louise said it was ridiculous and people would think I was a little Mick. The man that made the garden always called me Patsy. What is a little Mick? I never knew."

"It is what my little boy might be if I had one," Lucy said with something like a strangle in her throat.

"I wish I *was* your little boy." He turned and looked at her. "I never was hugged by a lady before, but I have seen other people. Down in Staten Island there was a lady I saw hug a boy, but Miss Baker wouldn't let the boys play in our garden. The neighborhood had sadly changed," and he sighed again.

It was at this moment that Mr. Thawl came in, and the child, who had evidently been trained to stand until he was spoken to, slipped to the floor.

MR. THAWL was a thin, gray-haired man well-known to the public, not only as a famous lawyer, but as a driver of four-in-hands, and a judge at horse shows, and a cool buyer at picture auctions, but now he seemed to have lost some of that manner for which he was famous and to be almost unduly apologetic for his delay. He called an office boy and sent the child from the room at once, immediately plunging into Mrs. Marshall's business. Mrs. Marshall had been abroad almost constantly for eight years and had only returned to her native land for business reasons.

"The only thing I see for you to do," Mr. Thawl said finally, "is to spend more money. It is very seldom that I am called upon to give that advice. Your income is piling up until it is hard to find safe investments for it."

"I am afraid," Mrs. Marshall said, "that if I begin to spend my income I shall be taken to task for having it. I understand that an American is no longer allowed to spend money freely without criticism. I have had enough newspaper comment."

"Indeed, yes," and Mr. Thawl shook his head, "but, my dear Lucy [Mr. Thawl had known her since her childhood, and the state of her finances was such that almost any lawyer would have enjoyed calling her by her Christian

"There is one question that I should like to ask if you do not mind: Is an income anything like a pony?" In the question there was a flutter of daring as well as of hope

Digitized by Google

name], have you ever thought of going in for philanthropy? You may do almost anything you know if you begin with philanthropy."

Lucy laughed. "Am I the sort of woman to go in for anything?"

"You ought to—" Mr. Thawl began. He had started to say "marry again," but thought better of it. Lucy Marshall had never been a girl to take advice upon personal affairs, and he thought that at twenty-nine she looked less likely to listen than ever. He did not believe that her experience in having her own way had changed her in that respect. "You ought to," he said, and let his sentence end there.

"Who is the child I found here?" Lucy asked as Mr. Thawl made a new apology for keeping her waiting.

"The child?" Mr. Thawl asked vaguely, as though he could not remember, to save his life, what child she had been talking about. "Oh, just the child of a client."

"Then he isn't an orphan? I imagined from what he told me that he was."

"In a way, yes, in a way"—as though one could be "sort of" orphaned.

"I suppose he is mistaken, then, in thinking that he has nobody except you to look out for him. Is his mother alive?"

"No, his mother died when he was born, and he was placed in a school on Staten Island."

"It seems rather hard to begin school so very young. And his father?"

"His father? His father is also dead, or I suppose he is."

"Did he desert the child?"

"Not exactly. In fact—" Mr. Thawl was very visibly embarrassed—"in fact, I am hardly at liberty to give the child's history. It isn't pleasant. He came into the world almost as an accident, you may say—"

"Not—?" There was an interrogation in Mrs. Marshall's face that Mr. Thawl hastened to answer.

"Oh, no! Oh, dear, no! But it was not a love match—on one side at

(Continued on page 35)

When the Farmer Shakes the Money Tree

By Isaac F. Marcosson

ILLUSTRATED BY RODNEY THOMSON

"THERE go the gamest people in the world," said a Kansas country editor the other day as the procession of vehicles rolled out of the village on Saturday afternoon, carrying the farm folks back to the farms. "They are a race of stout hearts. Hog cholera decimates their stock, chinch bugs and Hessian fly blast their grain crops, drought may reap where they have sown, taxes and mortgage rates eat them up, and yet they grit their teeth, through thick and thin, and stick to the land."

This might sound like the wail of a hard-luck howler, but the truth is that this same view is taken by the conservative financiers of the East. They say that "if city borrowing had to pay the same price as country borrowing most urban enterprises would throw up the sponge." This corroborates the statement of the country editor: that the farmers have stayed in the game only by sheer courage. What they have to contend with would break the hearts of any other class of American business men.

Interest is the worst bug that eats the farmer's crops. Blight, drought, boll weevils, and grasshoppers consume much, but interest devours more. The interest bill and the wheat crop balance. Like a mosquito, the interest bug, with its beak in the farmer's wallet, sucks the lifeblood of the farming industry. In the last generation it has wiped out the entire increase in land values!

The farmer gets up and goes to work two hours before daylight, but the interest bug has been working all night. Locusts and grasshoppers can only eat his crops in the summer, but the interest bug "hath all seasons for his own."

New Hope of a Credit Machine

FARMING, the least profitable business in America, pays the highest rates of interest. The cost of farm credit is from 8 to 25 per cent. In the latter case it eats the farmer up every four years. The farmer must have help, or agriculture must perish under this burden. And help is coming. What is the remedy: Farm without borrowing? No, borrow more and put on more debt than ever. That is the answer. But the money must be had at low rates of interest such as other safe and solid businesses enjoy.

After years of heatless talk about establishing better relations between the banker and the farmer we appear to be approaching some definite action. The slow and cumbersome machine of national legislation is grinding its way toward a deliverance of the farmer's pocketbook. It seems safe to assume that before the end of the present session of Congress some rural credit measure will be enacted that will place the agriculturist beyond the thrall of grasp and greed and make him economically independent. In other words, the United States is about to catch up with her sister countries in emancipating her most important worker from usury and providing him with a credit machine that will enable him to fulfill his destiny.

The very prospect of such a consummation bares a vision of far-reaching significance. Though he dwells along the highways and the hedges and off the beaten, spectacular paths, the farmer, in the end, touches everybody, however humble. The food we eat, the clothes we wear, the exports that swell our mighty trade balances, all hark back to the man behind the plow. When you succor him, you nourish the whole national body. Hence this imminent harnessing up of our mastery of the soil with the science of a new rural finance can only mean a whole fresh and even thrilling epoch in the uplift of the land.

Any explanation of rural credits, however simple may be the attempt, must of necessity involve two vast and compelling agencies. One is the institution of credit itself, aptly named "the vital air of commerce." Without its beneficent aid all development would falter, for more than 90 per cent of the world's business is based on it. The other is farming, the great universal activity, old as time and participated in by over half of the population.

Clearly to understand the need and importance of this approaching economic daybreak it is necessary, at the outset, to look into the business side, or rather the lack of the business side, of farming.

The Farmer as Financier

WHY should the farmer and credit be so intimately related? Simply because the man who gets his living out of the ground cannot, to use the commercial phrase, "turn over" his goods quickly. However scientific may be his methods, he must await the caprice of time and the mood of wind and weather and soil. During this period of waiting he must live and keep his plant in good working condition. In short, he must have money before he actually produces it, and the only way he can get it is to borrow. Thus credit is as the breath of his life; oil to his income-producing machine.

He should have ample capital, yet the accommodation that he grudgingly gets is very much like the brand once referred to by Louis XIV of France, who, commenting on the rural usurer, said: "Credit supports agriculture as the cords support the hanged."

The actual financial needs of the farmer are of two kinds. One is what might be called the fixed capital requirement, by which I mean the money needed for a farm, additional land, new buildings, or increased equipment. The funds for this loan must be a permanent investment, extending over a considerable period and secured by mortgage. This is the so-called "long-term" loan.

If this were the only kind of rural borrowing the farmer's troubles would not be so great. But he needs another kind of credit to supply his seasonal needs, such as seed or fertilizer, or a horse or a cow, or to cultivate or harvest his crops. This is known as the personal or "short-term" borrowing. It is seldom secured by mortgage, and the security is either the personal note of the borrower or his character.

Right here comes an important distinction between the short-term borrowing of the farmer and the same kind of borrowing by the merchant. The latter may need accommodation for thirty, sixty, or ninety days, but during that period he can, to revert again to the speech of commerce, "turn over" his goods and pay the loan. Hence he is constantly in the money market. The farmer who requires this kind of loan must wait until his crops are harvested or on the way to the consumer. His "short time" may range from ninety days to a year. By a curious and costly circumstance the farmer usually needs money most when it is highest, such as, for example, in the autumn, when he must have actual cash to "move the crops." At such times the Wall Street coffers are strained, interest rates soar, and who pays the freight? No one but the farmer, and yet he is simply supplying a legitimate need.

At this point you are doubtless beginning to wonder why the farmer, in the face of the most favorable natural credit conditions, with $40,000,000,000 worth of equity behind him (such is the estimated value of the American farms), and who produces $10,000,000,000 worth of output each year, should have to stand, hat in hand and with his purse strings hanging out, waiting the pleasure and the convenience of the lender.

There are various reasons. The first is that the farmer, as a rule, is not a business man; the second is that the whole machinery of our money and credit system is directed toward the aid of the city and not the country. Still a third is that our commercial banks have had to supply most of the rural credit, and they are not primarily credit institutions. To provide such credit requires a special system adapted to agricultural needs. In addition to all this there is the natural tendency of our capital, whether the big stake of the rich man or the nest egg of the wage earner, to seek employment in commercial and industrial enterprises. In a word, our small investors have not been educated up to putting their savings into the safest thing in the world, which is a good mortgage or a bond secured by a first-class land lien.

Take the case of the farmer first. He began as a "clodhopper" and tilled the land in a haphazard way. When you asked him why he planted corn on a certain hill he replied: "God only knows. I do it because my father before me did it."

Usury Oppressed Him

THEN came the kindling era of agricultural enlightenment with its miracle of soil culture, diversified and rotated crops, dry farming, the use of the telephone on the farm, the advent of the automobile—all the rest of that wondrous and romantic awakening that gave us a "New Land" and a "New Farmer." In a word, farming became a science and took on a fresh dignity.

But what else also happened? Though he emancipated himself from his almost primitive methods and freed himself from the uncertainty of crop production, the farmer clung to his old financial ways. He never analyzed credit. He simply classed it with drought, bugs, crop failure, and his other troubles. Debt he regarded as a natural heritage, and the top-heavy mortgage brooded over his affairs like an evil spirit. Like the Southerner who thought that "Damned Yankee" was one word, he believed that borrowing and usury were the same thing.

Digitized by Google

The very circumstance of his calling had something to do with this condition. Since his needs are seasonal and his cash income unsteady, he seldom had a bank account. When he did put money in an institution it did not stay there long. The farmer wants to do business with actual money whenever possible. Thus the bank gets little or no benefit out of his deposits. Moreover, his geographical isolation from the money centers, and the fact that he has scant social relation with the moneyed men of the town, combine to make him a figure with no great appeal to the accredited banking facilities.

A sad fact, too, is that many farmers are very unbusinesslike. A farmer will keep money in a bank that pays a small rate of interest—if any—and yet at the same time he will buy his fertilizer on credit and pay a heavy charge for the accommodation. He has not yet learned the value of buying for cash in order to get the liberal discount even if he has to borrow to get this discount.

Then again the farmer wants long-time credit, and the banker and the general country investor do not want to have their money tied up over a considerable period. This means constant refinancing for the farmer, and refinancing, as everybody knows, is a very expensive piece of business.

The Millstones

SMALL wonder that the rural banker preferred to do business with the merchant and the manufacturer who were close to his elbow and who mainly wanted short-time credit, and that he exacted a pound of flesh from the farmer when he did deign to accommodate him.

The natural result was that the farmer, unable to get credit at the bank, turned to the next worst thing, which is the local lender—familiar figure in the rural melodrama—who is always pictured as holding the lash of imminent foreclosure over the unhappy heads of the aged couple about to be turned from their hearthstone. But there is more truth than fiction in the conditions that bring about this resort to the village shylock.

Unpleasant as was the alternative, the farmer had to take his choice of two highly unsatisfactory courses. One was to borrow from the bank and lose his farm through excessive demands; the other was to operate without needed capital and fail in the end. Like that traditional person caught between the proverbial millstones, he was ground whichever way he turned.

The Bondage to Home Capital

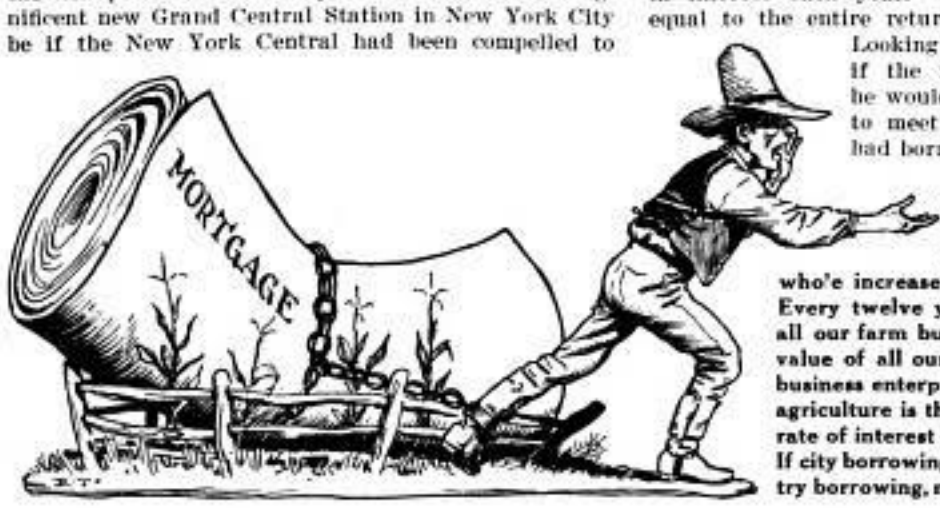
NOW we arrive at the real leash that has held the expansion of rural credit in check. It lies in what might be called the geographical limitation of our farm mortgages. Astounding as it appears, it is seldom that a farm loan is obtainable—save in rarely favored communities—outside its immediate neighborhood.

The effect of this restriction of the sources of credit cannot be overestimated. Though it may appear a trifle far-fetched, let me quote one of the best-known American authorities on rural credits on this subject. He said:

"People do not realize the hardship that dependence upon local capital works on the farmer. When you turn to some striking parallel you begin to see just what it means. What would happen, for example, if each mile of roadbed of the Pennsylvania Railroad depended for its financing on the country through which it passes? How would the United States Steel Corporation have fared if it had relied on the vicinity of Gary for the erection of its mammoth plant there? Or, to reduce the proposition to the nth power of absurdity, where would the magnificent new Grand Central Station in New York City be if the New York Central had been compelled to raise the funds for it from the residents of the adjacent streets?

"These huge organizations draw their funds not only from every part of the country, but practically from every section of the world, while our agricultural industry—the greatest of all—rarely gets beyond hailing distance for its capital. The consequence is precisely the same as it would be in the case of any of the other industries that I have quoted. Agriculture does not get all the capital that it legitimately needs; when it does get credit, it pays an exorbitant price."

The farmer gets up and goes to work two hours before daylight, but the interest bug has been working all night



Probe the source of rural credits and you find it bound hand and foot to local conditions. Sixty-seven per cent of it comes from the so-called "home banks"; 16 per cent from the neighbors. A bare 15 per cent is supplied by loan agents who represent outside investors. In a very few communities the building and loan associations are able to accommodate the farmers, but the number is so small that it scarcely figures in the general statistics.

Many reasons are given for the widespread farm failures. It may be that some farmers do not farm properly, that others do not raise enough crops per acre or realize adequately upon them. All these may be true, but the main reason which has just begun to soak into the consciousness of a large body of the American people is that these deficiencies are not causes, but effects, and that these effects are the result of an unprofitable system of farm finance.

What the Farmer Pays

NOW let us see just what this system costs the farmer. It is estimated that the average rate of interest paid by our agriculturists is between 8 and 8½ per cent. But if this rate were all that they had to pay, there would be little complaint. The trouble is that farm borrowing is cluttered up with all sorts of perquisites. Commissions, bonuses, and all manner of mulcting bring the cost of loans up to 12 per cent. In many sections a cost of 25 per cent for farm money is not unusual. The irony of this whole performance is that the cost of renewing the loan is almost as great as the initial venture.

You will not be surprised, therefore, when you find that the American farmer pays down $500,000,000 in interest each year. This huge fixed charge is equal to the entire return on our vast wheat crop. Looking at it from another angle, if the farmer raised only wheat, he would sacrifice his whole income to meet the cost of the money he had borrowed.

Viewing this interest charge from still another point, you find that within the last generation it has consumed the who'e increase in the value of our farms. Every twelve years it absorbs the value of all our farm buildings; each nine years the value of all our live stock. In short, of all business enterprises, the average profit upon agriculture is the least compatible with the rate of interest charged for necessary capital. If city borrowing had to pay the price of country borrowing, most enterprises would cease.

But all the hardship in rural credit is not confined to the mortgage on land or the cost of operating capital. There is still another expensive source, very widespread and seldom included in discussions of the subject. It is known as "store" credit, the process by which farmers or their tenants run accounts with merchants and pay an enormous bonus for their supplies.

In the South this system is little short of peonage. It is estimated that in some communities the merchants exact a toll of not less than 50 per cent on groceries bought, as the phrase goes, "on tick."

Of course there are two sides to this farm picture. Many farmers are lenders instead of borrowers; thousands own bank stocks and some even put the screws to the urban borrower. But they are considerably in the minority.

The fact remains that the whole system of farm credit has been extravagant and impractical; that it has hampered rural development and driven many farmers to the towns.

The Trouble

ONE more detail remains to be explained before we turn from the sordid drama of credit oppression to the rosy prospect of promised relief.

There is a nation-wide farm debt of nearly $6,000,000,000. Half of it is on real-estate mortgages. But these mortgages and their allied obligations do not spell failure any more than do the liens on our huge corporate institutions. On the contrary, the farmer, like any other intelligent person, realizes that debt may mean expansion if the proceeds are devoted to constructive purposes. The late E. H. Harriman had strong ideas on this subject. When people asked him what constituted a millionaire he did not say that it was a man who *had* a million dollars. He always replied: "It's a man who *owes* a million."

He assumed that the individual who could borrow a million either had equity that represented more than this sum or natural qualities that made for big material success. He had more respect for a person in debt than for one who was not. Credit in his empire-building game proclaimed triumphant advance.

Our trouble has been that there is not enough debt on the American farms. Contrast them with the railroads which represent an investment of $15,000,000,000. Yet they are mortgaged up to $11,000,000,000, or nearly 80 per cent. But this indebtedness has meant new equipment, enlarged service, increased efficiency, and more income. Our farms are worth approximately $40,000,000,000 and carry debt burdens of barely $6,000,000,000, or 15 per cent. With a larger mortgage load they would have a bigger producing power.

The best answer perhaps is in the statement that our mortgaged farms are more valuable than the unmortgaged. Their average of acreage under cultivation is greater, their yield larger, their equipment better, and their assessment higher.

If the farmer can accomplish these results with mortgages obtained under excessive conditions, what could he do if the credit machine were geared up to help and not to hinder him?

Turn for a moment to Continental Europe and you see what a rational system of rural finance can accomplish. With poor soil, more primitive methods, and lower prices for commodities the German, French, and Italian farmers are not only prosperous, but save enough to become investors.

They do this simply because their credit systems consider the rights and resources of the borrower. This principle, combined with cooperation whenever possible, has made the peasant a useful and helpful unit in the progress of his country. These Continental systems point the way for the proposed reforms in the United States. For one thing they separate long and short term credits on the theory that

The Tyranny of Beauty

Chapter III—Mme. Del Mar Begins to Soar

By "Jane Bunker"

Illustrated by MAY WILSON PRESTON

THIS apprenticeship to woman in the chair—to "beauty and the beast" as madame facetiously called it—laid the foundation for big business in more ways than one. In daily supervising, first a little five-a-week manicure girl, then a lady assistant, madame worked out certain policies of organization that made a large establishment when the time came. Previous to that she had never dealt with hired labor. Her mother and I, though paid—she in her living and I in a nominal wage—could not be classed as such; we were morally her partners, doing all the manufacturing, and carried a heavy share of the responsibility. Now she had real "hired help" to experiment on, dictate to, shape to her ideas, use for her purposes—people she could fire whenever the mood took her; and it was funny to watch her "finding herself" in this new situation.

Her scheme of organization was simple but effective—she introduced the "echo" plan—trained her assistants to echo her methods, manipulations, talks, explanations; paid as well as the business would permit and better than many other places, dismissed without warning for the least opposition, sometimes for even a disagreement. Only the successful echoes thus remained for any length of time, and they constituted a highly united band—united by fear of her and her moods.

Mamie Donovan—freckled, snub-nosed, subdued little Mamie—I hadn't thought of her for years! She was our first manicure lady and through her my aunt received illumination on the relation of labor to business. She'd already reached illumination on the laborer's relation to the Captain of Industry—"hire and fire" and pay the least wages you can.

MAMIE was getting five a week and tips, but earning ten to twelve. Tips were not as liberal in those days as they are now when some of the manicure girls in the big stores make from ten to twenty-five a week by them, and Mamie struck for another dollar a week on the ground that she needed it for one thing, but "had a right to her earnings" for the main reason. Madame, who couldn't afford to lose her at the moment, put her off with a vague "I'll see about it," and came home popping.

"Six dollars—the idear!" she buzzed. "And her earning only ten-'leven for the business! She thinks I'm going to work my fingers to the bone greasing those old dames to pay rent and light and heat so's a Donovan can set at her ease in my parlor and take all she earns? She's gotta earn her share of the fixed charges same as me."

"Perhaps she does—and a little more," I ventured. I was sorry for Mamie. "And anyhow, another dollar wouldn't break you."

"I sh'd hope not! But that ain't the point. She's making only five or six dollars profit for the business and our fixed charges are twenty a week. Whaddn you call her share when there's only two of us earning the fixed charges? Just you figger it out."

Well, we "figgered it out" through a considerable discussion, my sympathies being so strongly with the anemic Mamie that I argued for the dollar and held to it that she earned it.

All at once my aunt burst out petulantly. "Strikes me you're stupid to-day, Lucy, if you can't see a business is the same as a boat: hired help has gotta pull a big lot more'n their own weight if the boat's going to get anywheres—they gotta pull the weight of the boat, the weight of the cargo—you might call that the clerical department; the weight of the captain—the one that puts up the capital and takes the risk and responsibilities; and then they gotta pull enough more to meet the current—the competition—the market—the advertising; and enough more'n *that* to pay for the use of the name—the prestige of the establishment that brings in the trade. You show me any more reason why I sh'd row Mamie Donovan in my boat than why she sh'd row me? Huh! I think I see myself do it—charity picnic, me at the oars giving the crowd a good time and all they get out of it! Time enough for her to talk about six when she's making a profit of ten for the business—and that's only half the fixed charges as it is! Six—her! Six—the idear! I'd fire her, if I could get anybody better—trouble is you can't always at a minute's notice, and the customers seem to like her."

"Suppose she fires herself?—wouldn't you rather give her six?" I suggested as a last appeal.

MY AUNT considered this aspect of the case and ducked a decision on it either way with a "She won't. I'll talk to her—explain it why I can't—yet."

Armed with this pat and lucid illustration she "put it up" to Mamie and proved—to her understanding if not to her satisfaction—that she couldn't have six till she was earning sixteen for the business and Mamie said no more about an advance till that glad day arrived.

Having worked this successfully with Mamie, madame did the same with all her help in future, only without waiting for the demand: she explained her principle as soon as she engaged a new operative, telling each one what she expected in gross earnings on a given wage as her share of the running of the boat.

Not till years afterward did I realize what a brilliant piece of employers' politics this was, though she did it more by instinct than with any idea of its being politics; but she never had a strike, because each helper knew from the start that she had to earn her share of the whole establishment—at least three times her wages "to keep the boat moving." She made them see, if not the idealistic justice of it, the absolute necessity of the case, for there'd be no establishment at all if they didn't earn every last cent of the expenses and the salaries of the clerical department and herself, and we never had any talk about labor's not getting what it earned. Some years later a socialistic lady got in as an operator and tried to organize a manicure ladies' union, telling the girls they were "being robbed" by a cruel captain of industry, a slave driver in petticoats—capital exploiting labor for its own benefit—every girl ought to have what she earned and all she earned—capital ought to pay for the establishment—and I don't know what besides. The girls laughed at her. She lasted two weeks and fired herself much piqued and called them a brood of toads so low in intellect they couldn't see what was good for them.

Miss Cryder, having her nails done at a table near by, struck in pugnaciously: "I think I'd see any man make me do it to humor him if I didn't like it myself!"

As I said in the beginning, this is something more than the romance of a pushing woman turning grease to gold and making her dreams come true—it is the story of a modern business woman in the business world with all its forces arrayed against her developing a great enterprise out of the elements at hand and shaping its destiny, not by dreams but by certain fundamental conceptions of commerce and economics that became her steering gear; and so perhaps the most significant thing about her was the way these fundamental conceptions were born in her mind. As I see it now, though she had plenty of glib reasons when she needed them for argument—as in the purple hair case—I believe she never came to a conclusion by reasoning first. She seemed struck by an intuitive conviction, almost impossible to shake later—she "got" trade secrets as other people "get" religion. Once got, she simply hunted up reasons to support her faith.

MEN seem to arrive at their convictions by the reverse process, slowly reasoning things out to the very conclusion that your Mmes. Del Mar see by inspiration all in a minute. I am not saying either way is better—I am merely trying to show that woman seems fundamentally different in her methods of thinking; and, her methods being vastly quicker, she becomes a dangerous rival once she has the will force and the capital to back her enterprises. While a man is still considering she has acted.

But poor Mamie! Little did she dream in her brief life how much she did for the making of a successful business woman when she struck for six, gloomily declaring she had a right to it because she was earning ten on the average. Tuberculosis reaped her after three years. My aunt showed her appreciation of her by sending a fifteen-dollar floral tribute, with her business card attached by a purple ribbon, to decorate the casket.

The family were more touched by the card than by the wreath—it proved, in a humble tenement house, that their Mamie had friends in high places and was cut short in the promises of a golden future.

"With a lady like your aunt taking such an interest in Mamie," her mother whispered to me at the funeral, "she'd soon have been promoted off finger nails. She was that clever—if she hadn't died—it wouldn't have been no time now before she'd be giving new faces to some of the four hundred that already come to her for new nails."

BUT in my zeal for explanation I'm running ahead of my story.

During those three months of personal meetings with her customers madame was laying up hundreds of valuable pointers on the goods she was intending should soon cluster around Zuzu. She collected samples everywhere, and her way was to thrust one at a customer with an ingratiating: "Lookka that—smella that—feela that, and femme whatcha think," appearing to hang on the replies as

Digitized by Google

if her future depended on them. Her customers gave her a veritable gold mine of personal reasons why they liked, didn't like, used or wouldn't use a given preparation.

My aunt had intended to install us in a flat, but a basement, kitchen, and dining room on Twelfth Street, in addition to a commodious "labbatory," offered a back yard convenient for the storage of the crates that were soon bringing us pink jars by the ten-gross lot as of yore; we three huddled into the dining room until she finally managed to sublet a hall bedroom from a tenant on the top floor; and thus for the second time our kitchen was the birthplace of secrets that were to yield a fortune.

BY THIS time "our secret" had become so much of an obsession with her that she saw even a scrub lady as a spy in disguise, and since she didn't dare trust anyone but a blood relation to manufacture for her, she hired a bookkeeper to relieve me of all that part of the work and had an expert accountant come every three months and certify her books, paying him forty dollars.

Was it business acumen, or plain brute suspicion that dictated this move? I never really knew; but it freed her from all further worry on the financial end of the business, and she at once devoted herself to mining those suggestions which her customers had given her, and I was soon going at the manufacture of beauty cream by the tubful and trying out all sorts of recipes and making experiments in the gentle art of substitution.

Such stuff! Tonics and lotions for large-pored skins, purple and pimply skins, veined skins; astringents for flabby skins; wrinkle eradicators; anti-obesity tonics and lotions and soaps; hair tonics, hair-terizers, dyes; eyebrow and eyelash growers; rouges and dyes and tints; drops to brighten your eye itself; it makes me shudder yet to think of the messes of cocoa butters, coconut oil, beeswax, paraffin, mineral oil, almond oil, cottonseed oil, benzoin, alcohol, acid, and scents of every sort that I had to work up and calculate. Where madame obtained all the recipes I tried and figured out to the minutest fraction of a cent I do not know. She shrouded them in mystery; some, I suspect, because they were just picked up here and there, and she liked me to think them valuable, while others had cost her so much—and turned out so useless—she was ashamed to tell what she'd paid for them.

HER top limit was one cent for filler, two for the container of everything that was to retail for a dollar an ounce, ninety-seven cents profit on the retail trade, thirty-three off to the trade; nothing but soaps might cost over these figures. It was therefore a simple matter to decide for or against a given preparation: Did it cost a cent an ounce or less? Answer "More," and my aunt replied: "Out she goes. Not for us." That's all there was to it.

All these preparations were as harmless as they were expensive to the ultimate consumer; but madame held, in making the cent the ultimate test of fitness, that mere quality in these goods neither sold them in the first instance nor created the regular customer who uses the same brand of goods year after year; for the first reason that you cannot create a craving and a habit for a face wash or lotion as you can for a nostrum or a drug taken internally; and for the second that the woman trade is fickle.

THESE new "one-cent" preparations, all beautifully perfumed and put up in pink wrappers tied with purple ribbon, together with a few more expensive we had to carry for the accommodation of our customers at a profit of only a hundred or so per cent, were soon filling the show case and shelves of the little pink shop; but, trained by Zulu, madame reckoned 100 per cent no profit and 50 per cent a loss, and spent her energies on those that were worth while, and I did the same.

THESE were so worth while that before our first year was over the little pink shop was crowded to its utmost capacity, and madame took a store seven times as large and twelve times as expensive at five thousand a year.

I gasped at the risks she was running, but she merely smiled her superior smile and explained: "I been figgering it out; the same amount of responsibility, oversight, brains, and energy it takes me now to run a one-chair concern would run a ten-chair concern and move twenty times the stock. Besides, it sounds better—a *sa-lon*—beauty sa-*lon*—get a better class of trade in—charge them more for the use of the word."

"But the rent—five thousand!" I gurgled, seeing the poorhouse in the distance.

"Well, what of it? I ain't the one gotta earn the rent—the operators gotta do that the same in a ten-chair sa-*lon* as they do in a one-chair concern. Ten operators earn ten times as much rent as one, don't they? Well, this is twelve times the rent; but I been figgering that if I put in ten and raise the prices of treatments—some of our specials—the ten will earn as much as twelve—and save two pay envelopes into the bargain.

—all sorts and conditions of women, all Sisters of the Great Fear, rubbed elbows awaiting their turns for the magic "treatment"—

"There's that hot-milk pack I invented—only thing for proper bust development if you advertise it right—nature's own remedy—electric vibratory massage for driving the milk into the pores of the skin and through the pores into the muscles and flesh underneath—get up a few pictures to show how it works. Facial hot-milk pack, two dollars; bust pack, three. That'll both fetch the trade and make up the difference, I guess. I gotta do more with that hot-milk pack—there's money it—costs only four cents more'n a hot-water pack and brings in a dollar. All it needs is the right litterchure to make it a perfectly splendid treatment for bust development. And if I can get some prominent matinée idol to fall for it," she added, "if I could get Maude Adams to indorse that hot-milk pack—even if she never tried it—just say she thinks it's a good thing—it'll make it *the* scientific development treatment of America. Put all these Swedish gymnastic systems off the market with the Del Mar Development System—no work—no straining of your muscles—just lie back in the chair and let us give you a hot-milk pack that will develop your body to its natural curves through food. That's the idear, only it's gotta be worked out to make the system a success."

EIGHTEEN HUNDRED a month at least to meet!—how did she dare! I urged her to go slower, but I might as well have talked to the Empire State Express.

"Slower!" she snorted. "Huh! Be an old stick-in-the mud! I think I see myself do it!" and she went over her arguments again, winding up: "And besides all that—I got—I simply *got* to have a private office, that's all. I can't stand this being round where customers can see me any time they want. It's bad for business—those fool loafers with their skins—they got no more sense about interrupting me—talk an hour about their crow's-feet, 's if I cared whether they had them or not when I got a ten-gross lot of Zulu to place! And it's bad policy—you gotta be exclusive, or all those cattle think you're common as they are."

Madame repeated the tactics of her first experiment—furnished on the installment plan throughout, only much more extensively, and made her gamble on this and a month's rent; and, at a cash cost of less than five hundred dollars risked on the venture, she presently found herself at the head of the Del Mar Beauty Parlors, a ten-chair establishment occupying two floors in one of the best trade neighborhoods in the city, and with the dignity of a private office. It cost her, however, about three months more of hard work selecting and training her new staff, among whom she now numbered two hair workers and an expert hairdresser—a funny little Frenchman who called himself a "coiffure artist" and felt himself so very exalted he wouldn't go out to a lady's house—but made her come to him—excepting only to dress a bride's hair for the wedding, for which occasion he gallantly maintained "zat even ze greates' mus' make ze exception." And besides these, two home-treatment operators whose work was almost entirely outside. A pink store still, with a great deal of white enamel to indicate the purity of us and all our works and a neat sign in a frame: "Sterilization is one of our specialties." Two live palms and several stuffed pink brocade rocking-chairs now decorated the "sa-*lon*" in which our customers awaited their turn for beauty treatments.

MY AUNT surveyed it with deep joy and said it was the dream of her life come true, and no sooner was it come true than she uprooted us from our humble basement and carried us off to a fine first floor apartment—also furnished on installments—and very shortly after moved the laboratory over to the rear of the store. This last change, though sudden, in the end was coming inevitably because my grandmother was no longer able to make the cream or even do the dish washing for me. She'd been turning out ten or fifteen pounds a day to help me while I was working on the other preparations, the buying, and the thousand and one things I had to look after, but she was growing feeble and her memory was no longer to be trusted. She sometimes forgot the borax, and once the olive oil, and thus spoiled a batch of beauty cream in the making. The loss was actually trifling—two dollars would have covered the worst accident of the kind—but it was one of the things my aunt couldn't endure with even a show of equanimity. She no longer saw the original outlay: fifty cents' worth of spoiled pork fat meant fifty dollars' worth of sweet, perfumed beauty cream thrown into the garbage can.

I suppose people get these cricks in their minds and can't help it; anyway, she scolded for the first offense; swore roundly for the second; fell on us like a fury for the third;—on grandmother because she did it; on me because I hadn't watched her to see she didn't do it. "As for you, Lucy—I pay you enough to see that accidents don't happen to expensive ingredients."

She paid me fifteen a week then. At the time of the catastrophe I was in her office getting out some private correspondence she didn't care to trust to the little stenographer who was then her "secentary."

"Why wasn't you home here to the labbatory seeing to her and giving her the proper amount of ingredients to cream up?" she demanded furiously.

"I suppose because I can't be in two places at once—I was taking those letters for you," said I, more indignant for her mother than for myself.

"Who ast you to? Your place is here to the labbatory on make-up days and my letters can wait. What are letters compared with the loss of a hundred and eighty dollars' worth of cream!—thrown in the garbage—all that money gone to the pigs."

"Excuse me—it was only ten pounds of common lard," I corrected, angrily. "Grandma forgot to put the oil in—so that's saved." (*Continued on page 30*)

DRAWINGS BY JOHN T. McCUTCHEON

The Waif

Wearied with whist and waterlogged with tea,
The antisuffrage lady hies her home
To sneer at ballots in the thickening gloam.
"My place is here. No vote for mine," says she,
—The while outside the window, wistfully,
Waits politics, condemned for life to roam
The streets, the alleys from Key West to Nome,
Unkempt, untaught, unmannered; sadly free
As the unmothered waif. Forlorn as he,
It sleeps with outcasts; learns the outcast ways;
Yet like the waif, in all its savagery
It scans each mother with a hungry gaze,
"Your place is home, cushioned from filth and sin—
And mine is too," it cries. "Ah, take me in."

Mules and Juries

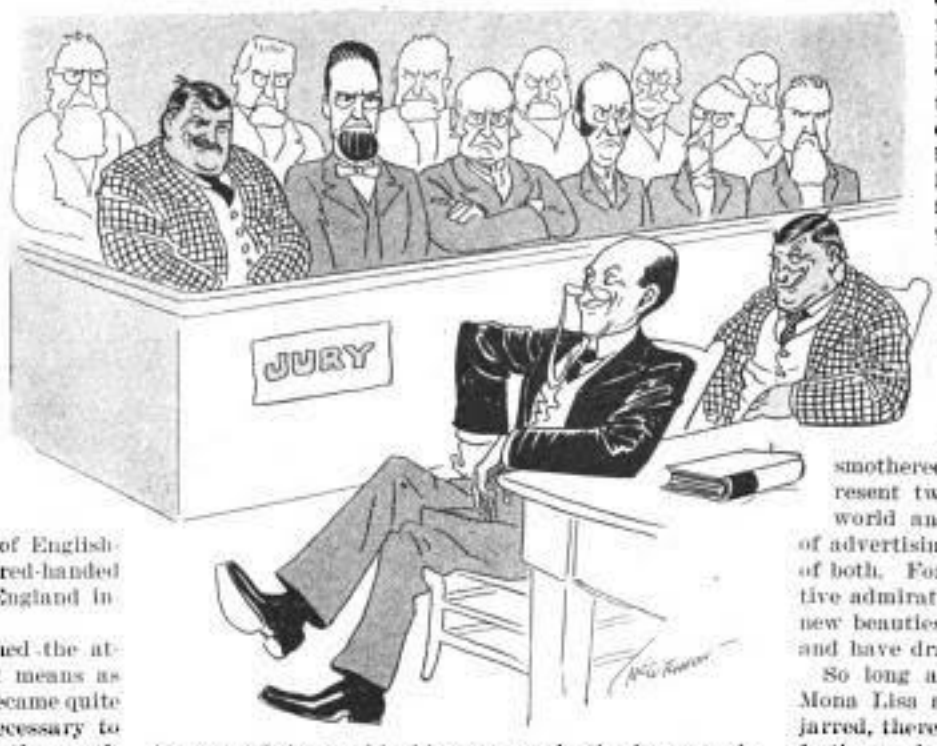
A JURY is a collection of twelve good men and true, chosen by lot for the purpose of deciding a case of law by chance.

The jury system was handed to us by England about the time she was handing us the stamp tax and other precious gifts. It was invented in the days when English kings had a habit of trying their own cases and deciding them without help—which made it mighty inconvenient for the poor devil who was so unspeakable as to have a dispute with a king.

By letting the jury decide the case the king had to persuade all twelve men to agree before his victim could be declared guilty. Owing to the natural stubbornness of Englishmen, this made it very difficult to secure red-handed justice for royalty and the population of England increased by leaps and bounds.

As time went on, English kings abandoned the attempt to influence juries by such eloquent means as typing ropes around their necks, and they became quite free and untrammeled. Thus it is now necessary to persuade twelve men by nothing harder than soft words to think alike before any villain can be convicted or any injustice can be righted. Those who have gone out on the street and have attempted to get three men to agree on any one question can realize the difficulty of this job.

So long as there are men who still hold that the earth is square and other men who will stop when you say "Good morning" to them and debate the question for half an hour, juries will continue to sit up all night and to disagree in the morning, and men who have used the laws of the land for doormats will go on smiling in a bland and contented manner when they go to trial.



There is a growing feeling that in these days when every man owns his own opinion in fee simple and wants that opinion to be unique and original, the task of getting a unanimous vote from a jury is too great. It is like persuading twelve mules to trot forward in perfect step. If half of the people can declare war and fire Presidents, three-quarters of a jury ought to be able to convict a chicken thief or a trust maggot. Moreover, if three-quarters of a jury could run itself, the lawyer for the defense would not throw his hat up so high when he got one personal friend of the accused into the jury box.

More Mona Lisas Needed

ALL true lovers of art, high finance, and international peace will rejoice, not only over the fact that the Mona Lisa painting has been discovered and restored to the Louvre, but that another Mona Lisa, even more authentic than the Paris painting, has been discovered in Spain—according at least to rumor.

Thus the misfortune which seemed likely to overwhelm France and leave a yawning chasm as wide as the crater of Vesuvius in the vitals of art has turned out to be a blessing after all. Paris has recovered its great tourist magnet and has nailed it firmly to the wall. Moreover, authorities, excited by the Spanish discovery, are now working on the theory that Leonardo da Vinci not only painted one Mona Lisa but many—that he was a sort of pictorial biographer of his Neapolitan friend's wife in fact, and that we may in time discover girlish Mona Lisas, fat and dowagerish Mona Lisas, and Mona Lisas with gray hair and the majesty of age in the features as well as in the paint.

These discoveries mean much for humanity. At present there is a palpable dearth of Mona Lisas. The French picture constitutes an international danger. Already it has almost overthrown a republic and has seriously jarred the good feeling between France and Italy. In time, if other editions are not discovered, it will produce even more serious jealousies. France is inclined to be uppish and haughty over its possession. Italy, which produced it, isn't getting enough credit. Germany may covet it. America may ravish it away by a $100,000,000 bond issue. General war, which usually starts on some pretext no more weighty than the chip on the small boy's shoulder which provokes a much-desired fight, may overtake humanity

because of the good-looking woman in the Louvre who little thought, when she plastered on her peculiar smile and sat for Leonardo, how much she might interfere with civilization later on.

WHEN Leonardo painted the Mona Lisa it wasn't worth much more than the current prices for art. No pope or king scrambled to get it as they did for much of his other work, and undoubtedly the husband of La Gioconda presumed to criticize it because of the strange look in the eyes, which appeared to be a trifle crossed. Anyone could have picked up the picture four hundred years ago for a few hundred florins. But that was because Leonardo was still alive and so was La Gioconda—it seems to be stylish to refer to this picture by both names—while the art of writing about old masters was still in its infancy. When Leonardo was in a position to tear off a dozen Mona Lisas, the market was flabby and uninterested. The twelfth picture would have been better than the first, but it wouldn't have brought anything to speak of. But in a thoughtful moment Da Vinci died, thus jumping the value of all of his pictures 500 per cent. Art and postage stamps are priced by the same standards. There is no great art in a triangular Cape of Good Hope stamp or an early Mauritius specimen. But they sell for more than the Mona Lisa did a hundred years ago—because they are hard to get. There are some old first editions of books, worm-eaten and extremely undecorative, which are priceless—not because they are worth anything, but because when a man pays $50,000 for one, then he has something which no one else can get. There are some diseases for having which the doctors charge you $1,000—not because these diseases are interesting, but because they are rare, and the man who has had one of them can brag about it for years. This is why collectors to-day will pay $100,000 for a ferocious attack upon the human frame by some old master long since dead and beyond the reach of justice.

McCutcheon—After Da Vinci

WE HAVE so much money nowadays—this "we" is strictly generic—that we simply have to throw some of it away to keep from being smothered. The growing prices of old pictures represent two things—the growing prosperity of the world and the wonderful development of the art of advertising—and Mona Lisa has had the full benefit of both. For years it has been the subject of competitive admiration. Men have risen to fame by unveiling new beauties of language while describing Mona Lisa and have dragged the picture along with them.

So long as Paris is not too unbearable about its Mona Lisa and the peace of nations is not seriously jarred, there can be no objection to its increase in perfection and charm at the rate of $1,000,000 a year, as new masters of language try their hand at describing it.

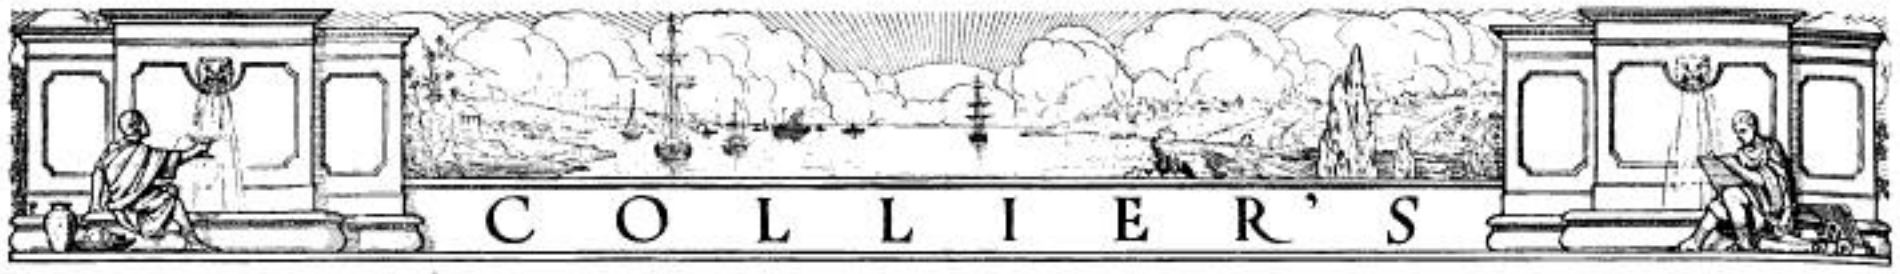
But if complications arise, The Hague should take up the matter with a firm hand and settle it. It can be done very easily. A few laws forbidding the mention of the picture for a period of ten years and giving some of the other old masters a chance would take $25,000,000 worth of unknown wisdom of unknown worlds out of the lady's eyes and put her on the bargain counter.

Curt Conclusions

A LITTLE bragging now and then gets by the wisest sort of men.

Four big words are as good as a fact in almost any argument.

The more patience there is in the world the more disagreeable people will enjoy themselves.



Repentance is a phenomenon which takes place usually just after discovery.

If men are to be allowed to build fireproof houses the designs ought to be first passed upon by their neighbors.

Dance Note

FROM this particular angle of vision it seems as if the Administration would soon have to abandon the hesitation and adopt the grizzly bear in its Mexican program.

A Letter and an Answer

FROM PHILADELPHIA comes the following letter, signed C. H. KIRK:

Why don't you stand on the side of the nation and call the States to arms to defeat the unworthy surrender of the Panama Canal, notwithstanding your snap judgment to the contrary of a few weeks ago? Or shall it be said that COLLIER'S, too, is for special privilege?

As Mr. KIRK does not favor us with his address, we will give him his answer here:

Your letter is an admirable specimen of the loose thinking and loose writing that people use who read dishonestly edited newspapers.

Just where did you get your idea that anybody in this country plans to "surrender" the Panama Canal, or for that matter the Gowanus Canal, to any foreign nation?

The proposition, as COLLIER'S understands it, is: **Shall the shipping trust PAY for the privilege of using the Panama Canal—which has cost the United States a good many million dollars—or shall the PEOPLE pay one more tax to "special privilege" by "surrendering" the Canal to combine-owned shipping?** Giving something for nothing is generally bad policy for any individual or any nation. That is the Wilson idea of this matter, and the Goethals idea, and the idea of Rear Admiral STOCKTON, and COLLIER'S idea.

Confessedly, the Canal's service is a great one. If you know of any reason why you and the editor of COLLIER'S should pay no fare on street cars because we happen to be American citizens, you will also be able to explain why American shipping shouldn't pay its fare through the Panama Canal.

By all means let us subsidize our shipping if subsidy is a wise economic policy; but if we are going to do it let us do it honestly and with our eyes open.

Why Women Should Vote

THE NEW YORK "WORLD" is not in favor of woman suffrage, its democracy being rather of the old-fashioned, "for men only" type, yet it has the following "special" on the April election in Illinois:

Women voting for the first time in Illinois township elections closed the doors of more than 1,100 out of 2,652 saloons, adding 16 counties to the 39 already "dry" and barring the sale of intoxicants in approximately 200 of the 300 townships in which local option was an issue.

Their victory included 11 of the larger cities of the State, which until the votes were counted last night were "wet" territory. They were Bloomington, Galesburg, Elgin, Decatur, Canton, Freeport, Belvidere, Monmouth, Kewanee, Lockport, and East Galena. Rockford, Mattoon, and Galva were kept in the "dry" column by women's votes.

Complete returns from country townships and from more remote sections of the State were not available, but it is shown that approximately 70 per cent of the woman voters favored the antisaloon ticket.

The editorial page made a feeble attempt to explain away these facts, but the facts remain—as is their habit. Women have suffered from the saloon for years. The ballot enables them to hit the old enemy. They see their chance and take it—just as Mr. ROBINSON shows in his cartoon on the opposite page. This constitutes intelligent voting.

How to Regulate Business

TWO NEW JERSEY CORPORATIONS tried to merge last month: the American Malting Company, an operating company with tangible assets worth about $9,250,000, and the American Malt Corporation, a holding company which owns practically nothing save the stock of the other concern. The proposed capitalization was $15,000,000. The Board of Public Utility Commissioners of New Jersey refused the necessary permission on the ground that the assets of the two did not justify the proposed capital, and also that they are not doing a cognate business. This is the sort of regulation that our industry needs. If it is maintained we will have sounder economic conditions and much more serviceable business. The old days of piracy are over in New Jersey since the Wilson forces have been in power there.

Habit-Forming Drugs Again

RETAIL DRUGGISTS have been protesting because in a recent paragraph we declared that some of them sell habit-forming drugs illegally. "Is it fair," ask the druggists of Pittsfield, Mass., "to praise a firm at the expense of others for obeying the law?" All firms and all druggists are alike to us. The firm we praised for announcing that it would not sell drugs except by prescription of the family physician is no dearer to us than the druggists of Pittsfield or of Wilkes-Barre. We know that "druggists as a class are workers for the public good." So are physicians. Yet we may condemn Dr. JOHN J. VAN HORN of New York, convicted April 8 for selling morphine illicitly, without stigma on the rest of the medical profession. Do the pharmacists for a moment maintain that they have no black sheep in their fold? CHARLES B. TOWNS found that even among the best known of the wholesalers methods were so lax that he could obtain without the slightest difficulty quantities of drugs by simply sending his order signed with the name of a non-existent physician. No question was raised; evidently not even a directory was opened before filling the orders. Let but the druggists scrutinize carefully all drug prescriptions; let them demand stringent registration laws, careful government oversight; let them, in short, purge themselves of those who traffic in darkness and ruin for untold thousands of people, and we shall be the first to praise them. Our chief object in the paragraph they disliked so much was to stir up precisely the interest in self-purification that we seem in a measure to have succeeded in arousing.

Hearst the Hellene

AN EDITORIAL—for a change—by one of our readers (italics his):

SAN BERNARDINO, CAL.

It seems they had a William Randolph Hearst in Athens about 427 B. C. C. W. C. OMAN, LL. D., writing the history of Greece, page 294, "History of Nations," says:

"CLEON was one of those men who, being gifted with very moderate abilities, endeavor to thrust themselves to the front by the profession of a narrow and unscrupulous patriotism. *He openly treated international morality as non-existent, and proclaimed that his country's interest overrode all considerations of right and wrong.* CLEON'S ability was limited to a power of gauging very accurately the varying moods of the Ecclesia. *He rose to notoriety by making himself the mouthpiece of public opinion of the moment, and by always coming forward to lead the assault on any statesman or general who made himself obnoxious to popular prejudice.*"

R. S. BOYESEN.

To vouch for a man's sincerity and uprightness—whether he be President or lesser figure—it will soon be necessary to utter only three short words: HEARST hates him.

In the Olden Time

A DISTINGUISHED DEMOCRAT says of the American press:

Nothing can now be believed which is seen in a newspaper. Truth itself becomes suspicious by being put into that polluted vehicle. The real extent of this state of misinformation is known only to those who are in situations to confront facts within their knowledge with the lies of the day. . . . The man who never looks into a newspaper is better informed than he who reads them.

Yet we do not despair of the Republic. The Democrat quoted is Mr. THOMAS JEFFERSON, speaking of the yellow journalism of the good old days.

He That Has Ears, Let Him Wear It

AMONG THE MARVELS of modern efficiency we must mention that triumph of sartorial genius which has set the young fellows' ears to work supporting their hat brims. We had often wondered just why and what those ears were for, and this is the answer of science. But it does not solve the problem of the high price of leather.

We Live in Hope

AN ESTEEMED CONTEMPORARY MAGAZINE devotes nine columns to an article entitled "The Failure of Free Love." Why doesn't some wide-awake sheet run articles on the following:

The Failure of Vitriol as a Lotion.
The Failure of Fire as a Refrigerating Agent.
The Failure of Whisky in the Nursery.
The Failure of Fasting in the Boarding School.
The Failure of the Banana Crop in Labrador.
The Failure of the Ice Crop on the Chagres River.
The Failure of the Tango in Church.
The Failure of Tammany as an "Uplift."
The Failure of Jack Johnson in Y. W. C. A. Work.
The Failure of Colorado's Coast Defense.
The Failure of Hearst in the Peace Movement.

This would make a snappy little series. May we have marked copies?

A Note on Jane Austen

SOME WEEKS AGO we took a vacation from politics, business, and morality long enough to phrase some of our ideas about JANE AUSTEN. Those remarks provoke one of Miss AUSTEN's admirers, who thinks we fail to do justice to the novelist's subtlety and humor. "Was there ever," our correspondent asks, "anyone who so beautifully renders match-making mothers, aunts, and patronesses of unmarried young ladies? Was there ever a gentler satirist or one more perfect in her representation of quite silly women—some of them, like Mrs. BENNET and Mrs. JENNINGS and the older Mrs. DASHWOOD, women of great good nature? Do you remember Mrs. FERRARS, in 'Sense and

Digitized by Google

THE NATIONAL WEEKLY

Sensibility'—her whom we meet as EDWARD'S mother at Lady MIDDLETON'S party?" One paragraph is enough for the full-length portrait:

MRS. FERRARS was a little thin woman, upright, even to formality, in her figure, and serious, even to sourness, in her aspect. Her complexion was sallow and her features small, without beauty and, naturally, without expression; but a lucky contraction of the brow had rescued her countenance from the disgrace of insipidity by giving it the strong characters of pride and ill nature. She was not a woman of many words, for, unlike people in general, she proportioned them to the number of her ideas.

This quotation brings out the point we made in referring to JANE AUSTEN as greatest of the Little Masters. The acid of her novels saves them from any flatness. For us there has always been a piquant contrast between JANE AUSTEN'S fictions and those of CHARLOTTE BRONTË. Which is preferred, we wonder, by such novel readers of to-day as still read the old-time books? Do those who swear by DICKENS as the greatest British novelist choose the author of "Jane Eyre," and THACKERAY'S friends join us in electing the delicious satirist of "Northanger Abbey"?

Pennsylvania's Senators

IT IS EASY to sneer at the politics of the Keystone State, but what sort of an impression do you get when confronted by the fact that in one hundred and twenty-five years the only United States Senators from Pennsylvania who have served two or more terms are JAMES BUCHANAN, DANIEL STURGEON, the two CAMERONS, MATTHEW STANLEY QUAY, and BOIES PENROSE?

A Plea for Stew

WRITING in a daily newspaper, Mrs. CHRISTINE FREDERICK asks why we Americans haven't any national dish. The Italian has spaghetti, the Hungarian cooks his goulash, the Russian offers us his shchee and borsh, the Frenchman brings the pot-au-feu and all the ragoûts, but if you ask Yankees what their national dish is, one will say "corn pone," another "turkey and fixin's," a third—horror of horrors!—"Boston baked beans." People talk about the high cost of living—one explanation is the fact that America has no national stew. Mrs. CHARLOTTE PERKINS GILMAN, lecturer on "The Larger Feminism," prophesies that private cookery is going out anyhow, and that we shall soon regard cook stoves as no more modern than the Puritan mother's spinning wheel. Perhaps. And yet if we can only arrive at that degree of civilization which expresses itself in a good stew we shall indefinitely postpone Mrs. GILMAN'S millennium of community kitchens and homes without housework.

Welcome!

WE DENOUNCE advertisements of medical fakes so often that it is pleasant now and again to speak kind words. In the Bloomingdale (Wis.) "Record" we read this editorial announcement:

The "Record" has occasionally accepted the advertisements of traveling "quack" physicians, but we have decided to cut out this sort of business. The rates on this class of advertising are high and the pay has been prompt, but we have come to the conclusion that we have no right to put such advertising before our readers, as we believe too many of the advertisers are fakes pure and simple. When you need medical advice, consult a reputable home physician; if they cannot help you, they will send you to some one who can.

Good for the "Record" and for its editor-proprietor, A. C. BISHOP! We hope that Mr. BISHOP'S next move will be to cut out the advertisements of Lydia E. Pinkham's "Vegetable Compound" and Mother Gray's "Sweet Powders for Children," and other tainted advertisements. Squeamishness about "ads" is an increasingly popular trait among newspaper publishers. It pays to be good.

Casting Out a Devil
(Drawn by Boardman Robinson)

For the Man Who Made Money Out of It

A MAN WAS PUT TO DEATH in the electric chair at Auburn, N. Y. He had murdered a policeman. But he stated that he stood ready to pay for his follies—that he had served in the American army and navy, and wanted to take his punishment "as a soldier should." The newspaper adds:

SHARP [the murderer] had been addicted to the use of intoxicants and occasionally drugs, and while in a raving condition started trouble in his boarding place, May 18, 1912. When Patrolman FOHR entered to learn the cause of the trouble, SHARP shot him. He also shot a civilian before he was overpowered.

This man SHARP was a failure—from society's standpoint. He worked his own ruin, and brought down another man's life with his own. Yet, from the whisky-dealing standpoint, from the drug vender's, SHARP was a success—while he lasted. He was an excellent customer.

The Well-Spent Life

HUGH BURNS, the oldest fireman in New York City's service, has been retired on his own petition. He thinks he ought to get a rest now, being seventy-eight years old and having had forty-five years of active duty. His last post was on Ward's Island, where he drove Engine 49. A man who can drive a fire engine at that age is certainly entitled to respect, and even admiration, as well as half pay. May HUGH BURNS live long and enjoy his retirement!

Business Practice

AN ILLUSTRATION of the old era in business has come to light in the report that a well-known ink maker will soon advertise widely, urging that a certain commercial grade of his ink be used in fountain pens. For years this manufacturer has made the above grade, wholesaling at 60 cents per quart; a fountain-pen ink at 75 cents per quart, and a certain "special" fountain-pen ink, sold under the brand of a well-known fountain-pen concern, for $1 per quart. All three were the same and the best he could make. Times have changed, so the practice is to be abandoned, and the ink sold on facts only. This is the new spirit in business practice.

Seeing the Light

ONLY A FEW MONTHS BACK the tariff was going to ruin our woolen manufacturers, but now that the tears have all been shed, the wailing hushed, and the bunk finally dropped, what do we find? The Cleveland (Ohio) Worsted Mills Company, for example, shakes off despair and proceeds to increase its capital stock from three million dollars to ten. Instead of retiring from business, it talks this way:

Recent tariff legislation has brought about a change in business conditions in connection with our industry. It will become necessary for the company to enlarge the volume of business, thereby requiring additional manufacturing facilities.

This is precisely what President WILSON meant when he spoke of releasing the energies of the nation. The Cleveland Worsted Mills Company is to be congratulated on catching step with progress.

On Visiting the Sick

DO NOT ASK THEM HOW THEY FEEL. It is an insult to them, for if they felt well they would not be sick, and it is also a reflection on your intelligence, for if you would look around a little you would be able to see how they feel. Be of some service and cheer (if possible) and get out. There is a time later when folks need company, but sickness is essentially a nonsocial occupation. It is a merit to visit the sick when you help them, but to beat them over their enfeebled heads with your robust personality is a peculiarly careless crime.

COMMENT ON CONGRESS

THE Chamber of Commerce of the United States has made an adequate summary of the progress made between January 20 and April 8 on the Administration's antitrust program.

In response to the President's trust message of January 20, only one bill, that relating to the Interstate Trade Commission, had actually been introduced in Congress. Three tentative committee drafts, relative to additions to the Sherman Law, definitions under the Sherman Law, and interlocking directorates, had been put forth as bases of discussion only. On March 18 a fourth tentative draft, dealing with holding companies, was made public. No draft or bill had appeared relative to the control of railroad securities.

The bill creating an Interstate Trade Commission was the subject of hearings before the Interstate Commerce Committee of the House from January 30 to February 16. It was then placed in the hands of a subcommittee for redrafting, and was reintroduced on March 14 and ordered reported out of the committee on March 16; but the report is yet delayed in order that it may be accompanied by printed explanatory matter. Consideration of the Interstate Trade Commission bill had been given in the Senate by the Committee on Interstate Commerce. The indications are that the Senate will insist upon broader powers for the commission than those provided by the House bill.

On the three tentative drafts referred to above there were hearings before the House Committee on the Judiciary during February and March. All three drafts were redrawn after conferences with the President. It is possible that all three drafts may be brought into one bill.

An Overworked Switch Engine

WHY the bills move with laggard step and why, roughly speaking, the program of antitrust legislation is in the same "tentative" stage of preparation that it has been in since Mr. Wilson made his recommendations to Congress is easily explained. The legislation does not move and apparently will not move until the President can take immediate, undivided, personal charge of it and apply the propulsive power. Now, Mr. Wilson cannot set his energies to this task until he has got rid of the difficulties of the Mexican problem and the repeal of the free-tolls provision of the Panama Canal Act. The Washington correspondent of the New York "Evening Post" visualizes the condition in these terms:

> You have seen, of course, a big terminal railroad switching yard, with all the tracks filled with loaded freight cars waiting to be made up into trains and shunted out on the main line and sent to their destination. Well, in a way of speaking, that is the situation and condition in Washington now. The trouble is there is only one switch engine to handle all the waiting cars. It may be called the "Woodrow Wilson." It is overworked.
>
> Just now the attempt is to get the Mexican problem and the repeal of the canal tolls exemption clause pushed out on the main line. Until this is accomplished virtually everything else must wait. This applies particularly to the President's program of antitrust legislation.

Kept in after School

THE chief factors in shaping the bills in their final form will be President Wilson and Attorney General McReynolds. The members of the subcommittees of the House charged with the responsibility and the duty of drawing up the preliminary drafts have irresistibly reminded observers of their processes of little boys kept in after school to work out problems which they did not understand. They have met time after time in closed session, made "tentative" drafts, and taken them to the White House for approval. After conferring with Mr. Wilson, they have come away from the White House saying that "changes must be made." Then they have gone back to the Capitol and again locked themselves up with their tasks.

"Let Music Fill the Air"

Cory, in the Chicago Daily Journal

None of the members of the House actively concerned in the work of drafting is noted as an economist or as having clear, definite, simple convictions and views on the regulation and control or supervision or direction or management of trusts or large corporate enterprises. They find it hard to say right off the bat what are the essential differences between a "good" holding company and a "bad" holding company, or even what should be the correct legal definition of a holding company. What should it hold and how much, for example? And how long should it hold it and under what conditions and limitations?

President Wilson has not committed himself to any form of bill or to any detail in any of the drafts submitted for public consideration. He has simply made recommendations, and left details to subcommittees of the House Judiciary and Interstate Commerce Committees. White House approval, therefore, before the introduction of the bills does not mean that the proposals are in their final form. The President's attitude toward the latest drafts that have been submitted is analogous to his attitude toward the Federal Reserve Act while that law was in the making. He approves the "bony structure," but does not bind himself to defend the measure against amendment.

One tendency is clearly perceived. After each emergence the proposals are found to be simplified and clarified, and less comprehensive. This is particularly true of the Interstate Trade Commission Bill. In the end the whole program of this legislation may be comprised in one great bill, or in two, with the Trade Commission proposal as one bill and the other proposals in another. President Wilson is supposed to favor this plan of an omnibus bill. Combining the proposals will make for time saving and simplification in putting them through Congress. The form in which the bills are reported to the House will not necessarily bear any close resemblance to the form in which they pass. President Wilson has made it clear time and again, and the House leaders have been equally explicit in declaring, that the measures will not be jammed through. They will be subjected to careful scrutiny, review, and criticism in both House and Senate—in committee rooms and on the floor.

If this program is carried out in the present temper of Congress the legislation will be neither hasty nor drastic.

The Next Issue

IS COUNTRY-WIDE prohibition to be the next great "issue" in national politics? There are certain signs and portents. Josephus Daniels thinks so, we deduce, while Senator Morris Sheppard of Texas says:

> There are two issues before the American people—woman suffrage and prohibition—which will not down until they are settled right. One or the other of them is an issue in nearly every State, and the politicians cannot avert them.

That is one straw. Here are two more: Cato Sells, Commissioner of Indian Affairs, has written in a letter to each of the six thousand employees of the Indian Service:

> I believe that the greatest present menace to the American Indian is whisky. . . . There is nothing that can induce me, since I have taken the oath of office as Commissioner of Indian Affairs, to touch a single drop of any sort of intoxicating liquor, and this regardless of my attitude on the prohibition question.

On one day chosen at random thirty-six memorials and petitions were presented in the Senate, and of that number twenty-one remonstrated against or favored the adoption of a constitutional amendment to prohibit the sale, manufacture, and importation of intoxicating beverages. The proportion holds true virtually every day the Senate is in session. And the petitions come from all over the country.

COLLIER'S maintains an office at Washington which will give the record of any Senator or Representative on important roll calls during the Sixty-first and Sixty-second Congresses and during the first session of the present Congress (the Sixty-third). This office will also supply information concerning Congress and the Government. The service is entirely without charge. Address Collier's Washington Bureau, 902 Munsey Building, Washington, D. C.

Unconventional Portraits of American Cities—Boston

A WRIGGLY STREET and somewhere in the picture a building of "historic interest"—these are the first essentials in any truly characteristic portrait of downtown Boston. Trade was reluctant to wander from its old centers; so a bigger Hub spins round the old axle and the scattered reminders of Colonial days are overshadowed by high walls of modern steel and stone. The central building in the portrait above is the old State House, the basement of which is now in use as a subway station for elevated trains. The camera is pointing eastward down Court Street from the roof ledge of the Old Colony Trust Company Building.

HIRAM C. GILL'S SMILE. *photographed at his inauguration a few days ago as Mayor of Seattle, is characteristic nowadays. Gill is one of the happiest men alive since he got back on the job after being recalled in 1911. But he dislikes being called a "come-back" Mayor. He says the people did most of the "coming." The other man in the picture is G. F. Cotterill, Gill's immediate predecessor*

Campaigning with Doughnuts and Coffee in the Windy City

NO, the women in the photograph are not feeding the unemployed. They are handing out doughnuts and coffee as bait to catch a man voter in the Third Ward of Chicago. In many precincts throughout the city during the recent election the women appealed to the voters through their appetites, but there was not enough coffee and doughnuts to make the Democrats desert "Bathhouse John" Coughlin. Miss Marion Drake was beaten for alderman by Coughlin in the First Ward, and eight other woman candidates for alderman were defeated, the Democrats carrying the city by 30,000 plurality. Although many women voted with the old-time politicians, the reform leaders among the Chicago women are sure of victory in the future. They are encouraged by telling blows struck John Barleycorn by their down-State sisters.

ST. AUGUSTINE'S PRICELESS RECORDS AND CURIOS, *dating back to the romantic days of Spanish rule, went up in smoke the other day when the heart of our oldest city was swept by fire, as did the famous Vedder House, home of the St. Augustine Historical Society, and the St. John County Court House, old landmarks which attracted tourists to the ancient winter resort from all parts of the country. The crumbling framework in the center of the photograph is the last of the Florida House, in which the fire originated. Four other large hotels were burned. The city was founded by Spanish settlers in 1565*

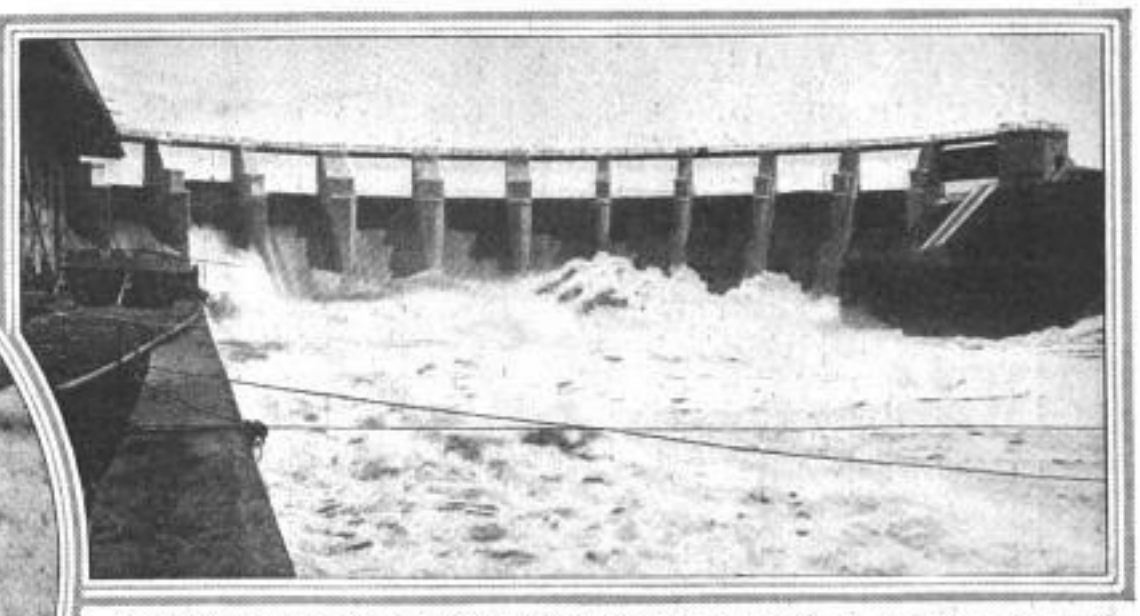
The Vaterland's Huge Engines



The necessity of having engines the size of this is explained by the fact that the owners expect the Vaterland, with her tonnage of 58,000, to compete in speed with the fastest of the lighter-built ocean greyhounds

AN IDEA of how enormous are the turbine motors of the Hamburg-American liner *Vaterland* may be had from our photograph above, which shows one of them being lowered into position. It is 17½ feet long and 17 feet in diameter, and is a part of the most powerful machinery ever installed on a ship.

Looking Up a Smokestack

THE way to appreciate the novelty of this picture is to hold it above your head and look up at it. It was taken inside the 165-foot chimney of the new incinerator plant in Savannah, Ga. The photographer was lying upon his back at the bottom of the stack when he took the snapshot.

THE GATUN SPILLWAY IS THE SAFETY VALVE *of the Panama Canal. It operates when, in the rainy season, Gatun Lake reaches a level of 85 feet. This view shows the gates open for the first time*

Slump in Idol Making

IDOL worship is on the wane in some parts of China and consequently many idol carvers are compelled to use their skill in other work. The man in our picture at the left is a Shanghai idol maker who has turned to making lay figures for show windows. American missionaries report that in the southern provinces many Chinese are not only forsaking their graven images, but are using a large number of old Confucian temples as schoolhouses.

Christian missionaries attribute the decline of idolatry to their own activities and to the general influence of Western civilization. They say that resistance to their teachings has diminished a great deal since the Manchus were overthrown.

The Most Suitable And Sound I

RIGHT now thousands of families are daily depriving themselves of an endless chain of economical pleasures, comforts and benefits that could be theirs just as well as not. Get a big handsome Overland touring car into the very midst of your family, and you increase the pleasures and broaden the viewpoints of everyone in the house.

Thousands could be enjoying a better life, a fuller life, and could be getting a whole lot more fun out of life if they had a spick and span brand new Overland at their beck and call. Ever figure it out that way? Well it's time you did.

Nearly 150,000 of the most substantial American families own Overlands. And every Overland owner is a loyal Overland booster. Find the Overland owner in your neighborhood. Get his experienced opinion. Talk to him before you make your decision.

He knows the difference.

Taking everything into careful consideration, the Overland is the most practical all-year-around-family-car on the market. It is not too large, nor is it bulky or cumbersome. On the other hand, it is not small, dinky or stunted—but just the right size for the full comfort, and the complete and ever-

lasting enjoyment
home circle.

It seats five lar
crowding, no jam
all the time. The

The long wheel base, in addition to giving you ample leg room, also adds to the riding comfort.

So do the large tires.

And the price—

Other cars of similar specifications cost a great deal more. How much? That varies. But in practically every case a careful comparison will prove to you that an Overland costs a full 30% less than any other similar car made.

In view of this can you afford to pay more for some other car that does not give you as much as you can get in the Overland?

Then again—

The Overland is outselling every other similar car made. This is a positive indication of how the buying public regards this car as against all others.

Remember the cost is 30% less.

Spring is here. Get your family out of doors all you can.

There is an Overland dealer in your town. Look him up today. Catalogue on request. Please address Dept. 6.

This Man

Gave You Puffed Grains

Gave you Puffed Wheat and Puffed Rice. He found the way to explode by steam the hundred million food granules inside of each grain.

He did this as a College Professor, in the service of science. Did it to make whole grains wholly digestible. In all the ages, men had never accomplished that.

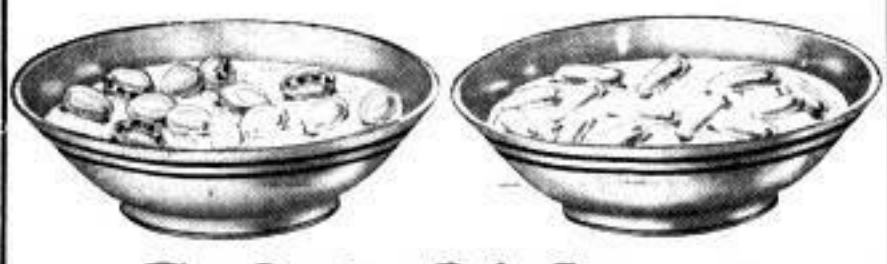
Thus he gave you the best-cooked foods, the most digestible cereals that science had ever prepared.

Gave Delight to Millions

He also gave you a new delight which millions are enjoying. Grains puffed to eight times normal size—bubble-like and thin. Grains that crush into dainty granules, with a taste like toasted nuts.

Before these came, no morning or evening ever brought to your table such fascinating foods.

That is all due to the years and years Prof. Anderson gave to this problem. And he is now seeking a way to do the same with corn.



Puffed Wheat, 10c
Puffed Rice, 15c *Except in Extreme West*

Serve with cream and sugar in the morning. When berries come, mix these Puffed Grains with them. For suppers, serve like crackers floating in bowls of milk.

Use like nut meats in desserts, in candy making, as garnish for ice cream.

Keep them on hand for hungry children, between meals or at bedtime. For Puffed Grains do not tax the stomach. And every element is converted into food.

Puffed Grains should be, in every home, as staple as bread and crackers.

Baseball for Sport's Sake

By
GRANTLAND RICE

YOU have probably felt as a good many others have felt that baseball, as a game to be played, was drifting away from you. You have probably felt, with other unnumbered thousands, that you had rather play a game yourself than to watch others play it—that you would rather make a two-base hit with the score tied on your own hook in some friendly Saturday afternoon encounter than to sit and watch Hans Wagner soak out triples for a week or Frank Baker drive a carload of balls over the right field fence.

So you have gone in for golf or tennis or have become a fan with the old dream that some day you would again get a crack at the ball and feel the old thrill as you pumped one on a line over the shortstop's head and drove some pal across the plate with the winning count.

You have had to give up baseball because you didn't care to enter the professional field or lacked the ability to play in such company.

There are many restless thousands in your fix, and to-day, for you and the rest of these, we have a message of cheer—the good old game is coming back—not for the spectator, for he already has more leagues to follow than Argus could cover in mid-season form. It is coming back for the player through the medium of the National Amateur Baseball Association of America—an organization recently launched in Chicago by E. C. Seaton to promote baseball again for "sport's sake," for the fun of playing the game for nothing rather than for watching others play at it at so much per watch.

Needed Innovation

AN organization of this sort has been needed for a long time. The only wonder is that it wasn't started sooner. Professional baseball is a great and needed institution, but for years now the greatest game of them all—the national pastime of 90,000,000 people—has been drifting from the many to the few—from the countless thousands who played it and loved it to the few elect willing to give their entire careers to nothing else—at so much a career.

For years it has been drifting from sport to business, from sentiment to "the highest salary" ever paid or "the greatest price ever paid for one player." For years it has been drifting from a game for the player to one for the spectator—and it is high time the game was revised and brought back to its original field.

In all this time we have been watching wonderful stars developed and wonderful stadiums rising up at the cost of millions. All this has heralded the game's great growth. But while all this was going on the average fellow who would like to play for the old-time fun of it has been barred out. Even the colleges, in their utter blindness to the wholesomeness of this sport, have helped crush the spirit of play by saying that no one of their team members shall play baseball in the summer without being barred as a professional. Imagine it! To take a youngster of twenty or twenty-one who loves baseball, who takes it as his game, and say to him that in June, July, August, and September, the four best months of play, he shall not play this game for even the fun of it! It is the most unfair and most senseless proposition or proclamation we have ever known—and here and there we have known quite a few.

Enter the Amateur Association

BUT now comes the National Amateur Baseball Association of America—founded in Chicago for the purpose of promoting and bringing back baseball for the fun of playing the game—founded for the purpose, in this commercial age, of giving thousands a chance to watch a Saturday game for nothing or to get in and play one.

The general scheme is to have one general organization, governed by a set of specific regulations with the laws to be enforced by energetic, responsible, and sport-loving officials.

The national association will be subdivided into different cities. That is, in each city there will be a city association composed of the different amateur leagues. These teams will play out a championship schedule with games arranged each Saturday afternoon.

Each city association will play out its own championship and then will follow a series of intercity contests—New York *vs.* Philadelphia, Chicago *vs.* Cleveland, San Francisco *vs.* Los Angeles, etc., as the case may be—until the list has narrowed down to two rival clubs, who shall then battle for the national amateur championship of America. It is planned to play the 1915 championship games in San Francisco at the Panama-Pacific Exposition.

The project is bound to succeed, for there will be no cost attached and it will appeal directly to thousands who have been looking for such a chance—for an opportunity to get back and play a ball game once in a while and still work for a living at some other profession.

Each city must direct the destinies of its own league, but all cities will be subjected to certain regulations, the most important of which are these:

Section 4. No player in any club in any city will be eligible who is under contract or reserve by the National Commission, Federal League, or any organized baseball club, or who is playing a regular schedule of games every day for money.

Section 5. No player on any club in any city will be eligible who accepts or receives in any form whatsoever any stipulated weekly salary for services rendered to any club.

Section 6. No player on any club in any city will be eligible who plays baseball for a livelihood.

This eliminates any professional atmosphere, but it doesn't eliminate any man who is working for a living at some other profession, even though he has once been a professional ball player or may accept $3 or $5 for playing baseball Saturday afternoons. It does away with big secret expense money so common with players who, to retain a certain amateur standing, must cover up the transactions.

In other words, the new association doesn't desire to be pinayunish or technical—it merely desires to see that the game is played mainly for sport's sake rather than purely for the coin's sake.

Off with a Rush

AT the first call seventeen cities—namely, Chicago, Cleveland, St. Paul, Denver, Louisville, St. Louis, Baltimore, Indianapolis, Cincinnati, Minneapolis, Columbus (Ohio), Milwaukee, Omaha, Washington, Johnstown (Pa.), Lowell, (Mass.), and Gary (Ind.)—came into the fold. And, in addition to these seventeen, dozens of other applications were received, insuring a big field for the start. The clubs from these cities represent over 34,000 players. Within a year there should be fifty or sixty cities entered, with a membership of upward of 90,000 players, comprising different zones, for the purpose of eliminating all save the survivors, who shall then battle for the flag.

There is no way any graft can be connected with the proposition, for without money involved there can be no graft. And to further insure its success the new association selected for its president Mr. E. C. Patterson, a sportsman who for

Digitized by Google

twenty years has time to developing Mr. Patterson, officers, has taken with a knowledge vital enthusiasm that circuit along to success sisted by responsible see to it that the association is maintained upon a high plane—and for all this work not one cent will be paid in the way of remuneration. The entire arrangement is upon a high, clean basis that deserves, and will command, success. C. C. Townes of Cleveland is first vice president; Jesse S. Smith of Chicago, second vice president; E. C. Seaton of Chicago, secretary-treasurer. It is due to Mr. Seaton's untiring efforts for two years that this association owes its existence.

given his recreation amateur baseball. with all other Aiding up the work ahead of conditions and a is sure to carry the He will be assparties, who will

Oh, well, you say, most people now don't care for amateur baseball any more. Don't they? Last fall the city league champions of Chicago and Cleveland played such a game in Cleveland and there were exactly 25,000 people present. That's all—only 25,000 with little advertising and the new association still beyond.

Officials of the association will receive the applications of all cities that desire to enter, and where they are convinced that a city is willing to enter fully into the spirit of the enterprise it will be taken into membership. With fifty cities enlisted in the cause, which will be a big boom toward the playground movement, more than 90,000 players will be added to the list and will be rewarded by a summer's fun. No college can conscientiously bar its players from participating in such contests without carrying a technicality to a foolish extreme, for this association should be the biggest factor now extant in promoting amateur play, in developing a wholesome spirit, and in furnishing an ideal recreation for so many who need it.

Professional baseball has its place. But isn't there room also for the fellow who would rather play the game than watch others play it? For the fellow who can get more benefit and enjoyment out of taking part than in looking on? The new association will be the answer and it will be no half-hearted or uncertain one.

When the Farmer Shakes the Money Tree

(Continued from page 10)

each kind of borrowing must have an agency all its own.

The best example of the long-term credit machine is in the well-known Crédit Foncier of France, which lends money to farmers at 4 per cent on long loans, which may be amortized. The company then pools these mortgages, issuing 3 per cent bonds of small denomination against them, and they in turn become the standard investment of the great mass of the people. Thus borrower and investor are accommodated in the simplest, cheapest, and most accessible way.

The ideal small personal loan arrangement is best exemplified in the Raiffeisen communal banks of Germany, in which the farmers syndicate their savings and credit resources and borrow from each other at a rate rarely exceeding 4 per cent. These banks represent the very essence of the cooperative spirit, and prove the need and value of self-help institutions.

The Awakening in America

THIS now brings us to the meat of the matter, which is: How are we to adapt these seasoned agencies to the relief of the long-suffering American farmer?

Incredible as it may seem, it is only within the past four years that there has been any serious awakening to our economic responsibility to the farmer and to the necessity of action. Ambassador Myron T. Herrick is really the father of the present rural-credit agitation. He interested President Taft, and this started an executive stimulus, which was inherited by Mr. Wilson. Through the influence of Senator Duncan Fletcher, and with the help of the Southern Commercial Congress, an American commission went abroad last year to study conditions and make some definite report.

Now the interesting thing about this commission, as well as the many individuals who have gone on similar investigations, is that they display great enthusiasm over the various credit agencies at work and manifest much surprise over the results of cooperation. They write long and learned reports extolling these cooperative activities and lamenting their absence in this country.

But all of them are not familiar with the economic systems of their own land. An incident which was brought to the notice of the Congressional Rural Credit Committee will illustrate. A resident of Columbus, Ohio, went to Europe to study rural credits. On his return he wrote an elaborate pamphlet praising the beauties of certain foreign loans, and saying how much it was to be regretted that they had never been attempted in America. Yet within two blocks of his house lived the president of a building and loan association that had more than $1,000,000 out in farm loans on the exact plan that was being held up as a model.

As a matter of fact, we have no lack of cooperative agencies in the United States. The only trouble has been that they are not linked with rural lending. Take, for example, the building and loan association. When operating under adequate statutory protection, it is an almost ideal cooperative structure.

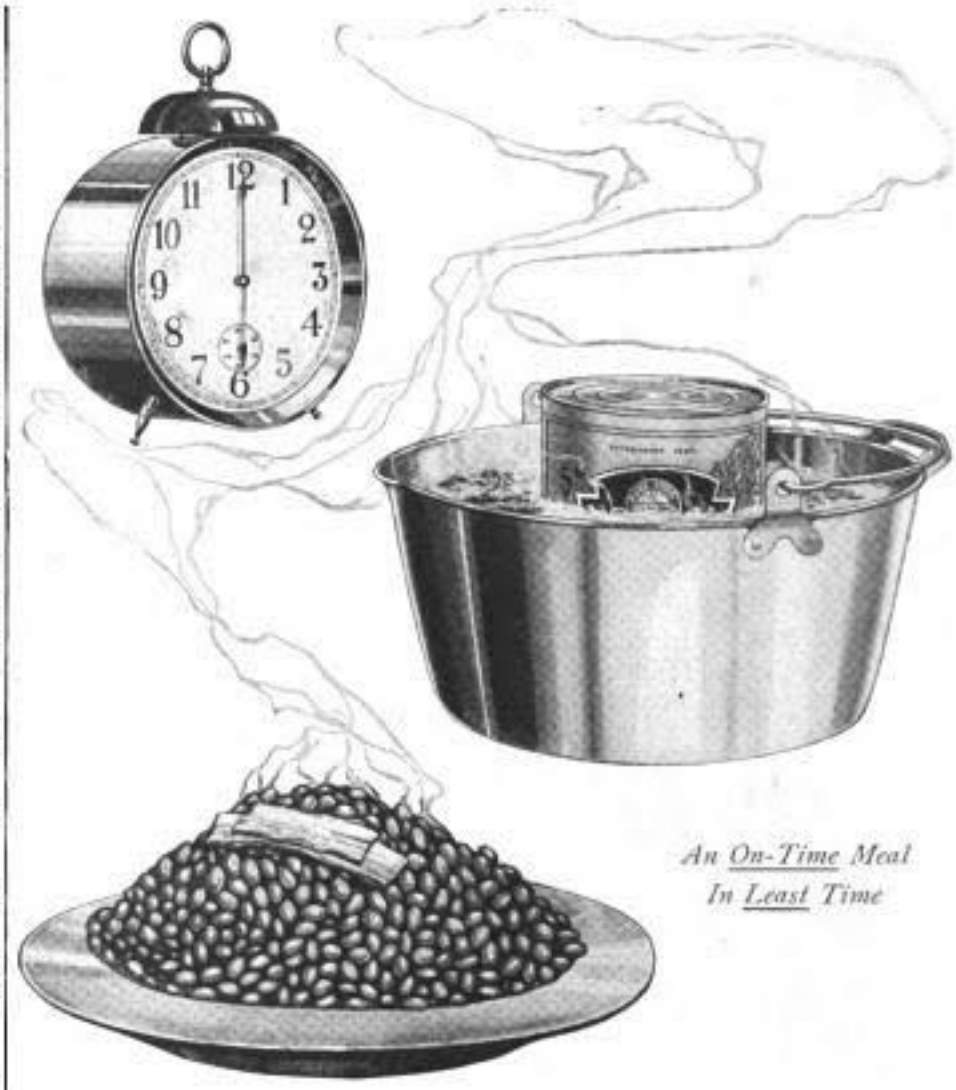
Best of all cooperative agencies is the Credit Union, already authorized by legislative action in New York, Massachusetts, Texas, and Wisconsin.

Thus there is no lack of available agency: what we need is the law to galvanize it into a bulwark for the farmer's financial needs.

What Shall the Remedy Be?

THE only remaining question then is: What shall that law be?

In selecting a type of institution to handle American rural credits a proposition more difficult than is presented in Europe is encountered, for the reason that our territory is so vast and there is such diversity of climate, products, people, and methods of farming. Such an institution, or rather one wing of it, needs cooperative effort, and our people have only scratched the surface of cooperation.



At this writing the Congressional subcommittee charged with the investigation of rural credits has just concluded its hearings, and set about sifting the flock of bills submitted for the establishment of some definite and permanent system. A brief digest of the most important will show what our legislators have in mind.

The so-called Fletcher-Moss Bill represents the sentiment of the American commission that went to Europe last year. It is what might be called a near-cooperative scheme. In a word, it authorizes the formation of land banks all over the country. Any ten or more men with a minimum capital of $10,000 can start one of these banks, lend money on mortgages, and then issue debentures against these liens not to exceed fifteen times the capital stock and surplus or the face value of the underlying mortgages. These institutions are to be called National Farm Land Banks, and when conducted under cooperative auspices must include the word "Cooperative" in the title. The loans made by the land banks may be amortized, and the rate of interest shall not be more than 1 per cent higher than the face interest rate of the debentures issued. This bill follows the Credit Foncier idea closely, with the exception that the proposed American banks are also authorized to do a commercial banking business.

The objection to this measure, made in various expert quarters, is that the small land banks would find it difficult to market their debentures; that the multiplicity of them would create confusion and that the small capital required would induce unscrupulous people to form them for land exploitation.

The next most important measure—the Bathrick Bill—calls for Government loans direct to the farmer under the supervision of a Farm Credit Board. The funds for these loans are to be derived from the issue of United States 3½ per cent bonds, to be retired with the amortization of the loans. By the terms of this measure the farmer is not to pay more than 4½ per cent for his money.

Still another bill—the Hulings—is somewhat similar in scheme in that it provides for governmental loans direct to the farmer, who forms an association and through the organization obtains currency from the Government for his needs.

An On-Time Meal In Least Time

We Take Time to Give You Leisure

Just heat Heinz Baked Beans while the table is being set. Then serve.

Without bother or fuss, without the hours of preparation, you give your family *real* baked beans with *the real flavor* that comes only when beans are baked by fire in an oven. The hard work is all done for you in our famous kitchens.

Heinz Baked Beans

One of the 57 Varieties

are baked the slow, painstaking way, the one way that produces the flavor and makes beans most satisfying and nourishing.

There are quicker, easier methods of cooking beans, but we are not looking for quick or easy ways. From the start of our business, our one aim has been to make only the best.

That's why we issue the broad guarantee for all our products, "Your money back if you're not pleased."

There are four kinds of Heinz Baked Beans:

Heinz Baked Beans with Pork and Tomato Sauce

Heinz Baked Pork and Beans (without Tomato Sauce)—Boston Style.

Heinz Baked Beans in Tomato Sauce without Pork—(Vegetarian)

Heinz Baked Red Kidney Beans

Others of the 57 Varieties are:

Spaghetti—cooked ready to serve, **Peanut Butter, Cream Soups, India Relish, Olives, Tomato Ketchup, etc.**

So Light

So Cool

This Label on Every Garment

CHALMERS
TRADE MARK
"Porosknit"
FABRIC PAT. DEC. 12, 1905.
DESIGN PAT. DEC. 19, 1905
REG. U.S. PAT. OFF.
GUARANTEED

There is a No-Limit Guarantee behind Chalmers "Porosknit." Let's consider WHY. Let's see what the genuine Chalmers "Porosknit" label MEANS—as compared with imitations.

Mere *holes* in underwear do not make it the genuine Chalmers "Porosknit." One must judge by more than appearance. That is, if one wants such quality as can be guaranteed *unconditionally*.

Let's first examine a Chalmers "Porosknit" garment. Then let's investigate its making.

Take this Union Suit. Observe the triangular piece in the back. The "stretch" in any knit goods runs only *one* way.

That is why this triangular piece is reversed. That makes its stretch run opposite to the rest of the garment. This is done to give full elasticity to the seat—so that it will *give*—at every turn or bend.

There can be no pull, no bulge, no draw—no "cutting in the crotch."

Turn the garment inside out. Notice how strongly the seams are reinforced—double-seamed by cover seaming. Extra stitches to prevent ripping.

Stretch the fabric. See the other *extra* stitches surrounding each ventilating hole. These, with the lock-stitch, prevent unravelling.

Note that there are no cumbersome flaps to gape open. The Chalmers Closed Crotch is comfortable. It fits. It stays put.

The Extra Quality

The yarn is the finest long-fibre, combed. Indeed, we've been told it's *better* than need be. That we could pocket thousands of extra dollars yearly by using less costly yarn—and still have it "good enough." That none might detect it.

True. The same careful workmanship could be employed in finishing such less-good yarn—and Chalmers "Porosknit" would still *look* the same.

Yet—what if the durability suffer? If something be lost in softness or elasticity?

We take no chances with durability—no risks with the established Chalmers "Porosknit" quality.

Such fine shades in superiority you cannot *see*. But they account for the inability to duplicate Chalmers "Porosknit." They explain the unfailing satisfaction. They mean unvarying comfort.

One doubts if imitations are a good buy.

Judge if *you* will accept any but the genuine. The way to be *sure* is to look for the label—as shown here—and the guarantee bond with every garment.

Chalmers "Porosknit" is made in *all* styles—for man, for boy. Open in texture, and of soft, absorbent yarn, it keeps you cool by absorption and evaporation of perspiration.

No-Limit Guarantee

"If any garment bearing the genuine Chalmers 'Porosknit' label, and not stamped 'Seconds' or 'Imperfect' across the label, fails to give you its cost value in underwear satisfaction, return it direct to us and we will replace it or refund your money, including postage."

Each garment is ironed individually before packing. See for yourself how pleasing the appearance in the box at the dealer's.

The Government in turn takes mortgages to secure the issue of the scrip.

Now, whatever may be the virtues or the defects of these and the various other measures that are now being considered, the cheering fact remains that they embody the principal benefits that have long been denied our farmers, for they include amortization of loans, a low rate of interest, and accessible money.

Relief Within Sight

YOU will note that these bill only provide for long-term or mortgage credit. No provision is considered for the short-term or personal lending. Following the European example, the committee has practically decided to have two separate institutions, and that the model for the personal loan will doubtless be along the line of the Jewish cooperative credit unions which I described in a recent issue of COLLIER'S.

Even while Congress is pondering over these measures Uncle Sam has begun the relief of the farmer. Under the terms of the new currency bill national banks may now discount farmers' paper, which tends to create a more liberal lending policy toward the tiller of the soil. In addition these banks may lend money on farm mortgages not to run over five years nor to exceed in total amount 25 per cent of their capital stock, or 33 1-3 per cent of their time deposits.

Nor are other signs wanting to indicate a whole new and constructive attitude toward the financing of the farm. Various States have begun to work out the economic salvation of their agricultural class. In New York, for instance, Governor Glynn has sent an impressive message to the Legislature urging the formation of land banks. He pointed out the startling fact that while the urban population of the great Empire State had increased 25 per cent in ten years, the increase in rural population had only been 1 per cent. During the same time there was a decrease of 5 per cent in cultivated farms. These facts alone would be sufficient to explain the increased cost of living. The decline in farm interest was due to only one thing, and that a lack of adequate financing. This, too, in the very State that is the fountain head of American money power.

The farm mortgages of New York State present a very illuminating object lesson. The farms have a total debt of $[illegible], secured by liens. If for these mortgages were substituted ten-year amortization loans at 6 per cent, and with an additional yearly payment to cancel the debt at maturity, the farmers would save not less than $24,000,000.

The Investor and the Farmer

BUT this dawning rural financial millennium will not be complete until the average investor with his small savings—and by him I mean the man or woman with $5 stuck away in a corner, $20 in a savings bank, or $30 in a building and loan association—can link his destiny with the farmers' financial relief. Such an investor—as is the case with his European brother—will not put his money in the debentures of a company with small capitalization.

For this reason men like Leonard Robinson, father of the Jewish cooperative credit unions whose dollars are so neighborly, have urged that the best way to bring about this union of farmer and investor is to have one huge central bond-issuing bank, or a limited number of regional banks performing the same service. The mortgages from the whole country could be deposited in these banks, and thus there would be a nation-wide blanket of security behind the debentures. A drought in one community or a devastating flood in another would not disturb the general character of the equity.

These banks, in the opinion of the men who are favoring them, should have large capitalization and a rigid governmental supervision to inspire confidence. Most of the trustees, as in the case of the Federal Reserve Board, could be appointed by the President.

They would not require new machinery either. The present financial agencies could become the agents of the central or regional banks, negotiate the loans on the mortgages (they are familiar with local conditions), and simply rediscount or exchange these mortgages for bonds at the central or regional land bank.

But whatever the plan employed, the big fact is that the proposed land bond will bring to the average American investor a long-needed medium, because it could be issued in small denominations to suit the humblest saving. It would have ample interest rate, safety, and marketability—the three cardinal requisites. The big financier is beginning to realize that the "baby" bond is the real investment hope of the nation.

A Way to Tap the World's Resources

THERE is even a wider vision in this proposed issue of mortgage debentures to relieve the farmer. They could draw on the whole world, and especially attract the continental investor who is only getting an average of 3 per cent on his Crédit Foncier and kindred land bonds. Thus we could father a security that would wipe out the stigma of Frisco financing and reestablish the integrity of the American investment abroad.

After many years of hardship the farmer seems to be coming into his financial own. Ready money for him means a larger and sounder prosperity for everybody. As the farm goes, so goes the rest of the country. Give the agriculturist ample working capital and you increase the national stability and give cheerful and contented rural life its best impetus.

But do not think that better rural credits will reduce the cost of living or shorten the hours of labor on the farm. It will simply mean a more widespread farm indebtedness at lower rates and the total interest bill paid by agriculture will be doubled and tripled over what it is now. The interest bill will still eat up the entire wheat crop, but there will be a bigger wheat crop for it to eat. And more of the farmers may become receivers of interest as well as payers of it, thus building up a stable middle class on the land.

The farm mortgage, once rejected and despised as the symbol of disaster, is on the way to become the instrument of a great regeneration.

The farmer has to borrow money when interest is highest. His hens always stop laying when eggs are highest

Digitized by Google

Mr. Burdock's Insurance

(Continued from page 7)

storage batteries evidently, with tiny blue and green and red incandescent lamps in each horrible empty eye socket —and suddenly all four sets of eyes flared wickedly at Mr. Burdock. To add to the gruesome tableau every rib and arm bone had been smeared with phosphorus, which caused each skeleton to loom forth in all the pristine awfulness of death in its most hideous form. Simultaneously one of the skeletons appeared to turn and face Mr. Burdock; its dreadful arm pointed toward him and a voice, low, rumbling, infinitely tragic, boomed out these words:

"We are dead! We await you, brother! Ashes to ashes and dust to its original dust! Beware!!"

MR. BURDOCK just hung over his front gate and gasped! His heart skipped two beats and on the instant his forehead was bathed in perspiration. On the backs of his sturdy legs gooseflesh broke out. Then the carriage top folded up again, the apparition vanished and William R. Burdock so far recovered himself as to seize a convenient stone and hurl it (together with something that would not have sounded well in church) at the ventriloquist cabby on the carriage seat!

"Good gracious!" he murmured, "that gave me a start! Horrible! Horrible! I'd give a thousand dollars to learn the name of the jackass that got up that parade. I'd have him arrested!"

Just as he was about to return to the house, a messenger boy shot around the corner on a bicycle and presented him with a telegram, which said, merely:

Do you believe that coming events cast their shadows before?

HENRY V. MOODY.
Representing Atlantic States Life Insurance Company.

For a single instant the light of murder blazed in the Burdock eyes. But only for an instant. The next he had sat him down on the horse block by the gate and was laughing quietly to himself: one of the longest and most satisfactory laughs he had had in a long time.

"Great!" he exclaimed to himself. "If that fellow doesn't know how to force his attention on a man nobody does." He wiped his eyes. "All right, Henry, my boy. You go to it and do your best. I'll enjoy it—maybe—but you won't sell Bill Burdock any life insurance!"

HE went back to the veranda and told Polly all about it. "If I thought that young insurance chap I met here the other night had an original idea like that in his head, Polly," he declared, "I'd give him a fighting chance if he was as poor as Job's turkey. But you never heard of one of these banjo-playing la-di-da boys bringing home the bacon, Polly. It isn't done! When you get married, Polly, be sure you land a live one. Tie up to a hustler every time; somebody with advanced ideas and ginger and go like a runaway horse; and—of course, a little money, to enable him to put his ideas into practical operation. This Henry V. Moody person is the real goods. He has enterprise—ain't afraid to spend a little money on the chance of making some."

"Is he trying to sell you life insurance, dad?" queried Polly, the innocent.

"Yes, he's trying. He won't succeed, but say, how I do love to see him try! I'll bet he springs some brand-new stunts on me before he lets go."

The following morning when he got down to the office he found a neat little bundle of press clippings on his desk. Thinking they had to do with the Lakeview subdivision and were the result of a new press agent the firm had employed recently, he adjusted his spectacles and commenced to skim through them, until he discovered they were more or less lurid accounts of persons who had been injured or killed within the past twenty-four hours—and all within the city limits! He threw the clippings into his waste basket just as Biddle entered with a telegram; which, upon being opened, was found to read as follows:

What assurance have you that you will not figure similarly in the news of to-morrow? Think it over. MOODY.
Representing Atlantic States Life Insurance Company.

Biddle saw the signs of mental disturbance on Mr. Burdock's face and fled, and for an hour thereafter Burdock couldn't get death and the thoughts of death out of his mind. But presently a circus parade came down the street in front of Burdock & Kewell's office and he went out to see the animals. Under the humanizing stimulus of the sight presented by a clown trying to ride a little trick mule which was bucking him all over the street, Mr. Burdock's good humor returned and he thought no more of Henry V. Moody, Special Agent of the Atlantic States Life Insurance Company, until after dinner that night.

Polly had been in great good humor during dinner; again she inveigled him out on the veranda for his after-dinner smoke. It was a drowsy evening, and in his comfortable wicker rocking-chair Mr. Burdock felt particularly comfortable and contented. What more natural, then, than that he should drift off into gentle slumber?

HE was aroused by the sound of a groan of that indefinite kind known as "hollow." At any rate it was a groan indicative of despair and utter weariness. Mr. Burdock came awake with a jerk, as it were, and to his immeasurable surprise a camel was standing in the gravel walk immediately in front of the veranda steps. The beast was draped in a black blanket of race-horse effect (the kind that permits the animal's legs and ears and eyes to show) and bore upon his back a gaunt old man with long white patriarchal whiskers. Over the shoulders of the ancient rider protruded a scythe.

It was the protesting groan of the camel, upon receiving "the office" to kneel, that had aroused Mr. Burdock. As the creature knelt Mr. Burdock came to his feet like a jack-in-the-box.

"Who the devil are you?" he yelled. And the man on the black-robed camel promptly replied:

"I am Death, the Black Camel that kneels at Every Man's door."

HE tapped the camel on the side of the neck with the handle of the scythe. The animal at once got to its feet, turned and scuffled down the gravel walk and out the gate at a rapid, swinging pace. Mr. Burdock, angry to the core of his being at this second fright within a week, ran after him, being minded, in case he should encounter a policeman, to have the camel driver and his camel arrested for trespass. He was easily outrun, however, and when, after a futile chase of several blocks he returned puffing to the house, Polly demanded to know what he had seen that had induced him to leave in such a precipitate hurry. When he told her of his strange and weird visitor, she was incredulous.

"A black camel!" she echoed, and laughed at him. "Why, dad, you must have had a nightmare!"

"No, Polly. This was a camel. I saw it all as plain as day."

"Strange nobody else saw it. When I left you on the veranda you were sound asleep and I'm certain you must have dreamed it. You saw the circus parade to-day and you probably had camels on the brain. I'm certain it was only a very vivid dream."

"Well, now," Mr. Burdock protested, "we can easily prove your case, Polly. If there are tracks in the gravel walk it wasn't a nightmare."

SO he and Polly went looking for tracks—and not a trace of a track could they find! Again Polly insisted that her father had been the victim of his own delusions, and in the absence of corroborative evidence to the contrary Mr. Burdock began to wonder if his reason wasn't tottering on its throne. He would have been in a fine rage had he known that Miss Polly herself had, with a broom, obliterated the tracks as far as the front gate!

While he was striving to convince Polly that he wasn't insane, no matter how much appearances might be against him, a messenger boy arrived with a cablegram. Mr. Burdock opened it and read:

There is a Reaper whose name is Death,
And with his sickle keen
He reaps the bearded grain at a sweath
And the Burdocks that grow between!

Under the circumstances, why put it off any longer? I shall get you in the long run anyhow and in the meantime

Are you in a "city prison"?

Why does the city seem like a prison when Spring comes?

Of all the pleasures the country affords, which do you long for most?

Isn't it the soft, springy "feel" of the turf under your feet—the joy of the long country walks and outdoor games?

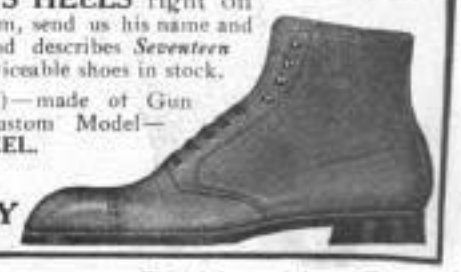
If you must spend most of your time in the city, you can at least go about your work and play with a light, easy stride, free from jar and jolt. You can cushion your step with O'Sullivan's Heels of new live rubber, as soft and resilient as the country turf.

For working, walking, playing and dancing you need O'Sullivan's Heels. They will add to your comfort and improve your health by stopping the pound, pound, pound of hard pavements. O'Sullivanize all your shoes when you buy them.

O'Sullivan's Heels cost but 50 cents a pair, attached. All shoemakers and shoe dealers will attach them to your shoes when you buy them, or at any other time. If you prefer, send us 35 cents and a tracing of your heel, and we will mail you a pair. O'Sullivan Rubber Company, 131 Hudson St., New York.

O'Sullivan's HEELS of New Live Rubber

For Men, Women and Children



Attached Ready-to-Wear to the Hazzard Shoe { $3.00 $3.50 $4.00

Ask your dealer for HAZZARD SHOES made with **O'SULLIVAN'S HEELS** right on them. If he does not carry them, send us his name and get our catalogue. It shows and describes *Seventeen* newest styles of comfortable, serviceable shoes in stock.

Stock No. 0118 (as illustrated)—made of Gun Metal, on the very newest Custom Model—low, broad. **O'SULLIVAN'S HEEL.**

There's SAFETY in

CAT'S PAW
CUSHION RUBBER HEELS

If anything ails your feet you feel it all over.

Are your insteps tired every night and tender in the morning?

Do the muscles of your legs get sore and stiff while your very backbone begins to ache?

Then you should wear FosterOrthopedic Rubber Heels

A blessing to all who are constantly on their feet.

The corner of the heel extends down under the shank, thus preventing the arch from falling or the shoe running over.

Gives a firm but resilient support to the arch—keeps the position of the foot normal and natural.

75c. attached of your dealer—or sent postpaid upon receipt of 50c. and outline of your heel.

THAT FOSTER PLUG PREVENTS SLIPPING

—even on wet sidewalks, pavements or the smoothest floors. You step with safety and comfort when you wear Cat's Paw Rubber Heels.

Compare them with others—you will find no holes to track mud and dirt.

The extra quality of rubber gives greater resiliency and makes them wear longer.

Ask your shoeman for Cat's Paw Rubber Heels. They cost no more than the ordinary kind—50c. attached—black or tan.

FOSTER RUBBER CO.,
105 Federal St., - Boston, Mass.

Originators and Patentees of the Foster Friction Plug, which prevents slipping.

you are running up a bill of expense on me. Be reasonable. MOODY.
Representing Atlantic States Life Insurance Company.

"May the devil fly away with that fellow Moody," cried Mr. Burdock, and this time he did not laugh. The matter was proceeding beyond the joke stage and that night he went to bed somewhat irritated.

SCARCELY had he arrived at his office next morning when Biddle brought him in a large bandbox, which he stated had been delivered that morning. Mr. Burdock opened it, thinking somebody had sent him a hat. Instead he found a wreath of autumn leaves tied with a large bow of purple ribbon. Biddle had the temerity to snicker and Mr. Burdock struck him with the wreath and quite ruined it for funereal purposes. Later he discovered a tiny envelope with a card within, upon which was written:

Deepest sympathy. He wouldn't take out life insurance! HENRY V. MOODY.
Representing Atlantic States Life Insurance Company.

"This nonsense has got to stop," the victim fumed and resurrected Henry V. Moody's letter from the files. To his chagrin it bore no address. He could not find the address in the telephone directory and "Information" could tell him nothing. The city directory was equally reticent.

Mr. Burdock gritted his teeth, for he knew he was in for it now. He had no protection. He was certain of this about five minutes later when he received another telegram.

Take it easy, old sport. If I had an address you would have me arrested for trespass and disturbing the peace. Perhaps you would hire a thug to kill me—in which event I should not worry greatly for I am fully insured. Nevertheless, I want to impress upon you the fact that death is a serious matter. You should be prepared, and the only way properly to prepare is to see MOODY.
Representing Atlantic States Life Insurance Company.

Mr. Burdock sighed. As Mr. Ballou remarked to Mark Twain when speaking of the coffee, it was a little too "technical" for him.

THAT was the beginning. For a week thereafter things happened so fast Mr. Burdock couldn't keep track of them. Asleep or awake he was never, for a moment, free from the freakish attentions of Henry V. Moody. His mail was deluged with press clippings of sudden deaths; with picture postal cards of Mexican and Balkan battle fields, showing gory corpses strewn promiscuously across the landscape. Messenger boys swarmed in and out of his office bearing telegrams, all of which contained some famous quotations on the subject of death. It was evident that Henry V. Moody had ransacked the literature of every nation in order to glean copy apropos to his purpose. In addition he never failed, in any communication, to impress upon Mr. Burdock the fact that he, Moody, represented the Atlantic States Life Insurance Company and that he, Burdock, was merely delaying the day of settlement!

A hurdy-gurdy appeared in front of his office and for hours at a stretch played the "Dead March" from Saul and other doleful melodies. An itinerant street singer with a bass voice as powerful and searching as the five-o'clock whistle came and sang "Down among the Dead Men," and a florist's boy delivered a "Gates Ajar." A local undertaking corporation made him a present of one share of their stock, explaining that their good friend, Mr. Henry V. Moody, had hinted to them that Mr. Burdock would be pleased to serve upon their board of directors. They invited him to come out any day and inspect their plant.

A PAUPER died in the city and county hospital. His name was John Burdock, and for some reason the hospital authorities rang him up and wanted to know of Mr. Burdock if he would defray the burial expenses of the deceased. When Mr. Burdock indignantly denied kinship with John Burdock and abandoned him to a medical college, he received a cheerful invitation to attend the dissection of the cadaver.

He received a Black Hand letter and a man called and tried to sell him stock in a cemetery association. Later another man called and tried to sell him a marble mausoleum. He dined at a restaurant and when the hat boy did business with him, Mr. Burdock discovered that his headgear had acquired a band of crape. He thrust his hand into his overcoat and drew forth a black-bordered handkerchief. A stenographer applied to him for a position and used mourning paper. Then suddenly the horseplay ceased, and for one entire week a long, dignified night lettergram arrived for Mr. Burdock each morning. Each lettergram contained a single powerful argument why he should take out life insurance. And these arguments been conveyed to him in the form of an ordinary letter, Mr. Burdock would have consigned them to the wastebasket, but since the villain Moody spent several dollars nightly to send the argument by wire, that subtle commercial sanctity which ever appertains to a cash outlay forced Mr. Burdock to read them all.

His wife—"You owe a great deal to my efforts! Why, if it were not for me where would you be now?" (And glancing at the clock he sighs reminiscently)

ON the morning of the seventh day of what Mr. Burdock vaguely realized was to be the finish of a whirlwind campaign, Biddle brought him in a package, ostensibly from his jeweler. When he opened it, out dropped the dried, withered hand of an Egyptian mummy! A tourist tag tied to the wrist of the grisly horror bore this cheerful message:

Shake! You have now made up your mind to receive me in your office and talk business. I congratulate you. I shall arrive promptly at ten o'clock and shall bring with me a medical examiner for our company. Please warn Mr. Biddle not to attempt to keep me out unless he is fully covered with the premiums paid to date. MOODY.
Representing Atlantic States Life Insurance Company.

This final feather, as it were, broke the camel's back. Despite his crotchety ways old Bill Burdock was intensely human; if one dug into him deep enough he discovered a blessed sense of humor. He laughed now until the tears rolled down his cheeks and was conscious of a tremendous satisfaction that at last he was about to meet Henry V. Moody face to face! He rang for Biddle. "Biddle," he said when that functionary entered, "a gentleman named Moody, accompanied by another gentleman, will call at ten o'clock. Show them in at once."

Biddle nodded and withdrew. At ten he returned.

"Mr. Moody is outside, sir," he began. "I do not know under what pretense he has obtained this interview, and I realize that it is not within my province to question it, but I warn you, sir, the man is a life insurance agent. I can tell by the look in his eye—and besides he has an actuary sticking out of his coat pocket."

"Biddle," said Mr. Burdock, "tell the

The Literature of Westinghouse Electric is a Digest of Practical Electrical Information

EVERY industry, every business, every trade and every home can be benefitted in some way by the use of electricity.

Every man or woman interested in the betterment of conditions in the business or home should have the latest electrical information bearing upon that particular subject.

Westinghouse Electric is known all over the world for its successful industrial applications of electricity, and it has made just as rapid strides in developing electricity for domestic use.

Its booklets and other printed matter are considered a liberal education on practical electrical subjects.

Listed below is printed matter representing the use of motors and electrical apparatus in a host of industries, in factories, stores, offices, churches, schools and homes. Send for any in which you are interested. We will be glad to furnish it.

Address Department N.

Small Motors are the modern servants and employees. They are great time, labor and money savers in the home, office, store and shop. Send for interesting booklet No. 4230 "How Westinghouse Small Motors Can Help You."

Electric Vehicle Motors. If you own an electric pleasure car or commercial vehicle, or are thinking of getting one you should send for No. 5223. "Westinghouse Electric Vehicle Equipment," which contains a great deal of interesting and useful data.

Electric Arc Welding is a wonderfully economical process for steam and electric railroad shops, ship builders, machine shops, foundries and other metal working industries. Our book No. 3089 gives a complete description of the process and the results obtainable.

Polishing and Grinding Motors for jewelers, opticians, dentists, hotels, machine shops, garages and the home. Polish metal ware, sharpen knives, grind tools, etc. Adjustable speed. Send for No. 4220.

Dental Lathe—Specially designed for dentists. A moderate-priced lathe of the highest reliability. No. 4257 gives complete description.

General Utility Motor is a unique labor saving device for the home. One motor drives the sewing machine, polishes silverware, sharpens knives, runs a ventilating blower and drives small machines of various kinds. Also operates a jeweler's lathe. No. 4219 tells you all about it.

Sewing Machine Motor. Of inestimable value to every woman who sews. Does all the hard work. The operator does no treadling but has complete control over the machine, starting, stopping and changing speed at will. Fits any family machine. Send for No. 4153.

Motor Driven Eraser. Will save its cost within a short time in draughting rooms because of the time and tracing cloth it saves. Full description in No. 4140.

Ventilating Outfits. An ample supply of pure air in offices, stores, theatres, restaurants, public buildings, etc., increases efficiency of employees and pleases customers. Westinghouse Electric outfits furnish a thoroughly satisfactory and economical means for providing good ventilation. Full line described in No. 4256.

Small Lighting Generators. A1 kilowatt steam-driven electric generator is supplied for lighting contractor's operations, steam yachts, etc. Provides current for an arc lamp and a few incandescents, or for about 40 25-watt incandescents without the arc. Working steam pressure, from 90 to 250 lbs. Send for No. 3695.

Battery Charging Rectifiers. Compact, economical, easily operated outfits for charging automobile storage batteries. Cooper-Hewitt Rectifier—type for Vehicle Batteries.—Folder 4201.

Vibrating Type for Ignition Batteries.—Folder 4237.
Pot Telephone Batteries - - - - 4204.

Ozonizers for removing odors and refreshening the air in the bedroom, nursery, kitchen, smoking room, theatres, offices, stores and factories.—Folder 4242.

Electric Fans. Over 24 different styles and sizes for all purposes.—Folder 4268.

Instrument Sterilizers for physicians and dentists. Convenient and clean because electrically heated.—Folder 4218

Tire Vulcanizers—Sale because electrically heated. Easy to use.—Folder 4251.

Electric Cooking Devices to save steps and labor in the home, including toaster-stoves, percolators, chafing dishes, samovars, frying pans, milk warmers, etc.—Folder 4197.

Electric Curling Irons. Always hot when wanted and free from fumes and soot.—Folder 4265.

Electric Breakfast Sets. For cooking breakfast at the table in 15 minutes.—Folder 4266.

Electric Irons to make ironing a pleasure.—Folder 4182.

Automobile Equipment, including electric starting, lighting and ignition apparatus, meters, vulcanizers and battery charging outfits.—Folder 4223.

Electric Meters and How to Read Them. A booklet that explains just what the meter measures.—Folder 4032.

Switches and Circuit Breakers for the control and protection of electrical machinery.—Folder 1205.

Railway Circuit Breakers.—Folder 4099.

Precision Meters for making electrical measurements of the greatest accuracy.—Folder 4087.

Lightning Arresters for electric power circuits. Special arresters for all kinds of circuits.—Folder 4110.

Graphic Meters for analyzing factory operations and determining economic leaks.—Folder 4160.

Tailors' Electric Irons to save time in pressing and turn out better work.—Folder 4190.

Moving Picture Rectifiers. To enable the use of direct current arc lamps where only alternating current is available.—Folder 4285.

Electric Meters. Instruments that determine how much the consumer pays for his electricity.—Folder 4241.

Arc Lamps. Long burning flame carbon arc lamps are the latest advance in illumination.—Folder 4258.

Automobile Fittings. Switches, sockets, fuse boxes, wire, etc., for equipping automobiles with electric lights.—Folder 4263.

Railway Lightning Arresters—Folder 4284.

Portable Meters. For making electrical measurements of every kind.—Circular 1204.

Switchboard Meters—Circular 1324.

Distributing Transformers—Circular 1502.

Switchboards, which form a vital point in the distribution of electricity.—Circular 1504.

Electric Radiators. Free from fumes and fire danger.—Folder 4197.

Heating Pads to take the place of the hot water bottle, and better because they stay hot.—Folder 4197.

Water Heaters for heating water in tanks, vats and sterilizers.—Folder 4240.

Electrically Heated Hat Making Machinery which saves expense and is easily regulated.—Circular 1175.

For Newspaper Offices—Electrically Heated Matrix Dryers.—Circular 1176.

For Candy Factories—Electrically Heated Chocolate Warmers.—Leaflet 2456.

For the Carpenter Shop—Electrically Heated Glue Cookers which do not require steam or gas piping and can be easily moved about.—Folder 4240.

Motor Drive for Various Industries

Publications have been prepared describing the advantages and economies to be secured from motor drive in various industries, together with data in regard to the proper size and kind of motors for the different machines used in each industry. In writing for these publications please use your business letterhead, since otherwise the request will not be filled.

General—How Electric Power Helps Manufacturers.
Motor-Driven Wood Working Machinery.
Westinghouse Electric Motors in Machine Tool Service.
Electrically Operated Clay Working Plants.
Motor-Driven Pumps.
Irrigation by Means of Electrically Driven Pumps.
Motor-Driven Dairy, Creamery and Ice Cream Machinery.
Motor-Driven Refrigerating and Ice Making Machinery.
Motor-Driven Printing and Cut-Making Machinery.
Motor-Driven Laundry Machinery.
Motor Drive in Paper Mills.
Motor-Driven Shovels.
Motor-Driven Equipment for Garages.
Motor Drive in Cotton Spinning Rooms.
Motor Drive for Worsted and Woolen Looms.
Motor Drive in Knitting Mills.
Motor Drive in the Silk Industry.
Electrically Driven Pickers.
The Illumination of Textile Mills.

Westinghouse Electric & Manufacturing Co.
East Pittsburgh, Penna.

Sales Offices in 45 American Cities **Representatives all over the World**

Fuel and Repairs

You can lower these expenses

IN three years' time supplies and repairs occasionally cost as much as the original price of a car.

Careless lubrication is responsible for most of this expense.

A canvass among New York repair shops showed that about one-half of the automobile engine troubles are caused by incorrect lubrication.

There are two things that must always be considered in an oil. One is its quality. The other is its fitness for your motor.

Low-*quality* oil in time may bring practically every trouble a motor can face.

Oil of a *body* which is incorrect for *your* motor brings many penalties — heating and seizing of bearings, worn wrist pins, poor compression, breaking of parts, excess carbon deposit, smoking or overheating of engine and many other troubles.

Aside from repair troubles you must face a plain fact:

The more power you waste the more fuel you must consume.

You cannot get perfect lubrication unless the *quality* is right, and the *body* of your oil suits—

(1) Your type of lubrication system.
(2) Your piston clearance.
(3) Your bearing design and adjustment
(4) Your bore and stroke.
(5) Your engine speed.
(6) The size and location of valves.
(7) Your cooling system.

Gargoyle Mobiloils are sold *by a Chart* which specifies the correct grade for each car.

They are backed by almost 50 years' experience which has won for us the world-leadership in scientific lubrication.

If you do not at present use the grade of Gargoyle Mobiloils specified for your car, you may feel almost certain that your bills for fuel and repairs are higher than they should be.

Consult the partial Chart printed at the right. Make a note of the grade specified for your car. Then make certain that you get it. If your car is not mentioned send for our complete Chart of Recommendations.

It is safest to buy in original barrels, half-barrels and sealed five and one-gallon cans. See that the red Gargoyle, our mark of manufacture, is on the container.

On request we will mail a pamphlet on the Lubrication of Automobile Engines. It describes in detail the common engine troubles and gives their causes and remedies.

The various grades of Gargoyle Mobiloils, purified to remove free carbon, are: **Gargoyle Mobiloil "A", Gargoyle Mobiloil "B", Gargoyle Mobiloil "E", Gargoyle Mobiloil "Arctic".**

They can be secured from reliable garages, automobile supply houses, hardware stores, and others who supply lubricants.

For information, kindly address any inquiry to our nearest office.

Correct Lubrication

Explanation: In the schedule, the letter opposite the car indicates the grade of Gargoyle Mobiloil that should be used. For example: "A" means "Gargoyle Mobiloil A." "Arc." means "Gargoyle Mobiloil Arctic." For all electric vehicles use Gargoyle Mobiloil "A." The recommendations cover both pleasure and commercial vehicles unless otherwise noted.

GARGOYLE

Mobiloils

A grade for each type of motor

VACUUM OIL CO., Rochester, U. S. A.

Specialists in the manufacture of high-grade lubricants for every class of machinery. Obtainable everywhere in the world.

BRANCHES: NEW YORK, 29 Broadway; CHICAGO, Fisher Bldg.; DETROIT, Ford Bldg.; BOSTON, 49 Federal St.; PHILADELPHIA, 4th & Chestnut Sts.; INDIANAPOLIS, Indiana Pythian Bldg.; MINNEAPOLIS, Plymouth Bldg.; PITTSBURGH, Fulton Bldg.

cashier to give you twenty-five a month more hereafter, beginning with the first of the month. You are showing signs of human intelligence. And show Mr. Moody in."

MR. MOODY entered. He was an ordinary-looking young man and rather solemn. He bowed to Mr. Burdock and introduced Dr. Jorum.

"Delighted to meet you, Mr. Burdock," replied Dr. Jorum, and drew a stethoscope from his pocket. "If you will kindly remove your coat and vest I will examine you right here, and we'll have it over in jig time."

Mr. Burdock eyed the pair curiously, but answered never a word, for his curiosity was indeed aroused and he was desirous of seeing how far this nonsense, as he termed it, would go. He knew he didn't desire any life insurance; he knew further that no human agency could force him to take any against his will. Strong, then in this knowledge of his power, he resolved to enter into the spirit of the day, as it were; encourage Mr. Henry V. Moody in the belief that he was about to sign up at last—and then when Moody should deliver the policy he would laugh at him and decline to go through with the deal!

Calm then in the knowledge that the balance of power lay with him, Mr. Burdock removed his coat and vest and Dr. Jorum jabbed the stethoscope against his fifth rib and listened. After listening fully a minute he jabbed it up closer and listened with the other ear. In fact, he made five separate jobs of listening to the Burdock heartbeat and without appearing to excite suspicion as to the state of that organ, he, nevertheless, contrived so to do. Mr. Burdock grew a trifle apprehensive.

"Anything wrong with that heart, Doc?" he asked.

Dr. Jorum ignored the query. "Lie down flat on the floor, please, Mr. Burdock," he commanded.

SO Mr. Burdock lay on his back on his own office carpet, and Dr. Jorum, kneeling beside him, applied the stethoscope once more. Then he nodded, as if convinced of the correctness of his original diagnosis, and shifted the stethoscope to the Burdock lungs.

"Bully set of lungs," he commented, and started rapping Mr. Burdock gently on the liver. He went over him like a carpenter shingling a roof, and finally let him up and ordered him to put on his coat and vest. Mr. Burdock obeyed and Dr. Jorum, seating himself at Burdock's desk, took out a medical examiner's blank certificate and commenced asking questions. As fast as Mr. Burdock replied the worthy doctor filled in the answers and finally signed the certificate. He indicated a line for Mr. Burdock's signature and told him to sign there. Secretly gloating, Mr. Burdock signed. Then Henry V. Moody presented for his signature an application for a ten-thousand-dollar policy, based on Mr. Burdock's age of fifty-two, and Mr. Burdock signed that; whereupon Dr. Jorum gathered up his stethoscope and medical examiner's certificate; Mr. Moody politely thanked his victim, intimating that he would call later with the policy, and both gentlemen departed.

MR. BURDOCK grinned after them. "He who laughs last laughs best," he quoted to himself. "This has been lots of fun to me and quite expensive to you, Brother Moody, but you seem to forget that I possess the great American privilege of saying No! When you deliver that policy I shall have changed my mind. Foxy! Foxy! You're banking on my sense of humor to land me, eh? Oh, well! I have a sense of humor all right," and he chuckled softly.

Three days later he received the following letter. Strange to relate, upon reading it he did not chuckle!

MY DEAR MR. BURDOCK: *I regret to inform you that the Atlantic States Life Insurance Company cannot grant your application for a policy of ten thousand dollars on your life. The company's medical examiner, Dr. Jorum, has reported you as a hazardous risk and has suggested that your policy be denied unless the company cares to accept the business on the basis of an increased rate of premium—which the local agent informs me he does not care to do.*

I regret exceedingly that I did not have Dr. Jorum examine you before I commenced my campaign. I should have saved myself some needless expense: the hire of that black-garbed camel from the circus, for instance, and the German band and all the rest of it. You see, I'd made a large bet that I would land you for a policy and you looked so confounded healthy I really did have the highest hopes of emerging with a profit, notwithstanding the expense of my selling campaign.

However, why repine? I have enjoyed it, if you have. It worked on others and it would have worked on you, were you not the possessor of a liver that even a horse doctor would have shied at; not to mention the slight aneurism which Dr. Jorum says he detected.

Well, we cannot expect to win every time we start, can we? This is one on Henry boy. If you still retain that mummy's hand, please keep it and I will call for it later. It's a splendid prop and I do not know where I should get another if you have destroyed it.

Regretting the entire transaction and trusting you entertain no hard feelings, I am, Yours very truly,

HENRY V. MOODY, *Special Agent.*

FOR a long time after the receipt of that letter, Mr. Burdock sat gazing dreamily at the office wall. An aneurism, eh? And a liver that a horse doctor wouldn't accept! Great Grief! He knew his liver had not been strictly up to grade two weeks back, but Dr. Gaffney had assured him he was all right again! Certainly he never *felt* better in his life. Yet here was this Dr. Jorum of the Atlantic States Life ruling against him as a hazardous risk! That meant he might pass out suddenly at any moment, and if this was so it behooved him to have his house in order! He called in his partner, Kewell, and told him all about it.

"An aneurism, Kewell, is no joke," he explained. "Remember old man Hyatt? He had an aneurism—a little one—didn't amount to that—so his doctor told him. Yet one evening at the club we were playing cribbage together and he keeled over like that and was gone before I could ring for a drink. We'd better incorporate the business, Kewell. A partnership's all right, but with me missing it's all wrong—"

"Rats!" sneered Mr. Kewell. "Burdock, you'll live to be a thousand years old. Take my word for it, your aneurism and your liver do not amount to that." and he snapped his fingers. "It's the size of the policy that really counts."

MR. BURDOCK reflected. If this were true (and there were tricks in all trades) who, he argued to himself, would insure a poor risk for the beggarly premium on a ten-thousand-dollar policy! But if he made the policy large enough: say one hundred thousand dollars—

He had a brilliant idea. He would test this life insurance business—plumb it to its very depths. He would apply for a policy for one hundred thousand dollars in some other company and see if they turned him down! If they did not—well, it might be best to do business anyhow and be on the safe side. Perhaps Dr. Gaffney had been too easily persuaded regarding the Burdock liver, or he may have made light of a matter he knew in his heart to be serious.

Naturally of an aggressive and combative nature, the longer Mr. Burdock thought over the statement that he was such a physical wreck no life insurance company would write him up, the greater became his desire for life insurance! For a great many years he had been used to the things he craved, and now, when he had not desired something, and had not sought it, to be coldly informed that he could not have it, aroused every drop of his fighting blood and made him crave it.

IN this state of mind, then, was Mr. Burdock when Biddle brought him in the card of Mr. John De Witt Burr, representing the Fiduciary Life and Trust Company.

"It's that same fellow that used to annoy you before," Biddle explained. "I told him to get out, but he wouldn't. In fact he seemed a little aggressive. Said he'd stick around until either he saw you or was kicked out. Just raise your voice, sir and say you do not care to see him, and he'll go away without creating any trouble."

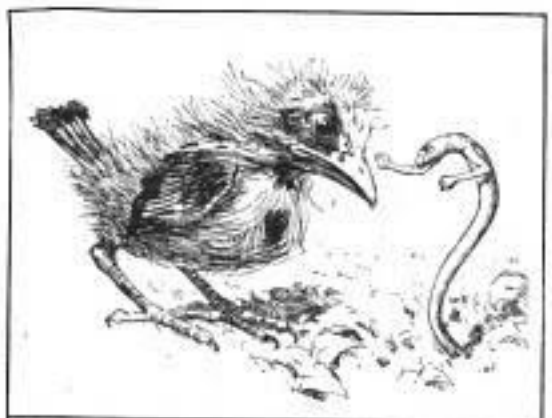
"Oh, but I do want to see him, Biddle," retorted Mr. Burdock. "Show him in this instant."

Biddle showed him in and Burdock received him with a grim smile.

Digitized by Google

"Mr. Burr," said I, "your stick-to-it-iveness is admirable. I admire you for it."

"Thank you, Mr. Burdock. I haven't been selling life insurance lately, but I'm back into the game again with the old company and here's hoping to serve you. A tough prospect always did have its attractions for me. In the trade, I'm known as Johnny Cockleburr. I stick so close, you know, and I'm hard to shake off."



"You're well named, Johnny. Now let's get down to business. I want a policy for one hundred thousand dollars. Are you ready to talk turkey?"

JOHNNY COCKLEBURR took up Mr. Burdock's telephone and called for a number.

"That you, doctor? This is Burr. I wish you'd come right down to the office of William R. Burdock—Burdock & Kewell, the real estate firm in Market Street. Mr. Burdock wants to take out a policy with our company—thanks, doctor. I'll wait in his office for you." He turned to Burdock.

"Our medical examiner will be down directly, Mr. Burdock. While we're waiting for him suppose we make out the application."

So Johnny Cockleburr made out the application for a one-hundred-thousand-dollar policy and Mr. Burdock prepared to sign it. "I suppose you've never been refused a policy by any other company?" Burr queried casually, his pen hovering over the answer space to that all-important question.

The early bird catches the worm
vs. *The worm will turn*
Scrambled Proverbs

MR. BURDOCK was silent, hesitating whether to lie or tell the truth. His hesitation damned him.

"What company and how much?" demanded Burr fiercely.

Mr. Burdock answered truthfully.

"Why did they turn you down?" queried Burr next.

"Liver and an aneurism," replied Mr. Burdock bravely. "And I don't believe I have them at all," he added with conviction.

"Well, I believe you have," retorted the insurance salesman. "Good thing you were honest about it or we would have had the wrong doctor down to examine you." He winked at Mr. Burdock in a very knowing way, and Mr. Burdock was amazed at the feeling of peace which stole over him in the knowledge that here was a young man who knew how to do business in a businesslike way! Burr was calling up a number.

"That you, doctor? This is Burr again. Say, never mind coming down to Mr. Burdock's office. He's been called away on business and I'll have to make an appointment later in the week."

He hung up, waited a half minute for the line to clear and called up another number.

"That you, doctor? Burr speaking. Come down to the office of William R. Burdock, of Burdock & Kewell, 741 Market Street right away. I want *you* to examine him. Are you next? Well, hop lively."

He hung up and faced Mr. Burdock smiling. "Where there's a will there's a way," he said, and winked again. "This fellow would pass you if you were dying of typhoid fever."

"How—how do you work it, Burr?"

"Oh, just split my commission with him. It stretches his conscience."

"I thought so," said Burdock.

TWENTY minutes later Dr. Collins was ushered into the office. In ten minutes he had made his examination: a far more thorough examination, by the way, than that to which Mr. Burdock had been subjected by Dr. Jorum.

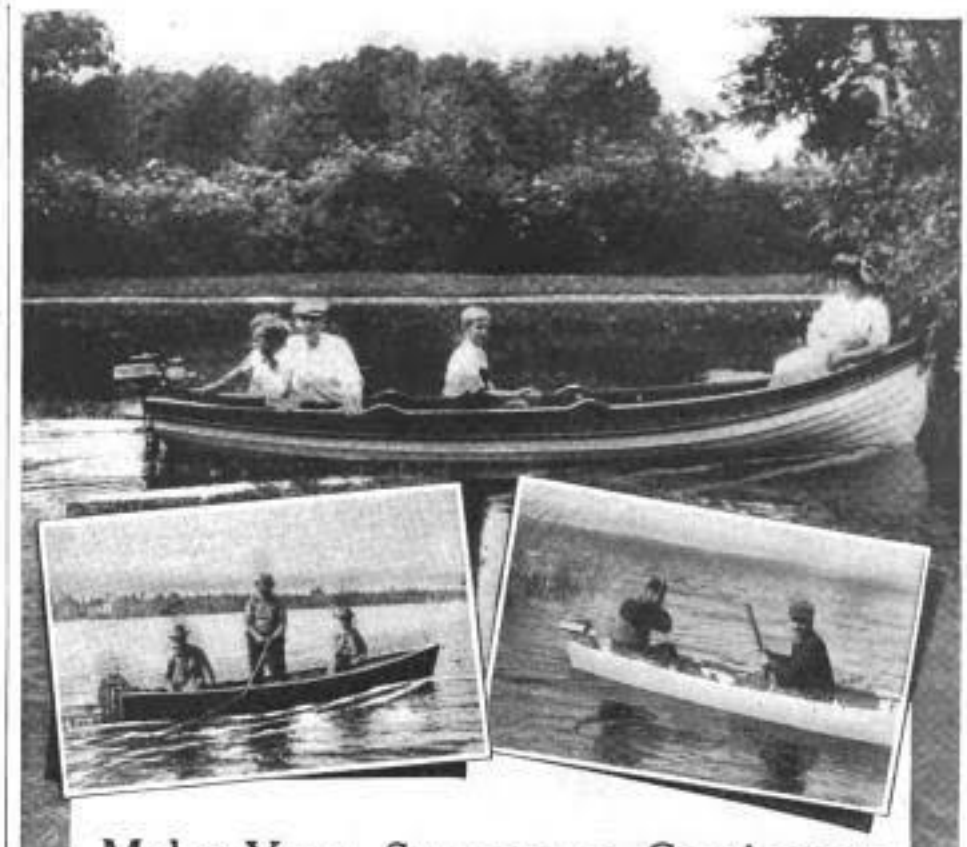
"I guess you'll do," he said, and departed forthwith. Then Mr. Burdock parted with a large check for the first annual premium. Johnny Cockleburr gave him a temporary receipt and left, promising Mr. Burdock that he would hear from the Fiduciary Life and Trust Company's home office in New York at an early date, stating whether his policy had been granted or denied. "Of course," continued Burr, "if the policy is denied—" he paused to smile—"you'll have your money returned to you. Still I think you can kiss it good-by. Good afternoon, and thank you!"

TWO weeks later William R. Burdock returned from the carking cares of his busy office to find the wife of his bosom in tears.

"My dear! My dear!" quoth Mr. Burdock, "what's happened?"

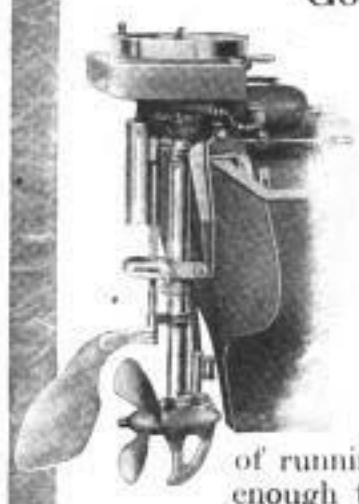
Between sobs she informed him that his daughter Polly had that day eloped to the next county and joined herself in wedlock to a most impossible person.

"Who?" roared Mr. Burdock, a horrible suspicion dawning on him. "That banjo-playing life insurance salesman I found on the front porch one night?"



Tearfully his wife admitted the truth of his suspicions. "This is terrible—terrible," he exclaimed, and commenced to pace up and down in his agitation. A maid carried Mrs. Burdock off to her room, where she could have her hysterics in comparative comfort, and Mr. Burdock retired to his library to think it over, pending a more lucid account of the disaster from Mrs. Burdock. Here the butler presently came to him with a large, fat envelope, which, upon being opened, was found to contain a policy for one hundred thousand dollars in the Fiduciary Life and Trust Company on the life of William R. Burdock. Contained in the envelope also was a letter from Johnny Cockleburr, which is worth recording here, for it explains many things:

MY DEAR FATHER-IN-LAW—*I congratulate you on your acquisition of a policy for one hundred thousand dollars in the Fiduciary Life and Trust Company, of which sound, old institution my paternal ancestor is the local agent. It is good, sound insurance—as good and as sound as your heart and liver, and I trust you will never allow your policy to lapse through nonpayment of premium.*



It has been a difficult and somewhat expensive task landing you, but I flatter myself that I was enabled eventually to accomplish it. The Atlantic States Life Insurance Company is a myth and Henry V. Moody is a cheap actor person out of a job . . . now that you have at last done the sensible thing, I made all the balls and Henry fired them. Dr. Jorum is a bartender in a local cafe, and happened to be off watch at the time you desired him to examine you. If you ever run into this amiable faker, be a good fellow and remember that the drinks are on you! He played his part well and gave you the score necessary to get you thinking along the desired lines.

While I have not the pleasure of an intimate knowledge of your character, my wife has. Her information enabled me to succeed, for it was she who informed me that it was your intention to toast me alone until I showed up with the policy and then give me the loud and raucous horselaugh. So I schemed to deny your application and turn the tables on you, feeling certain that your nature would cry out for that which had been denied you, whether you needed it or not. How correct this surmise was is evidenced in the excellent policy which is now in your possession.

Dr. Collins is an eminent and respectable practitioner. He pronounces you an excellent risk and I believe him. He would not stoop to such a disreputable act as passing a hazardous risk for half the agent's commission. No life insurance company, life insurance agent, or medical examiner has ever been known to do such a thing. Their business is founded on honesty and fair dealing, and by leading you to presume otherwise you have been bamboozled into doing the very thing you did not want to do.

Make Your Summer a Continuous Round of Pleasure With a Caille

Go fishing, hunting, picnicking, pleasure boating—go anywhere over river or lake, forgetting distance, forgetting all the back-breaking, hand-blistering work of rowing. Leave the rowing to your Caille Portable Boat Motor—the simple, sturdy, safe little Motor that clamps to the stern of any private or rented row boat immediately turning it into a reliable little launch, capable of running 7 to 9 miles an hour or slow enough to troll. The

Caille Portable Boat Motor

weighs but 55 lbs. and can be easily carried in our handy carrying bag, like a grip. It generates 2 horse power. Starts with a turn of the fly wheel. Is steered with a rudder, like a launch—not by the propeller. This gives you complete steering control even after power is shut off. The rudder is of our folding, stone-dodging type [Pat. applied for]. It rises over obstructions and then drops back in place again. The weedless propeller is protected by a substantial fin. The speed is instantly regulated by a convenient little lever. The motor can be easily adjusted for any angle or depth of stern. Can be supplied with batteries or reversible magneto. No extra charge for under water exhaust. Fully guaranteed. Runs in salt or fresh water. So simple that women and children operate it with perfect safety. Made in the largest two cycle engine plant in the world. Send for beautiful catalog giving details.

Caille Perfection Motors for Larger Launches

These are designed for pleasure and work boats in sizes from 2 to 30 horse power—one to four cylinder types. The 8 H. P. Unit Power Plant shown herewith is typical of the graceful Caille design. It embodies a reversing gear mounted on same bed as engine insuring perfect alignment of shaft and ease of installation. All working parts are enclosed preventing splash of oil and catching clothing. This is the ideal outfit for the average pleasure boat.

$150

If interested, send for our free Marine Motor Blue Book. Be sure to state whether you are interested in our portable or larger engines.

The Howard Watch

THE predominance of the HOWARD Watch among yachting men illustrates some interesting conditions in American business and professional life.

There is in this country no exclusively yachting class, as such. Practically every American yachtsman is a man of affairs, who finds his greatest relaxation on the water, and who takes his HOWARD Watch with him when he goes aboard.

The thing that makes him a yachtsman and an American disposes him to like the HOWARD Watch—with its fine traditions, its trim, racy lines, and its way of showing its clean American heels to the talent of the watch-making world.

The wonderful character of the HOWARD Watch is that it meets men of so many different kinds and occupations on their own ground. Men in commerce, in the technical industries, in the professions, in official life.

A HOWARD Watch is always worth what you pay for it.

The price of each watch is *fixed* at the factory and a printed ticket attached—from the 17-jewel (*double roller*) in a Crescent *Extra* or Boss *Extra* gold-filled case at $40, to the 23-jewel in 18K gold case at $170—and the EDWARD HOWARD model at $350.

Not every jeweler can sell you a HOWARD Watch. Find the HOWARD jeweler in your town and talk to him. He is a good man to know.

Admiral Sigsbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U.S. Navy. You'll enjoy it. Drop us a post card, Dept. A, and we'll send you a copy.

Save Money—Build the Lewis Easy Built Way

LEWIS EASY-BUILT HOMES

You can cut a big slice off your building bill. You can put into your own pocket the profits of the middleman, the dealer and the jobber by building the Lewis way. Lewis homes are shipped direct from the mills all ready to erect. The planning and designing, the worry and work of figuring is lifted from your shoulders. The Lewis Easy-Built way means better homes at low cost.

$248.00 and up Lewis Easy-Built Homes come in many sizes, styles and prices. Small, inexpensive cottages, cozy, attractive bungalows and larger homes, each one a masterpiece of design and construction. Lewis Homes are carefully planned and laid out by skilled designers—men with a lifetime knowledge of the business.

Shipped complete direct to you. Easy-Built Homes are made of the best grades of lumber. Lewis specifications include all lumber, millwork, hardware, paints and plaster—all sawed and worked to fit, ready to put up. Complete working plans come with each home.

Send for Plan Book If you are going to build send for the Lewis Easy-Built Book. It shows you every kink of the building game. It tells you how to build better and for less money. Get this valuable book. Every home-builder should have it. A postage stamp will save you many dollars. Send for it today.

Lewis Manufacturing Co., 1104 Lafayette Ave., Bay City, Mich.

Get the Lewis Price on this attractive semi-Bungalow. Seven rooms and bath.

You see, my dear father-in-law, I had a bet with my father that I could land you. Every agent on the local staff of the Fiduciary had taken a hack at you some time in the past and you were regarded as the deadest prospect in this city and county. Father is much pleased and is curious to know how I did it. I shall not tell him, however, if you do not desire it!

I will add, further, that a large element of luck figured in my favor. When I first called at your office you refused to see me; when you met me at your home and ordered me off the grass you were too blind to see me; and when I called and signed you up, naturally you did not recognize me. So it was easy.

I will close, with the mere statement that Polly and I are down at the Palace Hotel awaiting your parental blessing. Why not be a sport and send it?

Affectionately,
JOHNNY COCKLEBURR.

The Johnny Cockleburrs were not in their rooms when Mr. Burdock called up, so he left this message with the clerk:

Johnny, you're the flower of the flock and I'm sorry I told you to keep off the grass. Come out and we'll celebrate. God bless you, my children. FATHER.

To which Johnny replied by telegram:

O death, where is thy sting? O grave, where is thy victory? JOHNNY.

Annette—Roger has the cutest way of kissing me over the eyebrow.
Madeline—Yes, I know; I taught him that.

The Tyranny of Beauty

(Continued from page 12)

"I ain't talking about the lard it was, but the cream that didn't come out of the lard," she flared back at me, and turning on her mother: "As for you, mamma, just you see this don't happen again—I can't waste money this way. You hear? It ain't to happen again, so you ask Lucy to give you all the ingredients before you begin, then you can't forget."

"It won't happen again, I assure you," replied her mother grimly, shutting her lips like a trap and folding her hands.

I don't know what there was about her at that moment—an atmosphere of something renounced, of effort forever ended—that struck a chill into me and took the temper out of her daughter.

"What do you mean, mamma?" she asked in a different tone.

"I'm through with you."

"Through! Why—what do you mean?"

"Through—done with it all, Maggie—done with you. I'm through with it all now and forever. I'm going back to Columbus—Phil and Lucy'll take me in for the little of my life remaining, and a crust shared with them in love is more to me than a million-dollar heartless success shared with you."

"Phil and Lucy" were my parents—"Phil the failure," as my aunt had called him when she dared because he'd never been anything more pretentious than a country grocer and storekeeper, and nothing could have chagrined her more—on the eve of her "million-dollar success"—than to have her mother turn her back on it and take refuge with him and her other daughter.

To give my aunt credit, however, she was not all unfeeling, for when her mother added, "I'm through, Maggie—I'll trouble you no more," she burst out: "Oh, don't say that, mamma!" and two tears rolled down her cheeks. "You know I got a nasty temper, but I don't mean anything, so don't lay this up against me, will you? Lucy—you talk to her—you make her see it wouldn't be home here for me without her," and she kissed her hastily and rushed off. She was afraid of the scorn in those faded eyes.

THE moving of the laboratory inaugurated several changes in our lives. For one, my salary was now twenty-five a week. No doubt it would still have been fifteen and I to this day laboring under the delusion that being my aunt's "partner" she would "do what was right by me of her own accord," but for my grandmother.

"It's you who've made her as much as she you, Lucy. So be warned by me," my grandmother advised. "Take all you can get as you go along. The big hog never invites the little pig to eat out of his trough till he's licked it clean. As for the twenty-five—it's your right and you're worth all that to her. She can afford it, and if she refuses, come you back with me to those that love us and let us be done with this swindle."

AFTER considerable demurring I finally put it to my aunt—I didn't feel it worth while to stay unless I could get twenty-five and an assistant to do all the mechanical work of washing and packing, I said—I'd rather go home with my grandmother, and she wouldn't stay unless I did get twenty-five.

"Oh, is that all," said my aunt, evidently relieved, "I'll speak to the bookkeeper." And with that, discussion of the matter ended as with the locking of a door, and the question of my share of the wealth I was helping to create—a question I was preparing the way for—died in captivity.

For a small consideration we induced an elderly lady—one of our church friends—to come in and stay with my grandmother and do a little inoffensive housework on occasion and make herself generally useful, and my time was all put in at the Beauty Parlors.

MY position was now a peculiar one, to say the least. I was head of the laboratory; the buyer and general manager of the works; the go-between and mediator and looked to by all departments as the responsible head of the business in my aunt's absence; the court of appeal on whom the "echoes" tried to shift the blame from their own shoulders in case anything went wrong. A position that was neither a joke nor a sinecure. To keep our secrets now with "all these spies about"—and my aunt suspected everyone on the pay roll as being a

Maintain Your Efficiency

By Smoking TUXEDO—The Mildest, Pleasantest Tobacco Made

FOLKS are talking physical efficiency in modern business life. The idea is, that modern business keeps a man just about as occupied as the fabled one-armed paperhanger with the hives. And if you want to join in with the Gimp Bros. and travel with the Pep and Ginger crowd, you want to cut out a lot of things that make your day's work go wrong.

Take the item of smoking, for instance. It's much better not only for *you* but for your *job* if you smoke a light, soothing pipe tobacco like Tuxedo. Get a pipe and try Tuxedo awhile. You'll see the difference.

Your whole efficiency make-up will respond right away to the gentle and cheering influence of Tuxedo.

ARTHUR LUCK

Conductor of the Philadelphia Harmonic Orchestra, says:

"Tuxedo is easily my favorite smoke—giving greater fragrance, mildness and coolness than I have found in any other tobacco. Never stings or bites the tongue. Tuxedo doubles my enjoyment of pipe smoking."

Arthur Luck

WILLIAM COLLIER

Popular comedian, who recently starred in "A Little Water on the Side," says:

"My pipe is always Tuxedo-filled. I tried other tobaccos before I discovered Tuxedo. Now there IS no other."

William Collier

Tuxedo

The Perfect Pipe Tobacco

gives you this moderate and reasonable refreshment because it is primarily a pure, light, mild selection of the highest grades of Kentucky Burley tobacco.

Tuxedo can't bite your tongue. It can't irritate you in any way. There's no drag or sag in it. Simply pleasant, whiffable, aromatic, easy smoking.

Tuxedo has all these splendid qualities because it is made by the *original* Tuxedo process of treating Burley leaf. Many other manufacturers have tried to *imitate* the Tuxedo process—but never succeeded. Hence there is no other tobacco "just as good."

If you've tried the imitations, go try the *original*. At the end of one week you'll find yourself in line with the thousands of famous business men, lawyers, doctors, ministers, singers, athletes, who endorse Tuxedo as the one perfect tobacco.

A. H. GRIFFITH

Director of Detroit Museum of Art, and Lecturer, says:

"Like Omar I sometimes wonder what the makers of Tuxedo buy, one-half as precious as the stuff they sell. It's the greatest ever."

A. H. Griffith

JAMES R. HAYES

Owner and Manager of the Wayne Hotel, Detroit, Mich.; Park Hotel, Hot Springs, Ark., and Park Hotel, Sault Ste. Marie, says:

"Sports afield and afloat appeal to me, but the day would not be wholly enjoyable without the evening pipe of Tuxedo, my favorite smoke."

J. R. Hayes

VICTOR P. ARNOLD

Member of the Chicago law firm of Northup, Arnold & Fairbank, says:

"After a battle in the courtroom, there is nothing like retiring to your private office, sitting back in your chair with your feet on your desk and enjoying a fine smoke of Tuxedo. It is immense!"

Victor P. Arnold

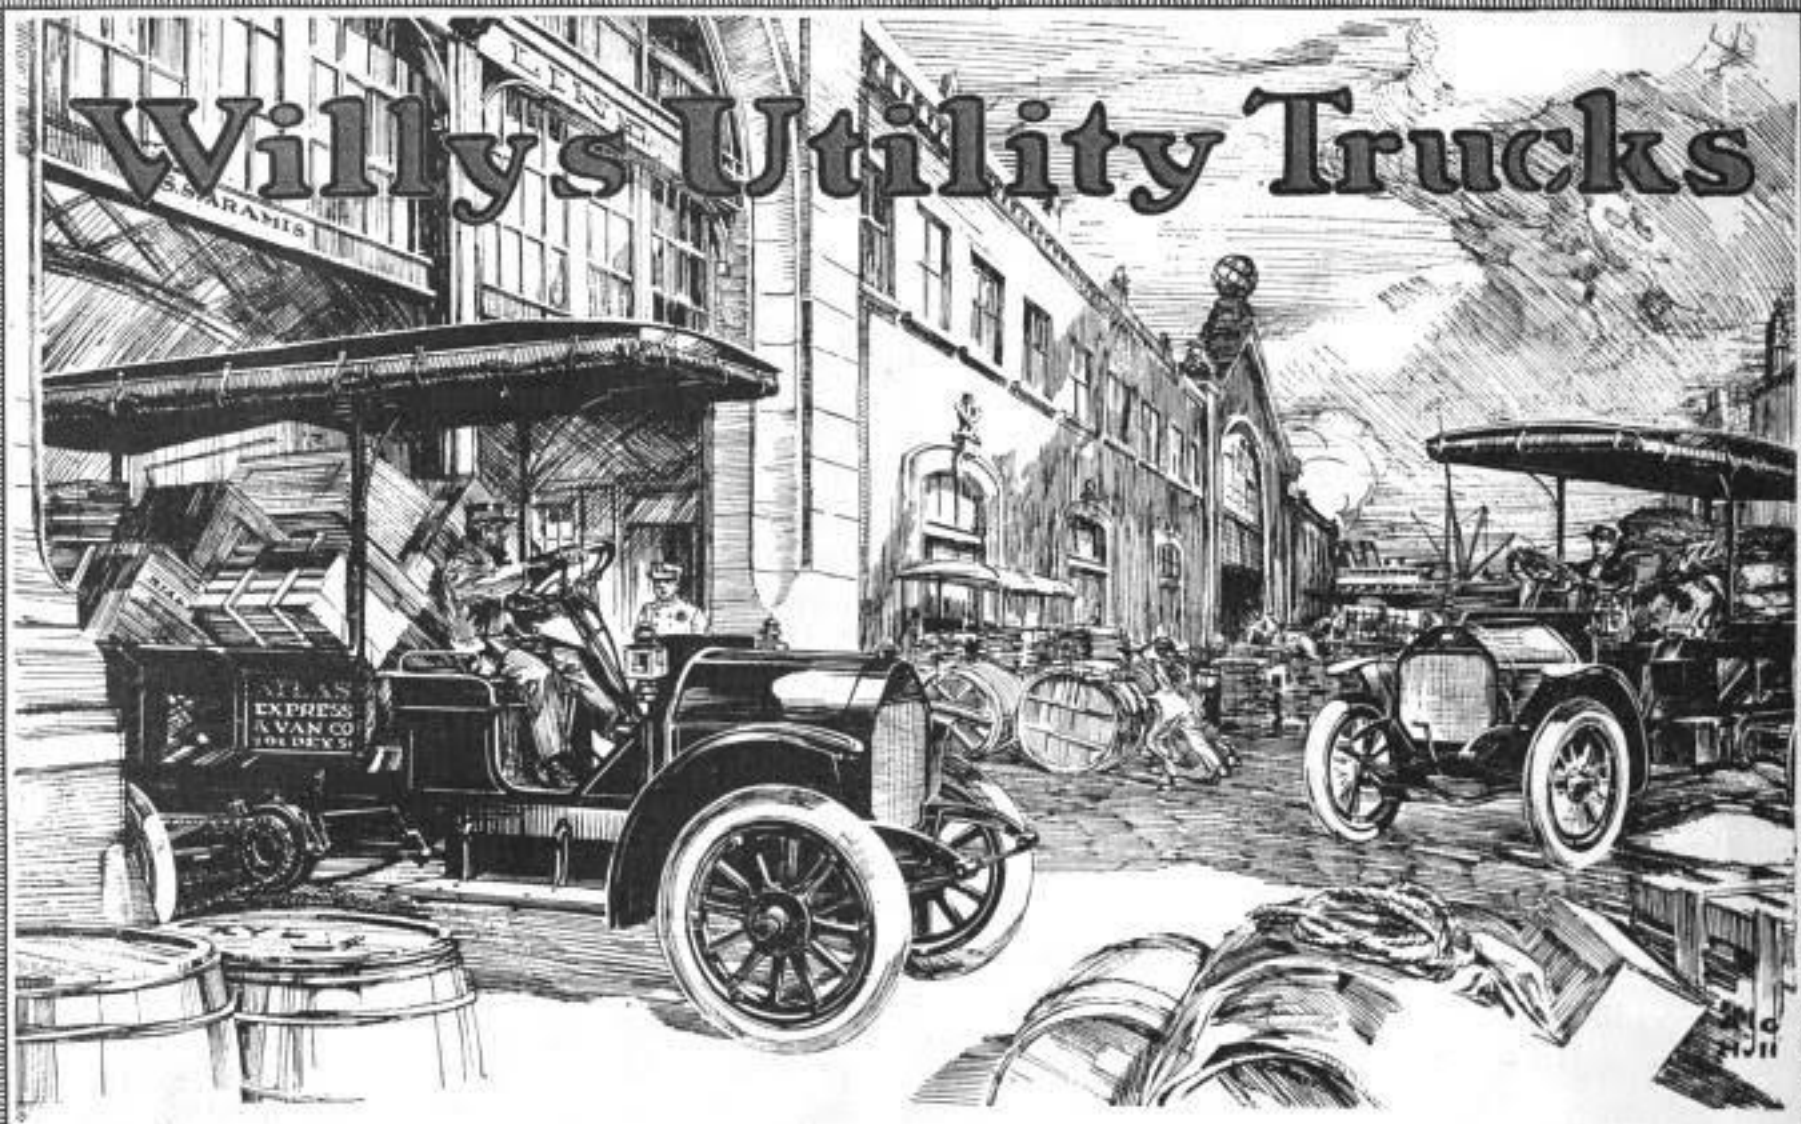
We Give You This Fine Leather Tobacco Pouch

Illustration one-third of actual size.

Every smoker appreciates a leather tobacco pouch. This handy, serviceable, Tuxedo Draw-Pouch is made of fine, soft, flexible tan leather, with a drawstring and snap that close pouch tight and keep the tobacco from spilling.

Send us 10c and your tobacco dealer's name, and we will mail you prepaid, anywhere in U. S., a 10c tin of TUXEDO and this handsome Leather Draw-Pouch. We gladly make this offer to get you to try TUXEDO. Address

THE AMERICAN TOBACCO COMPANY
Room 1258, 111 Fifth Avenue New York



PATRICK H. O'DONNELL

A prominent lawyer of Chicago, says:

"A canvass of my friends would show that Tuxedo is most popular with them. Many say it is the only pipe tobacco."

Patrick H. O'Donnell

Willys Utility Trucks

Getting More Business

Longwell's Transfer Company of El Paso, Texas, states:

Two Willys-Utility Trucks are doing the work formerly performed by twelve horses, and they are covering from thirty to sixty miles a day. I am amazed at the low cost of upkeep, and before long expect to have five Utility trucks in service.

Jacob Piper, (Grocery and Meat Business) of Lima, Ohio, states:

The Willys-Utility Truck has proven a profitable investment in every sense of the word. Business has increased during this time 25% owing principally to the extended delivery radius and the prompt service our old and new customers now enjoy.

Our truck makes from five to six trips a day, averaging 200 stops, the total daily mileage being from 45 to 50 miles.

The Cleveland News of Cleveland, Ohio, states:

The Willys-Utility Truck makes a run every morning to Akron loaded with from twelve to seventeen hundred pounds of Cleveland Leaders and returns empty. This is a round trip of eighty miles, ten miles of which are over very bad roads. Besides this the truck makes a run in the city of Cleveland, in the afternoon on our baseball edition, which I should say was in the neighborhood of twenty-five miles.

John F. Harting, of Webster, N. Y., states:

Yours of the twenty-fourth instant, requesting me to write you as to whether the Willys-Utility trucks purchased of you proved good and all about it, at hand.

I can say that I am well pleased so far, having run the car about five months without hardly any trouble, and no great expense except the price of lubricant and the gasoline, making as high as four trips to Rochester daily, a distance of about eleven miles, and it has never refused to go in cold or warm weather.

I have had no punctures in front tires so far.

It is a money maker for me as a trucker, and can do double the business that can be done with team of horses with a great deal more comfort.

Theo Becker, of Geneseo, Ill., states:

Replying to your favor of the twenty-first inst.—We beg to say that we are thoroughly satisfied with our Willys-Utility truck. It has helped us expedite our business materially, as we are doing heating and plumbing in twenty-three small towns adjacent to Geneseo. Before buying the truck we were obliged to hire teamsters to do our hauling, and in most instances it would take a man and a team an entire day to make one trip. Since having the truck we are making three trips a day over the same ground in the same length of time that it required a man and a team to make the one trip. These trips with man and team formerly cost us $7.50 per trip, together with the expenses for horse feed and board, making each trip net nine dollars. The truck is now making these three trips a day or $27.00 profit every day for us. Operating costs have been very slight.

EVERY one is daily confronted with any number of commercial obstacles, snarls or questions that are difficult to overcome, smooth or straighten out. It is either *"how"* can we cut selling expenses—or *"how"* is Jones doing—or *"how"* is so and so's credit—or *"how"* were yesterday's orders, and so on until it just seems as though business is one continual *"how"* after another. Yet all these are secondary to the biggest and most burning *"how"* of all, namely—*"how can we get more business?"*

Broadly speaking the only way you can get more business is to utilize your working time to better advantage.

You *cannot* lengthen your days. But you *can* accomplish more work in the same time by adopting modern methods. Modernize your business, and your bank balance has got to increase in proportion. It never fails.

Willys-Utility Trucks conserve time. If you haul things, *no matter what,* they make it possible for you to do in *15 minutes,* work that heretofore took *60* minutes. They permit *two men* to do the work of *six.* They make *forty deliveries* where horses make but *four-teen—and often less.* They make it possible for you to reach out for *new* and *undeveloped* business because they give you and yours *the time* and the means to do it with. They create *new* business—*increase* old business and *get* more business.

Read the letters on this page. These concerns thought, as you probably do, that they could not use these trucks to advantage. *But* please note what they say. And we have letters from merchants in every line of business.

In face of these logical facts—what easier way can you see to make more money?

Willys-Utility Trucks are helping merchants all over the world to develop new business.

They are cutting down expenses and increasing the volume of business.

They can do the same for you.

And we can give you all the bona-fide evidence you want from merchants right in your line of business.

Also remember the Willys-Utility Truck costs 30% less than any other similar truck made.

Our representative will be glad to call and go into all details, plans, specifications, prices, costs, etc. He will call whenever you say. Literature and special body book on request.

Please address Dept. 153.

treat's tool—the ingredients "standard" one cent goods had to be brought to the laboratory and smuggled in at night; and many's the time I've had fiskus of lard delivered at the flat, she and I hiring a carriage and driving them over and lugging them in our arms to the cream room in the dead of night. This little cell was marked "Private" in large letters on the door, and its only keys were in her possession and mine.

As general superintendent I saw a good deal of our customers.

THOSE women! Women still in their prime and young girls even, already showing the effects of lobster palaces and sleepless nights; middle-aged women bent on staying the course of nature; actresses preparing for the Great White Way; demimondaines buying lures for their trade; society women ordering new charms for old that once were real; withered beldames, bony and wasted, demanding new flesh to fill the hollows; grotesque old women with pendant dewlaps, pouchy eyes and paunchy abdomens, their fat in rolls under the coarse, gray flesh of gross feeding—these and dozens of others—all sorts and conditions of women, all Sisters of the Great Fear, rubbed elbows awaiting their turns for the magic "treatment"—that mauling and pawing, that patting and pinching, that steaming, packing, greasing, icing, tinting, clipping, powdering, dyeing, curling, and puffing that was guaranteed to give them new faces for old!

Why were they all there in motley array? Because the woman's world had suddenly refused to grow old—that was the secret that drew them all. Every treatment was a protest; every ounce of cream, tint, powder, wrinkle eradicator, depilatory, hair dye a defiance of their fears. The beauty parlor had simply capitalized their protests and their fears, and was catering to the delusion that the world need not be old or ugly if it were willing to pay the price.

"Will you come down this minute, or must I come up after you?"

To some their purchased fictitious youth was only a vanity and a lure; to others it was a weapon. Some were women fighting to hold their men against the hidden evils of the city. I heard one lady answer another: "Yes, this is my dye day too, and how I hate it! I wonder when we'll ever get the courage to see ourselves gray in the glass?"

"Oh, I have the courage, but not the imprudence," the other flung back. "I'm a married woman."

"These men—these men who are so sure of us and make us take them as *they* are, lame, halt, blind, and bald!—why can't they take us as we are and let us be ourselves?" cried one another day.

"They make us what we are," sighed a gentle old lady. "I've borne mine eight—six living—and had no help in the house till the last came. But now, bless him, with more money than we can spend, he wants to see the old wife young like the rest, so I trot round here twice a week to have my wrinkles eradicated and see how beautiful I can be—to please him."

MISS CRYDER, who'd come from a suffrage meeting and was having her nails done at a table near by, struck in pugnaciously: "I think I'd see any man make me do it to humor him if I didn't like it myself!"

"You'd feel different if you'd ever been married," commented the old lady, and on her face was the twilight wisdom with its gentle resignation and comprehension I'd seen so often on my grandmother's. Under her dye, I saw Miss Cryder blush.

SOME of this beauty work madame refused to do—she had had her lesson with the purple hair and was as timid of taking a risk where a failure might lead to a damage suit as she was bold about financial risks—she called it "a risk with a sting in its tail"; however, we saw dozens of victims of other establishments who came to madame in the hope that something might be done to repair a cure often much worse than the disease. These difficult repair cases—other people's failures—were now the only customers she ever saw personally when she was in the building; indeed, it often happened that no one else could handle them successfully and keep them on as customers.

"I'll call the madame herself," Miss Beekman, the manager, would utter with bated breath, and madame would hold up horrified hands and wail: "Oh, why didn't you come to me before you had this done?" (examining some part of the disfigurement with a magnifying glass). "I could have saved you that terrible operation—saved you all that expense. It was absolutely unnecessary—a piece of quackery—whoever told you you ought to have it done merely robbed you. Nature meant every woman to be beautiful. Nature works for beauty always, and all you gotta do is to assist her processes, help her gently—not go at her with tongs and blisters! I could have removed that entire skin in nature's own way—with hot-milk packs; and built it up with our face food—but not in one treatment. You tried to do it in one treatment, and see your face—your poor, abused, disfigured face! Oh, how you must have suffered! I sympathize with you—it's the worst case I ever saw—the very worst botch even for Mme. Granville—and she's— Well, of course I can't say anything about her, it might be attributed to professional jealousy, but everybody in the profession knows about some of her—accidents. You have my sympathy—"

"And mine," whispers Miss Beekman, who knew by instinct the exact right moment at which to echo. "It's as the madame says."

"If you'd only come to me first! Miss Beekman, do you remember that lady we had two months ago—one of Granville's—well, it's best not to give it a name. Her skin was not only taken off down to the naked flesh, but her eyebrows torn up by the roots. Nothing could be done—nothing—saddest case—woman in the prime of life—"

"Oh, but, madame, this case isn't bad as that, do you think?" encourages Beekman.

"No. Oh, no—*fortunately*. There's some hope here still—the skin isn't dead, I think—only very much injured—"

"Don't you think you can do anything?" gasps the lady.

"I haven't said that—I only say I can't promise anything now—all I can do is to put you in the hands of our head specialist—Miss Beekman, here—and let her try. Such a beautiful complexion ruined! What a shame! Do you think you can bring it back, Miss Beekman?"

"I wouldn't promise positively with a face in this condition, but a course of twenty treatments—hot-milk packs and vibratory massage to drive the milk into

HAVOLINE

MOTOR OIL

"It Makes a Difference" in

SAFETY SERVICE AND SPEED

in your car, because it produces the best results from your motor and preserves its life and serviceability.

HAVOLINE Oil is refined from *one uniform base*, the lubricating fraction of which is *admittedly superior* to that of other crude oils. This assures you the same high quality and perfect lubricating value regardless of where or when you purchase—the standard being thus *basically* protected.

Our "special process" of manufacture exempts HAVOLINE entirely, from the detrimental effects of destructive distillation. The potency of the oil is retained, giving you the highest lubricating value yet the least carbon deposit.

Therefore HAVOLINE prevents frictional losses and insures thorough motor efficiency.

Buy only the oil in the Blue Can. Two 5 gal. cans to the case.

Tell us your make and we'll tell you your grade.

Ask your garageman or write us direct for information of HAVOLINE grade for your make of car.

INDIAN REFINING CO., Dept. B, New York.

SAFETY FIRST

The foundation quality idea in the manufacture of Goodrich Tires

The Goodrich method of making tires is based on the "Safety First" idea. Safety for your family and yourself.

❖ ❖ ❖

Goodrich puts forty-four years of experience and quality in rubber manufacturing in every Goodrich Tire.

❖ ❖ ❖

That puts the safety in the construction of the tire itself—puts strength and resilience and service in it.

❖ ❖ ❖

Goodrich Unit Molded Tires are the standard by which all other high grade tires are judged because of their wonderful wearing quality and uniform excellence. That's why Goodrich has held the leadership for nearly twenty years.

❖ ❖ ❖

The extra thickness of tough Goodrich rubber in the treads at the point of contact with the road provides longer satisfaction *and lower-cost mileage.*

Goodrich Safety Tread Tires

Best in the Long Run

The Goodrich Safety Tread

Five Bars and a Crosstie the "Safety First" Symbol

The thick, **tough** rubber bars and crosstie of the safety tread as shown above, make a "Safety First" roadway for the car. They clean and dry the path and grip it and make the brake effective.

Pay no more than the following prices for the accepted standard automobile tire.

Size	Smooth Tread Prices	Safety Tread Prices	Grey Inner Tube Prices	Size	Smooth Tread Prices	Safety Tread Prices	Grey Inner Tube Prices
30x3	$11.70	$12.65	$2.80	34x4½	$33.00	$35.00	$6.15
30x3½	15.75	17.00	3.50	35x4½	34.00	36.05	6.30
32x3½	16.75	18.10	3.70	36x4½	35.00	37.10	6.45
33x4	23.55	25.25	4.75	37x5	41.95	44.45	7.70
34x4	24.35	26.05	4.90	38x5½	54.00	57.30	8.35

Dealers almost everywhere have Goodrich Tires or can get them for you from one of our Branches or Depots.

Factories: Akron, Ohio **The B. F. Goodrich Co.** Branches in All Principal Cities

There is nothing in Goodrich Advertising that isn't in Goodrich Goods

Speedaway
Detachable
Rowboat Motor

Sold Formerly at $70

NOW $50

Complete with all Extras

Noiseless underwater exhaust. Disappearing crank handle. A real rudder. Thoroughly protected propeller. Self-locking tiller device. Water-cooled engine.

All these and other well-known Speedaway features are in the motor at $50. It is the same motor, identical in every way, that has been selling at $70.

At $70 the Speedaway is easily the equal of any other $70 motor in the market—and if we were still sellingit through dealers we would still be charging $70. But now we're selling it ***direct to you*** and giving you the dealer's profit of $20.

The proposition in a nut shell is this—Manufacturer's cost ***plus*** advertising expense ***plus*** 10% profit. This amounts to within a few cents of $50—and so the price is $50 direct to you.

Reversible Built-In Magneto

The Speedaway Detachable Rowboat Motor is now sold with magneto built in. The price is $59, $9 more than the battery motor. This is an even more liberal offer than the Standard Speedaway at $50.

Write for our Engineering Specifications and find out just how excellent a motor the Speedaway is.

Speedaway Boat Motor Co.
160 Chicago Street Freeport, Ill.

Are You Going Up or Down?

If today you are no progressing — going toward greater things, bigger salary, greater success — you are in the same peril as a man who clings desperately to a rope suspended, in mid air. You can't hold *the same grip.*

You have got to assert the power within you and pull yourself upward, or slip down into the class of "Nobodies."

But you must be shown how to discover the money-making powers before you can develop them.

Ask Sheldon How

Nearly 60,000 men, in all walks of life, who have found their grip slipping have discovered the power and means of making more money with the aid of the Sheldon Courses in Salesmanship and Business Building. You can do the same—*NOW*. In your spare moments you can master the fundamentals of the science that compels men to recognize your real value.

Send for Sheldon Book — FREE

A letter or postal card will bring you a copy of the *Sheldon Book* free of all expense. The contents will be a revelation to you. Don't fail to write. Start *climbing upward today.*

the pores as shown in our illustrations, alternating with electrical treatments and feeding with Zulu night and morning—two treatments a week—it would show if anything can be done and probably remove the worst disfigurement. What a shame!"

WITH this bit of byplay, originated on the spur of the moment and through no particular scheming more than woman's natural bent in this direction, but rehearsed to perfection by many cases, the customer suddenly found herself booked for twenty treatments and a hope; the hope deferred at the end to twenty treatments more. Meanwhile we were pressing on to greater triumphs.

Our move to the Del Mar Beauty Parlors introduced two new dramatis personæ destined to play important rôles both in the business and our lives—Henrietta Beekman and Julia Cryder, whom I've mentioned already. Miss Beekman was "first assistant" in the treatment rooms—a nondescript position, neither forewoman nor mere operative, indicating a waiting attitude on madame's part toward one who might or might not "pan out"—an impressive woman, heavily upholstered in flesh, but well under control of whalebone, with a much coifed head and a furtive eye; a walking advertisement of what "doing up" can accomplish; a toady, yet competent in her work and the most successful echo in the establishment.

SHE confessed to thirty-four summers, though I doubt if she'd ever see forty again, and was thus much older than madame, and in some ways vastly more experienced with the world—with the chair side of the beauty business and particularly with its shadier aspects—a woman with an aptitude for little things but none whatever for the large undertakings that madame seemed to devour by instinct. Miss Beekman was a born employee raised to the *n*th power—if she'd been a man she'd have been a butler—and had an unerring instinct for wages and for avoiding risks. "Let the other fella take the risks—salary is good enough for me," was one of her precepts, and probably the reason why she'd given up a promising little establishment somewhere miles out on Amsterdam Avenue to come in with us. She had an indefinite position at twenty a week. The indefiniteness could be perceived by a critical eye. In moments of extreme affability, madame addressed her as Henrietta; in moments the reverse, as Beekman; during the unexciting intervals between, as Miss Beekman. Miss Beekman thought of her wages and took things as they came from the hand of "the madame" as she always called her, and after a tiff would suavely explain: "You know, girls, the madame doesn't really mean anything—we must all keep on doing our best and think only of pleasing her."

Little by little she wormed her way into my aunt's good graces until presently these two had the appearance of being intimate. Indeed, the woman was the only one of the employees my aunt ever asked out to lunch with her or brought to the house, and Miss Beekman took care to let these trifling attentions become known to the rest and built out of them a sort of prestige founded partly on envy, partly on fear of her supposed power with the head of the establishment.

JULIA CRYDER, whom Miss Beekman affected to regard as one of her dearest friends, was a customer—a newspaper woman Sob-Sistering on an evening paper and doing a society column and such other odds and ends in newspaper work as would turn to immediate cash an elderly young lady, dyed and puffed, massaged and manicured, and, in middle-aged despair, grasping at Zulu to put the bloom of twenty on the withered cheeks of fifty.

Now it happened that the Cryder cheek under the Beekman fingers yielded a valuable discovery.

Out of all the recipes I had tried and figured up we had selected three on the one-cent test which along with Zulu constituted our "standard specials"—a wrinkle eradicator made of a weak solution of gum arabic, scented, which was to be rubbed over the wrinkles—on drying it stiffened and was supposed to sort of iron them out; an invisible "germ-proof mineral face powder," warranted not to ferment with the perspiration of the skin, and put up as a dry paste that had to be wetted and dabbed on—bolted chalk at two cents a pound, dyed with carmine dye and scented and sold at retail for twenty-five cents a quarter-ounce box; and Nature Tint.

NATURE TINT was the cheapest grade of sherry wine, beet juice, and a little perfume. The sherry had just the right proportion of alcohol to preserve the beet juice and combine with the grease left on the face after the massage—"a purely vegetable tint to bring the glow of health to pale cheeks," as advertised. Filler for a half-ounce bottle cost a quarter of a cent and sold for fifty cents a bottle retail—one of the most profitable of our "standards" if it could once get a start. We had perfected it and put it on sale some time before moving to the new store and had advertised its virtues in a circular. But Miss Cryder was the subject the first time it was ever tried out fully by an expert in our own establishment, and the results were striking.

"There! Lookka yourself in the glass now! Ain't you lovely?" triumphed Miss Beekman. (She admitted to us later she'd been in a perfect tremble of fear of a stain that wouldn't come off.) "You don't look a day over thirty—I swear you don't! You ought to let me do this for you twice every week to keep it right."

"Oh, my *dear!*" expostulated Miss Cryder, viewing her cheeks with delight. "If I only could! But I'm not a millionairess!"

"Who knows if you're not?" retorted Miss Beekman, warmly. "You look it, and if you keep your face up, everybody knows you got money to spend. That's what half of them comes here for—to prove they've ready cash. If you wanta get on in this burg, you gotta be rich and young—believe me."

Miss Cryder came out of the treatment room and surveyed herself in the cheval glass, Miss Beekman murmuring: "That's a perfectly beautiful health glow you got now—perfectly lovely—" and forthwith tried it on the next customer, then had one of the other operators put it on her.

THIS was the famous "Del Mar facial retinting treatment—given only in the Del Mar Beauty Parlors"—discovered and pushed for the trade; for no sooner was Miss Beekman sure of her ground than she barked off to win merit in the eyes of her employer, suggesting that we sell Zulu and Tint in couples—Nature Tint—not a rouge—to be used always after Zulu—and double the trade on both.

(To be continued next week)

In Defense of Farm Journals

EDITOR COLLIER'S:

THE telephone at my editorial desk rang me up just now, and I found that I was called up by a competing farm publisher.

"Hello, Mr. Collins, have you seen this week's COLLIER'S?"

"No."

"Well, it says all farm papers are published to swindle the farmers."

A few minutes later we received our exchange copy of COLLIER'S, and opened it to find out if COLLIER'S had really gone crazy. No, it hasn't, but verges in that direction in making so general an attack upon the farm papers in order to defend its friends in the East.

The guarantee of honesty of advertising which you quote from the "Farm Journal" has been at the head of probably nine-tenths of the farm papers of the United States for the past ten years.

We attach hereto the guarantee of the honesty of advertisements carried by the "Northwestern Agriculturist." What other class of publications actually guarantee all promises made in its columns by advertisers? Yours truly,

The "Northwestern Agriculturist."

The Little Son

(Continued from page 9)

least. Circumstances forced it, and then the mother, a rather pretty silly girl, died, and the father, not very well off, provided for the child as he supposed in a private institution, putting his entire resources into an investment for that purpose. Unfortunately he chose the investment himself, and it was not a good one. To tell the truth, I see nothing for the child now except a public institution."

"His relations?"

"There do not seem to be any except a cousin of the mother's, and she refuses to take any responsibility."

"What is his name?"

Mr. Thawl cast a quick look at her. He seemed suddenly to hear more than curiosity in her tone. "Pardon me, but why?"

"I am going to adopt him. He told me all about himself before you came in."

"Oh!" Mr. Thawl said, and then: "Impossible!" There was consternation in his voice. "It would never do. It would subject you to talk."

"To adopt an innocent little child? I think they may talk. I have had sufficient notoriety to know that talk does not kill."

"The father and mother of this child have also been the subjects of newspaper comment," Mr. Thawl said slowly: "you must remember that."

"You say that the mother was unloved. I should be able to sympathize with an unloved wife—and her child. *She* died. I am going to take the child. At least you will allow that I am as capable as any institution. The father seems to have deserted him."

"Are you sure the boy told you all about himself?" He spoke slowly. "The father of the boy went with an exploring party to the South Seas. He has been gone nearly six years. The party has been lost to the world for two. He is undoubtedly dead."

Lucy arose hastily, all her soft draperies falling about her in Parisian-made folds. "I insist that you shall not tell me anything more about the child. I do not want to have a shadow of prejudice against him. Why should the child suffer or why should the world know that I have taken him?"

It may not be surprising that Mr. Thawl began to have the light in his eye that comes to the man who "sees through" a woman.

"You cannot legally adopt him without knowing his name."

"Well, maybe I shall not want to adopt him after awhile. He may show his father's disposition. At any rate, I am going to take him now."

As Mr. Thawl put the boy into the brougham beside her and watched the eager little face turn toward his benefactress, he kept his usual polite mask, but a little later he stopped in the consideration of an important point in somebody's affairs and smiled: "Fate is a humorous lady."

As she lifted him something seemed to break in the little body, some tenseness melted, and convulsions of sobbing shook them both

"I THINK," said Patsy as he put down the goblet from which he had been drinking slowly while he looked over its brim at Lucy across the table, "I think you would look nice in an angel's hat."

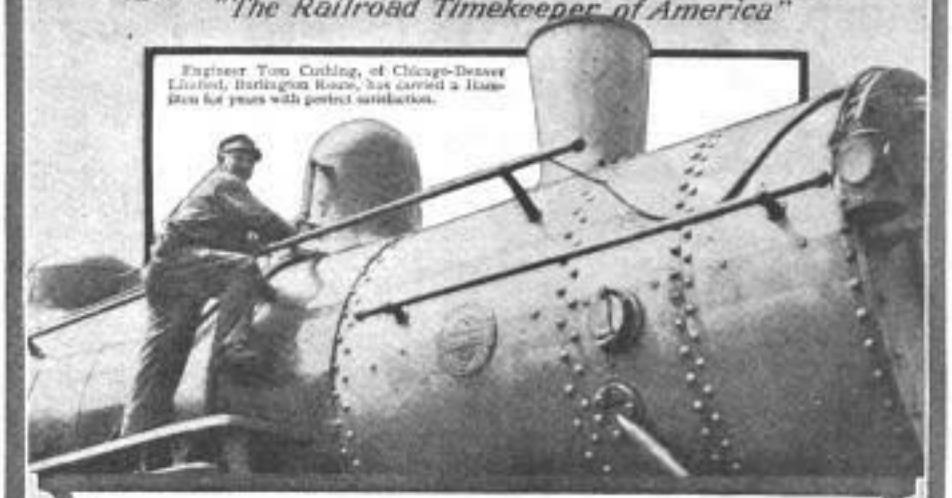
Lucy had become accustomed to the remarkable ideas of her protégé in the year she had had him, but an angel's hat required explanation.

"They all have 'em," Patsy said, "in their pictures. Moony kind of hats. I've often thought about Miss Baker in one. She always wore a bonnet with beads on it, and someway I can't just think she would like a hat." A smile brought out a dimple in a very ruddy cheek and was quickly repressed. "Lucy, is it wicked to laugh at an angel?"

Being assured that it wasn't polite to laugh at Miss Baker in a halo, and that they were always becoming when achieved, Patsy resumed his admiring remark that Lucy's face was strictly angelic. Indeed, there were others who had noticed that a brooding sweetness had come to the regular features.

THE ranch house on whose terrace they ate breakfast, with the mountain for a magnificent vision beyond, was a fairyland for a boy "going on seven." There had been no newspaper talk, that bugbear deterrent of many things in the lives of the conspicuous. Lucy Marshall had come back to the California ranch where she had lived as a girl. She had no near relatives. Her father had been one of the early gold seekers and had married late in life, leaving his daughter as a motherless girl to inherit his millions. At nineteen she had married a young Irishman who had crossed the ocean with her as she came home from her French school. Hugh Burke was on his way to America to seek his fortune, and people laughed and said that he hadn't waited to land before picking it up. He had been gay, brilliant, a rapid wooer from the day he arranged her cushions in her steamer chair and until the day, a year later, she found another woman's love letter to him she had been absolutely happy. She was young, and this was the first man she had ever known. Maybe it was not for him to explain that the girl had taken nonsense for seriousness, gayety for something else, and then, too, maybe he was quixotic and too passionately hurt at the accusations flung at him to behave reasonably. At any rate, she in her anger brought a swift suit for divorce in California, naming the girl who had written the letter, the sister of a health seeker at the Pasadena Hotel, as corespondent, and had obtained an instant decree. To her implacable youth her husband became as dead from that moment, and it was years since she had heard his name.

THERE is a shifting society in California. Most of those who came to "The Foothills" were people she had known abroad or old friends of her mother's. To them Patsy was easily "the child of a friend."



"Surely I am the friend of that poor woman whose husband did not love her," she would say to herself. The child was accepted as everything else is sooner or later.

Patsy had learned at the very beginning that an income was certainly a pony. He had picked it out from half a dozen presented for his inspection. "Mr. Thawl didn't find it after all, did he?" he said. "It was you, Lucy, and, just at the last, me. But you let me."

Never, never did he forget that it was Lucy who "let him" have everything. Lucy's only annoyance was his refusal to forget anything. It would have best pleased her if all his life, the lonely life of a little child who had never spoken to another child, could have been obliterated and memory begun at his coming to her. But even now he was looking toward the mountains with eyes too old for seven, and one of those sighs broke on the sweet morning air. His appearance

Hamilton Watch

"The Railroad Timekeeper of America"

The Watch of Proved Accuracy

Accuracy is the fundamental motive that makes anyone buy a watch. Few men, indeed, buy a watch for any other reasons than those that trace back to accuracy.

The Hamilton is a watch of proved accuracy. Wherever men work within fractions of minutes, you will find the Hamilton. As an example of this, note that:

Over one-half (56%) of the railroad men on American railroads where Official Time Inspection is maintained, carry the Hamilton Watch.

Your jeweler, if you ask him, will add to these facts about Hamilton accuracy other facts from his own experience with the Hamilton. If you are interested in buying a fine watch

Write for the Hamilton Watch Book—"The Timekeeper"

It pictures and describes the various Hamilton models and gives interesting watch information.

There are twenty-five models of the Hamilton Watch. Every one has Hamilton quality and Hamilton accuracy. They range in price from $12.25 for movement only, up to the superb Hamilton masterpiece at $150.00. Your jeweler can show you the Hamilton you want, either in a cased watch or in a movement only, to be fitted to any style case you select, or to your own case if you prefer.

Plant the TAPE

It's the Scientific Way
Make Vegetable Gardening Easy

Just unwind American Seedtape from spool and plant as directed. Selected seeds, properly spaced inside paper tape and fastened with glue fertilizer, insures a quick, sturdy growth, because the paper attracts moisture to the already fertilized seed. Sprouts much earlier than seeds planted in soil. Proper spacing means no seed wasted—no thinning out. You save time and back-breaking labor.

Send ONE DOLLAR for 50 ft. each of White and Red Radish, Boston and Curly Lettuce, Onion, Spinach, Beet, Turnip, Carrot and Cabbage Seeds. 500 ft. in all. Correct planting instructions in each package. Send the dollar now. NO AGENTS.

THE AMERICAN SEEDTAPE CO.

Wouldn't You Like to Own a Store Like This?

Wouldn't you like to be proprietor of a money making business? Once I was just a struggling candy maker. The profits from Crispettes, the new, delicious popcorn confection built this big business for me. The very same proposition that made me, should do the same for you. Best season just at hand. You can make lots of money this spring and summer. **Start in the Crispette Business for yourself.** Build a business of your own as I did. Get a window—a small store—a cozy nook where the rent is low. Keep **all** the profits. I'll teach you the Crispettes business—tell you how to succeed—show you how to make Crispettes by my special secret formula. I'll do it right here in Springfield—personally or by mail. But the thing for you to do is to

Take advantage of my offer to come and see me

Don't say you're coming. Just drop in quietly. Call on any banker or merchant. Ask them about Long—about my store—my crispette business. Ask them if what I say isn't the truth—right from the shoulder. Look into my reputation. See if folks think I'll give you a square deal. Then come and see my store—see that it's just like the picture. See the machine. See crispettes made—make a batch yourself. Learn the business. Get my pointers on how to succeed. Up to a distance of 500 miles I'll pay all your traveling expenses, if you buy a machine. You'll see—know—learn everything. It's simple—easy. Won't take you a day. I'll be glad to see you—glad to show you the store and have a good talk with you. You'll go home ready to make more money than you ever made in your life.

This is the Money Making Machine.

Every Nickel You Take in Nets You Almost Four Cents Profit

Think of it! Think of the fortunes made in 5-cent places. It's one business in a hundred. Everybody likes crispettes—children—parents—old folks. One sale always means two—two means four. So it goes. It's a great business. I found it so—and should you. Send for my big free book "How to make money in the Crispette Business"—48 pages illustrated—complete information and story of how I built my business. Read it and then come to Springfield.

Send for Free Book

had totally changed. The hair that had hung in curls was short about his ears, and there was a fine color of health running up to his temples. Lucy had changed, too. She was a little stouter. It was as though her breast had widened to hold the child.

"What is it?"

"It isn't easy to forget things, is it?"

"Sometimes it is and sometimes it isn't." Had she been his mother she might have reminded him how many times he had forgotten sundry commands, only the day before, but she didn't.

He came around the table and stood beside her and spoke with that air of intimacy whose poignant sweetness always thrilled her breast:

"Sometimes it is just like this"—he put his finger against his linen blouse—"I was another little boy. And when I think about that little boy that lived at Miss Baker's, I want to go and get him and play with him."

"Do you want a little boy to play with?"

"Why, no," in a surprised tone, "I've got you. I think you are a great deal nicer, but I am sorry for that boy. Do you suppose, Lucy, that in all the world there is any boy—now—that hasn't anybody to hug?" and he put his arms around her neck as though he never could satisfy his love-hungry little soul.

"I plainly see one thing," Lucy laughed, although she was as near tears as laughter, "there is going to be somebody in this family who goes in for philanthropy." It had come to that now—"somebody in this family."

PATSY had become practically the whole family. Whenever she was an instant alone she dreamed dreams and saw visions, and always it was her Patsy, her boy, her man in the by-and-by, who was the hero. "I am glad Miss Baker went to heaven," Patsy said with entire good feeling.

"Run along and get me the papers that Hewson is bringing," she said. There was no reason why the boy should remember—she would make him forget, keep him so busy that he must forget.

It was only since she had come to California that she had begun reading papers again. The terrible headlines of those days of her divorce had made the sight of a staring news sheet hateful to her, but now trouble seemed long past. She was forgetting. If the child could not.

Patsy brought the papers and sat down again to his oatmeal. She opened the first one, and a dozen lines tore down the very fabric of her life:

Portions of a wreck that seem to be that of the Wanderer, the ship that took the Foster exploring party out in 1896, have been discovered. The expedition was given up as lost years ago. It will be remembered that Hugh Burke, who married the daughter of Jacob Marshall, one of the wealthiest citizens of this State, was a member of the party. After the divorce secured by Mrs. Burke, Burke married the correspondent in the action, a Miss Fields of New Jersey. She died, leaving one son. Mrs. Burke resumed her maiden name and now resides on her ranch in San Luis County.

"Died, leaving one son. The father went with an exploring party to the South Seas." She could hear the very tones of Thawl's voice. She looked at the child, and from his face flashed the blue, black-lashed, Irish eyes of Hugh Burke, son of Patrick Burke. *His* son! His son and the son of that woman who had wrecked her happiness.

"Lucy—are you—is anything the matter?" the child asked shrilly. She motioned him back with a gesture he dared not disobey, and went to her own room, her heart torn with such passion as she had never known. She had been only a girl before, she thought bitterly, and girls cannot feel. How she had been tricked, deceived, played with! She, to nourish that woman's child! Mr. Thawl should pay for this. And then across her memory came his hints, her abrupt declination to hear more. He had thought that she knew. Well, he should find out that she didn't. How could he think that she did not know? Justice asked. The child was the image of his father, and she groaned with physical agony as she realized that the little face had first appealed to her with the same old charm. Trembling until she could hardly write, she found a telegraph blank and addressed it to Mr. Thawl in New York:

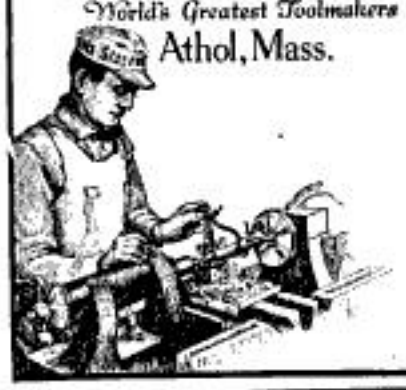
I am returning the child, Patrick Burke, to you. Do with him as you think best. LUCY MARSHALL.

Then she ordered the child's clothing packed, and told the butler to prepare to take him to New York on the evening train.

"I will not see him again. I will not," she said to herself over and over as she found something reasoning within her, something that said: "It is only fair to the child to say good-by to him."

AS the sun went down behind the mountains she bathed her eyes until there were no traces of the angry tears she had shed, and went downstairs. She could hear the men bringing down the two heavy trunks which held the many garments she had made for the child. Something in her kept singing: "He will not let you let him go," but she deafened her consciousness to its meaning. She had a feeling that she had lived through all this before, long ago. She went about like an automaton,

Starrett
Spring Nut
Calipers
For the Shop or Home



When intent on finishing work in the lathe you will find the quick-acting Starrett calipers a great convenience. You see the split nut permits making an approximate setting instantly, without stopping to turn the nut a number of times. For all mechanical work, these calipers are superior.

Starrett calipers are made of the best steel, balanced perfectly, and are used by the finest mechanics the world over. They are made in a number of convenient sizes, in outside and inside styles.

Starrett rules, squares, calipers, dividers, levels, gages, protractors, steel tapes, etc., may be seen at any good hardware store.

and at the last she put on a garden hat as casual as possible that she might look [illegible] and went down to the veranda by the porte-cochère just as he was ready to be lifted into the station cart. The grave young butler, who looked like a studious priest in his traveling clothes, was putting the bags in.

PATSY started toward her and then hesitated with a stiffness she had never seen in him before. There was a polite little smile on his face, no sorrow, none of the wild grief that she knew by the heavy sinking of her heart she had expected to meet and comfort. He held his cap in his hand, and the little lips were set in a red line of smile. It was so different from what she had expected. Of course she couldn't keep the child, of course she had never expected to keep him, but if it had been a passion of sobs, a storm of grief that had met her, why, she knew that she wasn't heartless!—but this!

"You must be a good boy," she said patronizingly while her heart broke, "and mind Withers."

"Yes, ma'am." Withers turned to lift him into the cart, his hand to his hat.

"Good-by," she said and stood still. Oh, if he would only rush at her, as he had rushed so many times, and put those firm little boy arms around her waist!

"Good-by," he said, and he sidled toward Withers with that polite little smile on his face still turned toward her to the last.

"I hope the pony will have some sugar *sometimes*."

The cart went down the drive, around the cluster of palms, and out of sight.

"He is just like his father," she wailed; "*he didn't care!*" And then she knew what she had been living over.

Few of us can stand it to be broken twice in the same place. It is apt to make one a permanent cripple unless the mending is skillful. Lucy stood her agony for a month. In two days after the child left she had telegraphed Mr. Thawl that she would provide a sufficient income for his education and she wished him put in a good school. In another day the pony went, with instructions that under no circumstances was she to be annoyed with news of the child.

"As the pony was all he cared for or seemed to have any thought for he may as well have it," she said bitterly.

FOUR long, weary, purposeless weeks went by and then she gave up, and trains to New York raced too slowly for her panting haste, while every turn of their wheels brought a new fear.

She had heard nothing from Mr. Thawl. He might be abroad. Her first telegram, in her wish to make it as impersonal as possible, had been addressed to the firm. She had heard that the other Thawl was a cold, hard man. Suppose her boy, her baby, had been put in an asylum! Suppose some one else had adopted him! Her boy! If it cost millions she would have him back, she told herself fiercely. She couldn't eat, she couldn't sleep. She sent telegrams from every station. It was a haggard woman who left the car and met the young clerk from the Thawl, Beard & Thawl offices.

"Where is he?" she began, and then she took the letter he gave her with hands that trembled. The Thawl family were all abroad, but Mr. Beard had received the telegrams and had sent the boy to the Thawl house up the Hudson. Also the pony. There was nobody at the Hudson house except the caretaker, but it was not the time of year to send the boy to school. In the autumn they would find a good school for him. *Would* they?

It seemed to Lucy that she could not live through the half hour before the next train up the Hudson. It was a steaming day in the beginning of July, and already the air of the city was full of the pungent smell of gunpowder and the crack of small explosions. The young clerk tried to make conversation, but Lucy was brooding over the fact that her boy had nobody to give him even one firecracker for the morrow, and she almost dissolved in tears at the thought, although a month earlier she had made up her mind that he should never touch such a thing.

AT the station near the house where she came at last there was nobody to meet her, although she had sent another of her messages. The Thawl house had not been occupied by the family for two or three years, and the gardens had been allowed to grow up in grass, and the house was closely shuttered, grim with the deadness of a soulless house. Lucy went around the corner and saw, sitting on the veranda, a comfortable-looking woman shelling peas. The child was not in sight. "I am Mrs. Marshall, who telegraphed you," and she looked around.

"I jes' got it," the woman said, and took the pinkish bit of paper from the chair beside her. "Pat ain't been well. He seems to be a sickly child, and yestaday I had the doctor—"

"Why wasn't I told? Where is he?"

"And the doctor said he'd better stay in bed a while," she finished placidly. She shook the stray pea pods from her dress and led the way down a bare corridor, clean and sounding, and into a darkened room where a little black head lay on the pillow of a four-poster bed.

With a hunger that seemed to have been gnawing at her heart all her life, Lucy lifted the child out of the bed against the breast that had widened to hold him, and as she lifted him something seemed to break in the little body, some tenseness melted, and convulsions of sobbing shook them both.

"Oh, Patsy," she said between tears and laughter, "can you forgive me? I was like a cruel stepmother to you."

When he could speak the child gasped into her ear as she held the little round head against her neck:

"I wanted you so! You won't *ever* let me go again, *will* you?"

"Never! Never!! Never!!!"

MR. HENRY THAWL was making out the papers for the formal adoption of Patrick Hugh Cecil Burke by Lucy Marshall.

"Don't you want his name changed to Marshall?" he asked as his pen waited.

Lucy's face burned with color. "No. It is his own name and it is his right to keep it."

"There is another thing," Mr. Thawl mentioned, "Hugh Burke is not known positively to be dead. He may come back, and that would make a complication."

"Let him come," Lucy said.

The Yarn is the Thing!

AFTER all, it's yarn more than knitting that puts wear in hosiery. Hosiery, knit of loosely spun yarn, quickly wears through under shoe-friction.

The special yarn of which Knox-Knit hosiery is made gets an extra twist in spinning that brings its fibers so firmly together that its ability to stand hard wear is greatly increased.

Knox-Knit Hosiery

"It wears and wears"

It is reinforced at heels and toes to give more service than a quarter actually entitles the purchaser to. Special machines shape the ankles to fit like gloves.

Knox-Knit medium weight is just right for year 'round wear. Knox-Knit Gauzieet Gauze is a very sheer summer weight with double sole, high spliced heel and extension toe to make it stand hard usage.

All Knox-Knit hosiery for men, women, boys and girls is furnished in latest shades and colors. The guaranteed hygienic antiseptic dyes cannot irritate or poison. An unlimited wear guarantee goes with each pair.

If your dealer does not carry Knox-Knit, send his name and $1.50 for four of six pairs by parcel post.

A Wide Open Letter

In our own office, where no one can hear us, we call you Jones, though, of course, that's only a little part of your name. What the rest of it is we can only guess, because you don't really exist at all, and yet you do.

We have never in our lives seen you, and you have never seen us, yet the biggest part of our day is devoted to thinking about you, and planning for you.

We do not even have a picture of you, there couldn't be a picture that would do justice to you in all your varied aspects, that would show you as we see you every day in our own minds. There couldn't be—for you are an ideal rather than an individual. You are the typical COLLIER reader; you are 723,270 individuals rolled into one.

That is, you *were* 723,270 individuals yesterday when the last figures were made up, but by the time this letter reaches you, you will be nearer 725,000. That's one of the things that makes you such a baffling, interesting problem—the fact that you are always changing, always growing, always the same, and yet every day different. It's the thing that makes our job, which is to interest you and really serve you through these pages, the most fascinating and attractive and altogether worth-while job in the world. For you don't know, yourself, how intensely varied your 723,270 sided character is—

For instance, with all your upstanding, hard-hitting manliness, there's a big feminine element in your character. And that doesn't count your wife who reads COLLIER'S also.

You live mostly in the larger cities within a stone's throw of what manufacturers call the "distributing centers"—but not entirely. Many of you belong to the small cities and towns.

Take it all in all, you're a pretty baffling problem, Mr. Jones; but you're *our* problem. We like you, and there are about a dozen different things that we can do for you every week, besides merely mailing you the Weekly, if you only knew it. (Some of you do—we received over 35,000 letters last year at our Washington Bureau.) That's why we're writing you this letter; because we want you to feel as we do that the National Weekly really belongs to you, the National Man; to Jones, the hard-headed, soft-hearted, business-doing, bill-paying, family-raising man.

You're Entitled To All This—Do You Know It?

Do you know, for instance, that we maintain a Bureau in the Munsey Building, Washington, D. C., for you, Mr. Jones? To be sure, other people use it; for instance, in the last Presidential campaign, every one of the candidates for the Presidency consulted it. But the Bureau really isn't for them; it's for you. It's to tell you anything you want to know about the Government; about Congress; to get information for you from the Congressional Library; to send you pamphlets issued by the Government; to do for you any reasonable thing that a friend could do in Washington.

Next time you want a bit of information from Washington, write to the Collier Washington Bureau—and then see what *you* say.

If you want to know ask the *Collier Reference Bureau*

We have a Reference Bureau in our New York Office, and that's for your service, too, Mr. Jones. There's hardly any question you can ask about reading or study, or where to find this or how to get that, for which the Reference Bureau won't find the answer some way. Last week a county superintendent of schools asked the Bureau to lay out a comprehensive course in American History for the schools of his county. It took nearly two days to answer that question. We rather hope your questions won't take so long—but if they do, why that's what the Bureau is there for.

E. C. PATTERSON, General Manager,
COLLIER'S, The National Weekly,
416 W. 13th Street, New York.

I inclose a question for the Washington Bureau to answer.
I inclose a question for the Collier Reference Bureau to answer.
I should like to know about the sets of books checked:

☐ The Harvard Classics ☐ Junior Classics ☐ Irving
☐ Lodge History ☐ Kipling ☐ Stevenson
☐ Shakespeare ☐ Poe

If It's a Matter of Books

There's another interesting thing about us that you may not know.

There are 1,800,000 books in the Harvard Library in Cambridge—a good many books you would say, wouldn't you? Well—here's the interesting thing—we publish right in our own plant, in New York, almost 3,000,000 books a year, more bound books than any other publishing house in America.

If you're a lover of books, Mr. Jones—and we've always pictured you in our minds as that sort of a man—there's a lot we can tell you about books that will interest you.

About The Harvard Classics (Dr. Eliot's Five-Foot Shelf of Books), for instance; or the Lodge History of Nations; or The Junior Classics, a children's library; or the Sahib Edition of Kipling; or the Valma Edition of Stevenson; or the Henley Edition of Shakespeare; or our Dickens or Thackeray or Dumas or Irving or Poe.

You needn't think you must *buy* books if you write to ask us about them. We like to tell about them; we're proud of them. As we make more books, we can sell them cheaper than anybody else, and the oftener you give us a chance to answer your questions about books, the better pleased we are.

Maybe you have some questions now

There are a good many other things we could tell you about, and perhaps later we will. But right now we're especially interested in getting you into the habit of telling us things, of using your COLLIER subscription for all it is worth. Just as a start in that direction, we are attaching a coupon to this page. If there is anything you'd like to ask about right now—clip the coupon and send it back. We may not get around to answering it in the next mail, but it won't be lost, and, sooner or later, you'll hear from us. For you don't belong to us, Mr. Jones, any more than we belong to you, and we're here to see that you get a big five cents' worth out of your paper every week—and as many extra five cents' or five dollars' worth of service as our whole big organization can give.

P. F. COLLIER & SON, INC.

Maxwell "25"

The Maxwell "25" is a powerful automobile—a real, full-grown automobile—a handsome stream-line automobile, and it looks and acts like an automobile of three times the price.

The Maxwell "25" has absolutely every essential quality, and absolutely every necessary feature found in the very highest priced cars.

In actual economy of operation, in real ability to keep out of the repair shop, it not only equals, but surpasses most cars which cost five times its price.

The Maxwell "25" weighs 1685 pounds. A wonderful "tire economy car." Has 30" x 3½" tires, *front* and *rear*, permitting rear tires to be shifted to front wheels to give extra long service.

The motor is cast enbloc; 3⅝" bore; 4½" stroke; adjustable valves completely inclosed. Extra large crank shaft; bearings of bronze with babbit lining.

Motor water cooled, will not overheat.

More Power for Its Weight Than All Higher Priced Cars

The Maxwell "25" has a real 25 horsepower *motor*—which develops *more power in proportion to the weight of the car than the engines of most $5,000 automobiles.*

The Maxwell "25" can pass most any *car on hills "in high."*—It is a phenomenal *hill climber.*

Costly High Tension Magneto—Like Highest Priced Cars

The Maxwell "25" has a Simms high-tension magneto, which always delivers the spark direct to the spark plugs in correct time. This means no coils—*no make-shift master vibrators*—no mechanism that requires frequent delicate adjustments. The magneto works right, and stays right.

Transmission—4 Speed Selective Sliding Gear, Center Control

The Maxwell "25" has a 4 speed selective type transmission, 3 speeds forward and 1 reverse. The main shaft has *Hyatt Roller Bearings* at front end—bronze bushing babbit lined at rear. Adjustable cone clutch is lined with motobestos. It takes hold firmly without sudden gripping, and without undue noise.

Control—Brakes of Extra Strength

The Maxwell "25" has left-side, 16" steering wheel. There is plenty of room for a big man to drive without being cramped. Spark and throttle control rods are inclosed in steering column. There is a foot throttle or accelerator pedal with foot rest. Transmission Control Lever is in *center of car* and is *operated by the right hand.*

The *service brake is contracting* and the *emergency brake expanding.* They act on 12½" brake drums bolted to rear wheels.

Unfailing, Economical, Springless Atomizer Type Carburetor

The Maxwell "25" has a Zephyr Carburetor—Atomizer Type. This gives unusual high mileage per gallon of gasoline without constant carburetor trouble. Starts and runs right in any weather, and controlled from the dash.

Lubrication—Improved Splash System With Oil Saving Pump

The Maxwell "25" has splash lubrication with a sturdy, slow-moving plunger pump. This saves oil.

Capacity—A Real 5 Passenger Car of Comfort

The Maxwell "25" is a real 5-passenger car. It carries 5 grown people comfortably. There is plenty of leg room.

Phenomenal Easy Riding Qualities

The Maxwell "25" has 4 *semi-elliptic type springs.* The front springs are 32" long. The rear springs are 40" long, fixed at front, shackled at rear, and mounted on a rocking seat. *Absolutely no expensive shock absorbers or auxiliary springs are needed.*

Fullest Equipment—Complete and of Unusual Quality

The Maxwell "25" has a perfectly fitted top with envelope. The top has the famous "Jiffy Curtains," which fold back in the top and can be let down in an instant without getting out of car.

Full equipment of handsome lamps, Prest-o-lite tank, full set of tools, jack, pump, Stewart speedometer, etc. A strong, good-looking tire carrier comes on the back of the car.

You have no extras to buy. Everything comes with the car.

See the Maxwell dealer in your town at once, and look at this wonderful, complete car. *If there is no Maxwell dealer near you, write for interesting, illustrated, descriptive catalogue.*

"I should worry?"

A package of Kellogg's Toasted Corn Flakes in the cupboard—crisp, fresh, appetizing and always ready—you should worry! Why fret over what to eat when the question's so easily answered. A moment in the oven before serving restores crispness. Your grocer always has a fresh supply.

To prevent disappointment, don't merely ask for toasted corn flakes—say "KELLOGG'S, please" and look for this signature on the package.

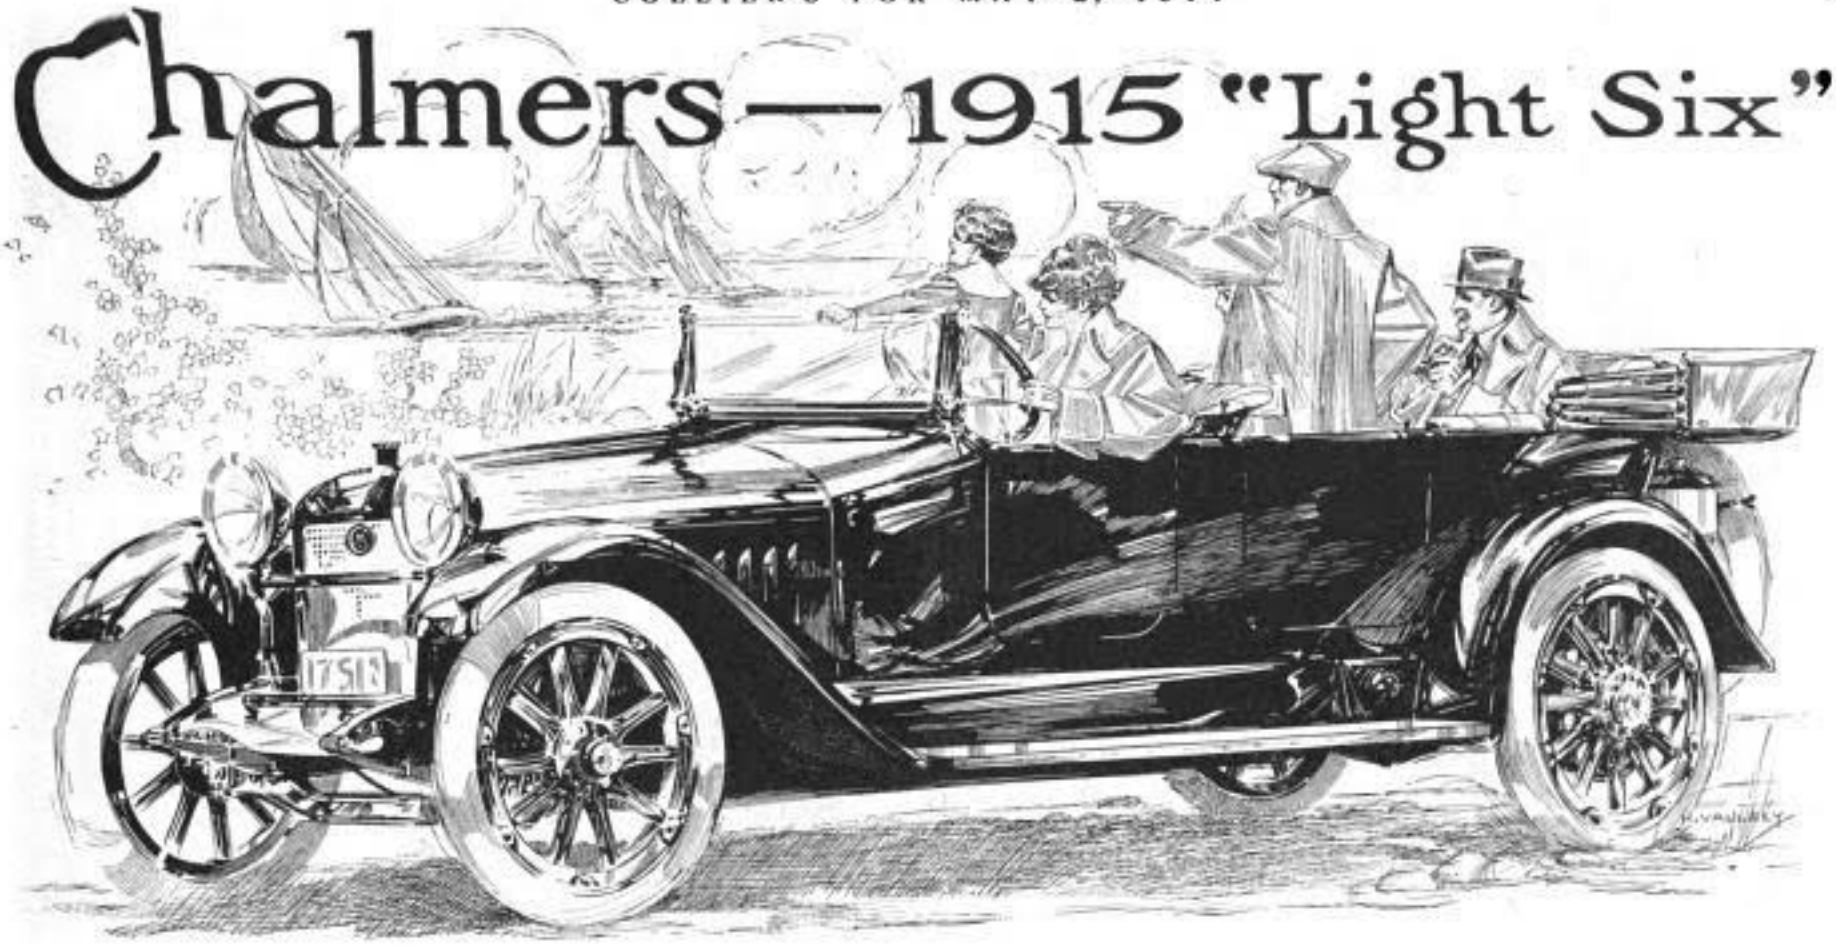
His "General Manager"

The wise business man leaves the management of his home to his real "General Manager"—the wife who buys the food, who makes a study of its nutritive value, who has a serious concern for the health of the family. The housewife who knows.

Shredded Wheat

has already solved the servant problem and the problem of the high cost of living. With Shredded Wheat in the house it is so easy to prepare in a few moments a deliciously nourishing and wholesome meal in combination with stewed prunes, baked apples, sliced bananas, or other canned or preserved fruits—a meal that furnishes highest food value at the lowest cost.

Two Shredded Wheat Biscuits (heated in the oven to restore crispness) will supply all the nourishment needed for a half day's work. Delicious for breakfast or any other meal for youngsters or grown-ups. Try toasted TRISCUIT, the shredded wheat wafer, for luncheon with butter or cheese.



"It's All in the Shreds"

Chalmers—1915 "Light Six"

A New "Light Six" of Chalmers Quality—$1800

In addition to the famous Master "Six" at $2175 we now offer you the Master "Light Six"—a new Chalmers model at $1800.

Here is a 1915 car at $1800 with all the features that have given "Sixes" first place in the high priced field: Silence, smoothness, flexibility, beauty. It has, besides, what "Sixes" in the past have lacked: A low first cost, which makes it easy to buy; low operative cost, which makes it easy to keep.

The Master "Light Six" is a full year ahead; in style, in mechanical design, in simplicity, in efficiency. That's why thousands who once thought a "Six" an extravagance are now ordering 1915 Master "Light Sixes" faster than we can build them.

A "Six" or Nothing

This is the car for which thousands who would have a "Six" or nothing have waited.

The 1915 Master "Light Six" offers for the first time the full measure of 6-cylinder silence, smoothness and flexibility at the price of any comparable "four."

The Master "Light Six" at $1800 makes it unnecessary now to pay a high price, or a high maintenance cost to get six-cylinder luxury.

This 1915 Chalmers answers the last arguments of the four-cylinder builders—those of price and economy.

A Lighter Master "Six"

What the Chalmers Master "Six" at $2175 is among high powered cars, the 1915 "Light Six" at $1800 is among cars of its class. It has the same Master Motor, though built on a lighter scale. It has small bore and long stroke to give it flexibility; perfect balance to give it smoothness; right design to give it silence.

Its Chalmers-Entz electric starter makes the motor non-stallable. Tapered bonnet, oval fenders and streamline body rank it with the expensive foreign cars in looks.

Its lighter weight means an added economy. Yet it is heavy enough to make it safe in any emergency; comfortable on any road. Don't make the mistake of buying too light a car. The difference in gasoline consumption *between* a medium weight car and a flimsy car won't amount to $25 in 10,000 miles, *and* $25 won't buy many repairs for a car so light that it shakes to pieces in ordinary service.

Like all Chalmers cars, the 1915 "Light Six" is built to give satisfactory service through many seasons.

Buy This Car for Economy's Sake

Men want silence for its charm; smoothness for its comfort, and flexibility for its convenience. And they want these six-cylinder qualities, too, because they make motoring nerve soothing, not irritating. You can drive a Chalmers "Six" 200 miles and be less fatigued than after 100 miles in a "four." Forty miles an hour in a "Six" doesn't give the nerve rasp of 25 miles in a constantly vibrating "four."

Men want these qualities for economy also. They know that vibration means needless strain on gears and bearings as well as nerves; power wasted in joggling the car instead of driving it.

They know that absence of noise means absence of undue friction; that a flexible motor means an economical motor. They know that only a "Six" can have these qualities. So they buy the 1915 Master "Light Six," for its economy as well as for its charm.

A Car of Super-Value

It is hard to believe that any car at $1800 could possess all the advantages we claim for the Master "Light Six." Until you see it, you cannot realize its distinguished beauty; until you ride in it, you can know nothing of the extraordinary value it offers at the price.

When we say the 1915 "Light Six" is a year ahead of others, we mean just what we say. In design, in luxury, in endurance, in good looks we believe this to be the most advanced "Six" on the market. It has today the features of construction and equipment which most cars in the $2000 class will not have for another year.

So we urge you to take the Chalmers Test Ride with our nearest dealer. Let the car itself prove its super-value.

Try to Match it

After you have taken the Chalmers Test Ride, challenge any comparable car to duplicate the performance. Compare these features item for item with any car at near the price. We'll leave the result to you.

Six Cylinders
30 to 50 Horsepower
126-Inch Wheel Base
Electric Starter
Non-Stallable Motor
Electric Lights
Tungsten Steel Valves
Streamline Body
Molded Oval Fenders
Triple Heated Fuel
Timken Bearings
Interlocking Gears
Chalmers Sectional Piston Rings
Cork Insert Disc Clutch
Clean Running Boards
Left Drive
Center Control
Rayfield Carburetor
Tapered Bonnet
Underslung Springs
Full Equipment

The Larger Master "Six"

2, 4 or 5 passenger type, $2175
6 passenger Touring Car, $2275

For the man who wants a larger and a higher powered car, there's our Master "Six," the fastest selling "Six" at its price in the country.

This Master Car set a new standard among the larger "Sixes" for silence, smoothness and flexibility; its modest price and low upkeep set a new mark for economy among cars of maximum luxury.

No matter how high your ideals of superlative merit in a motor car the larger Chalmers "Six" will satisfy your most exacting requirements.

Former owners of $4000 to $5000 cars are fast finding out that in the Master "Six" they secure the same six-cylinder value without the usual expense of a car of high power and large size. They say that a really better car no one can buy; a costlier car no one really needs.

Please send me literature on the 1915 "Light Six" and the larger Master "Six"

GOOD clothes are always the result of somebody's good judgment: judgment of material, of styles, and especially of what well-dressed men like to wear.

That is why it is so important that your great clothing house should be young and human and contemporary, rather than merely big and mechanical.

When you select your next suit, if you have an opportunity to visit a Kuppenheimer dealer, we ask you to note one thing: the number of Kuppenheimer suits in your size that seem to express the way you feel about clothes.

This is one thing that makes success for Kuppenheimer dealers—that attracts good trade to their stores.

Incidentally it has made this the fastest growing clothing house in America.

The Last of the Family

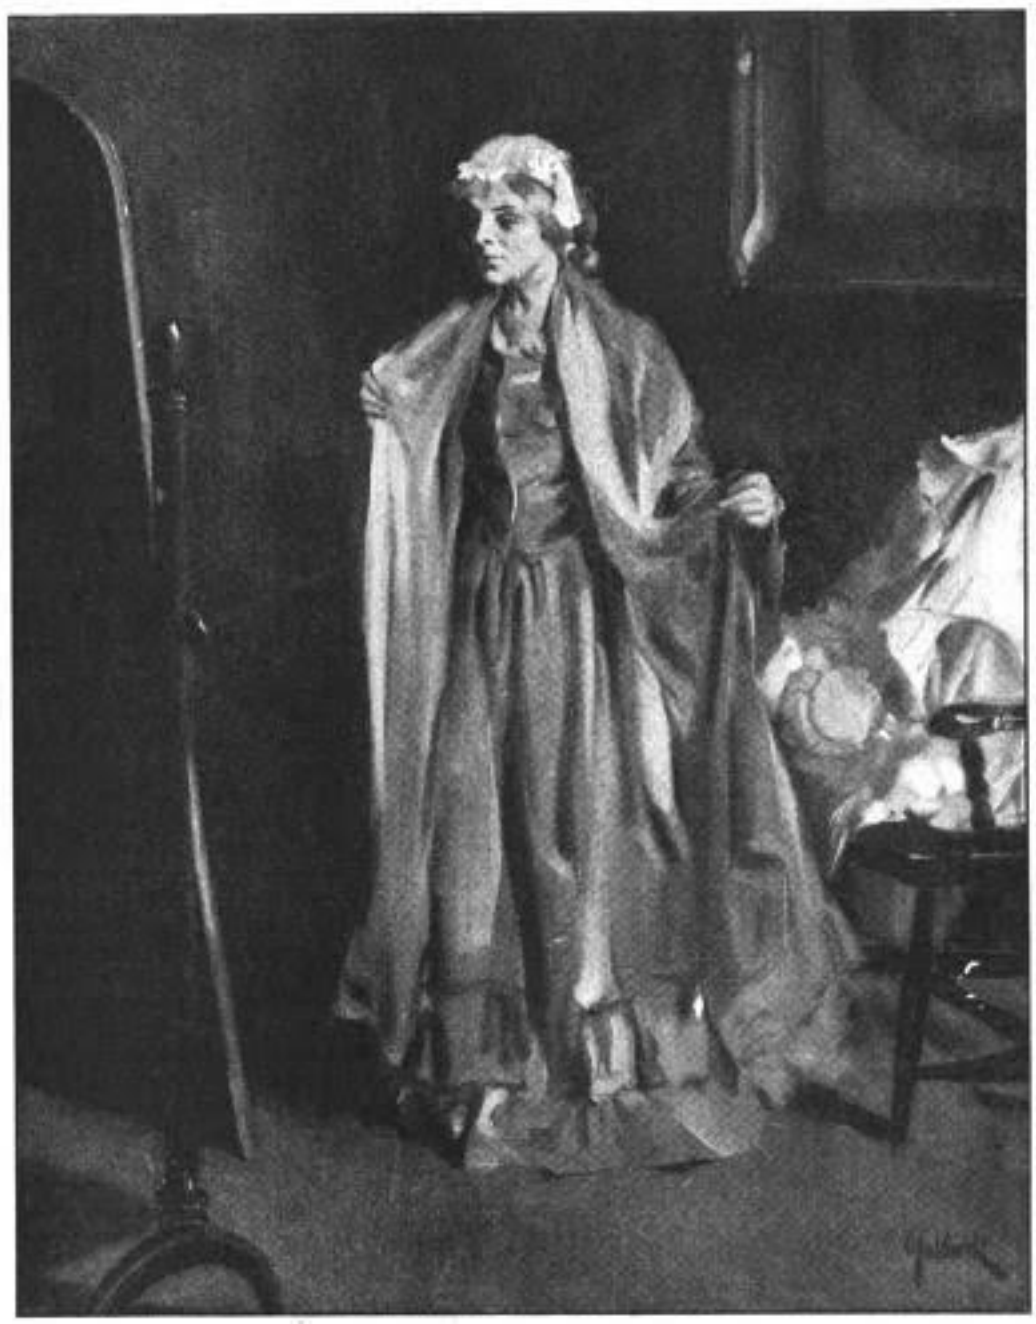
By Richard Washburn Child

ILLUSTRATED BY WALTER DEAN GOLDBECK

CURRENT styles in writing, just as the going and coming of fashions in hats, decree the subjects forbidden as well as those which are for the time popular. This observation was made by Thorndike at the Pad and Pencil Club, but several who were in ancient leather chairs believed that stories of snakes, hospitals, cub reporters, ghosts, and even of authors themselves, though on the black list just now, might be justified, and therefore—

There is a house in Virginia. Washington visited there, and in the garret, among the old bundles of yellow letters, the list of the Father of His Country appears, and gossip has it that one of those letters contains mention of losing so many colony warrants in a game of cards with the old master of Boxwood.

Boxwood is the name of the house, or the estate which has gone to ruin since the war. Say what you like, these old places, once plantations, are indeed haunted by ghosts of gentility, hospitality, and rich and mannerly living. I have been to Boxwood, and it is one of them.



I went with Fleetwood to see his grandmother, and I assert that she was a relief after the ladies, young and old, of the metropolis.

The house was one of those Virginia brick affairs with four chimneys on the gables at either end, and a porch with hand-carved pillars, if you please, painted white. The wreck of an ancient terraced rose garden, now a mass of weeds and briars, extended down either side of a long flight of stone steps, on which tiny lizards in the sunshine jumped up toward the house or down toward the iron gate which dated back to the days when they used to keep four hundred slaves for the tobacco fields.

ANY man who can climb down out of a hired livery runabout and approach Boxwood, with its closed inside shutters and the caved-in smokehouse and rotting slave quarters, and smell the damp and sense the despair of that old place without a gulp in the throat and the feeling of ghostly hands, either has no poetry in his soul or no manhood in his heart.

The mistress of Boxwood is Constance Fleetwood. Her slim and tiny frame had born seven children in her day, and at eighty-five, the girl who made the samplers once, has still the complexion, wrinkled though it be, of finely bred youth.

"There are no aristocrats but those who need never act so," said she to me in reply to one of my stupid remarks, and noticing that her dress was of gray serge, unadorned except for a white lace collar, I concluded that she never dressed differently, and in that I was quite right. Jim Fleetwood was the last of the scattered Fleetwoods, and for the sake of his ancestors, and in spite of the fact that I am not his friend, I have changed his name for him. Readers would recognize him—a slim, smart figure of New York literary success. He was the last of the Fleetwoods—except Constance, his grandmother

She tried these and other garments upon her body and spent many doubtful and even tearful moments in front of mirrors whose quicksilver backing had cracked and grown dim

"The old lady has been alone, I understand, on the old place for thirty years without stepping off her own acres," he had said with a cigarette-flicking manner. "There must be some atmosphere down there. I've heard my father tell when he was alive. There isn't any telephone, they say, and when the ford on Bullock's Run is frozen or filled with freshet, there is no way out into the world. And *that's* in the day of six-cylinders and vacuum bottles."

The old South had all oozed out of him. I think his grandmother noticed that it had. She had a keenness of ancient and sad but brave and active vision, seeing beneath his faultless clothes, upon which the autumn burs from the thicket we had pierced to reach the house had clung.

We were sitting beneath the portrait of Wilson Fleetwood, in black stock, a painted civilian, scarred by the bullets of Federal marauders, and a black woman had given us some abominable tea and some thick toast with abominable butter, when Jim produced the cigarette case. Under a false bottom, concealed by a silver flap on a spring, was the portrait of Genevieve Carroll.

"And I should tell you that I am engaged," said he, leaning toward the little old lady's deafer ear, and thrusting the portrait into her hand.

Having studied the beautiful face of the Connecticut Tobacco King's daughter, his grandmother finally nodded approval. She hastened, however, to indicate that her approval was not complete, and her voice had the note in it, in spite of the quaver of infirmity, that expressed consciousness that she was still the head of the Fleetwood family.

"Her father?" she asked.

"He is a commission merchant."

ONE could not say that a cloud might rest on such delicate features, but there was an instinctive drawing back of the grandmother's personality.

"I regret that he is in trade," said she. "I would have preferred a profession—or that he had been a planter."

Fleetwood laughed outright with his characteristic rudeness.

"I belong to a different age perhaps," his grandmother said, folding her thin, soft, parchment-covered hands. "And you are an author?"

"Successful," said I, smiling, in his behalf. "One of the highest paid authors in the world."

Her face lit up with true pleasure.

"My reading has been confined to the 'Gazette,' seven copies of which have come into this house every Saturday for more than half a century, and to the books the beetles have not destroyed."

"You shall have a subscription to the magazine which has made an exclusive contract for all my work," Fleetwood volunteered.

"I wish to see every line the son of my Edward writes. Your mother and I did not agree, I fear. But you are my own grandson. I take great pride, sir, in your career, for your profession of nourishing the public mind is one of great responsibility."

Digitized by Google

The livery-stable horse, perhaps shivering in the bleak Virginia wood road, and chilled to the marrow by the penetrating cold of early November, whinnied so insistently that soon we felt obliged to leave the comfortable circle about the round stove and the little old lady in her high-back rocking-chair. I was reluctant to move, but it was evident that Fleetwood was bored.

"I am glad you came, sir," the grandmother of Fleetwood said, with the habitual disregard of all extraordinary occasions which comes with old age. "Our estate is in sad condition. I have barely enough to maintain a single farmer, engage a neighbor's daughter for a companion, and keep our negroes in service. You are always welcome—James Fleetwood."

"Ten dollars for one of those Rostrum Club cocktails," said my companion when we were out of hearing of the little gray figure which still watched us from the porch. "And by the way, my father said that she stood there on that very spot where she is now with a shotgun and dared a detachment of Federal cavalry officers and men to come up the steps. She was alone. The men folks, as they call them, were away. Bah, what a dismal, musty place! Death ticks in the walls and everything out of repair."

I LOOKED back at the house. It had a square-jawed look. It was a game old thing, I thought—clinging to its own personality to the end. The slave bell, still hanging between two posts on the hill, showed above the range of the leafless woods and against the tints of a cold, wind-whipped sunset. Besides, I could not help comparing Fleetwood's grandmother with my own. They were alike and American. Mine was a Northerner.

"A wonderful girl," said Fleetwood.

"Who is that?"

"Miss Carroll. A splendid hand at tennis, and everything for that matter. The devil of a flirt at eighteen, but the right stuff. You have seen her?"

"Only in a portrait at the Four Brushes Exhibition—and in some periodical, such as the 'Week End.'"

"She is one generation removed from a Dublin ship chandler. I guess that would shock the old lady, eh?"

"It depends," said I, without knowing, as we all shall see, how well I had spoken.

The fact was that I did not have any notion of the type. Offhand, Genevieve Carroll would be placed in the class of girls with money, who dance the tango well and, with their mothers, look for matches. "Light," they are called. I assume that Miss Carroll was hardly old enough to be more. I met her with Fleetwood on the Avenue a week later when I came back from Washington.

There could be no question about her clothes—or the figure which made the task easy for the costumiers, or whatever the expensive ones are called. She was not the hard-riding, outdoor sort of person I had pictured, and I rather gathered the idea that she, unconscious of being wealthy and all that, had been overimpressed with the glamour which youth finds in the great author when that high-priced person is in good clothes and has been taken up by the country-club sort of people.

It is a pathetic thing to see real womanhood in the faces of these hastily rich girls. It is sad to have to wonder whether they, with their restaurant, limousine, hairdresser, adventuress-imitating life, for which they are almost put in training, are better insured for fulfillment of a decent destiny than their ancestors who were milkmaids. I rather caught this idea from Genevieve Carroll.

"Have you sent your latest stories to your grandmother?" I asked Fleetwood for the want of something better to say.

"She would not understand the problems they raise."

But Miss Carroll could not see that there were any problems. "He has told me all about that old place. It is wonderful!" said she, blowing the cold moisture through her veil. "Think of that old lady for all these years alone there on that plantation. I shall send Jim's stories to her myself."

I REMEMBER that as she spoke, vivaciously, as a child eager for life, the church bells around the corner whanged out on the frosty air of the Sunday-in-winter morning, and a stream of purring electric and gasoline vehicles, with flashes of the color of women, flowed by us. Between the Avenue and the Virginia plantation there was a lapse of an epoch, and yet it seemed to me that something in the eyes of the girl before me expressed the very soul of the little old lady of Boxwood.

"I never understand your stories—exactly," said Miss Carroll to Fleetwood, who was marking crosses on the sidewalk with the tip of a lignum vitæ stick. "But I am proud of the attention they attract. And I shall send them to your grandmother, Jim."

This promise she kept.

It is impossible for me to conceive of the pile of numbers of that exotic magazine, with their alluring colored covers and their brazen modern contents, reposing on the ancient mahogany table at Boxwood, where everything sings a low tune of the past, or to

"I will," said he in the hall.
"Come to lunch with me at the Carrolls'
some day. Gene and I are to be married soon."
"Thanks," said I. "Don't send that editor's letter"

picture one of these florid magazines in the delicate, timid, thin-backed, dried-up, shrunken hands of Constance Fleetwood, who, though a mother many times, will carry the aureola of virginity to the grave. With difficulty can I imagine the extent of humiliation brought to Boxwood by the signature of the Fleetwood name above the lure of the opening paragraphs and the doubtful illustrations of the high-priced Fleetwood stories. To me the fact that for a month, with dim but conscientious eyes, Jim's grandmother pored over his work, laboring to adjust her generation with the new so that she might form a judgment of which she might be sure, carries something extraordinarily pathetic.

IN THE middle of January, I think, Fleetwood came to my apartment one evening. He had dined well, was clothed well, and had left a theatre party in the middle of the evening in his characteristic, willful way, always so evident when he wished fashionable people to believe that he was a creature of temperament, free to mount at any moment to a higher intellectual plane. Champagne was in his eyes, and some oddity of mood induced by it had led him to me.

"Let's see," he said, throwing a black leg over a chair arm, "you were with me on my pilgrimage to the home of my ancestors, my dear fellow? What a depressing retrospect! Shabby! Genevieve sent my stories to my grandmamma. Her comments upon them are a bit quaint. I believe you will enjoy her letter. It will amuse you and possibly strike a chord of sympathy here and there, for you are one of those who still believe in choosing for fiction any subject but that of real life—the life of real men and women of flesh and blood."

I looked up at his curling, thin, red lips and noticed that the winter months in the city had begun to soften and puff the flesh about his lower jaw. There was an expression of challenge on his face.

"You write as well, I think, as any of the first group of Americans," said I. "We can all envy you the vivacity and ease of your style and the sure-footed way you have of telling a tale."

He smiled then as he reached for the corrugated knob on my old kerosene lamp, and turned up the flame until a thin, sharp line of soot thrust itself from the top of the glass chimney.

"Your room always reminds me of the room of an undergraduate," he said: "This old device of a lamp, and broken, dried-up cigars hidden behind pictures or in a beer stein, and kindling wood concealed on the bookshelf behind a set of Robert Louis Stevenson, and all that sort of thing—Here! Here's the blast from old Virginia. Look at the stationery my forbear uses!"

HE TOSSED the letter on to the table. Written in pencil, on sheets of paper lined faintly in blue, which must have dated back to war time, because on one corner was embossed a sabre crossed with a musket, this epistle was executed painstakingly in a fine, trembling penmanship.

It said as a low, careful voice might say:

JAMES FLEETWOOD, ESQUIRE.

MY GRANDSON JAMES—*It is with regret that I direct your esteemed attention to the consideration of a subject upon which only our close ties of blood permit me to presume to make comment. Having read, sir, the literary works recently proceeding from your pen, I must express my earnest hope that you will consult your conscience as to the responsibility you bear as an author and the representative of a long line of American gentlemen bearing a name of honor both in the defense of their native State and in the maintenance of the unsullied standards of womankood. Preferring to express myself as an American lady, rather than as the bearer of the Fleetwood name, with which your grandfather honored me, I present to you my opinion that neither in the duty you owe your readers to furnish them with high ideals, clean and beautiful thoughts upon a lofty plane, and characters of worth for their contemplation, nor, on the other hand, in the duty you owe to speak no word against the honor of my sex, have you met your obligations. I know that the many appeals you have made to the unwholesome interest of unrefined persons are inadvertences, which have, none the less, misrepresented the standards of honor between the sexes in this, our own country, as well as the traditions of our own family and name. I desire that you inform me, at your convenience, my dear James, that, at whatever cost, you will withdraw from public circulation the several narratives sent me to which I have made reference.*

With prayers for your health, I am,
Your affectionate grandmother,
CONSTANCE FLEETWOOD.

"Well?" asked Jim. "So life amuses itself, eh?"

"You are right as to quaintness," I replied.

"What can be the matter with the little old woman?" he said suddenly with the impatience of one unused to adverse criticism. "The age makes authors, not authors the age. Am I to be asked to paint life as it is, or do one of those ideal pictures you find in old-fashioned ladies' annuals?"

"I suppose that depends on how you see life," I said, digging into the tobacco jar.

"Damn your smugness," he said with a laugh. "You know Bornshelm? The editor? He has just written me to-day offering a contract for twelve short stories at a thousand apiece. He says in it that the demand is for sex interest, and that's the flat truth. It took me some years to find my vein. Come to think of it, the easiest way to make the old Southern dame understand is to send her Bornshelm's letter. She probably thinks I sell stories for twenty-five or thirty dollars, and it will be an eye opener."

"I wouldn't if I were you," said I. "Think it over. Wait till morning. Don't do it."

"I will," said he in the hall. "Come to lunch with me at the Carrolls' some day. Gene and I are to be married soon."

"Thanks," said I as the door was closing. "Don't send that editor's letter."

THIS was good advice. I recognized it as good when I gave it. So it was proved. He did not take it.

The note of Bornshelm, with a penciled comment above the letterhead, was mailed that night to Boxwood.

It traveled southward the next day and was shipped

Digitized by Google

over the Virginia Division as far as Dalton, and on Saturday a big, ray-wool black man, named "Ole Ben," drove a scrawny jinny mule in to the post office and brought back from town a box of crackers, a bag of Virginia mail, a call of coffee, the seven copies of the "Gazette," and the communication from James Fleetwood of the Hinterland Apartments, New York City.

UP THE front steps of Boxwood he went, through the untracked blanket of new-laid snow upon which the fires of winter dusk were reflected faintly. The wind of night, off the Virginia rolling country, had begun to moan around the corners of the old house, and the jinny mule complained, as our horse had complained, of cold and loneliness. But *Ben* went up the steps with his hat in hand and, having knocked at the door, repeated the established Saturday night ceremony of delivering the mail.

As he retired across the old rose garden, making a new set of huge footprints on the creaking white *surface*, he looked back at the wisps of wood smoke blown from the unstable chimneys.

"Dis yere place ain't gwine ter be yere long. Miss Connie ain't gwine ter las' many seasons moh," he said. "De day of Boxwood am done."

Not yet. If "Ole Ben" had turned his rheumatic neck once more he would have seen with alarm the ancient little figure of Constance Fleetwood standing on the porch, her old back drawn straight once more, her gray woolen dress and its lace collar blown by the gusts of wind, her hand clenched over the opened letter from her grandson James, her delicate mouth closed in a thin hard line, her head carried high and turning slowly as her eyes searched the countryside as if they could summon back the retainers of the long-gone days—Ben would have seen a lady of Virginia.

Perhaps in the succeeding days Fleetwood's grandmother, who for thirty years had scarcely been away from Boxwood, readjusted herself to new necessities. Time for action had come. Carefully enough, in hours spent in wide-eyed thinking, sitting in front of the round stove in the old hall, she combed over the living descendants of the families who once had been the neighbors and who were in the social list of the generation gone. Constance could not think of one to whom she could make appeal to stand with her in this, the last perhaps, of life's crises.

TOWARD the end of the week she had Jennie, the mulatto kitchen girl, climb into the attic after an ermine scarf and muff which had refused an invitation to Lincoln's inauguration. From the recesses of a mysterious wardrobe strewn with cedar shavings she uncovered a gray mantle whose ample folds suggested room for hoop skirts. She tried these and other garments upon her body and spent many doubtful and even tearful moments in front of mirrors whose quicksilver backing had cracked and grown dim as the gilt on the cupids which surmounted them had tarnished.

On Saturday the seven copies of the "Gazette" came once more and brought the outer world to Boxwood. The old lady spread them upon the table when Jennie had cleared away the nickel-blue plates and the chipped and cracked cut glass. A ship had gone down. Constance remembered that her husband had owned half a cargo lost on the way from Fayal. A mayor had been elected in a seaboard city. She recalled a young man from that metropolis who had courted her. A famous actress had died. A fire had swept a Canadian town. The Rev. Otis Bamberwell announced as usual the services at St. Gregory's at Dalton. And "Gentleman Matty" Grogan had won in eighteen fast rounds from "Italian Joe" Smith before the New York City Associates in a most important and decisive go, full of pep from gong to gong.

It was the suggestion of this last item which caused the little old lady to draw from the bosom of her gray woolen gown a folded, yellow, worn newspaper clipping which for several days she had carried there. It was dated Alexandria, March 10, 1857. "Thrashed a Scoundrel," said the headline, and then: "Edward Fleetwood, Esquire, after several warnings, had thrashed Merrill Ewing, the editor of our esteemed contemporary, the Fairfax 'Digest.' The affair occurred yesterday in front of the Braddock House, where those who were fortunate enough to be present narrate that Mr. Fleetwood, meeting Ewing, accosted him with the words: 'If you, sir, print a line more of your villainous reflections upon the women of this country, I will no longer place reliance upon the law or arguments, and will treat you as I would an impudent malefactor.' Whereupon, at some reply, our neighbor from Boxwood Plantation made good his threat. It is rumored that everyone in the country is thanking him for his kindly offices in behalf of the maintenance of our customary holding in honor of the gentler sex."

"Edward, Edward, I need you again," said the old lady's thin lips softly, and for a moment she buried her head in the curve of her delicate arm beneath the sputtering lamp.

I HEARD these facts from Jennie, the mulatto kitchen girl. She told them with her eyes upon the ground, and she shifted her feet as if in the next moment she was to suffer the shame of being held responsible for allowing her mistress, after all these years, to leave Boxwood. And she finished with a passionate recital of that awful day of how a man came from the bank in Dalton with a great roll of bills, and when Miss Connie had wrapped the discolored ermine fur about her little neck, of how she walked down from the front porch, the man at her side protesting, and drove over frozen ruts seven miles to the railroad station in the town, and of how the two negro women went weeping about their work, firm in the belief of animal instinct that, in spite of all her assurances, the mistress would never return alive to the old house. But Jennie forgot to say that when Constance Fleetwood left for New York she took with her, under her arm, a magazine with a florid cover, upon which the name of James Fleetwood occupied a place of prominence.

"After all, twelve thousand dollars speaks with greater authority than one who unfortunately has lost touch with the age in which she lives"

Neither Jennie nor anyone else can say what kindly spirit guided Jim's grandmother through the railroad journey, the terrifying tubes which shot people under a river, the overpowering streets, the fearful, rectangular-prism labyrinth of endless, awful buildings, and the eternal streaming by of confusing, staring human faces.

ONE of Jim Fleetwood's phrases occurs to me from a story of a delicate, innocent girl who learned the soul-hardening lesson of the business of being a crafty woman. "She had as much chance," said he of her introduction to a group of social Bohemians, "as a spring violet in a sausage machine." Surely it might be thought that this phrase would describe the fortunes of the little old lady stepping out of a quarter-century Virginia country refinement into the roaring, hungry, alert-eyed metropolis.

And yet at three o'clock one day in early spring, not twenty-four hours after Constance Fleetwood had arrived in the city, at a time when Matty Grogan was in the office of Sliney's stable bending over a box which contained seven healthy, warm, well-marked bull terrier puppies, the mother of which was Matty's own beloved Plunger Peggie, he felt a touch upon his elbow. When he turned about he saw a little old lady, dropped, he would have said, out of some attic, dressed gray, wearing knitted wristbands, and carrying in her hand a bag made of beads.

"Yeh," said Matty, nursing a ripped ear with the same hand with which he had snatched off his hat. "Hello, mother. Tell it."

"You are Mr. Matthew Grogan," said Constance Fleetwood, taking a much-worn rocking-chair beneath the spavin-cure calendar. "I have read of you in the Dalton (Va.) 'Gazette,' in which they do you the deserved honor to call you a gentleman. I came from my estate in Virginia in part to see you."

"The hell you say!" said the lightweight pretender, unable to restrain the exclamation. "Forgive that. I had an accident, ma'am. What's scheduled?"

FOR a moment the chasm between yesterday and to-day, between Boxwood and Eighth Avenue, between a frail little antiquity and a meaty-shouldered professional, seemed impossible to bridge. Constance turned a little whiter and drew in a deep breath, and then the eternal bond between human beings asserted its right to leap manners and customs and to batter down even the obstructions of language.

"Thank you for your courtesy, sir," she said.

"That's me," replied Matty, taking the emaciated strip of ermine fur she offered him and laying it gingerly on the table. "What's the answer?"

The Virginia lady adjusted the knit wristers and folded her thin, shaking hands; in her eyes burned reawakened fires. The "gentleman" rubbed his smooth-shaven, salt-and-alum-hardened face with the sympathy of one fighter who has met another.

"Will you thrash a scoundrel for me?" said Constance, touching the bead bag where her money roll still lay. "I will pay you well."

"Will it get me plucked?" asked Matty with a smile.

The old lady paid no attention to this question.

"Once I could have called upon a Fleetwood to come to my assistance in defense of the honor of our name and the women of our country."

THESE phrases, enunciated with careful dignity, touched the spirit of the fighter. He leaned forward with his hands upon his knees, his face level with hers, and every line in it expressive of attention, interest, and curiosity.

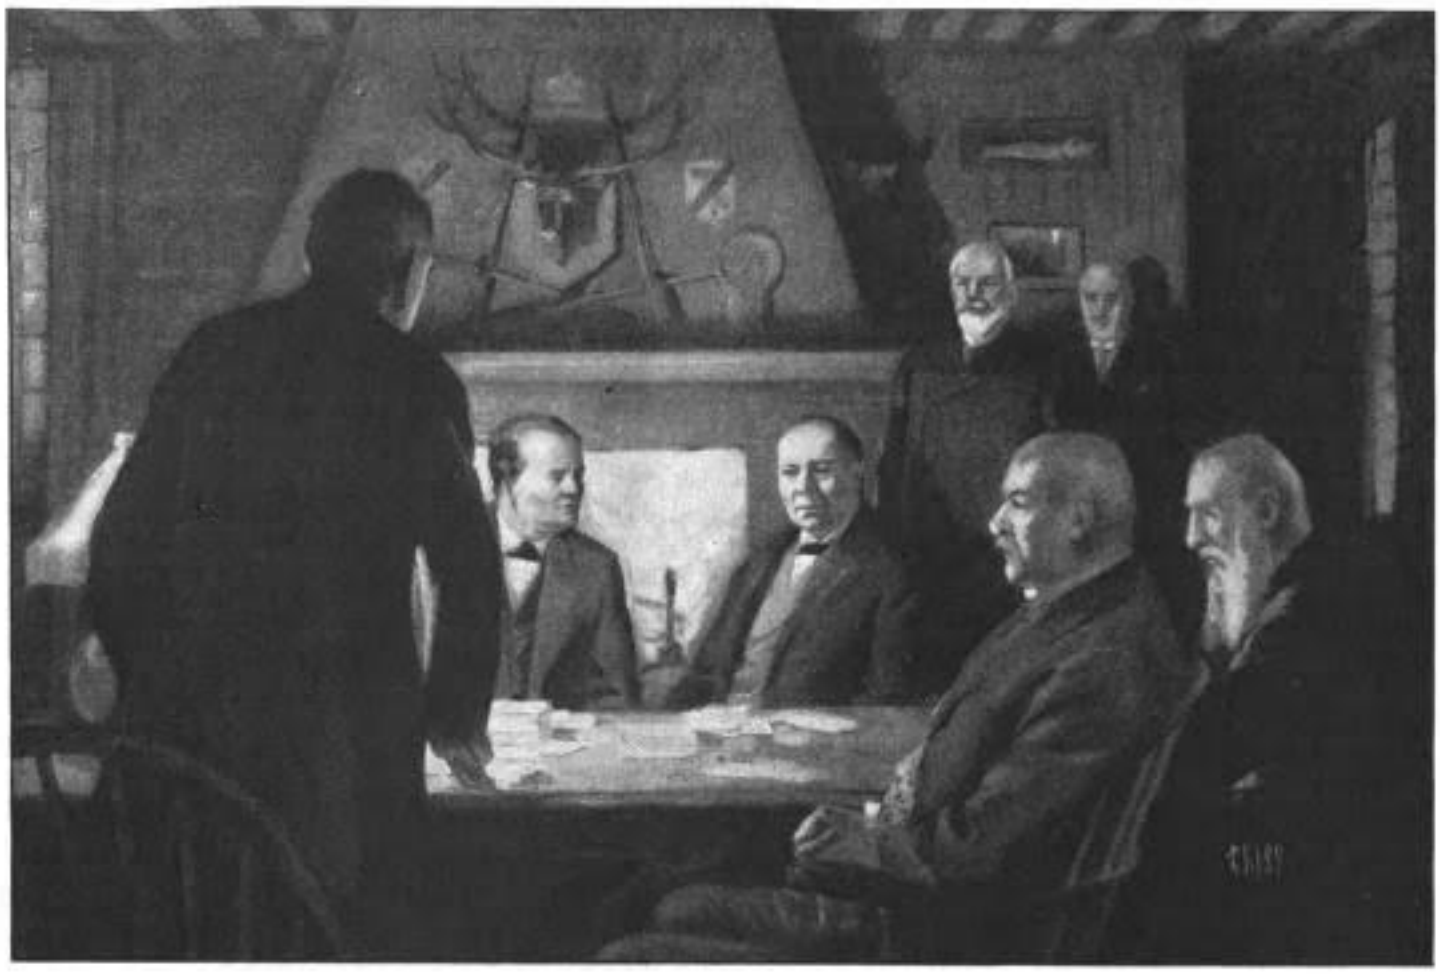
"But if a lady of my State has no champion at her service either by the call of kinship or the manners and customs of the gentlemen of her county, nothing remains, sir, but to employ a defender of the good name of my sex."

"That's right," the lightweight admitted. "I get that. S'right. Who's the guy?"

Twice Constance tried to answer. She closed her hands. Her eyes grew dim with her humiliation. Her delicate mouth drew into a line of determination.

"It is my own grandson," said she in a thin quaver. "I regret to say it is the last male representative of our family."

"Huh!" said Grogan sympathetically. "He did, did he? What's he put over?"



"He has dragged his talents into the mire," said the little old lady, half rising from the livery stable rocking-chair. "He has written of subjects not discussed by people of quality. He has dragged down the men and women of his country with vile misrepresentations. He has insulted American womanhood, sir. He has treated me with disrespect. He has sold his birthright and his conscience for money gain."

"He has, has he?" exclaimed Matty. "When did he do that?"

The Isolation of France

I had a distinct impression of the features of the six men who were making history round that table. There were writing materials, stacks of paper, and documents at every place

By Dr. Armgaard Karl Graves

ILLUSTRATED BY ARTHUR CRISP

IN RESPONSE to many queries following the publication of the article, "The Kaiser Prevents a War," we wish to say that Dr. Graves is no longer in the service of the German Government. While on a secret mission to England in 1912, he was arrested in Glasgow, tried on a charge of espionage at Edinburgh in June, 1912, and sentenced to eighteen months in the Barlinney prison. He was, however, released by the Government in September of the same year

AFTER my experiences with the earlier stages of the French, English, and German situation, I was quite prepared for the most unexpected developments. What occurred in the middle of October, 1911, was, however, beyond what I had imagined. The Morocco incident had shown the German Emperor that the *entente cordiale* was indeed solid. England and France would stand shoulder to shoulder in war. Being used to the ways of German diplomacy, I knew that from the Wilhelmstrasse would come a quick countermove. I guessed, too, that when it came I would be employed. It stood to reason that, knowing so much of the trend and importance of the affair—I had seen the intrigue grow step by step—I was the logical choice.

Nor was my reasoning at fault. I soon received the expected summons, and it brought me into the most amazing of my diplomatic adventures—a mission which showed me the utter ruthlessness that characterizes emperors and kings, particularly when the vital interests of their countries are concerned.

The Black Forest Summons

WORD to appear at the Wilhelmstrasse came when the autumn holidays were in full swing. The usual procedure of the Foreign Office having been observed, I found myself in Count von Wedell's private study. After an invitation to be seated, the Count surprised me. He complimented me on my previous missions on the *entente cordiale* situation, and handed me a pretty substantial check. It was actually 10,000 marks—$2,500—which the stubs of the royal check book will show.

As I took the money he remarked "Seine Majestät"—Foreign Office brevity for conveying that his Majesty was satisfied. Without more ado, Von Wedell plunged into the subject. Leaning back and crossing his legs, he began to talk in his abrupt way.

"I want you to go with his Excellency, Herr von Kiderlen-Waechter, as his private attendant and secretary," began Von Wedell. "I have selected you because of your knowledge of English and your insight into the whole matter in hand. There is to be a meeting of certain statesmen in a certain spot in the Schwarzwald [the Black Forest]. You are to be the sole attendant of these gentlemen. You'll see to it that nothing of their identity becomes known. You will look after them in every way. You will destroy all writing, such as paper and blotters. You will burn any such things in the presence of Herr von Kiderlen-Waechter."

He paused impressively, and I found my mind in a whirl. What his words portended I could guess. This mission promised to be very interesting indeed.

"I want you to be at the place of meeting," Von Wedell continued, "three days before the arrival of these gentlemen. You will have to make arrangements as regards catering and so forth. You'll be the only attendant. Means have been taken to assure strict privacy in the district. Understand that we want this to be thoroughly cloaked. I suggest to you the idea of a hunting party. The details I leave to you. The gentlemen in question may or may not be known to you. I shall write you their names."

The Tremendous Import

HIS pen began scratching across a piece of paper, and I had a moment in which to realize the grave importance of this mission: the future of Germany menaced; complete isolation was in the making between England, France, and Russia; and the Kaiser was about to save Germany by a master stroke of diplomacy. Of what tremendous importance it was, however, I did not learn until I had gone down into the forest.

Looking up, Von Wedell tossed a piece of paper across the desk to me (the identical paper which has been reproduced in connection with this article). It bore these names in his handwriting:

Viscount Haldane, Winston Spencer Churchill, Admiral von Tirpitz, General von Heeringen, General Moritz Ritter von Auffenberg, Herr von Kiderlen-Waechter.

I suppose, had it been my first Secret Service mission instead of the climax of eleven years in the service, I could not have controlled my surprise. These men, all meeting in a lonely spot in the Black Forest range, foretold a grave situation. Especially was this true in view of the newspapers of Europe. Here was all the press having Germany and England ready to rush at each other's throats in war. It was the time of the German spy scare in England. And now here were the two powerful members of the English Cabinet meeting the Kaiser's Minister of War secretly.

Brains of Three Nations

BUT Von Wedell was not yet through.

"These gentlemen," he said, "will meet at Schlangenbad about the middle of this month. You know the place, in the Taunus Hills—one of the Emperor's hunting lodges. I suggest that you get down there to-morrow and have everything ready. You thoroughly know what is required of you, Doctor?"

On my assenting I was dismissed. I lost no time in getting home to my quarters and into comfortable togs. This mission needed some thinking out. And after I told my Basuto boy to pack my bag, I glanced again at the list Von Wedell had given me.

Haldane, Lord Chancellor of England, persona grata with the Kaiser—in fact, a personal friend. Churchill, First Lord of the British Admiralty. Waechter, the German Minister of Foreign Affairs and, despite court opposition, the trusted man of the Kaiser. Tirpitz and Von Heeringen, chiefs of the German navy and army staffs, the latter a second Moltke. When I came to Von Auffenberg's name I whistled. Von Auffenberg was Minister of War and the right-hand man of the Chancellor of the Austrian Empire. Thus three great powers were represented. Six men of this eminence, the brains and force of three nations, to meet in secret in a little obscure hunting lodge in the forest! It portended darkly for France; but how darkly I could not then conjecture. It interested me tremendously, but I consoled myself that I would probably know all when the party gathered in that secluded hunting lodge.

According to instructions, I presented myself early next morning at the residence of Herr von Kiderlen-Waechter. It was in the Thiergartenstrasse. Without delay I was shown into his Excellency's room. He was seated at his desk, and while we exchanged a few perfunctory words I permitted myself a moment's brief conjecture.

A Statesman and His Waistcoats

JUDGING from appearances, you would never have taken this portly, rubicund, iron-gray, bushy-browed gentleman for a statesman. But a statesman he was for all that, and the Emperor and Germany miss him sorely. I would have taken him for a Boer Dopper or an English yeoman. This suggestion was sup-

Digitized by Google

ported by the The one he had a lurid peach-b But once his steel-gray, deerhound eyes looked you up and down you forgot all about the fancy waistcoat and got right down to business. I told his Excellency I had come for his personal instructions. His first remark was like a dash of cold water in the face.

Atrocious taste in fancy waistcoats. On still sticks in my memory. It was ossom creation, spotted with green.

"Hum," he grunted, "you are rather young, but I suppose they [meaning the Emperor and Von Wedell] know what they are doing."

Besides telling me to "halt my maul" (a German military expression literally meaning keep your mouth shut, but implying the need for utmost secrecy) he gave me certain general instructions. But from them I could gain no idea of just what was going to happen. I could only guess. How big was the gathering storm he never even hinted.

Remembering Von Wedell's suggestion about the hunting party, I procured some guns and reached the station in time to catch the 12.30 express for Schlangenbad.

It was early in October when I went to the Kur Hotel and registered as Herr Bamberger from Berlin. If you ever go to Schlangenbad, look up the register. Schlangenbad is a mineral watering place in Prussia, near the Black Forest, and within easy distance of our ultimate meeting place, the hunting lodge that Von Wedell had mentioned.

The Secret Envoys Gather

I WAS alone at the hotel for several days. Then, traveling incognito, the dignitaries began to drift in. First came the Austrian, General Moritz Ritter von Auffenberg. A distinguished, quiet, unassuming gentleman, he is known to be high in the confidence of Francis-Joseph. I found the War Minister very fond of salmon fishing, and got quite into his good graces by enthusiastic tales of fly fishing in New Zealand.

Admiral von Tirpitz and General von Heeringen came next. The Admiral is typical of the German sailor, a big man, six feet, wide of shoulder, blue-eyed, and full bearded. His manner I found genial and courteous. His exact opposite was Von Heeringen, thin, almost crooked of body, stoop shouldered, unusually taciturn, and possessing deep-sunken, smoldering black eyes. He struck me as an animated mummy of the Rameses dynasty—come to think of it, he much resembles Rameses II.

The exact date of the meeting, as I recall it, was October 12, and the place a shooting lodge, named Ehrenkrug. On the morning of the twelfth I hired a vehicle and, loading provisions, wine, and other necessaries aboard, drove to the lodge, sixteen miles into the forest.

No farmhouse or other human habitation was within a radius of several miles. It was a large stone and brick building, somewhat similar to your colonial style. It had five or six guest rooms, a large general meeting hall, and a morning room. It being the property of the royal family, I found two old pensioners of the Imperial Forest Service in charge. They had a good fire going in the grate, which was welcome, for it was still a little damp and chilly, especially in this wet mountain forest.

Patrolling both ends of the road were a number of gendarmes. They were scattered through the woods, too, forming a cordon through which no one could come. Indeed, they had challenged me. About three o'clock in the afternoon the German and Austrian envoys came out from the hotel, and at a quarter to four (I remember Waechter remarking "They're three-quarters of an hour late!") the chug of a motor announced the others, Lord Haldane and Winston Churchill.

A Group of History Makers

I HAD never happened to meet Haldane before, and I found him the English gentleman personified—polished and reserved. Yet his reserve, tempered by age, blended into a genial mellowness. The usual English arrogance had evidently been subdued by reason of his cosmopolitan knowledge of the world. In speech and action he was a Chesterfield, but in appearance he was not unlike a canon or a bishop, a little ascetic looking, and rather bald.

Quite the other type of Anglo-Saxon, still boyish in looks, high-strung and nervous, erratic in speech and action, just a bit self-conscious, Winston Churchill was the youngest member of this remarkable gathering. I had met him during the Boer War, and as he took off his motoring coat he looked at me closely.

"I believe I've seen you before," he said.

"I met the right honorable gentleman in the Bloemfontein Field Hospital during the war."

"Ah, yes," said Churchill, his face lighting up.

He had had his wound dressed there; his recognition showed his remarkable memory.

After refreshments the envoys immediately adjourned to the big morning room, and I was posted outside to see that no gendarme or forest pensioner came within earshot. I was not present at the beginning of the conference, but after an hour had passed I was summoned. My first impression as I opened the door was of an air of tenseness. It was obvious in the way Churchill was staring across the table at Haldane. It was an ordinary large German oak dining-room table, and in the middle were two big shaded lamps. It was growing dusk, and after lighting the lamps I backed away to a corner of the room. I had a distinct impression of the features of the six men who were making history round that table. There were writing materials, stacks of paper, and documents at every place. Sheets and sheets of paper were covered with their handwriting. Only in front of Von Heeringen were the sheets blank, for he never makes a note on anything, carrying everything in his marvelous memory.

Kiderlen-Waechter and Churchill, squatting down by the fireplace and poking the burning papers with old-fashioned irons

Obviously what were the last words of a speech came from Moritz, the Austrian, as I entered: "And to make this all possible," he was saying, "we must break the Russian Federation in the Balkans."

The Pawns in the Game

FROM his place at the head of the table the iron-gray-haired Kiderlen-Waechter rose slowly. I noticed he wore another of those atrocious vests. Turning on his left he gazed at Churchill and Tirpitz; his careful measuring eyes then met Moritz, an expectant, slightly nervous figure at the other end of the table awaiting the reply to the point he had raised. And Waechter's eyes turned from him to Heeringen, to Haldane; then he spoke. I recall distinctly the import of his remarks.

"Gentlemen," he said, "the point raised by General Moritz must stand, and, of course, it needs the sanction of our respective heads. As Lord Haldane has pointed out, it does complicate matters to some extent. The Balkans concern Austria most; to my way of thinking it is quite within reason to accede this point. [As I write I recall vividly how grave they had all become. They knew what this meant — war in the Balkans.] On all main points," said Kiderlen-Waechter, "we are agreed. As indicated by his Imperial Majesty, the primary reason of our meeting is to come to a tacit understanding in regard to technical details. This we have done. It is unfortunate, however, that this possible phase, the Balkan point, has not been gone into before. I suggest that we adjourn, to inform our respective Governments of this point. If necessary, we will meet again on Wednesday."

Destroying the Evidence

THIS second meeting, by the way, was not necessary, all the Governments represented agreeing with Austria.

As Kiderlen-Waechter sat down, Haldane audibly concurred, the others merely nodding. Apparently the conference was at an end. But what had they accomplished? From the general tenor of their conversation it was obvious that they all agreed. But what were the terms of their bargain? Presently I was to know.

"Bamberger," said Kiderlen-Waechter, addressing me by the name I had taken, "gather up any pieces of paper on the table and consign them to the fire."

I replied: "Yes, sir." Then turning to the others, he continued:

"Gentlemen, select the memoranda you wish to keep. The rest is going to be destroyed immediately."

Reading between the Lines

WHILE they ran over their papers, saving necessary scraps, I stood back from the table. It was characteristic of the men that Winston Churchill should have taken the most voluminous notes, while Heeringen had not put down a line. I then gathered up every scrap of paper left on the table—blotters, little note pads, foolscap—used or unused. Everything was to go into the fire.

I went about this slowly and deliberately, taking care to glance at everything before I carried it over to the grate. I wanted to make sure that nothing of value was destroyed. Here and there came a good chance to read some of the contents. Piece by piece from the memoranda the different men had made, always being careful not to confuse individual notes, thus learning one by one their train of thought, the thing began to piece itself together for me. There were extensive notes on army and navy matters. Churchill, for instance, had carefully noted the full strength that Austria and Germany could muster in case of war. Kiderlen-Waechter had recorded the full strength of England and Austria as given by Churchill and Moritz. So had Moritz taken down German and English statistics. Obviously it was a triangular alliance, each noting to what extent dependence could be placed upon the other. Then there were data on the French and Russian armies and navies. The significance of that was (*Continued on page* 28)

The Lynching of the Night Marshal

By C. Hilton-Turvey

ILLUSTRATED BY W. H. D. KOERNER

ORDINARILY the Santa Fe train compasses its schedule with all the accuracy of the sun passing the Greenwich line. You might set your watch by its arrival and departure. To every rule, however, comes its exception. The eastbound was already two minutes late when the westbound stopped with a sigh before the small mid-continental station labeled Eagle City.

Half a dozen vestibuled doors flew open as at a magic word. White-coated porters dropped to the platform like active spiders descending on a thread. After them came, more deliberately, passengers who hoped to find a moment's surcease from the constricted space of the train—the miles upon miles of khaki-colored scenery which prevails in August on the plains.

They were people of the cities—many of that restless, buzzing hive we call New York: professional men, financiers, who even in transit kept an eye on the market; middle-aged women, puffed with opulence and the perpetual feast; pretty young girls; rich men's sons.

The young people might have been bound for the tennis court as they stepped out on the platform, middy blouses hobnobbing with white flannels. They strolled down to wonder at the great sundials that mark central and mountain time—clocks with the earth for a face, an overhanging beam for the single hand, and the figures outlined with white cobblestones.

Some curious ones found a momentary interest in peering through the back window of the boxlike station at a man who lay inside with bandaged head. He seemed indifferent to their scrutiny, but from time to time he raised himself upon his elbow and gazed fearfully at the closed door that separated the front room from the back.

THE topiofftical name Eagle City came in for some good-natured jeering as well as the settlement itself. The houses huddled together on the sun-baked plain as if in mutual defense against the flat, horizon-wide loneliness of the place—homes without a hint of green—a patch of garden.

While the passengers meandered up and down the platform awaiting the arrival of the delinquent train there was a sudden stir in the crowd about the sundials. Men came marching in a sort of rude order—three or four abreast. Upon them was a certain authority—a signification of the seriousness of their errand, whatever it was. So might men go for the redress of a grievance, the furtherance of a project near to heart. Rough plainsmen they were, with dark, lean faces sun-baked into grim masks as unchanging as their own dun-colored prairies. Here and there a bright bandanna fluttered at a stringy throat—an audacious note of color in the somber procession. The dust of the plains covered them like the bloom on a grape, from their high boots to their broad-brimmed hats.

The crowd made ready way for them.

"The rubes are blowing in to see the sights," one man remarked, his arms thrust upward in an expansive yawn. But these grimly silent men looked neither to the right nor to the left. They assembled themselves close-packed in front of the little station like bees swarming on a branch.

HOW does tension make itself felt in a crowd? Does it follow a wireless trail from one mind to the next? Does it creep like fire along the ground of men's minds till a great flame rises—till all are aware? Soon everyone on and off the train knew that even in so unlikely a place as Eagle City *something was about to happen.*

A jaunty young man in white flannels tapped a plainsman on the shoulder. "Say," he observed genially, with a wave of his hand at the close-packed crowd, "this isn't the annual picnic of the Eagle City Sunday School, is it?"

"No," answered the plainsman curtly. "This here is a lynching bee."

The conductor stood near the engine, watch in hand. He looked anxious. He was impatient to be off. Far off on the dun-colored plain a puff of smoke rose—a gray feather trailed after it on the brassy shield of the sky. The eastbound train was hurling itself along at a sixty-mile speed making up for its ten-minute tardiness.

A ponderous old gentleman let himself down from the train and hurried toward the conductor with an air of interest, his reading glasses pushed up to where his bald spot began.

"Is it true there is some violence on hand?" he puffed, shading his eyes from the hot sun with the newspaper he held.

The conductor nodded. "They're lynching the night marshal."

"The night marshal?" repeated the old gentleman. "Some sort of town policeman, I suppose. What was the provocation?"

"He beat up an old man—a stranger in town, I believe."

"Dear me!" the old gentleman exclaimed aghast. "Where's the marshal now?"

The conductor smiled at his consternation. "The marshal has locked himself in the ticket office. He asked a few minutes' grace to make his will and they gave it to him. When he is through they'll give him a chance to leave town, either by my train or the eastbound one. If he refuses—"

The official shrugged his shoulders and, turning, pointed significantly to a telegraph pole. A rope swung ominously there, its noose just above the heads of the crowd.

"Good God!" burst out the old gentleman, scuttling away in haste. "I must keep my wife from a sight of this!"

The conductor followed. "It's all right," he reassured him. "They've promised not to lynch the marshal till the train pulls out."

A blue-jeaned figure climbed up the pole. A hammer stuck out of his hip pocket.

The crowd watched curiously while he tested the strength of the crosspiece. The sound of his hammer rang out over the silence like the stroke of doom.

The porters hustled the women passengers aboard the train. An elderly lady sank down in a faint and was borne limp and unconscious up the nearest steps. Several others yielded to hysteria. The young girls appeared rather to enjoy the prospect of a new sensation. They clustered at the steps and exchanged excited comment, not always inaudible.

A lock clicked sharply. The station door swung open. A man stood on the threshold.

THE mob surged forward. Something between a sigh and a groan burst from them.

Some one reached in and dragged a chair from the office. A man sprang upon it and began to harangue the crowd.

"Friends an' fellow citizens," he began. "Our late town marshal, known to you all as Jim Gordon, is about to git what's comin' to him fur beatin' up a stranger—a visitor to Eagle City. We've giv' him his choice and he 'lows he'd rather swing at the end of a rope than to leave our beloved city. Which choice," the speaker went on approvingly, "does Jim Gordon credit—I will say that fur 'im—an' hopin' we'll all make the same choice when our own turn comes."

The crowd shifted on its feet.

The ringleader was quick to sense disapproval. He changed the subject.

"Now it ain't," he declared judicially—

"I ain't one to snivel fur mercy." He pointed to the rope swinging greedily over their heads. "I reckon ye didn't put that contraption there fur nawthin'"

Digitized by Google

the man was older than him—the was a visitor to Eagle City. Now a notion to the place. What 'ud

"S, shh, because point is this: We s'pose he'd took happen?"

The speaker paused impressively, then answered his own question: "Why, he'd git all his friends ter come settle here."

"That's so!" assented a deep voice in the crowd.

"An' then what 'ud happen?" demanded the speaker, warming up. "Why, just give us a few trainloads o' strangers an' our beloved city 'ud boom clear up ter the sky. An' every mother's son of us 'ud find his property gittin' ter be worth somethin'—which it ain't now," he added under his breath.

"Every man here is proud of our beautiful town," he declared stoutly, raising his voice and glancing toward the train steps crowded with passengers. So we must—"

The eastbound train thundered in. His voice was drowned in the ringing of its bell, the whine of its brakes. One could see by his fiery gestures and the effect on the listeners that he had roused them to a sort of fury. Presently he stepped down.

A LEAN figure took his place—a man habited as were the rest, in a shirt open at the throat, trousers tucked into high boots. A ragged gash in his shirt over the left breast suggested that something—a badge of office, perhaps—had been removed forcibly and with undue haste. His cheek bones were as high as an Indian's. Deep lines crossed his face from nose to mouth corners. Through the brown of his face the beard cropped, blue-black. His eyes smoldered like live coals in a cave, as with the heat of passion not yet past. It was the night marshal.

He began to speak hastily, as a man who knows his time is short and determines to make the most of it.

The mob surged toward him with a roar.

"String him up!"

"Knock him down!"

"Let him speak!"

"Shut his mouth!"

The chair was overturned in the struggle and smashed into kindlings.

The division of feeling found vent in several hand-to-hand fights in the crowd. Guns were pulled out. The night marshal was forgotten for the moment. The mob was at half cock—poised on a hair trigger—ready for violence toward anyone who opposed it.

The previous speaker dived through the doorway—caught up a soap box—mounted it, yelling like a fiend one sentence over and over. (*Continued on page 30*)

The Tyranny of Beauty

Chapter IV—The Publicity Game

By "Jane Bunker"

ILLUSTRATED BY MAY WILSON PRESTON

AFTER Miss Cryder had begun coming to the "Little Pink Shop," she and madame had struck up one of those desultory friendships founded on the perception on each side that the other woman might some time be useful.

And now at last Julia Cryder began to play an active part and justified the foresight that had kept her handy. My aunt sent for her and the fiat went forth: "Let there be literature," and Miss Cryder at once set about creating it to order at so much per creation.

Up to then madame had produced what we carried, and it hadn't been altogether satisfactory; but never had it seemed so trivial, so inadequate to the magnitude of our business as under the critical professional eye of little Cryder. She had a prevailing sort of way about her, like a knowing hawk pouncing on the common facts of life from on high. I could see that my aunt was uneasy now that she'd come to the point of ordering, and floundered through a rather vague description of what she wanted and didn't want, interspersed with sudden breaks. "But you know how to get up that part without me going into it—I don't pretend to be lit'ry—you do what's right—tell a good story and put in a lot of facts."

"But, Mme. Del Mar, I've got to have one or two of those facts to put in about the preparations—this tint, for instance—how it's made and what it has in it—something to 'tie it to the ground,' as we say in literature," protested Miss Cryder.

MADAME handed her an unstoppered bottle of the tint. "Looka that — smella that — temme whatcha think."

"Roses?" sniffed Miss Cryder; then viewing the bottle against the light and repeating, "Yes, roses," after a second sniff.

"Essence of rose petals," corrected madame.

"Doesn't that come from Persia?"

"We import it from there."

"Persian gardens! How lovely!" Miss Cryder enthused suddenly. "I see the story now! Persian gardens—roses of a special variety—cultivated by one prince—variety bred for centuries until they yield this perfect color—peculiar climatic conditions—secret methods of growing—"

"Wait," commanded madame. "Lucy, get your book and take this down while she talks it."

. . .

I saw dismay strike Miss Cryder's little peaked face like a blight—she knew the woman she was dealing with, but she had the pluck to object, though in guarded language, explaining that she would have to read up on Persian gardens and varieties of roses—for which I respected both her acumen and her position in the matter, and, feeling sorry for her, I sat still.

Her full explanation of the preliminary work required for a good story convinced madame once for all that she could not catch this sort of literature on the wing and serve it herself, which I feel sure she'd meant to do and save her twenty-five dollars, and prepared her for Miss Cryder's "There must be a handsome picture to accompany it—palace and gardens—something suggesting wealth and exclusiveness—"

(Madame's eyes fairly lapped up those two words and she featured them later for the common herd: "Those who desire the preparations of wealth and exclusiveness," etc.)

"—Not merely the beautiful but the recherché—an Old World touch—glamour—mystery. You'll have to get a real artist to do that properly—"

"Where do you get one?"

Miss Cryder hesitated, and I saw she was keeping down a smile and was just a trifle taken aback by all the question implied; but she managed to bring out with a serious face: "Well, Mme. Del Mar, I shall have to do a little looking round and asking—most of the good artists have orders ahead, you know. But I do know one young man who's traveled in Persia—he could do it—if—he'd consent to—ah—undertake it. It's possible he might as a—favor to me."

"How much'll it cost?" demanded madame.

MISS CRYDER hesitated again—she'd had no tips from Miss Beekman on the matter of illustrations as she'd had on her share of the work and what she might expect, and she felt a sudden financial chill in the atmosphere. Madame picked a crumb of chocolate éclair from the Irish lace on her bosom and repeated: "How much will it cost?" in an aggressive tone.

"I think—I might be able to get the picture for—er—a—er—hundred dollars," Miss Cryder brought out with a now-I've-done-it expression and looked appealingly at me.

Madame ate the crumb she'd retrieved from her bosom and gave the verdict: "Offer him fifty. Tell him he can do it after hours, so it's the same as him finding money. And tell him I want those roses *red*—bright red—he needn't to save his paint on them; I want none of these fade-away pastel colors—these purply shades you're seeing on all the hats now—but color you can see a mile. And tell him I want them big as cabbages—they gotta look healthy—gotta prove that Nature Tint could have been made out of them. They gotta talk my goods—that's what I'm paying him for—talk with paint—is that clear?"

Like many a greater than he, the young man decided that a bird in the hand was worth two in the bush and accepted the offer, adding a large conspicuous signature which madame would have had removed had not Miss Cryder convinced her it enhanced the value of the picture; so madame put a two-hundred-dollar frame around her Persian Garden with a plate, "Owned by Mme. Del Mar," and exhibited the whole, after reproduction, at a Fifth Avenue gallery, paying for window space. But think of her diabolical luck!—the artist is famous to-day on two continents for his

Persian pictures, and his Rose Garden is now one of the art treasures of madame's salon, where she exhibits it to her friends, proudly telling how she "bought it for fifty when it was new and has refused that dealer's offer of two thousand for it without the frame."

Thus was a New Jersey beet patch transformed into a Persian garden; thus fate and luck and a withered little sob sister prepared the way for the next expansion that carried my aunt to the fringe of the great social world.

With a competent servitor like Miss Beekman attending to the parlors, and a blood relation whom she could absolutely trust supervising the establishment and manufacturing the secret "standard" preparations, my aunt was now free to throw herself upon the outside trade of the world at large, demonstrating and placing "our specialties" not only in New York, but in a string of cities between Boston and Washington; and at the same time she was gathering and training a staff of demonstrators for the smaller cities.

I knew little or nothing of these activities. To be frank, she had become alien to me and our little home; she'd begun to seem "madame" to us—a woman of another world than ours. She dressed extravagantly, always said "gown"—had bought herself a three-thousand-dollar diamond ring; and patronized the most expensive hotels wherever she traveled. She was away often two or three weeks at a time, "and never at home when she was home," as my grandmother said; so I can say very little more of the intimate details of my aunt's life than that the money was now pouring in and she was bailing it out by the bucketful.

But she was going through a period of awakening that ended in her seeing the city in its larger aspects and herself as a power—she was now dipping into its social life—the public life, of course, with its purchasable joy, its glitter of jewels and clothes, its gleam of white shirt fronts and patent leathers, open to all who could pay the price.

SHE could now. She had the clothes and the jewels. She knew how delicately to invite an escort who hadn't the money to invite her—it was "on the business." Evening after evening she would rush home to dress, but at what time she came home to bed I never knew—I was too dead to the world to hear her latchkey and her muffled steps as she tiptoed to her room. We were witnessing the transformation of a commercial beet into a social rose.

While my aunt grew more expansive, I had grown more retiring and reserved, partly because as she took larger and larger risks my responsibilities kept pace. I was a cross between a brewery Percheron and Good Old Rover. But there were other reasons. I saw Miss Beekman kotowing and currying favor with madame; I saw the others kotowing and currying favor with Miss Beekman, and from that I naturally saw their friendly advances to me as currying favor and ko-

Digitized by Google

towing still, and my sensitive dignity shrank, repelling the advances—I wanted to be liked for myself, not because I was my aunt's niece and a power behind the throne—or supposed to be; and I fear I ended by getting myself disliked for just that reason.

One day about closing time one of the younger operators, seeing me listing stock for the expert accountant who still certified the books, and so tired I could hardly stand, came up bashfully and suggested:

"Oh, Miss Lucy, you do look so worn out—all sort of frazzled. There's nobody in my chair now. Come sit down and let me give you a facial—you don't know how it'll rest you."

I saw her kindness, alas, as a piece of Beekmanism, thanked her coldly, saying I hadn't time for luxuries, and presently heard her from behind the curtains of a booth telling another operator that I was too stuck-up to have anything to do with the girls because I was the boss's niece. I was mortified enough to cry, but before I'd thought how to explain my refusal away the girls were gone.

WHAT funny results such trifles have sometimes! Next day I was still listing stock when M. Perriot ambled up. He'd always been rather gallant—was so to all the ladies who came his way, so I'd never taken it personally. Now he was in deep despair about a Mrs. Somebody's transformation—she declared it didn't match her hair, though made from her own combings—that a cheap hair had been substituted for hers and she refused to accept it and pay—a common trick with a certain class of women when they find themselves suddenly short of money.

"She says zat I—I—I—M. Perriot—ze premier coiffure artist of New York—substitute for her so beautiful combings ze pigtail of a Chinaman in order zat I keep her so beautiful transformation to sell to somebody else—mon Dieu!" he wailed, frightfully outraged at the accusation and the slur on his artistic conscience.

"Don't worry about her—she's not worth it," I advised. "I'll drop her a note to-night and ask her to step in some morning and examine her transformation by sunlight—she'll recognize it if we find her an excuse. I'll tell her we'll hold it thirty days for her and then sell it for costs. She'll very likely have the money by then."

She was a stockbroker's wife, putting up appearances on nothing certain a year. I'd begun to know the breed by then.

LITTLE monsieur was delighted—said I showed the same amazing ability in dealing with a customer as did my so estimable aunt—gave me a great deal of pretty French flattery, and then demanded why I did not make more of myself. "Ah, Mees Lucy, sit down in my chair and let me show you how beautiful you can be!"

Warped by the result of my cold refusal of the facial, I sat down and for the first time in my life let somebody do me up until I didn't know who it was when I looked in the glass and thought myself a perfect fright. But monsieur was so enchanted at the results of his handiwork that he warmed to me, and then and there began a kind of friendship between us. I came to feel him a comfort; and in the end it was he who—for my sake—ran to earth Miss Beekman's plot to steal the business.

SHE was now manager of the parlors—a position she'd demanded and received without increase of salary.

"Get results, Henrietta, get results—show what you're worth to the box office as manager," commanded madame when she bestowed the grand title, and winked up her sleeve at the same time. She communicated to me after the woman had gone back to the parlors: "Old Beekman's been figgering out for some time how she could stick me for a raise. Now I've put her where she can't! Take her about six months to show results enough as manager to let her risk it. If she had the business sense of a barnyard hen, she'd have stuck me for the raise first and the position afterward—and gottem both! Now you watch her work to prove her worth under the name!"

To hear his "Ah mademoiselle—c'est vous!" and see his smiling bow, no matter who was in his chair, you'd have thought I must be a countess to say the least

MY AUNT regarded it as a great joke on Beekman and a clever bit of insight in herself to see how, by granting one desire first, she'd made the request for the other temporarily impossible and saved a couple of hundred on wages, which she'd expected to have to pay, for the woman was worth another five.

However, events showed Beekman less a fool than my aunt thought. Beekman was not without her eye to the main chance and took her new title as seriously as a knighthood. There were now two managers to the establishment, and though I continued my general supervision in my aunt's absence, gliding out of my den every two hours and leaving my everlasting messing with grease and pink dye to have a look around and see that everything was moving smoothly, Miss Beekman now rather openly resented these visits to her domain because, she said, it "was the spying of one equal on another," and she considered it far worse than what I'd done before.

To make up for her hostility, obvious enough by this time, M. Perriot was more than cordial—he was deferential, and more so to me than to madame herself—and to hear his, "Ah, mademoiselle—c'est vous!" and see his smiling bow, no matter who was in his chair, you'd have thought I must be a countess to say the least.

BUT nothing escaped Miss Beekman's furtive eye, and even this innocent friendship (that never went farther socially than an occasional lunch together in a restaurant of the marble-topped table class) soon roused the green-eyed monster in the breast of my fellow manager. She took it out on the poor little Frenchman. She'd have dismissed him had she dared—as manager she now did all the hiring and firing—but M. Perriot was our one celebrity. Had he not taken a gold medal at Paris and was he not recognized as a man who created heads? But he was a sharp business man as well—he had many customers who, with curling lips, declined to patronize other chairs in the establishment. These ladies had their own private masseurs at their houses, but—since the mountain refused to go to Mahomet, Mahomet went to the mountain and paid well for the privilege of sitting in his chair.

But it was more than celebrity that held his trade; he not only performed a work of art, but one that would last a week, with care—an important consideration to many a woman keeping up New York appearances. After securing her to her hair with sixty pins, he taught her how to tie on a veil that should preserve the creation while she slept; and she loved him for his thoughtful regard and freedom from the grasping spirit of America—and, of course, came twice as often as she would have done for an ordinary coiffure that wouldn't last a week.

I think Miss Beekman knew if it came to a showdown she'd be the one fired, but pique and jealousy at last got the better of her prudence. The pricks and stings, the wounds to respect that such a woman can inflict in daily intercourse, are innumerable, and she accomplishes this in a way to make your own resentment seem to lower you to her level.

SO MONSIEUR bore her petty demands for accountings in such matters as towels, her sneers and furtive glances until one day when she promised a Mrs. Vanderwater—a "society leader" whom madame had struck up quite a friendship with—an immediate hair dressing, though two of his regulars were ahead of her, and marched her lady up, ordering him to do her next and let the others wait.

He flared at that. "I do her in her turn—not sooner."

"Well, it's Mrs. Vanderwater—I've promised her and she's in a hurry—she's got to catch a train."

"I'm going for a train, and I've been here nearly an hour," spoke up one of his ladies.

Monsieur motioned her to a chair and shot a few arrows out of his eyes at Miss Beekman, which she returned with a few daggers from hers. Mrs. V. with a cool, "Then of course—" stalked away.

Monsieur looked over his shoulder as the door slammed and delivered a few more arrows, which Miss Beekman cherished in her bosom till closing time, and then surged up and demanded an apology for the way he looked at her.

He bowed and demanded an apology for the way she looked at him.

"Me! Apologize to a *man!*" she snorted.

"Not to a man, but to an artist—wis a conscience," he corrected.

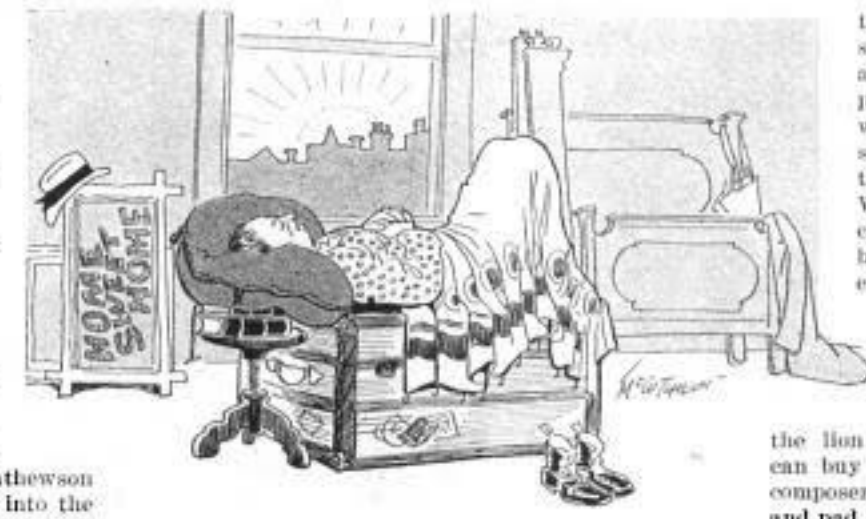
"I think I see myself!" she told him.

"Zen I remain away till you do—I come not here to be insult'," said he, and put on his hat and walked out.

SHE didn't take him seriously—she was far too accustomed to swallowing insults herself for the sake of her pay envelope to believe in the artistic temperament to that extent; but when ten o'clock came next morning and no monsieur—Saturday, with the matinée rush beginning—she worried; by eleven she was in a fright; by noon she came tearing down to the laboratory calling me to "open quick" and then told me her version of the tale of woe.

I advised her to apologize by messenger as the shortest way out of it and she turned away in scorn.

But by four o'clock, with the Saturday dinner crowd on, she was in a panic—twenty customers had come and gone in disgust—and she all but wept on my shoulder: "Oh, what will the madame say? She'll blame me—a woman always blames (*Continued on page* 35)



He flared at that. "I do her in her turn—not sooner." "Well, it's Mrs. Vanderwater—I've promised her and she's in a hurry—she's got to catch a train"

Rotsam and Jestsam

Housecleaning

The curfew tolls the knell of parting day.
The patient herds fight dumbly for a strap.
The car ejects a worn and weary chap.
Who hastens home to hit the waiting hay.
He smiles at thought of rest. His eager way
Into the hall he takes; and in the dark
The china closet falls upon its prey
And many a chair and table leave their mark.
Lost in a chaos, drear and chill and dark,
He hunts a crust and curls in sad distress
Upon a trunk to sleep and, with the lark,
To rise and beat the rugs; for cleanliness
Is next to godliness—though, strange to tell,
It sometimes seems to get there via hell.

The Venerable Mathewson

DURING the last few days Christy Mathewson has moved out from winter quarters into the sporting columns again and has become a hero to every American who believes that business should not be allowed to interfere with baseball.

Mathewson is now an aged man and has only a short time to live—in the sporting headlines. Within a very few years he will pass away into the historical section of the baseball guide and will have to begin a business career. This is one reason why he is so deeply venerated. Years after the ordinary hypnotizer of the unemotional baseball has slid out of the big league down into the bush towns, Mathewson has toiled on, pitching better ball than ever. Year after year, while his obituary has rested on the make-up stone of the baseball section, he has tottered out and held down some world-championship team to two or three hits. And now, in the twilight of his career, when he will probably never see thirty-five again, he is still the corner pillar of the New York Giants and has to do the heavy work whenever the high-priced youngsters blow up with distressing reports and peddle pies instead of inshoots.

Mathewson was originally a college dude from Bucknell University and created great laughter among the giants of the profession when he broke into the big league many years ago. At that time the custom of mixing muscle with various invigorating liquors was in great vogue, but Mathewson substituted brains for alcohol, and the experiment was a success. His educated inshoot has been one of the most widely sought-for balls, but very few players are able to locate it with any success. Frequently Mathewson will pitch a nice new ball all through a game and turn it in at the end with only two or three swat marks on it.

Mathewson is large and good-looking, but is not as flexible as some pitchers. When delivering the ball he does not wind his left leg around his waist and look frivolously into his hip pocket. Instead he gazes earnestly into his opponent's think repository and then feeds him a projectile about four feet from where he was expecting it. Mathewson would have made a great reactionary statesman. He is an expert at giving people exactly what they don't want.

It Has Happened Already

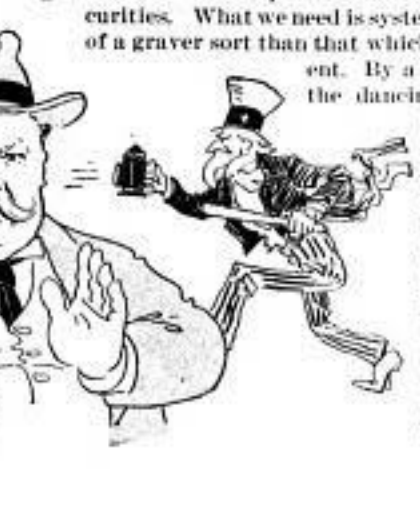
MR. TAFT, who led the Republican party into its present unwatered and dismal Sahara, was in Chicago recently, and while there expressed great concern over the railroad situation. "If they don't leave the railroads alone in New England I don't know what will happen," he declared.

Still, on this subject we have the benefit of past experience. They left the railroads alone in New England for many years and we know what did happen.

The Tango Year

THE winter of 1913-14 will live in history chiefly because of the tango, which grew from a few sporadic and neglected cases of the preceding years to an infection which swept the country like the famous influenza epidemic of the nineties.

The old dances preyed chiefly upon the young. The tango spares neither young nor old. Decrepit ruins who have decorated the side lines at dancing parties for forty years have trotted themselves young this winter, and the young Congressman who left his district in a blaze of glory in the spring of 1913 to serve his country for the first time discovered on his return for Christmas that his people had forgotten him in their enthusiasm over the young college junior who had returned for the holidays with seventeen variations of the grapevine and a brand-new dance called "The Alley Slink."



There are many who believe that the nation will convalesce from the tango in a short time. Meanwhile horrid complications have made the life of the casual and uneducated tangoist or tangolier—whatever he is—a wilderness of vexation and disappointment. Day after day he labors up and down the floor in the grip of a teacher gasping, "One-two-three-four—*dip*." "One-two-three-four—*grapevine*," and learning, as painfully as he ever memorized logarithms, the new dances.

Night after night he goes out in public to perform, only to find that the partners he selects have learned an entirely different set of steps. Dances in America this winter have consisted mainly of foundered and distressed couples standing in the middle of a ballroom floor explaining to each other the Denver, New York, Chicago, or Columbus (Ohio) system of clutches, speeds, loops, reverses, and skids.

No one has benefited from the present chaos but the dancing teachers, who are getting $10 an hour for adding new dances to the present mass of undigested insecurities. What we need is system to avoid insanity of a graver sort than that which afflicts us at present. By a very simple device the dancing teacher can be eliminated and harmony brought out of the present muddle. If we must have the tango, let us standardize our gyrations and reduce them to signs and symbols. Let one sign represent the dip, another the grapevine, a third the trot, and others the kick, the slide, the scramble, and the clinch. Let these signs, with appropriate beats and counts, be reduced to a printed page—about the size of the page from which a cornetist can blow two miles of quickstep. Then let a simple holder be devised so that when a couple essays to dance the "Waco Wabble" or the "Cincinnati Clamber" the man can hang up the notes for the same where both he and his partner can see them—on his left elbow possibly.

By this means new dances can be copyrighted and sold by the million for forty cents apiece, as sheet music is to-day, and the dancer who goes to a ball with a suit case full of the latest hoof harmonies will be the lion of the occasion. The tired business man can buy his skill in sheet form, and eminent young composers will gyrate solemnly by themselves, pencil and pad in hand, while publication agents wait breathlessly without for their chance to seize the new masterpiece and hurl it, damp from the press, to all the corners of the world. It is really a shame to let this idea slip without first patenting it.

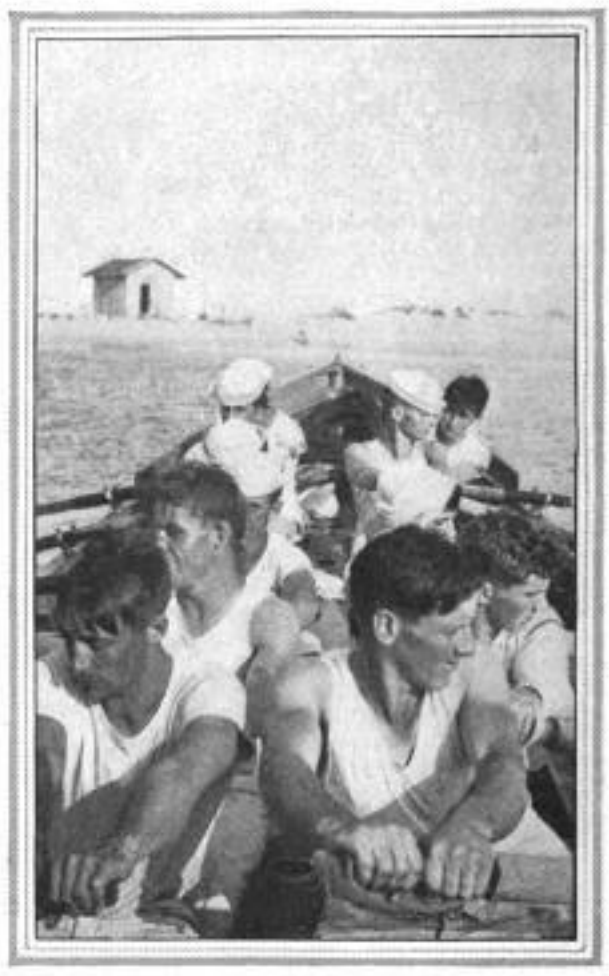
Where Chicago Is Drifting

IN CHICAGO, world-famous for pigs, population, and prairies, indications point to a very busy year.

After a severe struggle the Pennsylvania Railroad seems to have consented to plant its new $50,000,000 station where the advocates of the city beautiful have located it on their magnificent pink-and-blue plans. Another quarter of a mile of lake is to be appropriated and made into a park. Twelfth Street is to be made into a boulevard. A $4,000,000 museum is to be erected. The Saint Gaudens statue of Lincoln, possibly the finest piece of American sculpture, is to be planted at last with appropriate ceremonies. Mr. Lorado Taft will make great progress in the job of decorating the city with the $1,000,000 worth of statuary provided by the Furgeson fund. The Chicago Grand Opera Company will be enlarged to take care of the surplus receipts. The Cliff Dwellers Club, composed of artists, authors, and those who swear by them, is being compelled to raise its membership limit. Another four acres of buildings are to be added to Chicago University; and the last annual report shows five times as many visitors to the Art Institute as there were to the British Museum during the same time.

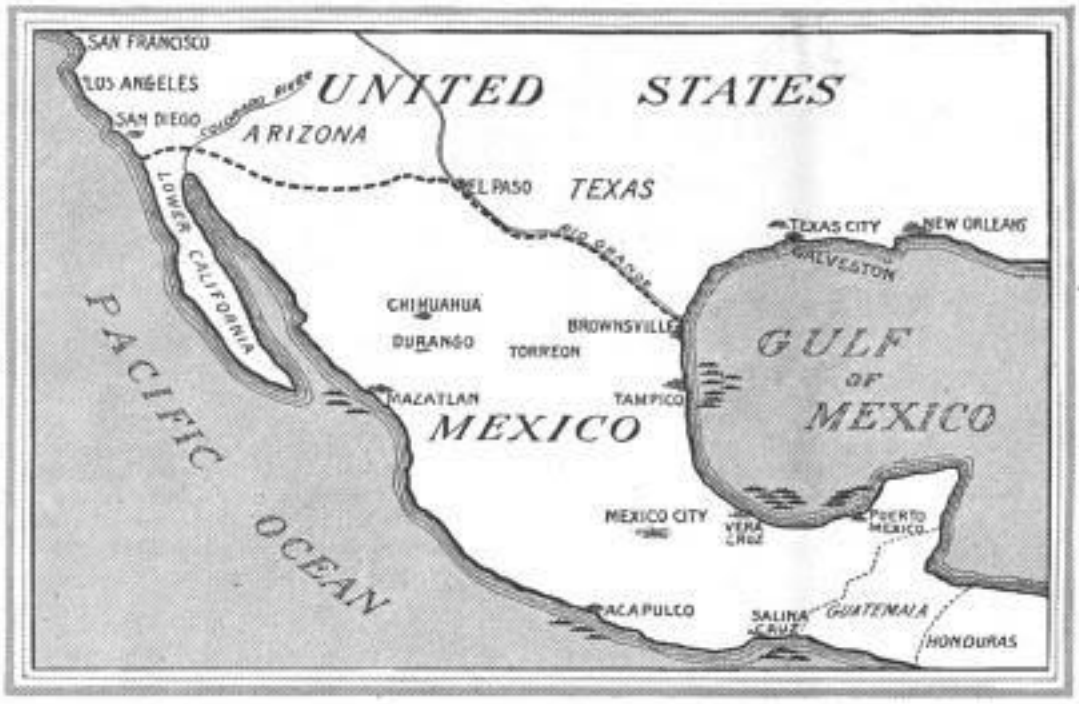
Presumably more pigs will perish this year in Chicago than ever before, and Chicago business men will keep on becoming millionaires in the old, impetuous way. But those scornful cities whose architectural and artistic glories are getting a little bit threadbare and season-cracked will do well to watch Chicago more and talk about her less. More strangers are visiting Hull House than are going through the stockyards, and the men and women of her most exclusive society paraded to the polls early in April, arm in arm, in the interests of the municipal ownership of aldermen.

First Aid to Worst Golfers—Putting



PUTTING is at times a genius and at other times a justification for homicide. There are days when the worst dub can put a golf ball into an undersized tomato can at twenty paces with one putt. There are other days when he could throw a camel through a needle's eye by the offhand leg with more accuracy and success.

The great thing about putting is to restrain the temper. Few people realize this. They foolishly imagine that the chief object of the game is to put the ball in the cup. After they have put it in they reach down, painfully, and fish it out, perfectly satisfied. It is a childish trick. Still, it will do a man no harm if he does not get childish over it. The man who wears out a perfectly good disposition putting and goes home in a frame of mind which makes the children slide hastily under the table when he speaks to them at dinner ought to have his putter amputated from his frenzied clasp by process of law. He doesn't understand the game at all.



The dub can triumph at putting where the expert will fall down miserably. (*Concluded on page* 29)

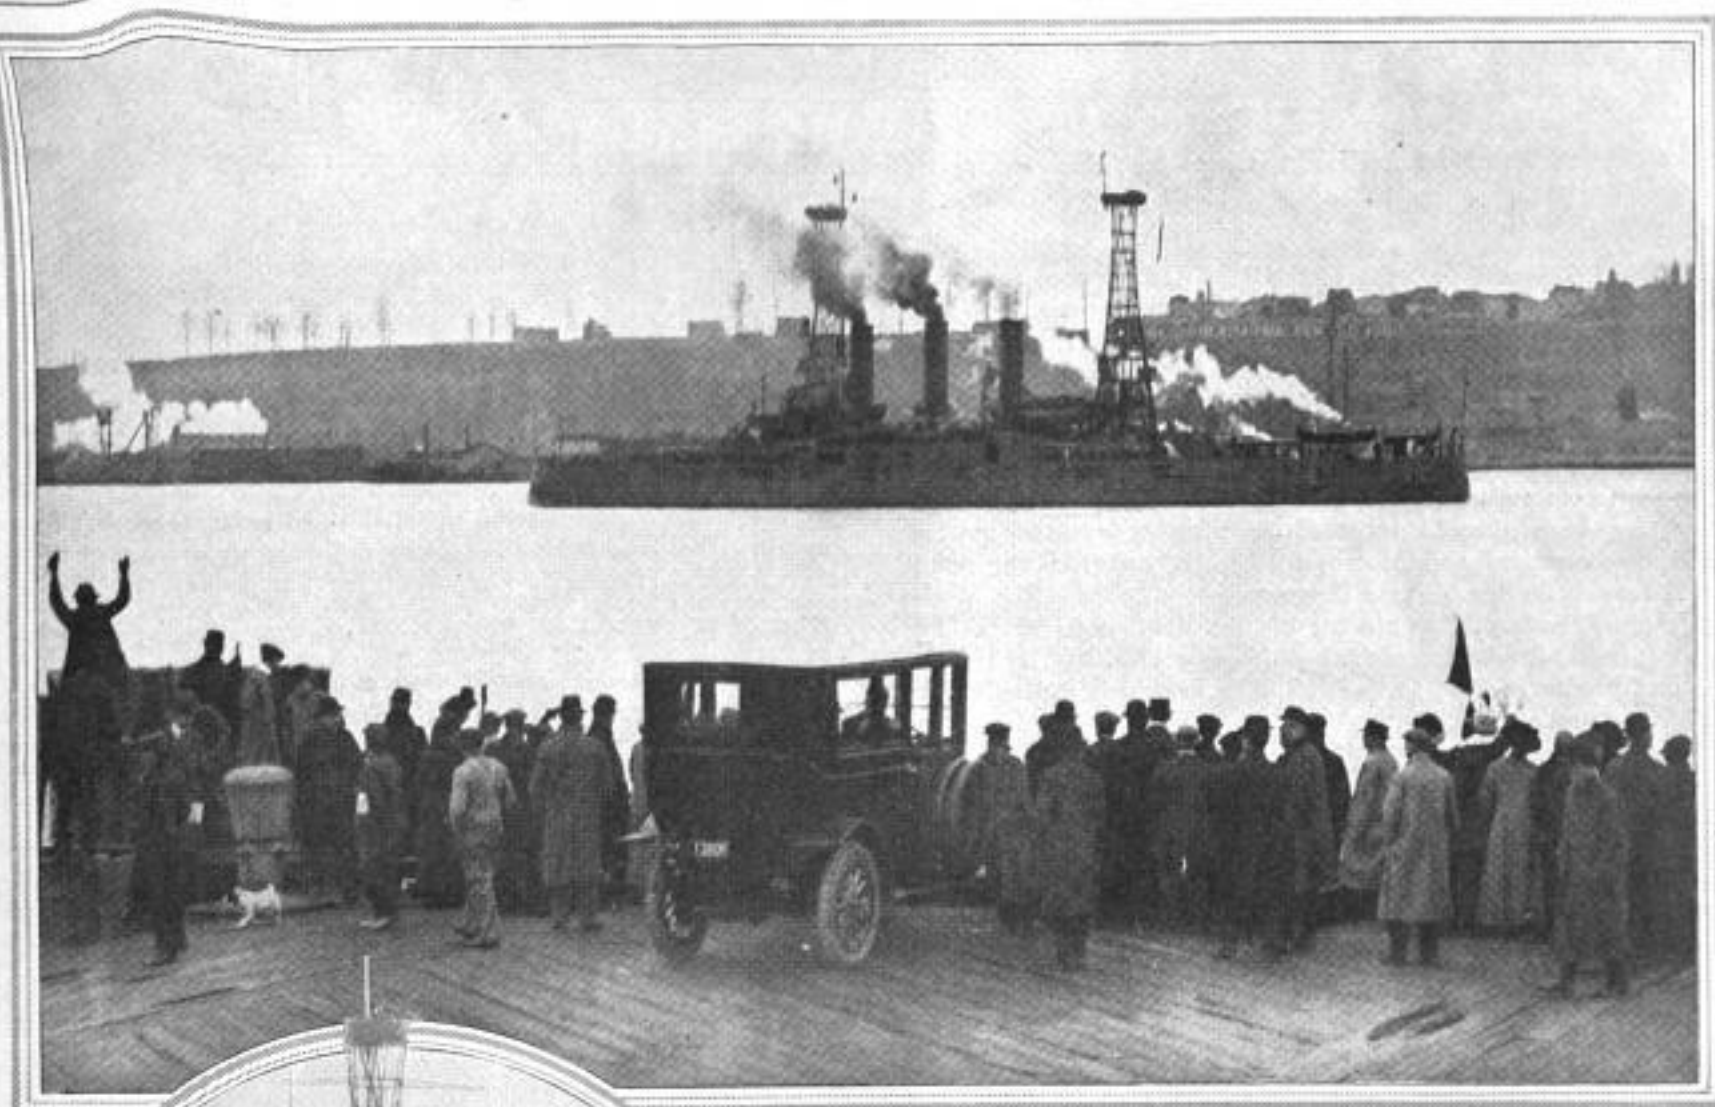
The Growl of Our Navy in Mexican Waters



THE story of the hurried assembling of American warships at the chief seaports of Mexico, following the unwarranted arrest of bluejackets by Huerta's men at Tampico, is told pictorially on this and the opposite page. It is a record of quick action on the part of the officers in command of the battleships in North Atlantic waters. It is also the story of the first vigorous demonstration made by the Wilson Administration in connection with Mexican offenses against American citizens and property.

COLLIER'S

On the Brink of War

THOUGH THE TAMPICO INCIDENT IS, judged from one point of view, trifling and wholly inadequate as a cause for war between two nations, it occurs as the culmination of a series of nagging and deliberate insults. As these lines are written American warships are speeding to both coasts of Mexico, and a blockade of Mexican ports is prepared. What the issue will be we are in no mood to prophesy, but this much may be said, that Americans generally seem united in supporting the Government in whatever steps may be required to place our prestige on firm ground throughout the Americas and to repair losses incurred as the result of a flaccid foreign policy. From the moment he entered the White House, President WILSON's treatment of the Mexican situation has been based upon the highest personal ethics, governed by the best intentions—and predestined to failure. The error which causes us the present alarums and excursions, and may cost blood and treasure too, has been one of misunderstanding the Mexican temperament and the actual conditions. Hating intervention above all things, Mr. WILSON adopted a policy whose logical end was intervention. Detesting war and foreign aggression, he has been compelled to call upon the army and navy. Two courses were open to the President: he might have recognized the Huerta régime (no worse in its origins and morals than most of those which preceded it), or he and his Secretary of State might, in withholding that recognition, have impressed Mexico with continuity and firmness of policy. There has been the same difficulty in dealing with this situation that is found in handling a high-strung, ill-bred child, with the added difficulty that this child is armed and insolent and that there are several millions of him. Mr. WILSON's striking achievements in domestic politics cannot be gainsaid, but they are, momentarily at least, obscured. What the situation will be when these words reach our readers, no one knows now, but the President seems to have dismissed pride of opinion, recognized the job ahead of him, and placed his hand firmly to the plow. With LINCOLN he may well say: "I claim not to have controlled events; I confess plainly that events have controlled me."

Oscar S. Straus on Canal Tolls

IN TESTIFYING before the Senate committee on April 15, OSCAR S. STRAUS, ex-Secretary of Commerce and Labor, said:

"Do you think the exemption of tolls would be of any public benefit?" continued Senator BRANDEGEE.

Mr. STRAUS replied that he did not think so, but was not in position to express an expert opinion on that subject.

"I do not believe it will affect railroad rates," he continued. "It will simply give to the coastwise shipping from $1,500,000 to $2,000,000 annually. The exemption takes that amount out of the pockets of all the people and gives it to the coastwise ships."

This is an exact summing up of the whole matter. These are the facts of the exemption proposal, and by these it must be judged.

A River of Fancy

CAN THE SPIRIT OF THE MISSISSIPPI ever be completely expressed by any one writer? MARK TWAIN's yarns of life along its banks are unapproachable, but the real mystery and romance of a great river are not for him. Oddly enough, ROBERT LOUIS STEVENSON caught the mood, though he was not writing of any special river. In "Will o' the Mill" an old miller answers the youngster who asks where the river goes:

"It goes down the valley," answered he, "and turns a power of mills—six-score mills, they say, from here to Underdeck—and it none the wearier after all. And then it goes out into the lowlands, and waters the great corn country, and runs through a sight of fine cities (so they say) where kings live all alone in great palaces, with a sentry walking up and down before the door. And it goes under bridges with stone men upon them, looking down and smiling so curious at the water, and living folks leaning their elbows on the wall and looking over too. And then it goes on and on, and down through marshes and sands, until at last it flows into the sea, where the ships are that bring parrots and tobacco from the Indies. Ay, it has a long trot before it as it goes singing over our weir, bless its heart!"

There is a glow of imagination and poetry in that, the same sort of feeling which induced the Indians to call one of their streams "Singing River." If only there were no other side to the picture!

—And of Fact

BUT THERE IS: "*The Mississippi receives the flood waters from thirty-one States, and its drainage basin comprises 41 per cent of the area of the United States!*" This sentence is from a volume entitled "Floods and Levees of the Mississippi River," by BENJAMIN G. HUMPHREYS, member of Congress from Mississippi. The book is copyrighted by the Mississippi River Levee Association, and we know of no other single work so comprehensively setting forth Mississippi River flood conditions and the possibilities of their remedy by levee construction. The work professes to be no more than a compilation of cold facts, but beneath it all runs the unspoken plea for a nation-wide consciousness of what share the Mississippi under control may play in the nation's life. Nowadays the whole country is carried away by a fervor of appreciation of what the Panama Canal may mean to us all. How long must the Mississippi wait for its chance to bestow—like STEVENSON's magic river—nothing but beneficence?

Facing the Future

IN SOME POEM KIPLING used a phrase one cannot forget about "turning a keen untroubled face home to the instant need of things." He was talking about the American spirit. A striking illustration of this is given by the Wells-Fargo Express Company in commenting on the new era in the express business. After all the protestations of ruin, the hour of peril strikes, and this, in part, is what they say:

The new rates have turned the tide of business—just as a good many keen prophets of the express prophesied. At the time this is being written traffic has begun to increase to a very perceptible degree. The business world has awakened to the commercial opportunities of the new rates.

Now is the time to talk the rates. They are new and they are low. And there is hardly a shipper who will not show interest in the ingenious block-and-zone structure on which they are based.

The big thing just now is the rates themselves. They are new and low, and they do spell commercial opportunity.

This is creditable to the Wells-Fargo people, and, indirectly, a very great tribute to FRANKLIN K. LANE, now Secretary of the Interior, who wrote the express-rate decision. It is interesting to note the discovery that lower rates may mean more business. ADAM SMITH published this idea in his "Wealth of Nations" in 1776.

Of Course They Aren't Serious

WHAT FOLLOWS is from the Enid (Okla.) "Events":

"So COLLIER'S finds itself in a minority."—COLLIER'S WEEKLY.

Impossible!

Wherever stands COLLIER'S the heavens roundabout are peopled with myriad hosts ready to swing the mighty cudgels for truth, justice, right. COLLIER'S—alone and unassisted—is more than a majority—at least five-sixths. As Kise WILLUM uster say: "*Me* und GOTT!"

This is unjust. COLLIER'S is often in a minority. Sometimes the minority proves catching and becomes a majority—but how can we help that?

Seeing Things at Night

THE "PUBLIC LEDGER" of Philadelphia fears that WILLIAM LORIMER, the Illinoisome, may be elected to the United States Senate, thus vindicating its judgment as to the popular election of Senators. Perhaps. But why did not the preference given to QUAY and PENROSE shake the "Ledger's" faith in legislative choice? It might be as well to await the event and compare the actual results. That is what practical men call a performance record.

Frederick Weyerhaeuser

HE CAME TO THIS COUNTRY as a laborer. When he married he was earning a dollar a day working on the slab pile of a sawmill at Rock Island. Those who appraise his fortune, largely invested in growing timber, as potentially worth a billion dollars, do undoubtedly exaggerate—but the figure itself is not material. From a brewery hand to one of the richest men in the world is the span of the career of FREDERICK WEYERHAEUSER. By our laws we threw away the legitimate interest of the people in our great forests, and Mr. WEYERHAEUSER picked it up. That a German immigrant boy could amass such a fortune in fifty years is quite to his credit, but it is vastly more to the discredit of the laws which allowed him to do it. He died the greatest monopolist of our forests, but it was not the fault of WEYERHAEUSER that we threw them away. He took them over, and is said to have been rather in advance of the age in conserving them. Possibly it is better for the nation for a WEYERHAEUSER to own forty million dollars' worth of our children's heritage in forests and mines than to have it distributed among four hundred less efficient men, each owning timber lands to the value of a hundred thousand dollars. Whether this great natural resource

Digitized by Google

THE NATIONAL WEEKLY

belongs in morals to the Weyerhaeuser heirs is a question for the future. *The* generation which allowed him to acquire the title to it acted for itself—and professedly for all future generations; but future generations were not consulted, and may have something to say for their claims. "The earth hath He given to the children of men"—not some *of the* children of men, and not alone to the generation of the children of men who allowed Mr. WEYERHAEUSER to acquire the paper *title* to the forests of a continent. The future will probably try titles with the WEYERHAEUSERS and their like in one way or another.

Just as Good Here

LLOYD-GEORGE is a Welshman, and happens to be the British Chancellor of the Exchequer, but the words he speaks on Votes for Women are as good here as they are in England:

> I cannot imagine a complete program of Liberal reforms which leaves half the citizens of this country unenfranchised. Whenever a reform to which we have set our hand directly affects women as much as men—nay, directly affects women more than men—it always seems to me to be an unarguable proposition that the opinion of women should be constitutionally sought and expressed upon the rival proposals of settling those questions. This conviction, I am satisfied, is seizing hold so firmly on some of the best minds in the country, especially among the progressive forces, that the present position must soon become intolerable for the Liberal party. . . . Militancy alone is holding it back.

Will some captious critic please point out the fallacies here? We confess that we cannot, unaided, find any.

The Women of Illinois

LLOYD-GEORGE'S words received a pointed illustration in last month's elections in Illinois. "The new voters made a most encouraging beginning," is the Chicago "Tribune's" observation. We commented last week on the part the women of Illinois played in closing about a thousand saloons. More than half the counties in the State are now "dry." Even in Chicago (where more votes are cast nowadays than in any other city in the Western world) the women's ballots counted for more than was at first apparent. They helped to vote down a subway proposition that would have profited the Harrison-Hearst machine rather than citizens generally. To quote the Chicago "Record-Herald":

> The women voted earnestly and eagerly, and they voted as citizens, not as women. . . . They rendered notable service in defeating gangsters and strengthening the cause of good government, economy, and efficiency.

We like the spirit of Miss MARION H. DRAKE, the stenographer who ran (unsuccessfully) against the First Ward's notorious Alderman, "Bathhouse JOHN" COUGHLIN. "Chicago women have justified equal suffrage," says this defeated candidate—cheerful in spite of rebuff.

A Bad Boy That You'll Like

IF YOU THINK it is easy to write stories about small boys—authentic stories about real small boys—it is quite obvious that you never tried. MARK TWAIN did it, however, and now BOOTH TARKINGTON has. TARKINGTON'S "Penrod" is the record of those successive, loosely related adventures which are the high lights of the American boy's career; the small boy in the small town, you understand, not the small boy cheated out of the best part of his youth by being city born. PENROD may or may not have been the worst boy in town, but he is as real as TOM SAWYER, and his dog Duke (he of the untidy whiskers) is almost as human as HUCK FINN himself. PENROD and his little world have given us more than one evening of positive delight—for you mustn't make the mistake of crowding this book into one sitting, or two; enjoy it lingeringly, like one of its hero's all-day suckers. To read about PENROD'S dancing-school tragedies, his smallpox medicine, his circus enterprise with HERMANN and VERMAN, is to add pounds to one's weight by laughter—to deduct several years from one's age account. BOOTH TARKINGTON has been a boy himself.

In the Shadow

The State That Makes Money Out of It

A READER OF OURS has seen somewhere a report that a town in North Dakota is taking up liquor selling on its own account and will monopolize the business. "What do you think of it?" asks our correspondent. We have written to him that no doubt the business will show a handsome profit—but from a social standpoint the account is a very different one. The indirect costs of this trade to the community far outweigh its direct profits to the trader. Russia is not generally deemed a progressive land, and for some years the Russian Government has made a national monopoly of its subjects' favorite tipple—vodka. In ten years, sales of this fiery liquor have increased by $250,000,000—and yet the Government is not easy on the subject. Count WITTE, who created the Government monopoly, now brings forward projects for restricting the sale of vodka and turning over part of the revenue produced by it to the temperance societies to be spent in persuading folks not to patronize the Government's saloons. This arrangement strikes us as positively Shavian in its sardonic humor. And it seems to us that the town in North Dakota that our reader writes about would much better abolish the liquor traffic instead of selfishly reaching out after its blood-stained profits.

. . . That Mother Used to Make

WE WERE a country boy originally (if this be bad grammar, make the most of it!), and even now our mouth waters at the mention of honest victuals. Imagine our wistfulness when we read in the Long Rapids notes of the Alpena (Mich.) "Argus-Pioneer":

> The congregational ladies gave a chicken-pie supper in the dining parlor of their church last Wednesday evening and was pretty well attended for the amount of gatherings, etc. The service was fine and among the goodies was chicken pie, cream mashed potatoes, escalloped potatoes, homemade bread, buns, crullers, cookies, many kinds of cake, etc., all kinds of pickles, butter, apples, coffee, tea, cream, and many other treats.

Scoff, if you choose, at the journalistic style of this. Our emotions are of another sort. There ought to be a law against printing such itemized accounts which may eventually be read by dyspeptic city folks who have to live on cold-storage eggs an' sich. It isn't right, say we.

The "Marrow of Life"

WHEN PIERRE LOTI was in this country a year ago, a good deal was said of his tendency to aloofness from the shams and turmoils of great cities, the insincerity and sophistication of much social intercourse, the merciless stress of modern ways of living. Since then we have happened on the words of a New England philosopher and nature worshiper who, long before LOTI, turned his back on towns. HENRY D. THOREAU wrote:

> I went to the woods because I wished to live deliberately. I wanted to live deep and suck out all the marrow of life, to live so sturdily and Spartan-like as to put to rout all that was not life. . . .
>
> Our life is frittered away by detail. I say let your affairs be as two or three, and not a hundred or a thousand; instead of a million, count half a dozen and keep your accounts on your thumb nail. In the midst of this chopping sea of civilized life, such are the clouds and storms and quicksands and thousand and one items to be allowed for, that a man has to live, if he would not founder and go to the bottom and not make his port at all by dead reckoning, and he must be a great calculator indeed who succeeds. Simplify, simplify. . . .
>
> Why should we live with such hurry and waste of life? We are determined to be starved before we are hungry. Men say that a stitch in time saves nine, and so they take a thousand stitches to-day to save nine to-morrow. As for *work*, we haven't any of any consequence. We have the St. Vitus' dance and cannot possibly keep our heads still.

THOREAU and LOTI are little alike. But they both revolt against the squirrel-cage life which thunders along so furiously that it destroys the art of living. The man who really wishes to get the most out of life doesn't do things merely because his neighbors are doing them. He takes time to get his bearings—takes time to live.

COMMENT ON CONGRESS

WHILE the debate in Congress on the Panama tolls-repeal controversy has not been noteworthy, it served to draw from Mr. Henry White and Mr. Joseph H. Choate striking contributions to our diplomatic history. Both Mr. White and Mr. Choate told of the beginnings of the Hay-Pauncefote Treaty. They made it clear that it was never contemplated by the framers of the treaty that American coastwise vessels should be exempted from the payment of canal tolls. Representative Montague of Virginia, who had access to the confidential files of the State Department, disclosed on the floor of the House these facts about the origins of the treaty:

John Hay, Secretary of State, on December 7, 1898, addressed Henry White, Chargé d'Affaires of the American Embassy at London, and advised him that inasmuch as an isthmian canal "seemed at this moment indispensable, both for our commercial and national interest," he was directed to ask Lord Salisbury

> whether it may not be possible to secure such modification of the provisions of the Clayton-Bulwer Treaty as to admit such action by the Government of the United States as may render possible the accomplishment of a work which will be for the benefit of the entire civilized world. The President hopes he may take it for granted that the British Government not only have no wish to prevent the accomplishment of this great work, but that they feel a lively interest in it and appreciate the fact that the benefits of its successful achievement will be to the advantage, not only of England and America, but of all nations.

On December 21, 1898, Mr. White had an interview with Lord Salisbury. The matter was fully discussed by the representatives of these two Governments, and Mr. White reports in a letter to Secretary Hay of December 22, 1898:

> A brief informal conversation followed, during which Lord Salisbury said nothing to lead me to suppose that he is unfavorably disposed, much less hostile, to the construction of the canal under our auspices, provided it is open to ships of all countries on equal terms.

On the very day of the conversation between Lord Salisbury and our representative, Mr. White wired Secretary Hay the purport of the conversation, and concluded his telegram with this language:

> He [Lord Salisbury] said nothing indicative of opposition, much less hostility, on the part of her Majesty's Government to the construction of the canal, and I do not believe, if it is to be open to all nations on equal terms, that there will be any serious difficulty in effecting an agreement satisfactory to both nations.

This testimony was fully borne out by Mr. Choate, who was Ambassador at London while the treaty was being negotiated. The disclosure seems to settle once for all the fine-spun arguments about our "rights" to grant an indirect subsidy to coastwise shipping by passing it through the canal exempt from tolls.

There's a Reason

THERE are 73 standing committees in the Senate with 710 members. Almost every Senator is chairman of some committee. Each Democratic Senator has about eight committee assignments, and each Republican averages perhaps five. At the present time nearly every Democrat is on four or five committees of first-rate importance. It is an absurd condition. At the present time, if any group of Senators would take the matter in hand, they could remedy it. One of the reasons for so many committees is that each chairmanship carries with it a committee room, a clerk, and a messenger, and the attempt has been to provide as many Senators as possible with these accessories to their dignity and comfort.

Strange Bedfellows

McCutcheon, in Chicago Tribune

Advance Rate Case

FINAL oral arguments on the so-called "advance rate case" were scheduled to begin at Washington on April 27. This is the application of the Eastern railroads before the Interstate Commerce Commission for a 5 per cent increase in freight rates. The correct determination of the question that has been raised is the most important of any of our immediate domestic problems. The railroads have urged that their revenues are not sufficient by $50,000,000 annually to meet their needs for the present and for the future. Mr. Brandeis and other opponents of the increase have sought to show that the carriers could increase their revenues by effecting a savings in management and by abolishing free services they now perform for favored shippers. Mr. Brandeis has pointed out where and how savings could be effected that, he asserts, would yield more than $50,000,000 annually. What the Interstate Commerce Commission must decide is this: Have the railroads succeeded in proving that they need additional revenue; if so, how much do they need, and can the required revenue be found without advancing rates? The pace of business in the East is perceptibly slackened awaiting the decision.

The Revised Antitrust Bill

THE Administration's program for trust legislation as embodied in the new bill which was introduced in the House on April 14 by Representative Henry D. Clayton of Alabama, chairman of the House Judiciary Committee, shows steady progress in the much-needed economic education of the Democratic party. The new measure consolidates and replaces the four similar measures which have been under fire for some time. Its aims are, very briefly, to regulate in the public interest the price treatment given dealers and possible competitors; to insure for labor unions and cooperative associations a fair but not a privileged position before the law; to safeguard the growth of corporations, but to prevent that growth from becoming monopoly; to prevent directors from being able to vote on both sides of profitable transactions, but without estopping the wide use of directive ability; to prevent judicial tyranny in the use of injunction and contempt proceedings against labor, but without crippling the proper power of our courts, and, above all, to make guilt personal instead of merely corporate.

These are obviously good purposes. The necessary process of debate and explanation will soon show whether or not the new bill is well devised for securing these ends. If it is, a long step will have been taken toward redeeming President Wilson's pledge "to square our laws with the thought and desire of the country."

Two dangers remain: first, the possible effects on our present industrial and commercial activity of the uncertainty attending the debate on such a measure. Almost any sort of amendment may be urged or even passed. It is of the highest importance that the debate be authoritative, sufficient, and reasonably brief. The second and more permanent uncertainty is as to the long-range effect on our future economic development of enacting into law the Democratic party's doctrine that competition is the one essential economic principle. Many well-informed students think not, and hold that the age of small competitive units is over. In any case, the Clayton measure is the most important bill now before Congress, and its progress cannot be too closely watched.

Pickups of Sport

By Grantland Rice

Lines to Any Scientist

I KNOW that antitoxin helps a diphtheritic case;
That certain famous serums hurl tuberculosis back;
I know that vaccination, though a pesky visitation,
Has a strangle hold on typhus when it whirls to an attack;
I understand they even have the leper breathing hope,
And cripples have been lifted who were glued against the mat;
They have turned the dreaded colic in an instant to a frolic—
But what will make a pitcher well when Baker comes to bat?

O scientists who range at large to help a fellow bloke;
Who yearn to help prolong the day that knows a lieing breath;
Why spend your time in wooing or in courting and pursuing
Certain remedies for something that may bring a painless death?
For the fever's but a fever and the plague is but a plague,
And at the worst they only in a graveyard leave you flat;
But I call your quick attention to the need of an invention
Or a serum for the pitcher when F. Baker comes to bat.

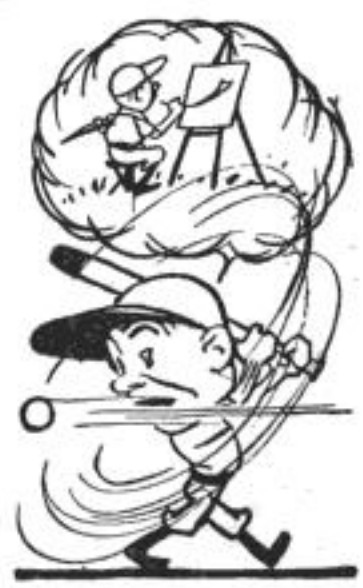
One Advantage

THE Federal League hasn't any bush circuit to which it may turn back its recruits.

But, on the other hand, or head, as the case may be, it doesn't have to pay any hospital or funeral bills when Walter Johnson loses control.

Imagination and Concentration

"I GUESS"—remarked a crack amateur boxer who was put in against a third-class professional and was knocked out in one round—"I guess I got too much imagination."



"Too much imagination" is the answer to many a defeat. Frank Baker of the Mackian Avalanche has no imagination at all. Baker, off the field, is a farmer, and life to a farmer is mostly real and a good part stolid. A world-series game to him is only a ball game. The frenzy of the 40,000 and the gaudy trappings are beyond him. His eye is on the pitcher—or a certain dip in the right-field wall.

Francis Ouimet is another without imagination. A battle against Vardon, Ray, or Travers is, after all, only a golf match. Why get excited or worked up about it? Suppose you lose? They don't throw you into jail or amputate your left ear for losing.

The only chance those with extended imagination have is to carry perfect powers of concentration.

No man playing baseball has as great a power of concentration as Christy Mathewson. Mathewson is a wonder in any card game, a great checker player, and a master chessman—games requiring concentrative powers. He also has imagination, but he has the ability to keep it under firm control.

No American golfer has the same knack of concentration as Jerry Travers, now in England with Ouimet in quest of the British championship. Travers has imagination, and, unlike Ouimet, is also a bundle of nerves. But his knack of concentration is superexcellent. Young Chick Evans, probably the greatest all-round amateur golfer in America, is badly shy on concentrative powers.

"Too much imagination"—minus concentration—is what furnished a rocky start for all our high-priced ball players—Marquard, O'Toole, and a good many others.

To reach the top in any sportive endeavor an entry has two roads to travel—to be born without imagination or to develop fully the power of concentration.

You can't sing a medley to one set tune—and get away with it.

The Polo Argument

WHAT chance has England to wrest the polo championship from American soil?

Take your pick—but we're not betting.

Last June, "riding hell for leather," America rode England off the field. This time England has three months' jump in training and is coming all set for any such assault with a rougher riding team. So from present indications England has a better chance than she had last year—or the time before. The "break of the game" is a big part of polo and the "break of the game" will decide this next clash.

The Cub Fan's Dream

"LAST night," he said, with shining eyes,
"I dreamed that Chance was back;
I dreamed that Steiny's wallop
Once more led the old attack;
I seemed to see Joe Tinker make
An old-time Tinker spear,
And hear J. Evers barking
In the shaking umpire's ear;
And, like a dream of heaven
Where the feathered angels sing,
I heard the shouts of Brownie
Hit the mitt of Johnny Kling.

"I cheered for Circus Solly
As he cracked one on the nose;
I saw old Jimmy Sheckard
Pick a wallop from his toes;
And with the old-time flash of speed,
Agility, and science,
We mauled the Pirates to a pulp
And stamped upon the Giants."

He closed his eyes in retrospect—
He sighed with joy—and then
I kindly shot him through the heart
Before he woke again.

Baseball vs. Cricket

WE HAVE known only one big-league ball player to partake both of baseball and cricket as a pastime. He was the late Harry Vaughn, who played cricket in his early English days and later on became one of the star catchers of the Cincinnati Reds; remember Rhines and Vaughn?

We asked Vaughn one day what he regarded as the main difference between baseball and cricket.

His answer was the keenest we have ever heard to this query.

"The main difference," he replied, "might be summed up in the difference between the war cries of the two sports—between "Well tried, old top" —and "Slide, you bonehead, slide!"

George Edward Waddell

GEORGE EDWARD WADDELL *has passed on to join Arthur Raymond in the eccentric nook of baldom's Valhalla.*

Life for him was a joy ride, but he scattered many a puffoon along the way. He had his fling. And it was considerable "fling" when he was right. Ask the Athletics, who let him go to St. Louis and then took sixteen trips from the plate back to the bench one August afternoon while the eminent Rube was out there attempting to show that "some one had blundered."

Sad Case

"I SHOULD have had a ninety-six,"
The moody golfer said;
"I should have had—but somehow got
An eighty-four instead.

"I jumped eight bunkers, seven mounds, and
Fourteen traps to-day;
No matter how I played each shot
The luck was all my way.

"I never missed a holly putt
I should have made"—and then—
"Gee—but I was a lucky dub,"
He muttered once again.

Sadly they wired Matteawan
A double guard to send,
Before he grew more violent
And tried to shoot a friend.

Out after "Uncle Anse"

SEVENTEEN years ago Pop Anson laid down his war club firm in the belief that he had set a record good for all eternity.

In twenty-two years of big-league campaigning the Old Boy had compiled 3,013 base hits—a record mark beyond all rival figures. Anson quit the game in 1897. That same season a youngster named Hans Wagner broke in with Louisville, and on opening day, 1914, this same Wagner found himself only forty-two hits back of Pop's wonderful mark. Wagner has corraled 2,971 safe blows in his seventeen seasons of work, and just back of him comes Lajoie with a total of 2,882 hits for the same period of time.

Carnegie and Rockefeller never collected dollars with any greater keenness than ball players collect base hits, but it won't be long now before Honus Wagner will have enough hits to retire. He should pass Anson's mark by the first of June.

Cobb, with only 1,462 hits up to 1914, is years shy, and while Tyrus may maintain his pace ten years more—well, we'll save the rest of this for copy in 1924. Sufficient unto the day is the dope thereof without plunging ten years on ahead.

For October 29

COACHES YOST and Haughton are now in the midst of spring training for next fall's schedules.

Colonel Yost is reported to be working on "an effective defense against the Harvard attack." We haven't heard what it is, but offhand we should say that it consisted largely of teaching about eight of his young men to fly forty feet in the air and interrupt a series of drop-kicks from the 37-yard line.

More brilliant maneuvers than this may easily be possible, but nothing else will be as safe.

Chip Shots

THE entry who looks for the best but is prepared for the worst is sure of an even break.

Step off to a clean start and the finish will take care of itself.

Never mind explaining a defeat; get busy and make up lost ground while the other fellow's telling how he won.

Keep your eyes open and your mouth shut—and you can write your own ticket.

A Matter of Justice

KOTOWING to the British Lion is one thing; slipping him simple justice is another. Joshing England has developed into a popular pastime, but in our bush-league opinion the Little Isle deserves a good bit of credit for her gameness in continuing the assault.

For the last few years America has well-nigh hammered her off the sportive map, and yet here in 1914 we find her leading the greatest international assault she has ever launched. It requires copious quantities of raw grit to rise up after the fourth knockdown and travel 3,000 miles for an outside chance to put over the winning punch.

Wilson Bro's

Athletic Union Suit

Licensed Under the Klosed-Krotch Patents

Look for this label

THE maximum of comfort in summer underwear. The crotch is permanently closed. No open edges to bind and cut—no buttons to pinch and chafe. Fit and comfort in every pose. Front opening does not connect with seat opening. Single button holds flap across seat—cannot gap open or bunch up into uncomfortable folds. Light and cool—ideal for active men.

Made from imported and domestic woven fabrics, in sleeveless, half-sleeves, knee and three-quarter lengths.

Men's sizes, $1.00 and up. Boys' sizes, 50 cents and up.

Other furnishings bearing the Wilson Bro's mark of quality include Shirts, Gloves, Hosiery, Suspenders, Neckwear, Handkerchiefs, etc.

Wilson Bro's

Open-Mesh Union Suit

Licensed Under the Klosed-Krotch Patents

MADE with the same patented closed crotch as the Wilson Bros. Athletic Union Suit. A superior open-mesh fabric; airy, absorbent, elastic. Long sleeves, half-sleeves and sleeveless; ankle, three-quarter and knee length. $1 and up for men—50 cents for boys.

Wilson Bro's

Combinette Shirt

Licensed Under the Klosed-Krotch Patents

A ONE-PIECE garment that combines outer shirt and drawers. Ideal for playing golf, tennis and other open-air activities. Crotch is closed like the Wilson Bros. Athletic Union Suit. No working up or bunching of shirt-tails. Half or full sleeves. Soft attached collars or without. $1.50 and up.

At your furnisher's or he can get them for you.

Wilson Bro's Chicago

Keeping New York's District Attorney's Office Out of Politics

By CHARLES S. WHITMAN
District Attorney of New York County

THE office of district attorney is a law office. It is essentially nothing more than a law office. The position of district attorney was not created to provide patronage for the support or benefit of any political organization or organizations, however good they may be in themselves. It is not, at least it ought not to be, in any sense, a political prize or reward. I can conceive of nothing worse than a district attorney influenced, guided, or controlled in his official actions by a political party. Political judges are bad; political prosecutors are inconceivably worse.

Crime is neither racial nor political, and the man who is influenced in the conduct of the great office of district attorney and in the prosecution of crime by motives political or selfish is violating, in spirit at least, the law of the land just as truly as does the criminal he prosecutes.

Whatever may be its power for good in this community, and I believe that it is great, the office of district attorney can be used as an instrumentality for evil and wrong as can no other one office in the land.

I believe that the time will come in this city when the people will realize the importance of giving to this office the permanent character requisite, if it is to be the bulwark of the community against wrong, injustice, and crime, which every thoughtful man knows it should be.

It doesn't make so much difference who is the district attorney if the heads of the various bureaus or departments, if the members of the staff, wisely and carefully selected and trained by years of experience, form such a perfect organization that political changes in the city create little disturbance in the office. This can be done if the citizenship of New York will permit it to be done. We have tried, and by this I mean the men associated with me as well as myself, to bring the district attorney's office up to a state of efficiency with the hope that it may become a permanent asset to the good citizenship of New York. We have accomplished much in this respect, but there remains much more to be accomplished. If political considerations are to control in the matter of appointments on the district attorney's staff, then, of course, it is altogether likely that every four years there will be a clearing out and starting afresh. Much that has been acquired at the expense of the county in the way of training, experience, and competency is lost by such political housecleaning when the party in power is changed. We have witnessed such a spectacle in this county over and over again.

The district attorney's office is no place for politics. I have striven hard to keep it out.

"My election was due to no political party. It was due, in a very large degree, to those who recognized no party allegiance whatever"

The One Qualification

THERE is one qualification which I believe, in the light of the last three years' work, I have a right to claim for myself—the ability properly to select men to perform the services which the law provides must be performed, and whatever success may have been attained during these years is due, in large part, to these faithful, loyal, courageous, and able men, who have been willing, when called upon, to labor in season and out of season, usually without public recognition of any kind.

Party allegiance and personal friendship can have little place in the selection of those men upon whose judgment, experience, character, and ability the district attorney of the county must at times absolutely rely.

Demand Efficiency and You Get It

THE task of keeping the district attorney's office out of politics was made easier by the manner in which I was elected to this office in the fall of 1909. My election was due to no political party. It was due, in a very large degree, to those who recognized no party allegiance whatever. My nomination, in the first instance, came from the Republican party. In that campaign this party, as well as those allied with it, pledged itself to nonpartisanship in municipal affairs, and had its successful candidates assumed any other attitude in the administration of their offices they would have been false not only to themselves and their own preelection promises, but to the organizations as well which were responsible for their preferment. Every great department of our Government is on trial every day.

The press of the city and the nation leaves little opportunity for the avoidance of publicity even as regards the most minute detail of the public's business. The praise or the blame, the approval or the censure, the indorsement or the criticism, appearing in our daily newspapers often may seem and may be unfair, unjust, and prejudiced. Sometimes it may appear that one official's conduct is indorsed whatever it may be, and another's condemned whatever it may be, but, on the whole, the net result of our newspaper enterprise is, in my opinion, so far as public life is concerned, to place before the public eye the official as he is, his conduct as it has been, the work that he has done, and the influence which he has exerted, whether it be for good or for evil, and it has been in no small degree due to this instrumentality that the people of the present generation have the opportunity to know the matters which vitally concern them as a commonwealth as their predecessors never knew them.

Evil conditions, if they exist, continue only by the permission or on account of the indifference of the people, who after all are most vitally affected.

Officials of the city are as efficient as the citizens demand that they shall be.

If Not Inside, Then Outside the Party

THE saying that New York is as good or better than another city of another land perhaps does not answer the questions that have been uppermost of late in the public mind.

The government of the city is as good as the citizens make it, and a political party deserves to survive only when it recognizes the fact that whereas the distribution of patronage is perhaps properly and necessarily an incident of political organization, the numbers are growing every day of those who care little for party name or party regularity, but are becoming more and more insistent that the work, which necessitated the creation of certain offices and departments, shall be done and properly done; that the men called upon to perform the tasks provided by law shall perform those tasks; that they shall be responsible to the people who placed them where they are, and to no one else; and if our political parties or organizations are unwilling or unable to produce and support these men, they can be found and they will be found outside, and they will be supported, too.

"Ladies of the Jury"

By EVA C. BRYANT

(This real-life drama, casting a flood of light on the new conditions in civic and public life, has for its setting a prosperous city in the State of Washington)

SCENE I—*Home*

MOTHER. [*Reading from letter.*] "You are hereby notified that you have been drawn on the regular panel to appear at the courthouse of Brown County, Washington, on the fifth day of March, 1914, at the hour of nine o'clock in the forenoon of said day, to act as trial juror in cases thereafter to be tried in said court."—Girls, I'm a juror.

GIRLS. [*In chorus.*] Send in a claim of exemption, mother; you can't go.

MOTHER. Why not?

ELDER DAUGHTER. Well, for several reasons: in the first place, you're too tenderhearted; your sympathy would run away with your judgment. You would want to give every prisoner at the bar a turkey dinner with cranberry sauce, pat him on the back and tell him how sorry you were if you'd hurt his feelings.

YOUNGER DAUGHTER. If the testimony were long and tiresome you'd be sure to go to sleep. You know we have to take turns going to church with you, so that some one can nudge you and keep you awake.

MOTHER. [*Asserting Independence.*] I shall send in my acceptance by return mail.

SCENE II—*The Brown County court room*

The court room is crowded with men and women, young and old, fat and lean. I, being a voter, taxpayer, and having lived in the county the allotted time, and being able to read and write, am accepted as a juror of the Superior Court. This is a damage suit—a case of damaged potatoes. The defendant, a pleasant-faced man, had stored a quantity of tubers in his cellar. He had shipped several carloads South, the market was glutted, the selling price did not warrant further shipment. What was he to do with the remainder? Happy thought: Why not give them to the poor and become a philanthropopotatopist? The recipients of his bounty now declared that he had only cleared his cellar of rotten spuds. The two plaintiffs went to the warehouse to get their share of something for nothing, fell down a shaft, and sued for $5,500 damages. For five days we jurors had potatoes served up in every form, shape, and style. The court room reminded one of a vegetarian restaurant. On second thought we'll leave this scene out and pass on to

SCENE III—*The rest room (noon)*

A FAT JURESS. I'm just clean tuckered out trying to catch that car and hurrying so at noon.

THIN LITTLE JURESS. You ain't so lucky as I am; my man had lunch all ready when *I* got home.

A YOUNG ROUND-FACED JURESS WITH CHEWING-GUM DICTION. I think bein' on the jury is just swell. I haven't washed a dish since I've been courtin'.

SCENE IV—*The jury room*

The damaged-potato case has been settled in favor of the defendant. The case now before us is that of a poor man who is suing a railroad for damages for the loss of his right arm. The defendant alleges that the plaintiff was intoxicated at the time of the accident. The case was given to the jury at 3 p. m. after a three days' trial, and the eight women and four men of the jury still disagree at ten o'clock.

THE BAILIFF. You must decide in half an hour or I lock the doors for the night.

Half an hour passes, but nothing happens; the BAILIFF *repeats his notification.*

YOUNG MARRIED JURESS. Can't we telephone home?

THE BAILIFF. Yes, if I stand by while you're talking.

FIRST LADY JUROR. Hello. Can't come home to-night.—To-morrow, I think. Be sure and put out the milk bottle.—Oh, a quart. Good night.

SECOND JUROR. Is this you? I'm so sorry I forgot and took the key. How did you get in?—You had to break the lock on the cellar door?—Yes, I know there's not much in the house to eat. I expected to be home for dinner.—If you're going to swear I'll ring off. Good-by.

THIRD JUROR. Dear, you won't see me to-night: we're tied up.—Glad of it, are you? So am I. Well, so long.

FOURTH JUROR. Can't come home. Don't forget to feed the chickens in the morning. Good-by.

FIFTH JUROR. Here for the night.—Is that so?—Well, keep him warm, grease his chest, and give him some hive syrup.—In the medicine chest.—Tell him to be a good boy and not cry—I'll bring him something.—Of course, if he's not better, you'll have to stay home with him to-morrow. Good night.

SIXTH JUROR. Can't come home to-night.—You hope I'll get enough of it, do you?—This is a very important case.—You think my home is very important, too? See you to-morrow. Good-by.

SEVENTH JUROR. Guess you can get breakfast, can't you? I won't be home to-night.—Oh, make some toast and coffee.—Ate all the bread for dinner? Well, you can borrow some from Mrs. Harris.—Well, see that the children are all right when they go to school. Put a clean waist on Roy. Good-by.

MOTHER. Don't expect me home to-night.—Of course you can't come after me; I'm in the jury room.—How absurd! You need not worry about my outing flannel nightgown and hot-water bag. Good night.

CURTAIN

The Great Architects Specify Ripolin Enamel Paint

Made by Old Dutch hand processes.

It is difficult for you to realise the durability of Ripolin. Let us send you this strip of tin coated with Ripolin. Bend it, twist it to any shape. The enamel won't crack, chip or peel.

—because that pure white finish is retained for all time—will not discolor, crack or peel. It comes in that brilliant high gloss like glass, or in a beautiful semi-gloss, or absolutely flat.

Ripolin finish applied in houses 14 years ago is just as good today as when first put on.

That is why Ripolin is so inexpensive—most economical even for the average householder who does his own decorating, or for the finest residences or big buildings.

Equally suitable for bath room, parlor, dining room or furniture—for interior and exterior woodwork—for metal work—in fact wherever a white finish is desired.

Ripolin is used for metal fountains under constant play of water—for railroad signals subject to all weathers and steam and gas from passing locomotives—for steamships and costly yachts, inside and out, where sea air and salt water ruins ordinary enamels—for hospitals and sanitary factories where economy and durability are absolutely essential.

Let us send you a book showing residences, exclusive clubs and palatial hotels finished with Ripolin. With it we will send the Ripolin coated strip of tin mentioned above. Also name of the Ripolin agent in your territory.

Then purchase Ripolin yourself—see that the seals are unbroken. A gallon will cover from 500 to 700 square feet, depending upon the surface. Your painter or decorator will tell you the quantity needed. Anyway write for the Ripolin book today.

Note the seal, on can.

J. A. & W. Bird & Co.

Importers and Distributors of Ripolin for the United States

92 Pearl St., Boston, Mass. 660 Peoples Gas Bldg., Chicago, Ill.

U. S. Mail Cars are painted with RIPOLIN for durability.

RIPOLIN has stood the play of water on this fountain for seven years without impairment.

RIPOLIN is the only enamel that stands the test of salt water and sea air.

Architects will find full RIPOLIN specifications in Sweet's Index

A Motorcycle Runabout for Two

ALL the touring pleasure, comfort and efficiency of an automobile at the cost of trolley fares. That's Indian Side Car-ing. A spin in a summer's evening. A week-end trip. A coast-to-coast tour. The Indian Side Car is *a comfort vehicle* serving your every desire. This is the second year of the Indian Side Car. It is already as famous as the machine to which it is attached. Beauty of design—luxurious ease—strength with lightness—these things characterize an Indian Side Car pre-eminently.

Indian Motocycle
With Side Car

Its trig body speaks of interesting road companionship—of jaunty hours spent in keen out-of-door enjoyment.

Side Car-ing is a new phase of motorcycling—and an extremely popular one.

Side car equipment *doubles* your motorcycling fun and utility at only a small additional cost. When the possibilities of Side Car-ing are fully realized there won't be a motorcycle without its Side Car attachment. *There is no other motor-vehicle in the world providing so much comfort, healthful delight and recreative opportunities for so little cost.*

The superior features of the Indian Side Car are fully set forth in a booklet just issued especially covering this one subject. It turns over a fresh lot of facts and thoughts that anyone—whether a motorcycle owner or not—may profit by reading. There's a lot of brand new stuff in the book that's mighty well worth looking over. Write for a copy today.

HENDEE MANUFACTURING COMPANY
802 State Street - - Springfield, Mass.
(Largest Motorcycle Manufacturers in the World)

THE SILENT INDIAN

The Little Country Theatre

By GEORGE CREEL

NOW comes Hiawatha's Land of the Dacotahs with a brand new remedy for the deadly dullness that drives young people out of the rural communities into the cities, leaving farms untilled and an even greater social stagnancy. A Little Country Theatre has been established in connection with the State Agricultural College at Fargo, N. Dak., and if the experiment succeeds every village hall, district school, and farmhouse parlor may become a laboratory for the development of interest and happiness.

The college has several hundred students of both sexes, and it is proposed that all of them shall be poured into the jolly little dramatic crucible during the course of the year, either as actors, authors, stage hands, producers, or choruses. There is no intent, however, to evolve the Great American Drama or to uncover potential Booths and Bernhardts. The significance of the Little Country Theatre is entirely sociological. All that is desired is to have every young man and woman "get the idea," so that when they scatter at the end of the term they can carry on the good work in their own particular communities. To this end, every physical detail is marked by scientific simplicity. Seats, stage, scenery, and settings are all planned so that they can be reproduced by any intelligent person with lumber, hammer, nails, and a pot of paint. That, in effect, is the whole idea!

Professor Alfred G. Arvo'd
The man behind the idea

The college is not considering profits, but only ways and means of socializing the country life of North Dakota to an extent that will keep boys and girls from quitting the farms for the cities. The Little Country Theatre is merely an experiment station to prove the plan's feasibility in connection with schoolhouses, churches, halls, store basements, living rooms, and even barns.

Alfred G. Arvold is the man behind the idea and like all good ideas it did not flash across the background of a dream, but came as the result of hard thought.

As a graduate of the University of Wisconsin he was familiar with that State's use of its school buildings as social centers, but his study of North Dakota brought the need of something more intimate, more far-reaching and more definite. He found it in the phrase "home talent."

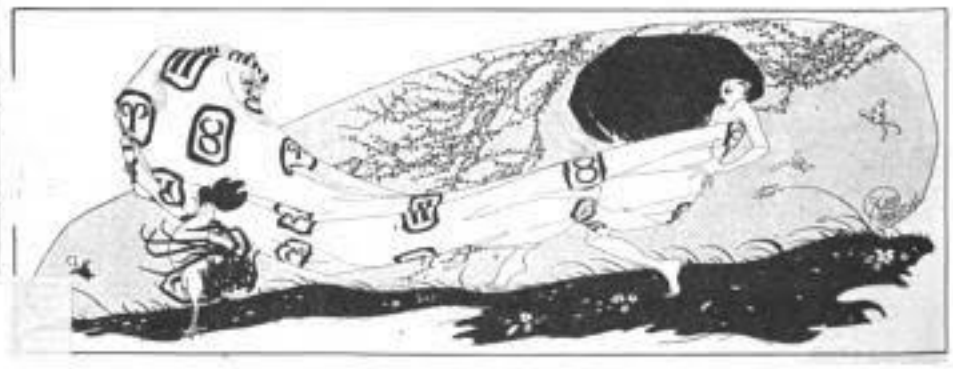
The Proportions of the Plan

HERE was something that would not only gather people into friendly groups, but which would give them a specific thing to do when they were gathered; a thing with participation in it, a lot of expression and a direct personal interest for every auditor. President John H. Worst came to the front with a large hall on the second floor of the administration building, which meant not only home, permanence and authority, but the use of the entire student body as disciples and apostles. Not such queer business for an agricultural college when it is remembered that there is small use teaching farming unless people can be induced to stay on farms.

The "grand opening" in February was the big event of the North Dakota year, and John Kendrick Bangs and Richard Harding Davis were the playwrights honored by productions. As the venture gains in strength, however, there will be insistence upon "home talent" plays as well as "home talent" actors, for nothing is more essential to the success of the plan than that each group shall be made entirely dependent upon itself. One-act plays will be the official medium for expression, since they offer fewer difficulties in presentation and in composition.

"Vaudeville turns" will also be introduced, so that the large foreign population may be called upon for its rich store of music, dancing, and folklore. The single number will permit the tapping of this undeveloped vein. Professor Arvold likewise contemplates "nationality programs" that will portray the life, customs, and costumes, work and pleasures of the land from which the immigrant has come. In such fashion the new Americans will secure a blessed expression, while the native born will gain in breadth and understanding, all to the end of greater unity and friendliness.

Even though the Little Country Theatre is scarcely started as yet, the people of North Dakota are refusing to wait for the spread of the students. Every performance is witnessed by envoys and delegations, eager to see, to learn, to report, and it is only a question of months when a score of Little Country Theatres will be firing away at dullness and monotony.



A Chance for Other States

IT looks like a big idea. There is no question about the pressing nature of the country-life problem. The annual exodus from the field to the town, caused by the revolt of the young against the intolerable dullness of rural life, is costing the nation many a needed harvest.

In addition to the economic consideration, authoritative commissions have fixed on the stupid monotony of country existence as a prime factor in the alarming increase in vice and crime, for even when it does not poison at the source, it sends a host of eager, innocent boys and girls to the dangers of an unguarded life in the cities.

The Little Country Theatre is a funnel through which some color and charm may be poured into this drabness and discontent. It is a chance to laugh and play.

Since Professor Arvold has not copyrighted his idea there is no reason why other States should permit North Dakota to monopolize a good thing.

How 200 Concerns Boosted Their Eastern and Export Business

THERE are more manufacturing establishments, more manufacturing capital and greater value represented in manufactured products, in New York CITY alone than in any ENTIRE STATE in the Union, except one.

New York's bank clearings are more than *six times* greater than of any other American city—because the country's business is done in New York. And the business is done in New York because the railway and steamship lines focus here—because the paths of industry, of commerce, of business activity throughout the world, find a common meeting place in this great metropolis.

What are you doing, Mr. Manufacturer, Mr. Wholesaler, Mr. Distributor, to get your share of this enormous trade—and take advantage of the unparalleled trade handling facilities and stupendous MONEY VALUE of New York as an operating base for YOUR business?

What are you doing to profit by the strategic position of New York as the central point in the wealthy, easily reached, prolific Eastern market—a market which, if you operated from New York, would bring 27% of the buying population of the United States within 100 miles of your door? Consider, too, the export and import advantages to be gained by such a location, New York City alone carrying on half the total foreign commerce of the United States.

New York is the hub of the commercial world and the industrial hub of New York is BUSH TERMINAL. In this mammoth community over 200 progressive business concerns (some of them in the ten-million dollar class) have plants for manufacturing, assembling, warehousing or distributing, first because of the value they find in a New York location, and second, because Bush Terminal offers them, *in one spot*, every facility and every economy to take 100% advantage of that location.

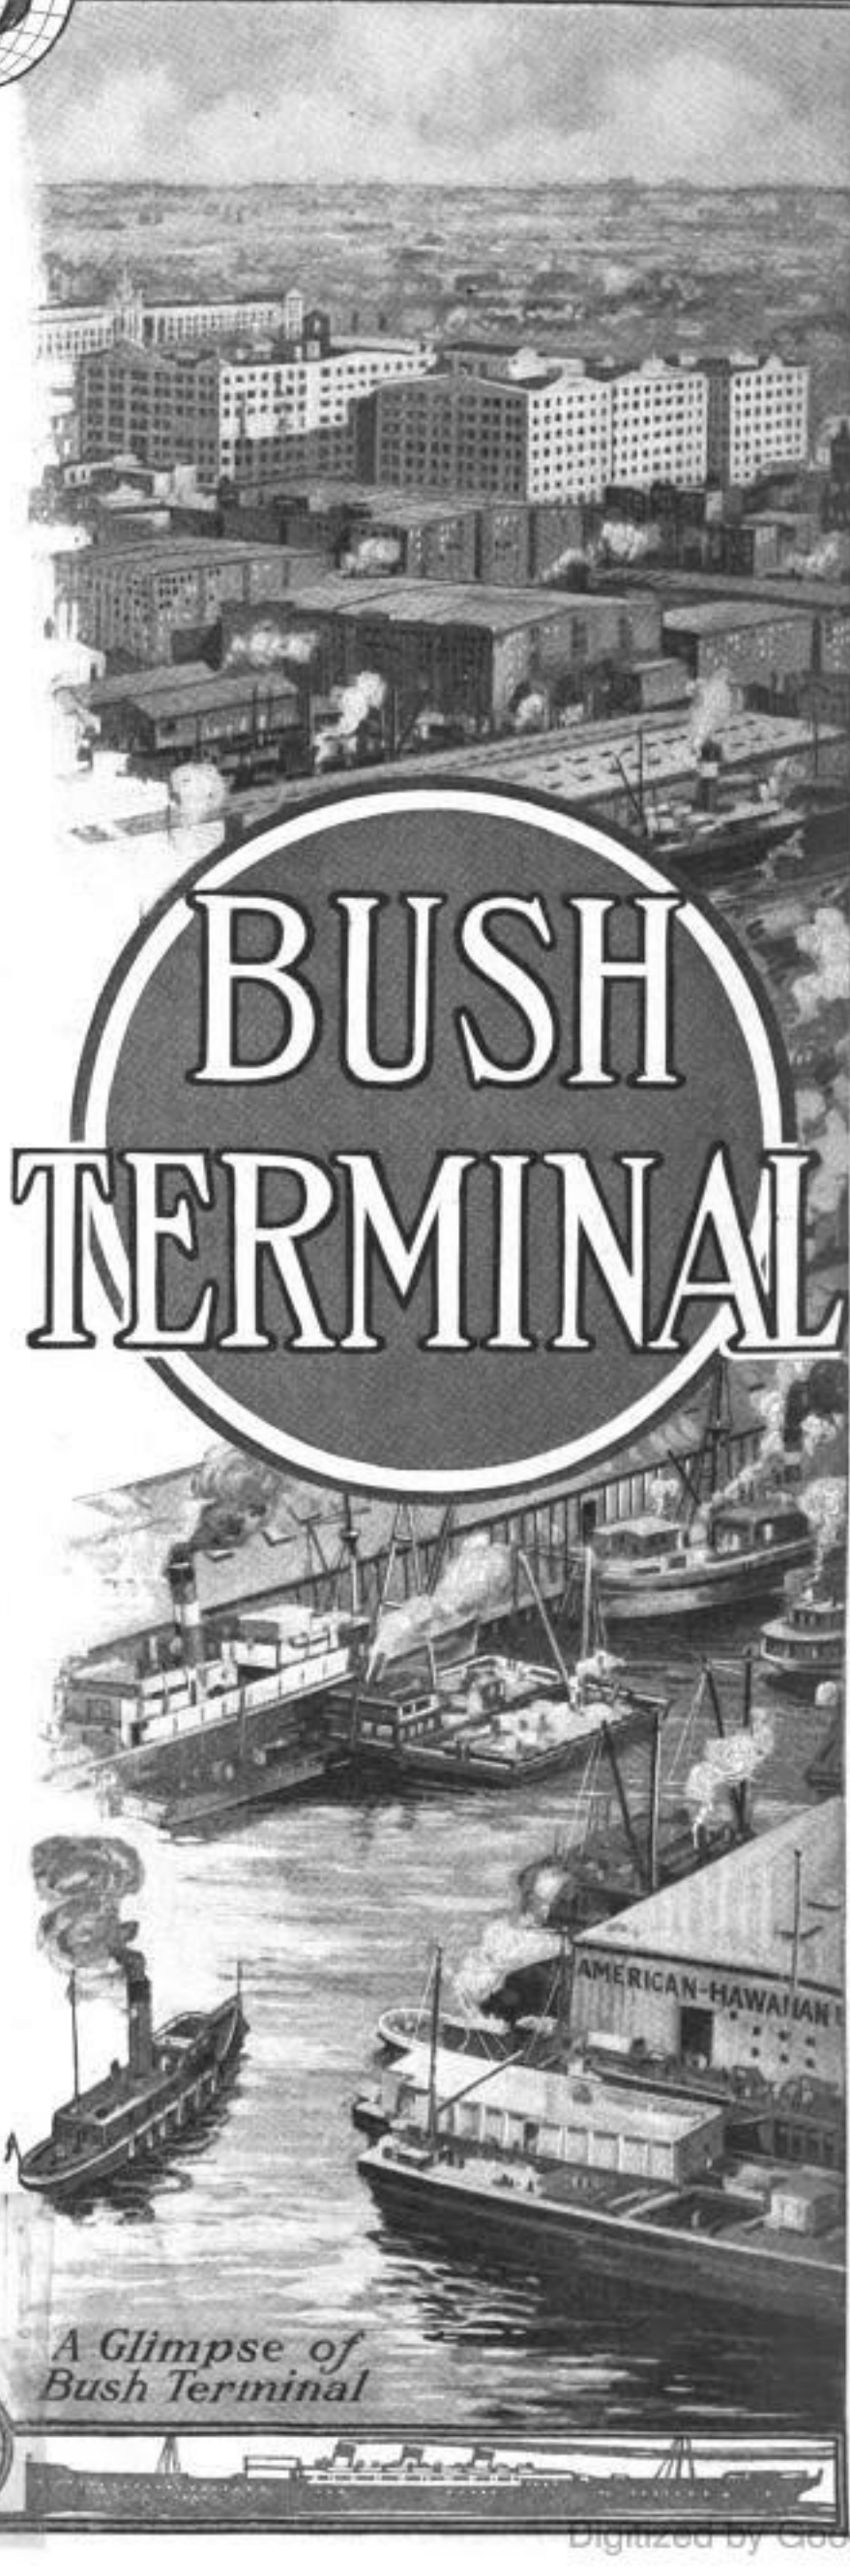
BUSH TERMINAL buildings are new, modern, finely appointed, fireproof. In them you can rent as much space as you need—or as little—divided to suit your needs. You can have all the space on one floor or on several floors, as your business requires. You have room to expand. You can get just what power, light, heat and water you need, paying only for what you use.

All railroads and coastwise steamship lines run virtually to your door. You receive goods on your own floor and shipments are loaded on cars direct from your own elevator. You get freight *in motion at once*, without the expense of hauling or cartage or delay of intermediate handling.

Your equipment and merchandise are safeguarded by a million-dollar sprinkler system and other modern fire protection. Insurance rates here are only 10 to 20 cents a hundred. Compare this with what you are now paying. Some tenants save enough on insurance and carting alone to practically *pay their rent*, as compared with former quarters.

Labor supply is plentiful—with living accommodations nearby and reasonable in cost. In Bush Terminal buildings employees have maximum daylight, up-to-date sanitary arrangements—everything that can make for perfect working conditions.

WE want to give you the full details about the Bush Terminal plan—how for the first time it makes locating in New York easy, simple and economical.



We want to co-operate with you in getting at the FACTS concerning New York as a location for your business—for you want us and we want you only if it is to YOUR advantage.

We will make a careful investigation and tell you frankly whether New York as an operating base would SAVE MONEY for you; whether it would reduce handling and transportation costs, thus netting BIGGER PROFITS on your present business; whether it would simplify your buying and selling operations, thus enabling you to build MORE BUSINESS—Eastern, Export or Import; whether it would enable you to make quicker deliveries and clinch business by giving better service to your customers; whether it would bring you closer to raw material sources and CUT MANUFACTURING COSTS.

This service is open to any concern, big or little. It costs nothing and entails no obligation.

To Business Men—A Valuable Book Picturing and Describing Bush Terminal Facilities in Full.

A request on your firm letterhead, signed by an official, will bring a copy free.

The Best Hardware Dealer in Your City Sells "PEARL"

No Other Screen Equals "PEARL" Wire Cloth in Appearance and Wear

In selecting screen material consider *wear* first. The screen that wears *longest* is least expensive and most satisfactory. Right?

Genuine Gilbert & Bennett PEARL will so far outlast the painted screen you have been using that there is positively no *comparison*.

Painted screens are *ugly*—PEARL is *handsome*. And the same metallic coating which gives it *beauty* makes it practically *rust-proof*, consequently almost *wear-proof*. If our claims for PEARL Wire Cloth are just, it is the screen you *want*. Investigate before you buy screens.

For Screening Doors

GILBERT & BENNETT **Pearl** WIRE CLOTH

For Screening Windows and Porches

Two weights—Regular Grade and Extra Heavy—Extra Strong, both suitable for door, window and porch use. The handsome appearance and rust-proof qualities of "PEARL" come from the *peculiar metallic coating*, part of the wire itself. This coating is exclusive with Gilbert & Bennett—no other manufacturer has it. So—if you would avoid imitations and disappointment, make sure of the *genuine* article by looking for *two Copper Wires* in the *Selvage* and the Round Tag bearing our name on every roll.

The best hardware dealer in your city sells Gilbert & Bennett PEARL Wire Cloth and will gladly supply you.

Or—write nearest office for samples, literature and the dealer's name.

Collier's at School

IN THE junior year at Culver Military Academy—a flourishing Hoosier institution—COLLIER'S is used as a regular textbook. The experiment was tried last year in the second semester; and the idea wasn't ours, but that of a member of the English department at Culver, Professor H. L. Durborow. The junior cadets average sixteen years of age, and in 1912-13 subscriptions were entered in the names of the pupils in five classes—copies of the Weekly going to the boys at their dormitory addresses—not to the classroom in American literature, where their use was tested. And the plan "worked so well" (we quote the school authorities) "that it was extended this year to *all* American literature classes"—that is, to one hundred and thirty cadets. "At least half an hour a week is given over to classroom study of the magazine. It admits of a variety of methods of presentation and treatment. Discussion, oral report, and written comment have their turn. Class debates are popular." At the end of the semester one section of the examination in American literature takes the form of this question:

"What personal benefit have you derived from the study of COLLIER'S *this year?"*

NOW when, thanks to the professor of English at Culver, the editor of COLLIER'S had a chance to look over the examination papers for himself, and read the verdict of fivescore sixteen-year-olds on the magazine which he edits, he had his qualms. If one may look to boys for anything, it is a frankness that approaches brutality (he reflected); and possibly this is doubly true where literary style is in question. Besides, COLLIER'S is not made up as a textbook, and it was a question in the editor's mind just how well the magazine would stand this unusual test. Instead of the boys being under examination, it was really COLLIER'S.

Somehow one's point of view is so changed when one *has* to read a book in school. There can be no doubt that boys like the fiction they take up on their own initiative better than they do that in the classroom. Wouldn't the Culverites be down on COLLIER'S because they *had* to read it along with Irving's "Tales of a Traveller" and the Sir Roger de Coverley papers and still better books?

Apparently not. Certainly there was no unkindly criticism of the magazine in the papers turned in. And, for the most part, the boys like the fiction fully as well as their elders do.

"WHAT personal benefit," ran the examination question, "have you derived from the study of COLLIER'S this year?" The answers would take up too much space if we printed them in full: these are, therefore, typical excerpts. They are fully as intelligent as most of the editorial comments we publish from time to time in "Brickbats and Bouquets." But judge for yourself. The first paper refers to the editorials we have published on "The Man Who Made Money Out of It":

"The fund of information which I have received during the last term from our study of COLLIER'S I consider of as much, if not more, importance, than any one thing I have ever taken up at school. Take the liquor question. The views of some of the fellows here have been changed."

And another boy writes—we must quote it before we get far away from this particular subject:

"I am now prejudiced against whisky manufacturers, as COLLIER'S has brought to light facts which heretofore have been concealed from me. I know now the immense number of crimes that whisky is causing to be committed."

"The study of COLLIER'S has aroused within me," writes another boy, "a keen interest in the progressive movements of to-day and a desire to understand them more fully and to follow them more closely." And another:

"Of the various works we have studied this year I have enjoyed COLLIER'S most. COLLIER'S has cultivated within me a taste for editorials and a desire to learn of the doings of Congress. 'Comment on Congress' has given me an idea of the workings of our national system, and I am sure that I will make a better citizen than I should have if I had not had the opportunity to study COLLIER'S. Politics and editorials have never interested me before, but now I find the richest enjoyment in talking with the editors through their editorial articles. Instead of looking into comic papers for humor and wit, I look into the editorial pages, where I find the sharpest wit and the truest humor of all—and the most common sense. While the poems we have studied and the history of American literature have done me good, I think that learning to like articles of public interest has done me more practical good than all the rest combined."

What the movies may soon be used for—with the moon as a screen and a rattling good lens, it might be a very simple matter to communicate with Mars, something after this fashion

Each of the following paragraphs is from a different boy's examination paper:

"In the first place, the study of COLLIER'S has kept me up to date on all current events; something I have always desired but have never been able to get down to before this. It has made clear to me the various political questions, the problems of pure food, tariff, liquor, etc. Besides this, I have enjoyed the work much more than textbook work and feel that it has done a great deal more for me than the study of any textbook."

"My study of COLLIER'S has greatly interested me in politics—a subject I never glanced at before. The articles on pure food are most interesting to me, as I am planning to enter the wholesale grocery business with my father. I believe that COLLIER'S has broadened my view on many of the subjects it has treated. Its editorials have taught me a clear and forcible way of speaking and writing."

"Before my study of COLLIER'S, if I read a magazine I would never look at the editorials, but now they are the things that interest me most. COLLIER'S 'Comment on Congress' is a very interesting and instructive part of the magazine; it shows what is going on in Washington. . . . Before my study of COLLIER'S I thought the magazines throughout America were in some way or other connected with particular interests. My mind has been changed since reading COLLIER'S, for I am certain that it is an independent magazine, working for the good of the people. COLLIER'S fine attitude on the liquor question has made an everlasting impression on me."

Every Sip of

RED WING the GRAPE JUICE

with the better flavor

Is rich with that rare quality found only in the juice that comes from the first crush of the choicest fresh-picked grapes

Red Wing Grape Juice is sold for 10, 20, 30 and 55 cents east of the Rockies

When you buy Grape Juice ask for Red Wing—insist on the brand that insures the utmost in purity, quality and grapy goodness. Write for booklet containing recipes for many dainty, grape delicacies that delight both guests and home folks. It's *free*.

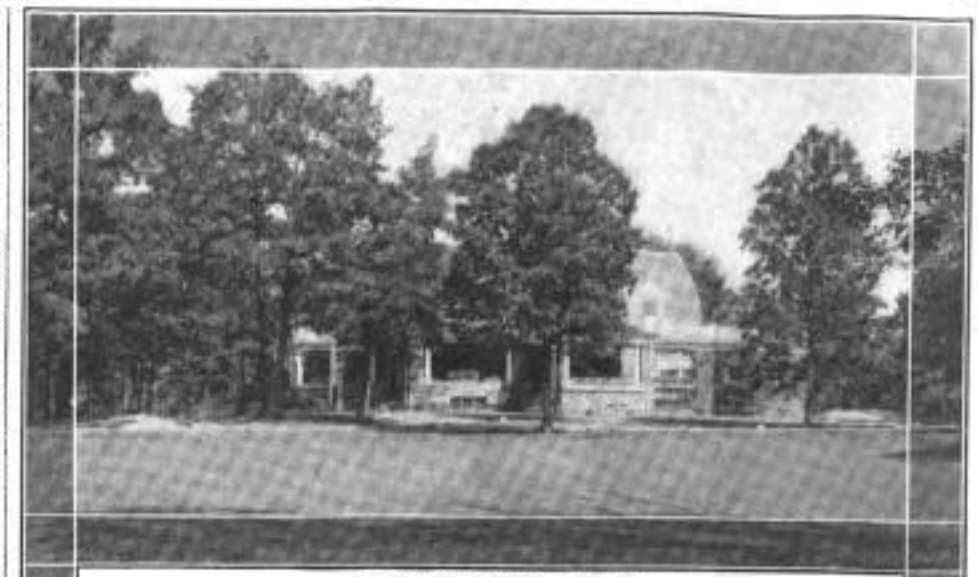
MANUFACTURED BY
Perfection Fruit Products Co., Inc.
Fredonia, N. Y.

"Since I have studied this magazine I have come to know the modern style of English much better than I formerly did. The reading of this periodical has taught me to appreciate good English in fiction. And last, but not least, I have learned to enjoy editorials."

"The patent medicines have been exposed to me by COLLIER'S—such ones as the 'sure cure for cancer' dope and the fake tuberculosis cures. I know enough to leave cancer cures and all other patent medicine dope alone."

"The 'Comment on Congress,' by Mark Sullivan, has taught me some things that I probably would never have learned but for COLLIER'S being my textbook. The editorials have brought me to realize what is going on in general all over the country and what the national opinion is."

"I think that there is no better way to get a literary education than to take COLLIER'S, as I have done, and in preparing an article for the classroom to become so acquainted with it as to explain the meaning to others."



"The study of COLLIER'S has helped me in many ways and kept me in touch with all that is going on in the educational, religious, medical, and political world. It has set my mind working on many of the grave problems of to-day and every-day life. Most of all, it has taught me to look at all questions from an unbiased viewpoint, for no matter what the question may be, both sides have some good points behind them. COLLIER'S has taught me to be a careful student; not to jump at conclusions, but to weigh all the facts and arrive at the true conclusion."

"COLLIER'S, I believe, has been a greater source of pleasure to me during the term than any of the other work taken up. The stories are interesting, but the editorial pages of COLLIER'S come before these. The editorials are the work of experts—men who know what they are talking about and have the ability to wield the pen and express their thoughts."

COLLIER'S has been published for men and women rather than for boys and girls, and it is an exceedingly welcome discovery that these boys read the Weekly with a good deal of appreciation and, by their own view, benefit. The editor blushes a little at the thought of his prose and that of his contributors being used in the classroom, along with old Thomas Babington Macaulay and Edmund Burke and young John Keats, but he is proud of it. Professor Durlorow of Culver Academy assures COLLIER'S that he thinks "a compactly phrased, meaty editorial" a good model for his boys to follow; "and," he adds, "I have found that they will study its style with twice the avidity that they will give to a paragraph of Addison or Macaulay. The idea is to show them that American literature did not end with the last-named author in the textbook, but is still being produced in various virile forms; another purpose, that of getting the students acquainted with important questions in our present American life; an effort to make a definite start in training for upright and useful citizenship."

Incidentally, a good argument might be framed for instruction in magazines of to-day, as well as in the classics, at other places than Culver. Magazine publishers are persistently boosting and pushing their wares—good, bad, and indifferent—whereas the competition is much less active among the great men of the past—the Vergils and Horaces and La Fontaines and John Miltons. It is a genuine service to his pupils if a teacher can steer his charges toward the worth-while, the more purposeful, and the saner of magazines, instead of letting them drift. The only difficulty in the way of anything like formal instruction in magazines in schools and colleges is the fact that the curriculum is already too crowded for the student's good. But it is a question that is up to the educator—and the editor stands aside, and accepts his decision without argument. He knows of a number of classes in current events, in secondary schools and in colleges, and in several of them, at least, COLLIER'S is the magazine chosen for special study.

COLDWELL LAWN MOWERS

Is Half Your Fuel Expense Worth Saving?

Read This Letter

Home Bank Building, Detroit, Mich.
The Peck-Williamson Co., Cincinnati, Ohio.

This is my third winter and I am perfectly satisfied with results. Am using slack coal at a cost of about $3.65 per ton, when my neighbors are paying $8 and $8.50 for their fuel. A ton of slack lasts as long as a ton of hard coal and with equal results. The UNDERFEED is the only system of heating, as it does not smother the fire every time you replenish the fuel. The UNDERFEED system crowds the live coals nearer the point of attack and consequently gives more heat when replenished, than less, as is the case with the topfeed system.

Yours truly, GEO. M. CONDON.

Why Underfeeds Cut Coal Bills in Two

Coal in the Underfeed is fed from *below*, and like a candle, burns *from top down*. The fire must burn down into the fresh coal slowly, against the draft. As in the candle, this down-burning gives the best and cleanest heat and makes the coal last longer. Simple and logical, isn't it? With the fire always on top, smoke and gases are consumed, making more heat with *no* soot, smell, smoke, clinkers or dirt, and few ashes. *Cheap* slack soft coal and pea or buckwheat sizes of hard coal yield in the Underfeed as much clean, even heat as *highest*-priced coal in other heaters. The Underfeed is adapted to warm air, steam or hot water in buildings of all kinds, large or small. Shall we send you the names and addresses of over 2,000 Underfeed users—some right in your vicinity—who *know* by experience that clean, even, *economical* heat is obtainable with the Underfeed.

Our Startling Guarantee

We guarantee a saving over your present coal bills of at least one-half by means of the Underfeed, when properly installed and operated. Every Underfeed carries this guarantee, which is backed by a $1,000,000 company. So you take no risk. The burden of proof is on the Underfeed. It has satisfied thousands—it will satisfy you.

Cut-Out View of Underfeed Furnace

You Need This Book

If you are tired of paying big coal bills; if you want more heat at less cost or if you are going to build, then you need our big free book, "From Overfed to Underfeed." This book will open your eyes and save you money.

PARIS NUMBER *of* JUDGE, *May 2*, TEN CENTS

le Judge

Le JUDGE—l'Edition Parisienne paraîtra le 2 Mai. Ce sera un numéro spécialement amusant et digne de la reputation que ce journal comique et satirique a établi par la passé. Si vous n'êtes pas déjà abonné, voici une excellente opportunité pour faire la connaissance du journal.

Oh, no, it is not in French, but this week's issue of JUDGE has a distinctly Parisian tang.

At All Newsstands Ten Cents

The Answers to Mr. Washburne's Brickbat

LITTLE ROCK, ARK.

"SUDDENLY Sally's face relaxed. 'We have all suffered,' she said." They sure did, and so have we, the readers. Please, Mr. Editor, don't feed us from this spoon any more. C. E. MOYER.

✚

RIPLEY, N. Y.

Thank goodness, the end is in sight. The largest number of words grouped into one story with the least amount of sense I ever read. "World's-End."

MRS. FRED CLINTON DEAN.

✚

NEW YORK CITY, N. Y.

I was greatly surprised to read the comments of a Mr. Washburne on that excellent story, "World's-End." I could scarcely wait for each succeeding installment, and would like the gentleman from Milwaukee to know a great many people's sentiments differ from his. Hoping you will print a great many more like "World's-End." BESS GILMOORE.

✚

OKLAHOMA CITY, OKLA.

Unlike the "candid friend" from Milwaukee, we are sorry to have "World's-End" finished, for it is by far the most gripping story we have read in months. We are curious to know the "why" of Mr. Washburne's scorn. It makes us suspicious. . . . We also have inquired of friends who are readers of COLLIER'S, and with one accord they proclaim it a fascinating story. We are willing to be afflicted with more doses of just such "puerile drool." Anyway, we think COLLIER'S about the best all-round magazine published. T. CORKINS.

✚

JAEGER, W. VA.

I notice in your issue for April 11, 1914, a quotation from a letter written you by H. F. Washburne, principal of Park Street school, Milwaukee, Wis., condemning as "puerile drool" a serial that has been running in COLLIER'S for some weeks. Does Principal Washburne refer to "World's-End," by Amélie Rives? If so, I must take issue with him. This is the one serial running in COLLIER'S that has interested me. I have always read it first. Possibly I have not passed the "puerile" stage, but to me this story has struck a new note. With no apology for sin, it portrays the nobility of soul that, conscious of its own shortcomings, can look into the sin-scarred soul of another and see the possibilities that lie therein, and that with sympathy and understanding and love can help that other to attain a higher, clearer, nobler consciousness of life. . . .

E. L. HOGSETT.

✚

CHICAGO, ILL.

I have just read a criticism of "World's-End" in the April 11 issue in which it was termed a "tiresome serial." I cannot agree with Mr. Washburne, principal of the Milwaukee school. I considered this serial one of the best you have ever published. The story was delightfully told, and to me it represented a wonderful narrative of human control and suffering. It requires strong minds and souls to live through a mistake such as was committed in this story. I hope COLLIER'S will have more serials like this. CHALMERS L. PANCOAST.

✚

ST. LOUIS, MO.

In your last editorials you quote "polite language from a candid friend," and this candid friend thinks "World's-End" has been tiresome. . . . Mark my word, we have not heard the end of "World's-End." It announces the passing of that made-to-order stuff that has made our magazines like highly pictured empty cans. FRANK H. CROSS.

✚

CHICAGO, ILL.

One day last fall, while waiting for a friend in a dentist's office, I idly picked up a copy of COLLIER'S and began to read the serial referred to by your candid friend, he of the polite language. Since then, rain or shine, hot or cold, I have rushed each week to the news stand to get the next installment. Moreover, my two sisters have waited at home with bated breath for me to come home from work with my copy. Also, I know a high-school teacher here in Chicago, the head of the English department, who is of the same mind in regard to the subject. I haven't asked twenty or thirty others, but we four, who like the story, have enough sense to enjoy Thackeray, Dickens, Jane Austen, and George Meredith. Isn't our judgment as good as that of the thirty from Milwaukee? BERTHA WHITE.

✚

COUDERSPORT, PA.

That poor deluded Professor Washburne of Milwaukee deserves to have a satirical poem written about him. He must be one of the very few principals who work for their money and read only to be entertained.

Certainly I have not enjoyed a serial in a long time—a bit shy of action at times, but the original expressions of ordinary thought hold the attention.

Poor man! Some things are too deep for his befogged brain, and it takes a woman to explain it. Does he prefer the half-foreign trash with a great deal of action and very little motive power?

EUGENIA G. BENN.

✚

OKEMAH, OKLA.

After having just finished "World's-End" (for that is always the first thing I turned to), my eye fell upon your editorial (for I always read the editorials next), "Polite Language from a Candid Friend." . . .

In defense of the serial, let me say that never have I read anything to me quite so appealing. . . .

I was sorry when I had read the close of it, and hope the next will be as good.

J. F. HARRIS,
Supt. of Okemah Public Schools.

✚

MONTREAL, CANADA.

Just finished reading your serial, "World's-End." It is the best moral I ever enjoyed reading, poignant and interesting.

If such noble thoughts and character were depicted oftener and imbibed by readers, this world might gain by acquiring more generous and loving hearts and true manhood. J. S. BLONDIN.

✚

NATICK, MASS.

I have been deeply interested in the serial story, "World's-End." I cannot at all agree with the caustic critic who calls it "drool."

I like the story because its plot is different and daring (but not half so improbable as real life) and so well handled. . . .

The ordinary story, *just like every other story*, is what I would call "drool," but would doubtless please our friend the critic. WALTER W. COOK.

✚

NEW YORK CITY, N. Y.

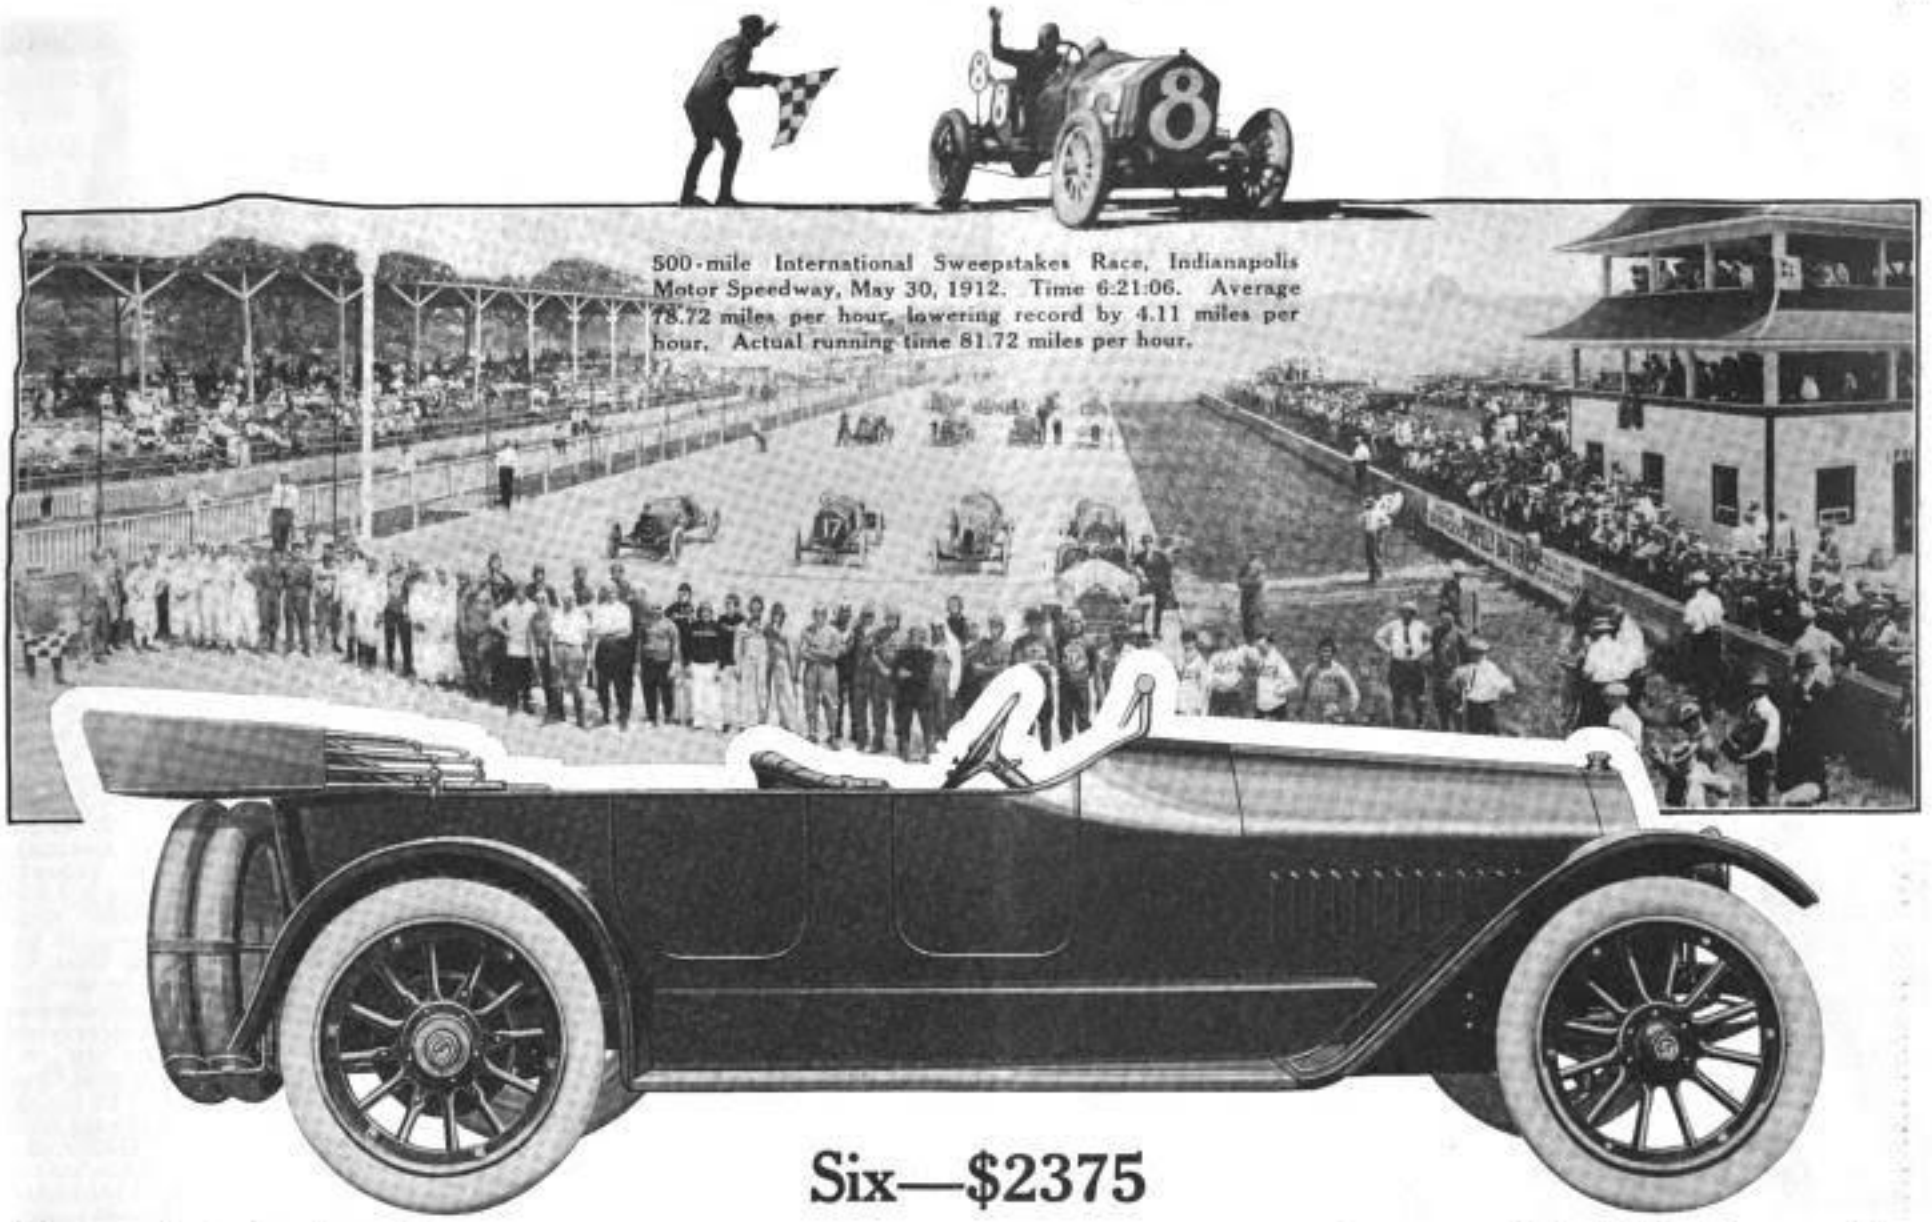
It seems incredible that any reader of COLLIER'S WEEKLY could find "World's-End" as unworthy his attention as your reader in Milwaukee found it. My own interest survived to the last line of the story, and I know several others who likewise found it interesting. We—these several others and I—can testify to one thing: that it is a genuinely interesting and veritable picture of Virginia country life and society, quite apart from any consideration of its theme. How anyone could fail to be reached by the *humanness* of the story and the genuineness of its feeling throughout is a bit of mystery to me. If you find anything else as good, be sure to run it.

HARRY DOUGLAS ROBINS.

✚

HATTIESBURG, MISS.

I have just read Mr. Washburne's unjust criticism of the serial, "World's-End," and must say I do not agree with him, finding the story full of interest from beginning to end. I feel sure the story is based primarily on facts, as it rings too true to be mere fiction. Let's have more from the Princess.



FERN CHAMPENOIS, M.D.

✚

JAMESTOWN, N. Y.

Many thanks for giving us such an entertaining story as "World's-End." Our whole neighborhood has thoroughly enjoyed it and feel that we must protest against Mr. Washburne's criticism, which we think *ridiculous* and unwarranted. M. T. JOHNSON.

Digitized by Google

500-mile International Sweepstakes Race, Indianapolis Motor Speedway, May 30, 1912. Time 6:21:06. Average 78.72 miles per hour, lowering record by 4.11 miles per hour. Actual running time 81.72 miles per hour.

Six—$2375

The one and only American-made car that remains superior to all foreign cars in the International 500-mile race is the *National.*

National	time 6:21:06,	winner in 1912
Fiat	time 6:31:29,	second in 1912
Peugeot	time 6:35:05,	winner in 1913

(*The National was not entered in 1913.*)

National

The *National* won, and has held for years, the world's stock car championship. The *National* also holds the world's record for the fastest average straight-away mileage with a stock car, 89.28.

Its History and Its Today Warrant Your Confidence

The International 500-mile race is again scheduled for May 30th, on the famous Speedway at Indianapolis. Three times has the race been run—with almost a hundred of the world's best automobiles competing. It is the supreme test of automobile construction. It is a decisive, uncompromising method of elimination of the weak.

The Unconquered *National*

Against this background of three years' struggles the *National* stands with silhouette distinctness. It is the record-maker, the record-holder, the unconquered. You may or may not believe in racing. You must admit that a car must have great and genuine *quality* to win and *remain* The World's Champion as the *National* has. The *National* was not entered last year. (A foreign car won, but did not equal the *National's* record.) The *National* will not enter this year. The *National* need not fight its own unblemished record.

National Success Fundamental

Racing with us has been a *means*, not an *end*. Our proudest victories have been won with absolute *stock* cars. Our wonderful success in contests rests upon the wonderful success in our factories. From the beginning, fourteen years ago, we have made the *National* for long, satisfactory service, not as a "Stock speculation" or as a "business chance." From the beginning we strove to win not only contests but public confidence. Today the *National* Company is one of the old, reliable, successful concerns that holds public confidence because it deserves it.

"You Don't Have to Raise the Hood"

National owners know that when the *National* builders put their guarantee behind the car it is *right*. We have no secrets. We invite you to visit our factories and inspect and analyze our cars and our methods. But we do say with all our might that the biggest consideration in buying a car today is to purchase *performance* and not specifications. We take the responsibility for the mechanical parts of our cars—as we *should*.

Let's Be Candid

Why *should* you have to raise the hood before buying a car, any more than you have to pry off the back of a guaranteed watch before believing it will keep time? You don't have to raise the hood of the *National*. We put the right material in the correct place. We sell you our responsibility, our reputation, our ability and our guarantee, and not a mere collection of wheels, axles, gears, etc.

We Know This Is What You Want

We think you'll agree with us that the best car is the one which gives maximum service and pleasure—gives you perfect performance. In a *National* you can actually forget that there is machinery running inside it. Don't buy a car for one or two parts—buy the whole car. Base your judgment and invest your money in a *whole* car, sold to you *as a car* in itself.

Today—

Today the owner of a *National* is a proud, satisfied motorist. He profits by the *National's* long history of success. The *National* today is beautiful in its advanced graceful designs; it is roomy and unusually comfortable; it is simple, easy and convenient to drive; it is dependable and all sufficient in operation. The *National* owner, who happily found the *National* a good car years ago, now has even more reason to own the perfected *National* of today.

If there isn't a *National* dealer near you, please write us for the address of the nearest one. Ask us for our booklets. Post yourself—*know* the *National*. And to know it is to want to own it. Write today.

National 40 This is our staple car Five models $2750 to $3400, with still further improvements and refinements. Motor 4⅞x6; electric lights and starter, a most luxurious and dependable car—The World's Champion.

National Six This new Six is beautiful, graceful in design, the most comfortable car you ever rode in—roomy, convenient, noiseless. Motor 3¾x5½; 132-inch wheelbase, electric starter and lights; left side drive, center control; complete in every detail, *full* equipment.

POMPEIIAN BRONZE SCREEN CLOTH

LASTS AS LONG AS YOUR HOUSE

Think of This

Just one little hole in your screens—one tiny rusted-out, broken-down mesh and your entire screening expense is wasted. Through that unsuspected breach in the defenses of your home, germ-carrying insects creep unseen and spread the havoc of disease.

The remedy is in the use of enduring

Pompeiian Bronze Screen Cloth

—100% efficient—woven from a remarkable wire (90% pure copper) that *can not* rust. Fog, salt mists, rain, smoke, the dampness of tropical swamps, sulphur or ammonia fumes are powerless to harm Pompeiian Bronze. Barring fire or accident, it lasts as long as your house, each mesh whole and unbroken—a *permanent*, positive protection.

Rescreen with Pompeiian Bronze. Use it if you are building. Your safeguard against substitution is the removable red string woven in the selvage of every piece before it leaves the mill. If there is no red string it isn't Pompeiian Bronze.

If your dealer can not supply you, we will promptly. Send to-day for book.

CLINTON WIRE CLOTH COMPANY

65 Sterling Street, Clinton, Mass.

First weavers of wire by power in the world. Makers of Clinton Wire Lath—the first metal lath produced and the best to-day for stucco and inside work. Interesting book of "Stucco Houses," showing many types, sent upon request.

NEVER RUST

NEVER PAINT

NEVER WEAR OUT

SIMPLY DUST AND PUT ON

The tourist gives his car a real test

YOU may not buy a car especially for touring—but you do want a car that you *know* will take you over any roads or through any country if you decide you want to go.

The Sturdy Stutz gives you this assurance. Its dependability has been proven by official records in a remarkable series of race victories and by Stutz owners in the public marathon of daily service.

With its latest modern conveniences, its consistent performance on the race tracks and for the private owner, its absolute dependability, no matter what the emergency may be—the Stutz recommends itself to you for any use.

Write today for Booklet

It will pay you to investigate the Stutz before you buy. We have a new booklet called "They Say"—not gossip, just a straightforward statement of *facts* that will interest you. Ask for it, also Catalog B-J, Series K.

The Isolation of France

(Continued from page 9)

apparent. What puzzled me, however, were numerous statistics on Holland and Belgium.

3,500,000 Germans Ready for Action

NOT until Kiderlen-Waechter and Churchill, squatting down by the fireplace and poking the burning papers with old-fashioned irons, not until then, when there began a conversation and other pairs conversed on certain points all around the room, did I gain a clear idea of just what had happened. What they said, the vital scraps of their conversation as they drifted to me while I moved to and from the table and fireplace, I shall now present as close to the words of the men involved as I am able.

Heeringen, who had drawn Haldane aside, said: "We are ready at any time with 3,500,000 men without any further straining of our reserves. According to our lastest agreement, Austria will support us with 2,000,000 more men. The financial aspect of this is, of course, out of my hands."

Haldane mumbled something that sounded like "that is very satisfactory." At any rate, he nodded an affirmative.

By this time the positions had changed somewhat, and Churchill drew Tirpitz aside. Churchill spoke German only indifferently, so they conversed in French and partly in English. I heard Tirpitz say:

"We could bottle up the Baltic in twelve hours. Russia would not have a chance to stir. Of course, in the event of any outside situation arising, we shall look to England to take care of such new condition. That seems to rest clearly with your navy."

Churchill became a little cautious.

"There is a certain contingency that might arise," he said, "Suppose, under stress of circumstances, the United States should take a definite stand against us in this matter?"

Von Wedell tossed a piece of paper to me which bore these names (identical paper reproduced)

United States Not a Factor

THE reply of the Admiral was the very expressive German word—*Quatsch!* He further intimated that the United States was so interested in its own internal affairs that it would not be drawn into the question, and that in any event its navy would be needed for its own immediate protection. He had a disposition, however, to put the entire situation up to Churchill.

Kiderlen-Waechter and Moritz were deep in the Balkan question, and I sensed then the coming Balkan imbroglio.

"Without doubt," Moritz said, "we will bring that to an issue within a few months." I knew he meant that Austria would precipitate the Balkan question. Kiderlen-Waechter was serious.

"It has got to be done."

There were other snatches, all bearing on the same subject, and gradually the situation began to clarify in my mind. It was not, however, until I had noted the contents of certain documents before destroying them that the tremendous importance of the big stakes they were all playing for became apparent. What I shall now do is to reveal the substance of these documents, coupling them with overheard conversation, thus interpreting the full significance of the conference.

Within the last twenty-five years Germany has so enormously advanced in commerce that she urgently needs some further outlet on a northern seacoast. This means Holland and Belgium. Hamburg and Bremen are the only two practical harbors that Germany possesses for the distribution of her enormous export. The congestion in both places is such that steamers wait for weeks to load. One-quarter of Germany's exports goes through Antwerp. Germany must have Antwerp. Practically the whole of southern Germany's commerce, especially along the Rhine and the highway of the Rhine, pours into a foreign country at present. Germany must have Antwerp—in fact, the whole coast, Amsterdam and Rotterdam included.

The empire wants harbors, not colonies. The colonizing idea is a fallacy. Germany is, first and last, a manufacturing country. It never was and never will be, for a long time to come, a successful colonizer. At present all that Germany wants is markets, and facilities for extending her markets. These markets Germany will always be able to command because of her intense scientific application to all branches of manufacture. But these products need outlets. Germany is quite willing to let the others colonize so long as she has a chance to get her goods in. So much for the German situation.

Germany Cannot Fight England

ENGLAND, in her vast over-sea domains and possessions, wants rounding up. England has not been able in the past, and certainly is not at present, able to supply herself and her colonies. In Germany she has a first-class workman. Germany manufactures what England needs. Germany's building of her navy was never meant as a real menace to Great Britain. It was solely a means to impress the English that Germany would make a powerful and valuable ally in every shape and form. Conversely, it was a threat that she would be a dangerous opponent. This is clearly understood in the English and German Cabinets. Public opinion is being rapidly educated up to this in both countries. All the war-scare talk between Germany and England has been and is only a means to an end. The end is to throw dust in the eyes of the rest of the world. Germany and England will never go to war. The destruction of one would mean the destruction of the other. They are too equally powerful to be able to fight each other; their real interests run too close together. Indeed, they are mutual. Germany manufactures, England uses.

The Doom of France

SHOULDER to shoulder, Germany and England (Germany, of course, including Austria, and probably Italy) could dictate to the rest of the world. There is one stumblingblock. This is France.

Well-informed Frenchmen have known and feared this for a long time. They have, of course, never mentioned it in public. Shrewd French statesmen have long kept it in the seclusion of their own minds. It would be political and possibly physical death openly to assert that France is doomed. But doomed she is.

With all her gallantry, hysterical patriotism, and wealth, she would never be able to hold out against Germany alone. Her attempts at alliances have been frenzied. To secure Russia's friendship she has loaned enormous sums of money. But the Japanese War and internal troubles have eliminated Russia as a high-class ally. She was at the time of the Black Forest conference but a secondary power. She is to-day balanced by Turkey and Austria. The Balkan States are smashed. So France did her utmost to solidify the *entente cordiale* fostered by the late King Edward VII under the stress of public opinion in England.

What They All Want

TO what extent she met success we have seen. The Moroccan question showed England ready to back up France in war, but now comes this meeting in the Black Forest. Germany has shown England the greater advantage of a German-English coalition, and France is frozen out. England, with her shrewd alertness to make the most profitable deal, was not slow to see the advantages of the German proposition. In a nutshell, it is this:

Germany must have the lowland

ports. Holland is not adverse to coming into the German Federation. Belgium is adverse, but could be snuffed out as easily as a candle. But French public opinion would never tolerate under any circumstances this German aggression. France would fight, even though knowing it to be a losing fight. If only she would let Germany have what she wants, there would be no war. But the French temperament, public opinion, years of decorating with flowers that Alsace-Lorraine symbol, the Strasbourg statue in Paris, have not been conducive to fostering a submissive spirit in France. To resent Germany's inevitable aggression is equally inevitable.

So much for what Germany gets out of it. Austria wants to round up her empire in the Balkans. Austria has to have outlets in the Mediterranean. England, for standing by Germany, will be rewarded with French Northern Africa and the Dutch East India possessions. What will become of France? Reconstruction, partitioning, possibly a little kingdom, probably under the Orleans régime. France is in the lap of the gods. I know these things, for I possess them in black and white.

NOTE: *I am indebted to Edward Lyell Fox for his collaboration on this article.* —ARMGAARD KARL GRAVES, M. D.

Rotsam and Jestsam

(*Concluded from page 13*)

Many a dub has tramped around an eighteen-hole course taking four and five putts and all the time holding his temper easily on the snaffle and enjoying life—whereas his companion has been searing the landscape with corrosive and complicated cuss words because he has averaged three putts to a hole. This is a pitiable sight and one which should make all dubs feel thankful. To putt successfully, gather up the temper carefully in one hand and putt with the other, aiming for the hole or thereabout. After each miss repeat your favorite joke softly and remember that with all the villainies of a putting green

you cannot lose a ball on it. If you finish the job with your temper under perfect control, mark a star opposite that hole on your score card and drive on.

Answer to Correspondent

Hopeful, Jacksonville, Fla.—*Your game shows marked improvement. To avoid hitting yourself on the foot while driving, stand back and do not close your eyes.*

Settlement Work for the Rich

YEAR by year the smothered rich become more careless of their children. An Eastern millionaire recently left his young son in Pennsylvania with a thousand-dollar bill for spending money, and the poor child almost starved before he got it changed. Dreadful crimes of neglect are constantly being committed in this manner. Innocent little ones are being left alone with huge boxes of candy. They are being abandoned at a tender age in big-powered automobiles, and are given colleges to play with in the most reckless manner. Cases are even on record of boys who, with all the wealth of the world around them, have never known the firm and salutary pressure of a father's knee on one side of the body and a father's hand on the other. We need settlement work among the ignorant parents of our future plutocrats.

Guarantees **CASH** for your diamond if you need it or want it! Also legally certifies *carat* weight, quality and value! **"See that your diamond is Basch Guaranteed!"**

A Valuable Tip to Diamond Buyers

Always buy diamonds *by the carat!* Many dealers sell *by the piece* to hide the tremendous price per carat they really ask—to make honest comparison impossible. We have sold by the carat for 35 years!

A Few Examples of Basch Prices

C1—14K. Engagement Solitaire, 1 carat diamond	$101.25
C15—Solid gold tie clasp—1 diamond. **Special**	1.00
C3—14K. Twin ring—two ⅓c. matched diamonds	67.50
C4—14K. Engraved ring, ⅓c. diamond	22.50
C8—14K. Earscrews, two ½c. matched diamonds	138.00
C7—14K. Shirt Stud, 1 carat diamond	99.75
C10—14K. 6 prong tooth ring, ½c. diamond	50.50
C12—14K. Gentleman's Belcher Ring, ¾c. diamond	91.25
C13—14K. Lion's Paw Ring, ½c. diamond	38.25
C14—Solid gold cuff links, 2 diamonds. **Special**	1.75

128 Page De Luxe Diamond Book Free

This richly illustrated book is more than a catalog. Written by life-long experts, it contains facts about diamonds—their colors, qualities and values that have never before been published. Explains how we have reduced the selling of diamonds to an exact science, enabling you to purchase as intelligently as any diamond expert. Shows the newest fashions in diamond mountings, 14K. solid gold and platinum—which we price at COST IN OUR OWN SHOP; also standard lines of *Jewelry* and Watches at factory prices which by comparison are startling!

One Great Essential in Furniture is that it Must Mean Something.

BERKEY & GAY furniture is made for use, of course. But more than that, it is made for your enjoyment. It expresses the dominant thought of yourself and of your home, just as do your books, your pictures and your family.

Berkey & Gay pieces have such beauty as can only be attained by the combination of the best woods with the best workmanship and the best ideas and ideals. Many people buy it one piece at a time, knowing that it is standard—that tomorrow, next month, next year, or any time, they may choose more of it and that they will *always* find the same gratification in it.

When people say of some furniture you admire in their home: "That is a Berkey & Gay piece," you know it is not because of the price they paid, but of the beauty and value they obtained.

Berkey & Gay Furniture

"For Your Children's Heirlooms"

OUR DEALER will show you, with the displays on his floors and our beautiful portfolio of direct photogravures, our entire line of upwards of 5,000 pieces. You make your selection as understandingly as though you were in our great exhibition building in Grand Rapids. And your dealer gives you our promise with his that what you choose must satisfy you. If you do not know the nearest Berkey & Gay dealer, we shall be glad to write you his name and address.

The salesman will show you our shopmark. It is not a label. It is *inlaid*—made an actual part of every piece we produce. It is easily found, but, of course, is not obtrusively displayed. It is a pledge of good faith and good furniture.

OUR de luxe booklet, "Character in Furniture," which will be mailed to you for fifteen two-cent U. S. stamps, is an authoritative history of period furniture and will be a valuable guide to you. We do not publish a catalog because our furniture is not that kind. Our entire set of "Travelogues in Furniture" will be sent you for five two-cent U. S. stamps, or the travelogue on any one period will be sent free.

Any of the following publications of ours is sent free on request:

The Story of Berkey & Gay, —an interesting chapter of American History;

Entertaining Your Guests, —a beautiful booklet, illustrated, on the never ending problem;

Things to Remember, Masterpieces in Miniature and Eugene Field's whimsical poem,

In Amsterdam, —in colors on a wall card.

ILLINOIS COLLEGE OF PHOTOGRAPHY
949 Wabash Avenue, Effingham, Illinois

The Lynching of the Night Marshal

(Continued from page 11)

Sheer persistence and a carrying voice gained him his point. The hubbub lessened till his message became intelligible:

"Give the dead man a show, boys! Give the dead man a show!"

The noise died down like the menace of a passing thunderstorm.

In the silence some one shoved the night marshal roughly toward the soap box. He stepped up and faced them.

THE man seemed perfectly cool. His long arms hung loosely at his sides. There was no visible tension in his attitude. He began to speak, slowly and in a low voice—evidently unused to public speaking, particularly at his own funeral.

"Louder!" some one shouted peremptorily.

At the word the night marshal flung out his hands, as one who casts from him the preface, the embellishment, and spoke up abruptly and to the point:

"I don't want you fellers to git the idee that I'm stuck on beatin' up strangers, an' pertic'ly them as is older'n me. This here's a different thing altogether."

A man on the edge of the crowd jeered openly. "Sparrin' fur time, ain't ye?"

The hand of the night marshal sought his belt. It was empty. He made a savage gesture, leaning to the last speaker over the intervening crowd.

"You've another guess comin', Bill Dobbs," he flashed back. "I ain't one to snivel fur mercy." He pointed to the rope swinging greedily over their heads. "I reckon ye didn't put that contraption there fur nawthin'."

He paused to pick up the thread of his discourse, pushing his sombrero back off his face.

"Boys" he resumed, "one't I had a good job in Noo York City—not rustlin' cattle, nor tendin' ranch with the termometer at 112° in the shade, but a decent payin' job. I had a gal I was goin' to hitch up with when we got a few more plunks cached away."

The crowd leaned closer to listen. The human-interest story is always worth while, whether at the "movies" or far off on the plains.

"Along comes a land promoter—a sly fox of a feller, and whistles to the money in my pocket like he wuz a snake charmin' a canary bird. Next thing I knowed I'd said good-by to Sally, drawed my money out of the bank, an' sunk every cent of it in a God-forsaken place at the end o' the earth—no, I won't tell ye the name o' it till I say all I want about it, like I've been a-bustin' to do this long while."

THE night marshal fumbled in his pocket. He held out a crumpled envelope. "This here," he announced, "is Sally's invite to me to come East an' see her git hitched up to another feller. It came last week."

The night marshal paused. His face darkened. "Last night," he went on, "a feller blew in on the late train. His ugly mug was strange to me, but I felt like I'd happened on him somewheres, an' he called up unpleasant things to me. So I taps him on the shoulder an' says: 'What do they call you where you live, mister?' Just then the light struck his face an' I recollected who he was, beard an' all. Then, boys, I seen six ways to one't, fur it wuz the sly old feller as had seduced me fur to leave my happy home fur the coyote's hole we call Eagle City. An' the edge o' this here envelope stuck into me like a spur into a cayuse. Well" (he shrugged his lean shoulders), "I must of giv' 'im all that was makin' fur 'im, though I don't remember much about it."

There was a murmur that might be either sympathy or impatience. Then a voice spoke up:

"That's all very well, Jim, but Eagle City is a law-abidin' locality. We don't propose to let personal matters git a headway in public affairs. We—"

A voice interrupted with some heat: "I want to ask the prisoner at the bar if he meant all them slurs he slung at our fair city?"

At the sound of their gathering rage a man climbed painfully out through the window that gave to the back of the station

The night marshal nodded solemnly. "I did," he replied. "It's a roostin' place fur yaller dogs — it's a freckle on the face of the good old American continent! An' Goddlemighty knows I could say worse an' mean it." He flung his long arms out with a gesture as if he opened his heart to them.

Silence fell.

A man on the edge of the crowd came smashing through, waving his arms like a windmill and cursing as he came.

When he reached the soap box, he grasped the night marshal's hand and began working it up and down like a pump handle in a drought.

"The saints be praised!" he shouted. "Sixteen long years I've lived in Eagle City, an' divil a word of truth have I iver heard annyone say regardin' the place. 'A growin' community'—'A foine climate'—'Risin' land values'—och! sure I've whooped it up wid the rest, boys, but manny's the toime I like to tied me tongue's end to me wisdom teeth to keep from sayin' what I tho't about the misbegotten hole!"

Some one guffawed. A murmur of amusement swept through the crowd, like the ripple on wind-stirred water.

"All aboard!" sang out the conductor of the westbound train.

THE speaker waved his hand toward the scrambling passengers.

"Fur the privilege of freein' my mind on the subject of Eagle City," he announced, "I'd be willin' to leave town on that train. An' for the great an' endless pleasure of gittin' me two hands on the mug of the he-goat that lured me here," he went on with growing intensity, "I'd be willin' to swing on that there telegraft pole along with the night marshal!"

"Same here!" a deep voice concurred.

"You bet!" sang out another.

"Amen!" another intoned piously.

"We wuz all corraled with the guff rope," growled one. "Who wuz it roped you, O'Hara?"

The little Irishman took a deep breath that puffed him out like a fat bird. "Phineas S. Skaggs," he spat out as if the name tasted bad in his mouth. The crowd echoed it in a sudden blaze of fury.

Get the Personal Touch!

Sixes or fours—the Mitchell-Lewis Motor Company makes both. *Our idea is to suit the public taste.* We are not trying to cram either down your throat. We want you to try them both, sit in the driver's seat, get "the feel of the car," note carefully the action of the engine, the brakes and the steering apparatus. You can get the pulse of any car by doing the driving yourself. *And you can't get it any other way.*

You ought to know your own car even if you hire a driver. You ought to know it *before you buy it.* That definite process of acquiring information will often save you a lot of money and worlds of trouble. It eliminates all element of risk. *You buy with your eyes open,* and you don't buy through the eyes of somebody else who might happen to be prejudiced. We believe that anything which costs as much as an automobile ought to be bought that way—*and no other way.*

We are asking prospective customers to buy Mitchell's that way. We are asking them to drive the car themselves and get what is known as "the feel of the car." It can't be gotten by sitting in the tonneau or even alongside the driver. The only way to reach the pulse of a car is *through the steering wheel.* The matter of detail may be learned afterwards if the car behaves well enough to arouse your interest. We think the Mitchell car whether Six or Four is the buy of the year. Try it yourself and see how close we have come to the truth.

Here is the Equipment for all the Mitchell Models Which Is Included in the List Prices:

Electric self-starter and generator—electric lights—electric horn—electric magnetic exploring lamp—mohair top and dust cover—Tungsten valves—Jiffy quick-action side curtains—quick-action two-piece rain vision wind-shield—demountable rims with one extra—speedometer—double extra tire carriers—Bair bow holders—license plate bracket—pump, jack and complete set of first-class tools.

Specifications of the Three Great Mitchell Models:

The Mitchell Little Six—fifty horse-power—132-inch wheel base—36 x 4½ inch tires—two or five-passenger	**$1,895**
The Mitchell Big Six—sixty horse-power—144-inch wheel base—37 x 5 inch tires—seven-passenger	**$2,350**
The Mitchell Four—forty horse-power—four cylinders—120-inch wheelbase—36 x 4½ inch tires—two or five-passenger	**$1,595**

Eighty Years of Faithful Service to the American Public

P.A. makes a pipe smoke a real man's game!

Water-color portrait of Peter Newell, celebrated artist, painted by himself.

Listen to this:

P. A. spells "pa"—and that means Prince Albert is the *daddy of 'em all!*

Never hit you before? *Sure will* just about as quick-off-the-bat as you fire-up some national joy smokings, via a jimmy pipe or rolled into a makin's cigarette.

Because Prince Albert has everything—flavor, aroma, quality. It's so ripping good for what ails your smokappetite that the sight of a tidy red tin just jams joy into your system.

You pin a quick-action tag on your sleeve, beat it biff-bang around the corner, and lay in some

PRINCE ALBERT

the national joy smoke

Sooner you *know for yourself* that P. A. can't bite, the wiser and more cheerful-like you'll be early in the a.m. It's this way: Prince Albert is made by a patented process that *removes the bite!* Just leaves the tobacco-goodness *all there,* and brings out the rich flavor that makes men yearn for P. A., sunrise to sunset.

You give Prince Albert the punch-test. That's trying it out any old way—just as mean as you can be to it. You'll find P. A. true-blue because you can smoke it red hot—*and it just can't make your tongue tingle!*

Say, you be game. Mate up P. A. with a jimmy pipe and get going—*some!*

You buy Prince Albert just like you know what you're on your way for. It's sold all over the nation, on the byways as well as the highways. Toppy red bags, 5c; tidy red tins, 10c; also handsome pound and half-pound humidors.

Tarvia
Preserves Roads
Prevents Dust—

Academy Street, Fitchburg, Mass. Constructed with "Tarvia X." One of the many streets constructed in Fitchburg during the last ten years with Tarvia, some with grades up to 14 per cent.

How roads wear out—

MACADAM roads disintegrate by various processes. Automobiles destroy the surface, pulverizing and loosening it so that it blows away in the form of dust. When the top coat of screenings is thus destroyed the road has lost its roof, and water, instead of being shed quickly to the gutters, penetrates into the lower layers of larger stone and does endless damage.

Under heavy loads ordinary macadam undergoes a certain amount of internal movement which is very destructive. The stones below the surface, grinding against each other under great pressure, exert a mutually abrasive effect, resulting in a general disintegration and breaking-down.

The modern way to protect roads against such wear is to bond them with Tarvia.

Tarvia is a dense, viscid compound of coal tar. It fills the voids between the stones and forms a tough, plastic matrix. On the Tarvia surface thus formed automobile wheels do no damage, since the tenacity of the Tarvia is great enough to resist the traffic. Used in the interior of the road, Tarvia keeps the stone in its proper position and prevents internal shifting, rubbing and grinding. These two results of the use of Tarvia bring about great economies in maintenance.

A tarviated road lasts so much longer and needs so little care that the cost of the Tarvia is more than compensated for.

Booklets on request.

BARRETT MANUFACTURING COMPANY

New York Chicago Philadelphia Boston St. Louis Kansas City Cleveland Cincinnati Minneapolis Pittsburgh Seattle Birmingham

THE PATERSON MFG. CO., Ltd., Montreal Toronto Winnipeg Vancouver St. John, N.B. Halifax, N.S. Sydney, N.S.

"Phineas Skaggs! Hell!"

At the sound of their gathering rage a man climbed painfully out through the window that gave to the back of the station. In spite of the disguising bandages that encircled his head, one could see that he had a sharp, curved nose like a beak, the unwinking eye of a ferret, and an ingratiating smile that, even in this precarious moment, held its place on his features as though glued thereto.

HE stood crouching a moment, then limped stealthily round the corner of the station toward the eastbound train.

"All aboard!" called the conductor.

The nearest porter had gathered up his rubber-decked footstool and swung himself on the steps. His hand was on the door to close it when, out of the tail of his eye, he caught sight of the furtive figure.

So did the mob.

They stopped patting the night marshal on the back and whispering sweet nothings in his ear, and started after the fugitive with a rumble of rage.

The fingers of the foremost man laid hold of the coat tails of Phineas S. Skaggs. They lay straight on the wind as he flew along.

The howl of triumph had hardly left their throats when, like a biblical progenitor, the fleeing land promoter shed his coat and leaped like a cat at the high step of the last car as it slid past. His feet missed it, but his lean hands clung desperately to the handrail.

A moment he squirmed frantically, found a footing for one toe, and was gathered up by the porter.

AN excited group crowded into the observation car and gazed in wonder from the moose swinging idle and empty from the telegraph pole to the yelling mob tearing the raiment of Phineas S. Skaggs into inappreciable shreds.

"What a terribly exciting place!" exclaimed Middy Blouse to White Flannels with a laugh. "Aren't you glad we live in quiet New York?"

Cheer up, everybody! This is the official weather forecaster who predicted fair weather

Last of the Family

(Continued from page 7)

"Here," said Constance, holding out a copy of the magazine, between the pages of which was held the letter from the editor, Bornsheim.

The young professional picked up one of the bull terrier puppies and examined it critically before he dropped it back into the straw and took the magazine. He read Bornsheim's note with the pencilled comment at the top, addressed by Jim Fleetwood to his grandmother. He squinted one clear blue eye at the luxurious, questionable illustrations by the dry-point artist, Mantleck. With his twisted forefinger he traced the lines of the narrative critically.

"Say!" he exclaimed suddenly. "If that stuff was put on at an East Side theaytre, they'd close it. I'm not much

"Look for the Styleplus Label"

Styleplus Clothes $17

"The same price the world over."

There is a simple way to avoid paying too much for your clothes or getting a suit of inferior quality—look for the Styleplus Label on the inside of the coat collar.

The Styleplus Label is more than a tag, it is a *promise*. It means that the clothes are under bond to give you satisfaction or new ones will be furnished.

So when you see the Styleplus Label in a coat you know that the Merchant is back of it and the Manufacturer is back of it. They stake their business reputations on its genuine quality.

Style + all-wool fabrics. Style + perfect fit. Style + expert workmanship. Style + guaranteed wear.

One leading clothier in nearly every town and city sells Styleplus Clothes. If there should not be a Styleplus store in your town, please write us, and we will refer you to one nearby.

You can tell a genuine Styleplus by the Label in the coat, the Ticket on the sleeve, and the Guarantee in the pocket.

"Whip" Will Perpetuate the Name of Patterson

My father introduced the mellow Burley Leaf as a pipe tobacco. He was the first man to produce a pipe tobacco without "the bite." His entire life was spent in improving smoking tobaccos and he originated many of the leading brands now on the market.

His improvements in smoking tobaccos have increased pipe smokers by the millions. We feel that the comfort and pleasure men derive from his accomplishments give his life's work a value of the greatest magnitude.

We later Pattersons—my brother James and myself—continuing our father's work, originated the popular ready-rolled styles of tobaccos

And now, after 30 years, we have blended "Whip"—a new tobacco which brings ready-rolled tobacco to its highest state of perfection.

This new tobacco we dedicate to our father—who did more than any man or group of men to improve smoking tobaccos.

Whip Ready Rolled TOBACCO

To merely state that "Whip" is blended of Burley, might suggest that it is similar to other Burley blends. If "Whip" were not distinctively different, and better than any tobacco you ever smoked, we would not consider it worthy to perpetuate the reputation of the Patterson name.

"Whip" is the most aromatic and satisfying of all pipe smoking tobaccos—yet it is the mildest tobacco ever blended. You can smoke it all day, pipeful after pipeful, without ill effects.

I blend "Whip" myself—not to guard the secret of its blend, but because I can't teach anyone to blend it to my liking.

Oscar of the Waldorf is generally conceded to be one of the world's best chefs, yet I'll find a thousand mammies down here in the vicinity of Richmond who can beat him making corn pones or waffles.

These natural cooks could show Oscar how they make their "Co'n pones" or their waffles a hundred times, and yet he could never quite duplicate them.

FIVE-CENT CAN FREE

But let me send you a 5c. one-ounce can of "Whip" to prove its own goodness. I can only tell you the qualities of "Whip" and in doing so I must use words that you have read scores of times in the announcements of other tobacco manufacturers.

After all, your pipe is the real test—and we rest "Whip's" case with your pipe. Just drop me a postcard, naming your dealer, and I will send you an ounce can free of charge by return mail.

"Whip" is sold in one-ounce tins at 5c., 2-ounce tins at 10c., and in pound humidors. Ask your dealer.

M. C. Patterson
Pres't.
Patterson Bros. Tobacco Co., Inc.
Richmond, Va.

Also makers of "Queed"—the big 2½ oz. 10c. tin—a little stronger than "Whip" and a little better than most 2 oz. 10c. tobaccos.

fer this. I wouldn't let my sister read it. There ain't any *man* in that stuff. The feller that wrote that threw the game for the coin."

HE tossed the magazine on the table on a pile of the "Breeders' and Kennel News," unbuttoned his sweater, adjusted his necktie fastidiously before the broken piece of mirror tacked on the wall, raised an elbow and felt for sore spots in the muscles of his forearm, examined his cuffs, and yawned.

"What's there in it for me?" he asked. "I'd take a chance on trimming anybody to-day for three ten spots. I feel so good I guess I'll have to see a veterinary!"

"Come with me, sir. Your terms are satisfactory," answered the old lady. "He shall have one chance to apologize."

As the two went out of the office, a truckman, standing beside his team, plucked at Matty's sleeve.

"Where'd she get the disguise?" he asked.

"Cut *that*, you big fluff," said the gentleman. "That little old dame's all right."

The truckman, deeply chagrined, folded his horse blanket and looked down the street just off the avenue toward the strip of blue of the North River, where cakes of ice showed white, like pieces of paper scattered over the tide. "It's a good day anyhow," he said.

SO it was—a good day; and because it was so bright and fine, Fleetwood called Genevieve Carroll by telephone and proposed a walk to the Metropolitan Gallery. They had said at the club that he was taking on too much loose flesh, and he could not bear, I suppose, to lose the lean grace of which he had been conscious, and from which he had derived, together with his tailor and the Hunt Club set, so much pleasure of the eye.

It was after five and growing dark again when the pair reached the doorway of the Hinterland Apartments. The janitor of that handsome building was standing on the steps admiring the newly polished brass about the doorway.

"Oh, come on in," urged Fleetwood. "It will be a lark. I will make you a cup of the Russian tea that Hendricks, the correspondent, borrowed from the Czarina and sent to me. Daisy Madison came up once. And others. Besides, we are engaged."

"We are *now*," said Genevieve, laughing. Fleetwood, however, keen in his impressions, was displeased by this quip. In the last thirty days Miss Carroll had seemed to change from a young girl full of vivacity, animal spirits, and blind admiration for him, to a more mature woman who was beginning to weigh life and scrutinize her environment. He missed her open, wondering gaze, and often noticed in its place half-covert glances of perplexed scrutiny.

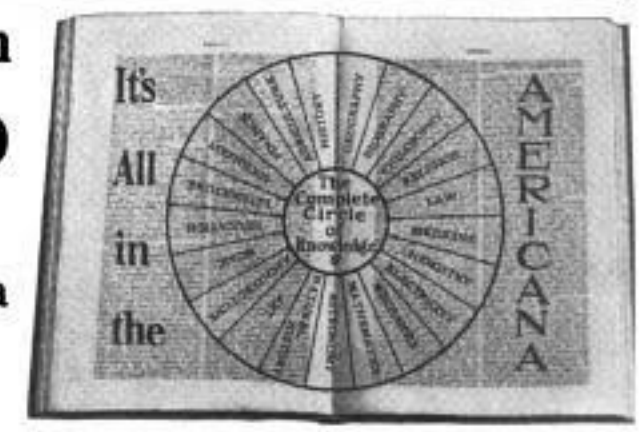
"Come on," said he.

"There's an old lady and young gentleman in your rooms, sir," the janitor volunteered. "They're sitting in the dark, sir. She says she is your grandmother, Mr. Fleetwood."

"My grandmother!"

"From Virginia!" added Genevieve. "Oh, Jim, that's wonderful! Let's hurry!"

"I don't quite make it out," he said to her in the elevator as they passed up through the warm, faint, and not unpleasant changing odors of the succeeding floors. "What brings her here?"



"Her grandson," suggested the girl, stepping out.

IN Fleetwood's apartment there was no light, but there was a movement and an atmosphere of living beings in the room which made themselves known before Jim scratched a match to light a cigarette and turned the electric switch.

"Hello," said he carelessly, pulling at the finger tips of his buckskin gloves. "Sorry you've been waiting."

His desk, which is said to have been the property of Balzac, as all Fleetwood's friends know, stood under the dome in the center of his study, and before his companion had seated herself he fell into the chair in front of it and looked up inquiringly at his grandmother and at the "gentleman" who sat with a blank, empty face in the corner by the rows of morocco-bound foreign novels. The latter returned his look without a change of countenance; indeed, he might have been a stuffed figure propped up on the carved window seat. The little old lady, however, rose to her feet as Genevieve Carroll ran up to her with a half dozen hurried, out-of-breath sentences of introduction and greeting. She

You Can AFFORD an Encyclopedia NOW

The New Issue of the

ENCYCLOPEDIA AMERICANA

Bound Two-Volumes-In-One

Is sold at a price you can afford to pay

100,000 Users the World Over Say It Is the Best Encyclopedia

The **AMERICANA** is the Only Compendium of Universal Knowledge Built by Competent Americans on a Modern American Efficiency Plan.

The Efficiency Plan on Which It Was Built

First the complete circle of knowledge was divided into its component parts. Then the most eminent scholar procurable in each branch of learning was put in charge of his special department. The work of building the first properly planned and co-ordinated encyclopedia was then carried on under the personal supervision of these scholars, with a thoroughness that has never been possible with the haphazard methods of previous works.

Some of the 2,000 and More Distinguished Men Who Built It

Cardinal Gibbons — Henry van Dyke
Marquis Ito — Dr. Parkhurst
President Hadley — George T. Ladd
Simon Newcomb — Rabbi Hirsch
Admiral Dewey — Austin Dobson
David Starr Jordan — John Hays Hammond
Dr. William Osler — Andrew D. Draper
Andrew Carnegie — William T. Harris
Joseph H. Choate — Rev. Ida Wheeler
Hugo Munsterberg — Robert S. Woodbridge
Edmund Gosse — Levi P. Morton
Goldwin Smith — James H. Hyde
Zenos Von Halle — Hilles Thompson
Albert Bushnell Hart — Joseph Silverman
Hiram Bulley — Garrett P. Serviss

The Result is the Encyclopedia You Cannot Afford to be Without

To the Busy American: The **ENCYCLOPEDIA AMERICANA** not only stands pre-eminent in every field of human activity but as its name suggests, gives particular emphasis to matters pertaining to the affairs of our own Country. And the classification of subjects is such that, when you wish specific information, you will find the article you consult to contain just what you wish—nothing more—nothing less.

11 Volumes, Containing all 22 Volumes of the Standard Encyclopedia for Americans.

Printed on India Paper and Bound in Full Flexible Morocco, the New Issue of the AMERICANA Two-Volumes-In-One Binding Is the Last Word in the Encyclopedia Field.

AT THE LOWEST PRICE FOR WHICH A STANDARD ENCYCLOPEDIA HAS EVER BEEN SOLD.

Tell us the subject in which you are most interested and we will send you the volume covering it. We make this offer because we know it is the surest way to sell you the **AMERICANA.** We will also send you an 84-Page 1914 Book, describing the entire set, and containing sample pages, colored plates, etc.

We will also tell you of our Special Price for this New Two-Volumes-In-One Issue and of our *Deferred Payment Offer.*

What is there about that substance known as

Zinc

which makes the paint so good?

Technically it is a long story, but the facts are quickly stated.

Zinc makes paint look better, whether white or colored; it makes it last much longer, and it transforms the paint into an impervious shell of protection from all kinds of weather.

Proof: The best paint manufacturers use it in their best paints.

The story is readably told in our booklet, "Your Move," which we would like to send you.

The New Jersey Zinc Company, 55 Wall Street, New York

For big contract jobs consult our Research Bureau.

withdrew her little hand slowly from the larger, stronger hand of the young girl with a little bow of excuse.

"James, I have come to receive your apologies. You may wish that you and I should be left alone, sir."

"Apologies?" said Fleetwood with a sneer. "Apologies for what?"

"For this letter, sir. For debasing our family by selling your talents for base purposes. For these stories which vilely misrepresent the virtue of the women of your country and the honor of its men. For plying your vocation of author for a dishonorable gain. For being a member of my family. For bearing the name of my husband, who was, sir, a gentleman of Fairfax County. Your grandmother is here, James Fleetwood, to demand an apology in the name of decency, sir."

FOR a moment the color of her girlhood, the color which had risen to her cheeks when with a loaded shotgun in hand she had dared Federal officers to mount the steps of Boxwood, now surged up, perhaps for the last time.

Fleetwood, calm, patronizing, and self-possessed, observed it from his chair without rising. The girl to whom he was engaged, stepping forward into the circle of light, picked up the Bornsheim letter and read it twice with sweeping glances. Above its embossed heading, in Jim's familiar hand, was the sentence: "After all, twelve thousand dollars speaks with greater authority than one who unfortunately has lost touch with the age in which she lives; it speaks louder indeed than any personal prejudice of my own!" Genevieve drew back slowly into the shadows.

"Well," said Fleetwood, smiling across a whorl of cigarette smoke which he allowed to drop from his opened mouth like a liquid. "This is very interesting—and unusual. But not to be unreasonable, I apologize for my shortcomings—in part, in toto—whatever they may be, my friends." He looked inquiringly toward the "gentleman," whose not unattractive young face still remained motionless and expressionless, and whose thick, knuckled hands were still resting upon his own knees.

And then, raising his eyebrows, Jim looked toward Miss Carroll.

"You have sold yourself!" she cried out at him. "Why have I never known that? You are a—"

"Hush, my dear," interrupted Constance Fleetwood of Virginia, reaching for the young girl's hand. "We must not forget that we are women."

"Then take me away, please," replied the other with a catch in her throat. 'I want to go with you. There is something real about you, and I want so much to learn. Take me away."

"Lift your head, my dear," whispered the little old lady, and offered her arm. Side by side the two, ancient Constance of Boxwood and modern Genevieve, daughter of an immigrant, walked slowly and with dignity out of the room.

FIVE minutes later "Gentleman Matty" Grogan followed them down in the elevator. "Good-by, ma'am," he said, adjusting his derby hat and pulling down his waistcoat. "Let it go at that—good-by. I'll be on my way. Here's a taxi for youse two, and I'll beat it."

"But I have not yet made you compensation, sir," she asserted.

"Oh, s'all right, ma'am. Just a trifle, see? A great pleasure."

Constance Fleetwood's little parchment hand was fumbling in her bead bag.

"I prefer to pay you, sir, as well as thank you for your gallantry."

"Me? Take pay from youse? Not in a thousand years."

"Thank you, sir," said Constance Fleetwood, dropping him a curtsey.

He had gone around the corner before Genevieve Carroll, at the door of the motor cab, turned to her companion. "Mrs. Fleetwood, did you see his hands? I could not speak. They were all smeared with blood!"

"I do not think it was *mine*," said the little old lady grimly.

LAST winter I heard that she had gone —that she had died alone at Boxwood. It haunted me—that news. I wonder the old house still braves the years and what has become of the wisp of wood smoke that used to dip down from the leaning chimneys, and whether the despair—and pride—of that old estate still hang above the terraced rose garden, and whether the ghosts of gentility, hospitality, and honor still stand at the white and paneled door.

A May Day Treat For You

Let the Knox Cooks send you enough

KNOX SPARKLING GELATINE

to make six plates of Cherry Sponge

1 tablespoonful Knox Sparkling Gelatine.
¼ cup cold water. 1 cup cherry juice.
Juice of one lemon. ¾ cup sugar.
1½ cups cherries. Whites of two eggs.

Soak gelatine in the cold water 5 minutes and dissolve in the hot cherry juice. Add Cherries (stoned and cut in halves) and lemon juice. When jelly is cold and beginning to set, add whites of 2 eggs beaten until stiff. Mold and when ready to serve turn on to serving dish and garnish with whipped cream, putting chopped cherries over the top.

NOTE: This same recipe may be used with other canned fruits.

THIS will be our treat to you for the month of May. You will be so delighted you will always have Knox Gelatine in your home.

Send us your grocer's name, enclosing a 2-cent stamp and we will send you the Knox Gelatine.

We want every reader of this publication to know how to use KNOX GELATINE for all kinds of Desserts, Jellies, Puddings, Ice Creams, Sherbets, Salads and Candies.

We will send you, free, an illustrated book of recipes with the Gelatine.

Chas. B. Knox Co.
22 Knox Ave.
Johnstown, N. Y.

Nightfall

By
EDWARD M. CARNEY

The day dies.
The last faint ember of the setting sun
Goes out; and long, dark Night comes on apace.
A stillness wraps the world in solemn thought.
No song of bird, no rustle of the breeze
Disturbs the sacred silence of the hour.
On rapid wing, a solitary dove
Pursues her lonely and belated flight
To eastward skies o'ercast with leaden clouds.
So white, so sad, so lost in such a sky!
Her course is straight and swift as arrow's flight—
And darkness swallows up the white-winged bird.
A star peeps out—and Night is on the world.

Tyranny of Beauty

(*Continued from page 12*)

another woman when it's between a woman and a man. Can't you tell her first—say something that'll make her see how it was? I was only trying to serve her own dear friend—and for him to take offense like that!"

I PROMISED; but my aunt came home on Monday and went direct to the office, and before I'd had a chance to say anything, in walks little monsieur, tells his version and—resigns!

"What's all this, mossoo?" cried my aunt. "Resigning? You—the most important person I got here—because a woman like Beekman don't know her place? Why, she ain't wuth the notice of an artist like you—not for a minute—ain't fit to be your doormat. I'll make you manager of the hair department and raise you five a week. Now you got as much right to order her as she has to order you—if you want revenge, just tell her that I raised you five because she didn't know her place, and next time she demands an apology of you I'll raise you five more. That'll put a flea in her ear, I guess. She needs a lesson."

Monsieur kissed her hand and went back to his chair.

MADAME recounted the incident at supper, in high feather over it. "That Beekman has the intellect of a hen," said she. "Now when she tries to stick me for her raise she's put me where I can tell her: 'Pretty manager you are so far—nearly lost me mossoo—a man I can't replace in the whole country, and I had to raise him five to keep him—two hundred dollars this year to pay for your foolishness. You gotta get some different results from that before I see myself speaking to the bookkeeper.' . . . Save off her what I put on him!—and then some."

"If she's worth it, Maggie, you should pay her," remonstrated my grandmother, "not take advantage of a slip of temper with a foreigner."

"That's business," laughed my aunt.

BUT every dog has his day, and Miss Beekman's was coming, though none of us suspected it. At the end of the third year, our lease still having two to run, my aunt took a whole building. Then she got married.

It is characteristic of the modern business woman of the Mme. Del Mar type that she marries only after reaching the whole-building stage of her career, not at the beginning when she might be sup-

SAXON $395

A Good Low Priced Car

The price of $395 includes windshield, top, storm curtains, lamps, horn, jack and tire repair kit.

True Blue SAXON Makes Good Everywhere

Nearly 2000 Saxons are now in use in all parts of the country. They are being driven on all kinds of roads, under all sorts of conditions. And everywhere they are making good. Owners are proving every day the wonderful power and stamina of these Saxon cars.

Ample Power for Heavy Going

From Texas comes the report of a long cross-country trip, fording creeks, plugging through mud for miles and running away from bigger cars. J. McNair Ealy, a banker of Caro, Mich., drove his Saxon home from Detroit, 110 miles through muddy March roads in 4½ hours.

A strenuous trip in Wisconsin made H. S. Wilson write "the Saxon takes long grades and hills better than most cars costing five times the money."

From Pittsburgh to Uniontown, Pa., three Saxons made the journey over mountain roads "so full of ruts and holes that a big car couldn't have gotten through at all."

Gallops Up the Hills

On the hills the sturdy Saxon is unconquerable. In Boston it "gallops up Commonwealth Avenue on 'high' alongside any big car at 35 miles per hour."

On the steep Broadway Hill in Paterson, N. J., this car "started in at the bottom at 20 miles an hour and had picked up to 22 at the top."

The 4,000 foot Gilbert Avenue Hill in Cincinnati is easy for the Saxon with 3 passengers at 26 miles an hour. And so everywhere.

A Car for All Classes

Saxons are making good with all classes of people. Recent purchasers include: Corporation officials and salesmen; stock brokers and physicians; contractors and real estate men; men of moderate means and men who can afford the most costly cars.

For the man who belongs to a country club; for the family living in the country; for the summer, the Saxon is an ideal convenience.

And the Saxon is economical too. Its first cost is less than a good horse and buggy. Its cost of operation far less.

An official test, recently made in Detroit, gave a record of more than 30 miles to the gallon on average roads.

So buy a Saxon now—and get the use of it all summer. Many territories will not have enough Saxons for all who want them. So the wise thing is to order now—today. Catalog on request.

SAXON Motor Company, Detroit. Dept. E

posed to need a husband's guidance and support, nor yet when part way to the top and able to support a husband in the style to which he's been accustomed by his mother's income. Men as men have little glamour to a woman like my aunt after she has seen through their tricks, deceived with subtler tricks, devised schemes and foiled others and pulled the wool of cajoling flattery over usually sharp eyes. The woman who "hires and fires" in an establishment like ours soon comes to regard the men as she regards the women employees—mere pawns in her own game.

I CANNOT, even looking back into my aunt's girlhood, seem to see her as a marrying woman. She had boy friends in Columbus and man friends in New York, and she went around with them in a public sort of way to view the passing show, but beyond that she apparently had no use for them. One and all they were "supes," minor actors in that magnificent drama, "The Romance of Perfumed Pork Fat, or the Mystery of the Pink Jar." There she was creator, author, producer, manager, star performer, and box office rolled into one, and stage bounded by two oceans, whose million footlights burned with every woman's secret: "I can be beautiful."

Nobody really knew her inner life. She was a woman absolutely without intimates—that was part of the price she paid for her success, that isolation of a soul barricaded by fear of rivals, by hatred of opposition, and a supreme self-confidence in her own methods. We who lived under the same roof with her inhabited a little domestic world of our own—a world of warmth and affection, of few wants and simple pleasures, of rigid self-denial. I was putting my brother through an agricultural course and planning to send my little sister to college, and my grandmother was saving a bit here and there from the house money and sending it to my mother or one of her other children on the sly. "Well, I'm sure I hope Joe turns out with your money, Lucy," was my aunt's only comment on my activities in this line. How little she would have missed a hundred dollars and how grateful the boy would have been to her! She reminded me in those days of a sea turtle—a hard shell, impervious to human affection, with a beaked head sticking out and flippers strong enough to carry her across any current.

I WAS now not so startled and aghast at her announcement of a change into a larger store—a whole building—as I had been by the expansion of three years before.

"I've had my eye on that corner ever since we came to New York," said she. "Lease or no lease, I can't afford to let a chance like that get by me. I've been figgering it out—seven floors—only five more'n we got now, crowded. And I've been talking with little mossoo. He's no fool if he is French. I got a kind of an idear he's sweet on you, Lucy. You might do worse than him, and then I'd have two relatives identified with the business! He says he could occupy a whole floor easy—offered to sublet on his own responsibility and run the hair goods as his private business. I says: 'What are you allowing me for the use of the name—the prestige of the preparations?' and he says: 'And what are you allowing me for the use of my name and prestige?'

"Didja ever! And him only French. All the same I think I'd let him do it—call the prestige equal both sides—only old Beekman might start up. I don't know what I'd do without her if she was to get so jealous she'd leave—perfectly hen-headed about some things, but she does get on with them old women. Don't see how she can touch them with a ten-foot pole. Yes, Beekman's a perfect money magnet when it comes to dealing with them old got-the-diamonds, and I got nobody to take her place and leave me free of the whole establishment. I'm going to make her general superintendent in the new building—or general manager. I suppose you're the real general superintendent. Calling her that'll save me raising her ten. Five'll be enough—she'll swallow the name for the other five and never know the difference."

MY aunt was one of those persons who, when they've "come it over" another, experience a reaction in which that other's virtues appear enhanced. It was not the upspringing in her of the generosity

You Can't Dodge the Income Tax—The Decay Tax, Yes!

The decay tax is high. A worn out paint coat results in rot, repair bills, run-down, hard-to-sell houses and a bad neighborhood spirit. That's a heavy tax, but you can dodge it. Paint *in time* and paint right.

Dutch Boy White Lead

and Dutch Boy linseed oil preserve and beautify houses enduringly. Lead and oil make a waterproof elastic coat which expands with the wood and won't crack. Dutch Boy made-to-order paint saves dollars. Your painter will mix it to your house's needs and tint it any color.

Write for Paint Adviser No. 77
A Group of Practical Helps Sent **FREE!**

Tells many useful things for house owners: how different wood surfaces need different paint combinations; how to choose attractive colors that go together and wear best; how to estimate amount and cost; how to test paint for purity. Write now—this book is yours for the asking.

The best way to make the best bread

Carnation Milk adds wonderfully to the goodness of bread, just as it does to rolls, biscuits, muffins, cakes and pastry.

Carnation Milk

From Contented Cows

Carnation Milk is always ready, always pure and always of the highest in quality. Once you try it you will always keep it in the house.

Write today for "The Story of Carnation Quality"—with choice recipes telling how to make the best bread and do the best cooking.

Pacific Coast Condensed Milk Co.

SEATTLE, U. S. A.

that will not hit a fallen foe, and certainly it was not remorse for either unkindness or injustice; rather, it was the winey flattery of a proved superiority warming her veins and melting her temper to a glow of fresh appreciation of what was admirable. With all her inconsiderate selfishness—due largely to her absorption in the business world that left her no time for the little things of affection—she was not vindictive by nature, and never petty. When she did her worst, her worst was done. She either picked up the object of her wrath and set it back on the shelf, or swept the pieces out of her life—that depended on how badly she'd broken it. She was quite incapable of the meanness that probes for tender places and daily stabs them on the sly. So her "coming it over" Miss Beekman had been rather to that lady's advantage than otherwise, as the sequel proved—she became "General Manager of the Del Mar Beauty Salon" as soon as we moved into the new building, and had the title printed on her cards.

I MADE no comment on the proposed appointment and my aunt rattled along. "Our laboratories" would now occupy a floor, and there'd be a practical chemist to manufacture all the preparations but our "standard specials," and another floor devoted to the mail-order business.

"I've been talking to that Mme. Granville—perfect fool in some ways and her preparations are the worst on the market—her cream ain't a thing but paraffin, beeswax, and mineral oil—grow hair on the face something awful—I wonder she ain't been sued by some actress, and I told her she would be—but she says they can't prove it on her goods, so lettum sue—good ad for her. . . . But she says she's cleaned up seventy thousand dollars on the mail-order end alone—magazine ads done it all for her—didja ever! Perfect liar. I don't believe she's cleaned up forty on that stuff; but it took her only two years, whatever it was—that's how long she's been there on Fourteenth. If she can, I can. Gotta have room for it, that's all. Brains and floor space—that's the secret of all modern success."

A BUILDING of her own was the logical consequence of the Beekmans and Perriots, the Julia Cryders and the Lucys, just as Mme. Del Mar was the logical transformation in the melting pot of commerce of Maggie McNulty. Wonderful woman! A wholesaler by instinct, she had now discovered how to conduct a retail business wholesale—wholesale operations, wholesale responsibilities, wholesale risks, and much she cared! Another furnishing by installments, another gamble of a month's rent, and there she was in a suite of private offices—three now—with an innermost privacy to which only the chosen few had access.

America's Telephones Lead the World Service Best—Cost Lowest

from London "Daily Mail"

Why is it that Government ownership and management of the telephones is practically always a failure?

Why is it that throughout the length and breadth of Great Britain and the Continent hardly a single efficient long-distance service is to be found? Why is it that in New York one ...

from "Electrical Industries" (London)

THERE is a certain amount of satisfaction in the fact that Mr. Winston Churchill got so angry over the freaks of the telephone the other day that he flung his receiver on the floor. As a member of the Government which purchased the telephone system, he deserves all the torture that Post Office working can inflict. But his rage, ...

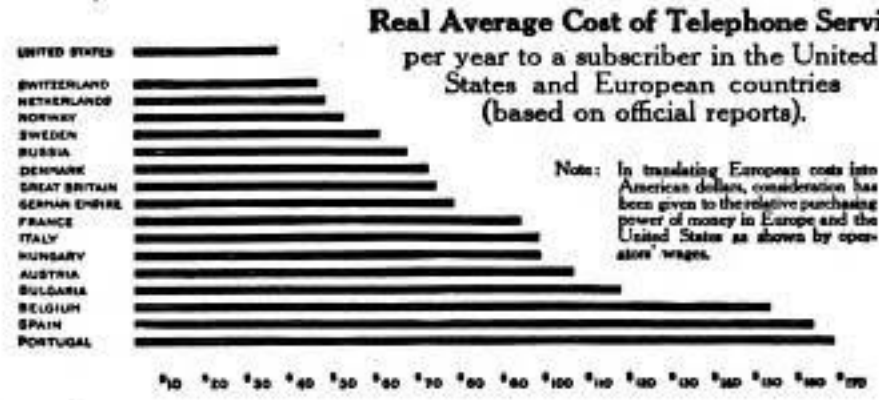
From "Le Petit Phare de Nantes," Paris

"But today I found I had to talk with Saint-Malo, and, wishing to be put through quickly, I had my name inscribed on the waiting list first thing in the morning; the operator told me—though very amiably, I must confess—that I would have to wait thirteen hours and ten minutes (you are reading it right) in order to be put through."

Herr Haberland, Deputy, in the Reichstag

"The average time required to get a connection with Berlin is now 1½ hours. Our business life and trade suffer considerably on account of this lack of telephone facilities, which exists not only between Dusseldorf and Berlin and between Berlin and the West, but also between other towns, such as Strassburg, Antwerp, etc."

Herr Wendel, in the German Diet.



"I refer here to Freiberg. There the entire telephone service is interrupted at 9 o'clock p. m. Five minutes after 9 o'clock it is impossible to obtain a telephone connection."

Dr. R. Luther, in the Dresdner Anzeiger

"In the year 1913, 36 years after the discovery of the electro-magnetic telephone, in the age of the beginning of wireless telegraphy, one of the largest cities of Germany, Dresden, with half a million inhabitants, is without adequate telephone facilities."

Real Average Cost of Telephone Service

per year to a subscriber in the United States and European countries (based on official reports).

Note: In translating European costs into American dollars, consideration has been given to the relative purchasing power of money in Europe and the United States as shown by operatives' wages.

These are the reasons why there are twelve times as many telephones for each hundred persons in the United States as in Europe.
